institution of Christian learning and a \*library. He probably spent most of the 540s there working on his *Commentary on the Psalms* (*Expositiones Psalmorum*) which demonstrates profound learning combined with pervasive spiritual and moral purpose.

### Constantinople

Cassiodorus was definitely in \*Constantinople in 551 as part of Pope Vigilius' entourage, but clearly advocating against the \*Emperor \*Justinian I's condemnation of the \*Three Chapters. He had with him there a copy of his *Gothic History* which was lent to \*Jordanes who used it as the basis of his own history of the Goths (*Getica*). It is possible he left Italy for the eastern capital on the surrender of Ravenna in 540 or with Vigilius and his friend \*Cethegus in 547 and finished his psalm commentary there. It is unlikely that he stayed in Constantinople for long after the promulgation in 554 of the new imperial law for Italy.

### Squillace

From the mid-550s to his death 30 years later Cassiodorus presided over an active and industrious \*household on his family \*estate. Known as \*Vivarium from the local \*fish ponds (on the Alessi River near Squillace di Lido), it was a community of scholars and scribes operating within the framework of a monastic routine with a nearby walled enclave for those who preferred the solitary monastic life. Studying the scriptures and the Church Fathers involved copying manuscripts day and night, while for some, such as \*Epiphanius, \*translation was a priority. Cassiodorus used Epiphanius' translations of church historians to compile his influential *\*Historia Tripartita* c.565, and other translations such as that of the *Jewish Antiquities* of Josephus were also important. The essential volumes to be read and understood by monks, and how they should be read, were itemized in his *Institutiones* (Book I covering religious writings, Book II the texts of a traditional secular \*education). Successively reworked over the period from the mid-550s, the final version of the *Institutiones* was completed after his death. The importance of the scribes knowing accurate spelling gave rise to his final work (*De Orthographia*) at the age of 93. Individual manuscripts originally owned or copied at Vivarium remain difficult to identify. Late in life he briefly summarized his life and work in the *Ordo Generis Cassiodorum* (also known as *\*Anecdoton Holderi*). BC

**Castelseprio** Excavations since the 1960s at Castelseprio, recorded as *Castrum Sibrium*, a hilltop site along the Olona Valley north-west of \*Milan, have revealed a sequence of progressive defensive, religious, and civilian occupations, with a mint active from the 8th century.

Three watchtowers of 7 × 7 m (23 × 23 feet) were built in the later 4th century, and were designed to observe routes leading south from the Alpine foothills. A *castrum* was created in the 5th century, and was defended by an extensive (and partly extant) curtain wall formed of river cobbles and \*spolia, girding the irregular hilltop. The chronology of these first phases is disputed, the *castrum* perhaps beginning in the second half of the 5th century. The fortress interior held a large \*cistern and the adjoining baptismal church of S. John the Evangelist.

Findings and building works (including housing and the church of S. Paolo) attest continuity through the \*Ostrogothic to the \*Lombard and Carolingian periods. The latter phase probably saw construction west of the *castrum* of the (intact) Church of S. Maria *foris portas* with its remarkable cycle of wall paintings, whose dating has ranged from as early as the 6th century through to the 10th, though most scholars now prefer the 9th century. The monastic complex of S. Maria di Torba, located within a fortified annexe at the eastern base of the promontory, also probably belongs to this latter phase. The fortress site was destroyed in 1287. NJC

**Castel Trosino** One of the best-known \*Lombard \*burial grounds in \*Italy, 4 km (2.5 miles) from Ascoli Piceno. A century separates the two principal publications related to the burials, grave-goods, and interpretation. The main \*cemetery is located at Contrada Santo Stefano, east of the settlement, with lesser burial plots

located between. A contemporary village possibly lay close by, with Castel Trosino as fortress-refuge.

Excavated in 1893, Santo Stefano yielded 270 burials, although only half held grave-goods and the burials lay in specific groups. Only nineteen skulls were retained, depriving modern scholars of vital data on the community. The finds suggest use from the later 6th century into the 8th. From the mid-7th century high-ranking burials are concentrated near a church and Lombard and native \*dress and burial types merge.

Although near the border of the duchies of \*Spoleto and \*Benevento, the settlement seems less strategic than one where a new ruling group (perhaps just one or two \*families) is imposed on an already-active \*landscape. There are few weapon graves, but there are \*hunting and luxury items (including spurs). Brooches, \*earrings, \*combs, pins, and necklaces are prominent in female graves, the best known being from Tomb 115 with two necklaces each featuring coins ranging from \*Justinian I to \*Maurice (550–600).

**Castrensis Sacri Palatii and castrensiensium** As steward of the \*Palatium, apparently the leading official in running the administration and finances of the Palace in the 4th century. His \*officium is described in detail in the \**Notitia Dignitatum* (or. XVII, occ. XV). With his staff (*castrensiensium*) he oversaw the \*palatini who included cooks, waiters, and barbers, as well as the \*eunuch chamberlains. Gradually the Castrensis became subordinate to the \*Praepositus Sacri Cubiculi and himself one of the \*cubicularii. The first known \*eunuch Castrensis is \*Amantius, who served \*Arcadius' wife \*Eudoxia. SFT

**catacombs** See ROME, CATACOMBS OF.

**Catalaunian Plains, Battle of** Battle in AD 451 fought near modern Châlons-sur-Marne, between the rivers Seine and Aube near Chartres in northern \*Gaul (also *locus Mauriacus*). The 'Roman' army of Flavius \*Aëtius fought the 'Hunnic' army of \*Attila, gaining a tactical victory. Aëtius commanded Roman troops, \*Visigoths under their King \*Theoderic I, \*Sarmatian \*Alans, Salian and Ripuarian \*Franks, \*Saxons, Armoricans, \*Burgundians, and the otherwise unknown Liticiani and Olibriones. Attila fielded \*Huns, \*Ostrogoths under King Valamer, and \*Gepids.

The Romans and Visigoths took a dominating hill early in the battle and the Huns were forced back with heavy loss to their wagons, with a river behind them, to make a last stand. Attila prepared for death. The main source, \*Jordanes, termed the field 'the threshing-floor of countless peoples' (*Getica*, 36, 191–41, 215). In the confusion Theoderic was killed and Aëtius persuaded his son \*Thorismund to return to the Visigothic territory to secure his succession, thus sparing the Huns as a future counter-balance to the Visigothic threat. This was Attila's only defeat in battle and in the following year he devastated \*cities in northern \*Italy. JCNC

**cataphract** A type of heavy armoured cavalryman. Meaning literally 'defended on all sides', cataphracts

were associated particularly with the Parthians and \*Sasanians, but specialist units increasingly featured in the Roman \*army from the 2nd century through Late Antiquity. There is debate as to how they differed from \*clibanarii. ADL

**catenae, Biblical** See BIBLICAL CATENAE.

**Catholicus** (Armenian) Title of the head of the \*Armenian Church. From the time of S. \*Gregory the Illuminator until the death of \*Nerses I in 373, the Catholicus was consecrated in \*Caesarea of \*Capadocia, although the Armenian Church was not strictly under the jurisdiction of Caesarea. Secular authority usually rested primarily with the Persian King of Kings, who was accorded the same prerogatives as the Roman emperor for both the Persian and Armenian churches. When the Armenian Church broke off communion with \*Constantinople in 607/8, the catholicus was left as head of the newly independent Church. After the \*Arab conquest of the 7th century, it increasingly fell to the Catholicus to negotiate with the \*caliphs on behalf of the entire Armenian community; the Catholicus was therefore often one of the few unifying figures for the Armenian community. TLA

K. H. Maksoudian et al., *Chosen of God: The Election of the Catholicos of All Armenians from the Fourth Century to the Present* (1995).

**Catholicus** (Church of the East) A title in the \*Church of the East for the \*Bishop of Seleucia-\*Ctesiphon. It comes into \*Syriac from \*Greek (where it could apply to an important church or archbishop) as *Qatolliqa*. When the title of \*patriarch began to be applied to this see in the 5th or 6th century, Catholicus became a synonym: the title in the present-day church is 'Catholicus-Patriarch'.

The Church of the East officially traces its patriarchate back to the Apostle Peter (citing his presence in 'Babylon', 1 Peter 5: 13). According to other ancient authors, the founder of the see of \*Kokhe (an old name for Seleucia) was a certain Mar \*Mari, identified later as a disciple of Addai the apostle of \*Edessa. The first \*bishop of whom anything is known, \*Papa (early 4th cent.), is recorded to have aroused opposition from other bishops; but whether this opposition was to Papa's new assertion of primacy, or whether this primacy was already established, is not clear from the sources. At all events, the authority of the Catholicus as the 'great \*metropolitan' of the capital city was canonized at the \*Council of Isaac (410)—'by our own will and also as it has been commanded to us by the Shah \*Yazdegerd', as the bishops said (canon 12).

Any lingering idea that the catholicus was subject to the \*Patriarch of \*Antioch was finally rejected by a

synod of 524. The autocracy of the Catholicus was often a source of trouble in the Church, as witnessed by the Council of Barsauma in 484. Succession to the office also became the occasion for crises. Catholicus Dadisho<sup>c</sup> had to be defended by a council against a group of opposing bishops in 424, there was a schism with two rival catholici between 524 and 537, and when the Shah \*Khosrow II refused to allow the bishops to elect a successor to Patriarch Gregory in 608, there was a long vacancy until the shah's death in 628.

See also CATHOLICUS (ARMENIAN) and, for secular use of the term, KATHOLIKOS. JFC

Chabot, *Synodicon orientale*.

**cats** Domesticated in \*Egypt, cats had spread throughout the Roman and \*Persian Empires by the 3rd century AD. Originally sacred, cats became domestic pets in Roman lands. \*Palladius recommends them as a remedy for moles in \*gardens (IV, 9, 4). They were despised by \*Zoroastrians in Persia but common in \*Jewish \*households (*Babylonian Talmud*, *Baba Mesi'a*, 97a). MD

D. W. Engels, *Classical Cats: The Rise and Fall of the Sacred Cat* (1999).

**cattle** The most important sources of traction in Late Antiquity, also valuable for milk, \*meat, and hides. \*Plough oxen, often castrated males, yoked in pairs made large-scale \*grain cultivation possible. Much larger areas of land could be ploughed using oxen than by unaided human labour. The cattle depicted on \*mosaics in \*Syria are often humped, probably indicating breeds of *Bos indicus*. In Persia cattle were highly valued for their milk and traction and less relied on for meat. \*Paul the Deacon (4, 10) records the introduction of water buffalo (*Bubalis bubalis*) into \*Italy in 593, where their heat tolerance and adaptability to wet environments made them superior to other species. In Late Antique \*Italy, intensive \*farming practices, improved management, and demand for beef contributed to the development of larger, heavier cattle and identifiable 'breeds', but evidence of this breed improvement is spotty in \*Britain where the data is best published. In the post-Roman West, cattle remained a valuable resource; the \**Lex Salica* (PLS III, 14 = p. 69 Drew) includes steep fines for \*theft of large herds (over 25 animals) and cattle remains appear in 5th-century \*Anglo-Saxon sites in Britain at rates similar to the Roman period. Cattle plague (*Rinderpest*) devastated herds in \*Gaul (\*Endelechius, *De Mortibus Boum*, PL 19 = 70–5 White) and elsewhere throughout Late Antiquity. MD

M. R. MacKinnon, *The Production and Consumption of Animals in Roman Italy: Interpreting the Archaeological and Textual Evidence* (2004).

**Caucasus Passes** The ancient history of \*Georgia was shaped by the passes through the Caucasus Mountains. The routes through \*Suania (the Mamisoni and Tsebelda gorges) connected the northern steppe with eastern and western Georgia. The Surami range with its difficult passes had determined in Antiquity the division of Georgia into two kingdoms that lasted for centuries, \*Iberia to the east and \*Lazica (previously Colchis) to the west. The strategic importance of Iberia and Lazica lay in their control of the Caucasian passes; this was the dominant concern in the region of both the Roman and \*Persian empires.

Dariel and \*Derbent are the primary passes that run north to south through the Caucasus range, although many more paths and trackways also provide access. Derbent is the direct passage to \*Albania and thus to the Caspian Sea. To its west runs the main pass of Dariel (also called the Caspian Gates, Iberian Gates, and Caucasian Gates: \*Pliny, *Natural History*, VI, 40; \*Procopius, *Persian*, II, 10, 1–10). Both Dariel and Derbent have been identified with the legendary 'Phalanx of Alexander' (Suetonius, *Nero*, 19, 2.) The \**Alexander Romance* claims that Alexander the Great hung the gates between two rocks. Strabo (XI, 3, 5) notes that it took three days to negotiate the pass. Georgian tradition attributes the building of the first fortress at Dariel to King Mirian I (2nd cent. BC) and King \*Vakhtang I Gorgasali is said to have restored the fortress.

Roman payment to the \*Persian Empire towards the costs of maintaining a garrison at the Caspian Gates intended to exclude \*nomad invaders from the steppes of \*Central Asia became a persistent topic of \*diplomacy from the time of the \*Emperor \*Julian into the 5th century (\*Priscus, fr. 41, 1; \*John Lydus, *Mag.* III, 52–3). \*Anastasius I declined to go to any expense to protect the passes (Procopius, *Persian*, I, 10, 10), a fact thrown in the face of a Roman ambassador by \*Qobad I in 531 (Procopius, *Persian*, I, 16), adumbrated again at the time of the negotiation of the \*Everlasting Peace (*Persian*, I, 22, 5–11) and when \*Khosrow I broke the peace in 540—at which point the Romans agreed to pay 500 pounds of \*gold annually, though as a subsidy rather than as \*tribute (*Persian*, II, 10, 18–30). MO Braund, *Georgia*, 225–6, 269–74.

**cavalry, Persian** (MP *aswār*) The dominant military element in the Persian \*army in the \*Sasanian period. Persian heavy armoured cavalry refined Parthian military practices, and their effectiveness, as \*Ammianus (XXV, 1, 10) and other Roman sources noted, led the Romans to adopt aspects of their cavalry

\*arms, armour, and techniques, while holding a low view of their infantry (\*Procopius, *Persian*, I, 14, 25–6).

Sasanian cavalry wore heavy armour from the 3rd century to the end of the Sasanian Empire. They were drawn from those of noble stock who showed exceptional talent in the art of war. \*Tabari (V, 262) describes their armament as including horse mail, a mailed coat, breastplate, leg armour plates, sword, lance, shield, mace, battle axe or club, bow case with two bows with 30 arrows, and two plaited cords. The leader of the cavalry (MP *Aspbed*) was from the rank of the high nobility (MP *wuzurg*). His personal \*seal bore winged horse(s). By the late Sasanian period it seems that the Empire's supreme cavalry (and thus military) commanders were specifically chosen from Persian and Parthian families as their titles are followed either by the term 'Persian' (MP *Pārsīg*) or 'Parthian' (MP *Pahlaw*). The great generals (MP \*Spāhbed) of the four quarters of the Empire are portrayed on *bullae* (sealings) as seated on horseback wearing full cavalry armour. Before the reforms of \*Khosrow (Husraw) I, a 'Great General of Iran' (MP *Ērān Spāhbed*) held supreme command, but after the 6th century power was divided among four generals responsible for the south-east, north-east, south-west, and north-west respectively, to deal with threats from all fronts. In the course of the \*Arab conquest, some of the *Aswārs* joined the conquerors and kept their status into the early Islamic period. TD

**cavalry, Roman and post-Roman** The mounted component of Roman \*armies in the first three centuries AD was provided by the \**Equites Singulares Augusti*, the *Equites Singulares* of \*governors, the *Equites Praetoriani*, the *Equites Legionis*, the auxiliary *Alae* and *Equites Cohortales*, and irregular formations (Palmyrene horse-archers, \*Moors, etc.). *Alae* continued to exist in Late Roman frontier forces, but many of the other elements were formed into separate units of *Equites Promoti* and *Stablesiani*. These appear separately from new mounted guard formations (\**Scholae Palatinae*) and cavalry regiments (\**vexillationes* and *Cunei Equitum*) in the \**Notitia Dignitatum*. The *vexillationes* provided the bulk of the field army cavalry in the 4th to 6th centuries, supplemented by the mounted \**bucellarii* of generals. The *Notitia* also lists numerous units of horse-archers in the East (*Equites Sagittarii Indigenae*). Later regiments were defined by their geographical, ethnic, and equipment titles, which included both heavily armoured troops (\**cataphracts*, \**clibanarii*) and light cavalry (*Mauri*, *Dalmatae*).

Roman cavalry drew on the cultures of horse-borne *elites* within the Empire (Iberians, Gauls, Germans, Thracians, \*Moors) and also recruited the skills of external peoples (\*Sarmatians, \*Huns, \*Avars, Turks, Parthians, Saracens, Persians). Horse \*harness, \*saddles, clothing, \*arms and armour, and military \*standards were characteristic of these internal and external cultures.

Among Rome's enemies, the Asiatic \*nomads excelled in horse-\*archery and directly affected both Roman and Persian tactics. \*Procopius, \*Agathius, and \*Maurice all demonstrate that armoured horse-archers predominated as the decisive tactical component of Roman armies from the 5th century onwards. Some carried lances, and front-rank horses were armoured. They dealt effectively with Germanic barbarians with mounted *elites* (\*Vandals, \*Ostrogoths), as well as those whose warriors fought mainly as \*infantry (\*Franks, \*Slavs). However, Roman armies never became predominantly mounted forces, and infantry continued to be a vital component. This tactical shift towards armoured horse-archers was derived from Persian and Hunnic warfare, not a consequence of the supposedly pivotal victory of barbarian cavalry over Roman infantry at the Battle of \*Adrianople in AD 378. From the 7th century onwards, in the \*Themes, the best armoured cavalry (\**tagmata*) continued to be organized in the equivalent of *vexillationes*, some retaining their old titles into the 10th century.

The Parthians and Persians faced a range of indigenous, Asiatic, and Roman archery practices. They therefore developed for their predominantly mounted forces appropriately complete defences and employed lances and other penetrative weapons. Asiatic mounted nomads were less well supplied with metallic armour, but excelled in horse-archery. Northern barbarians and Germanic successor states fielded significant cavalry forces but were more constrained by wealth, status, and resources than the Roman and Persian \*armies. In particular, the \*Lombards were heavily influenced by \*Avar armour and archery practice. North \*African peoples continued to fight as light cavalry skirmishers with javelins, from the Punic Wars into the Middle Ages. Mounted \*Arab troops were initially not especially strong in cavalry, armour, or archery, until influenced by Roman, Persian, and Asiatic practices. JCNC

**Cave of Treasures** (Syr. *M'arrat gaze*) Anonymous \*Syriac work, formerly attributed to \*Ephrem the Syrian, extant also in \*Arabic and \*Georgian. Although its

present form dates from the 6th century, the work was probably written in the 5th century, or possibly earlier, by an author of the School of \*Edessa familiar with Ephrem's works. He describes the history of the world from Adam to Christ on the basis of biblical, Mesopotamian, Jewish, and Christian stories and legends, in order to establish the genealogy that links Jesus to Adam. The eponymous Cave of Treasures is that in which Adam and Eve lived after their expulsion from Paradise and in which Adam hid the \*gold, \*incense, and myrrh later given to Jesus by the Magi. KDB

**Ceaulin (Ceawlin, Cælin)** King of the West Saxons (d. 593), son of Cynric, a founder of the West Saxon royal dynasty. Ceaulin was remembered as one of the \*Bretwaldas (overkings). He died the year following defeat at a battle at Wodnesbeorg, near where \*Wansdyke crosses the Ridgeway in Wiltshire (*ASC s. a.* 592). NAS

*ODNB s.n.* Cealwin (Yorke).

**ceilings and ceiling decoration** Under the trussed roofs of \*palaces and \*basilicas, vaulted or more often flat ceilings were constructed. Timber was precious, so well-made roofs from one building might be preserved for reuse in another (\*Gregory of \*Tours, *HF* II, 14), while the 6th-century *Life* of S. Nicholas of Sion records the miraculous lengthening of roof timbers which had been cut too short (*VNicSion* 20.25–30).

Wooden panels, generally of pine, cedar, or cypress, were attached to the tie-beams, so as to create coffers, rectangular or octagonal recesses. These might be covered with \*mosaic or painted with geometrical, \*foliage, fruit, and figural motifs or with representations of divinities or mortals, as on the fifteen coffers of a ceiling of a room excavated at the 4th-century imperial \*palace at \*Trier.

Ceilings were often gilded, lavishly reflecting shimmering \*light. The mosaics in the soffits of the arches in the nave of the Acheiropoietos Basilica at \*Thessalonica give a small idea of the intricacy of such decoration. Impressive ecclesiastical examples of descriptions which survive include \*Constantine I's churches of the Holy Sepulchre in \*Jerusalem, and the \*Holy Apostles in \*Constantinople, \*Paulinus of \*Nola's \*martyrium of S. Felix from the 5th century, and the churches of \*S. Polyeuctus at Constantinople and of S. Stephen at

\*Gaza in the 6th century. Open-vaulted and barrel-vaulted roofs prevail after the 6th century, and in some cases these \*brick or brick-and-stone constructions probably had no separate ceiling beneath them, though some of the brickwork, as with the herringbone patterns in the church at Salah (Turkish Salhi, mod. Bağlarbaşı) on the \*Tur 'Abdin, might itself be a work of art. DK; OPN

J. Bardill, 'A New Temple for Byzantium', in W. Bowden, A. Gutteridge, and C. Machado, eds., *Social and Political Life in Late Antiquity* (2008), 339–70.

**Ceionii** Family of senatorial \*aristocracy which had two main branches, the Iuliani and the Rufi, whose relationship is unknown. The Ceionii Iuliani are first attested with M. Ceionius Iulianus, \*Praefectus Urbi at \*Rome in 333. His descendants occupied important positions in the later 4th century. Ceionii Rufi held important magistracies during the 4th and early 5th centuries (Rufius Agrypinus \*Volusianus was Praefectus Urbi in 417). Prominent pagans, they were connected to Christian families through \*marriage. Probably of Etruscan origin, their names indicate links with early imperial aristocrats. The earliest attested Ceionius is C. Ceionius Rufius Volusianus, urban prefect and \*consul under \*Maxentius and \*Constantine I. His son Albinus held these same offices under Constantine, and at least one member of each following generation was Praefectus Urbi. \*Marcella of Rome, ascetic friend of \*Jerome, was Albinus' granddaughter. The Rufi were linked to the \*Decii, preserving the family name into later periods. CARM

**Celer** \*Magister Officiorum (503–18), admired by \*John Lydus (*mag.* III, 17). Effective as commander and negotiator in the \*Persian war (503–6), he was \*consul for 508. He helped to depose the \*Patriarch \*Macedonius (511), and to calm the pro-\*Chalcedon riot of 512. He lost influence under \*Justin I, but was involved in religious negotiations with \*Hormisdas of \*Rome in 519–20. FKH

**Celtic Christianity** The Churches of Celtic \*Britain, \*Ireland, and \*Brittany originated in Roman Britain, and were marked during Late Antiquity by adaptation from a centralized to a highly localized political system, and from a Latin-speaking to a Celtic-speaking milieu. Accordingly, especially in the 6th and 7th centuries, they showed similarities both in

culture (e.g. in their distinctive system of \*scripts) and in organization (the large numbers of \*bishops, and the high status accorded to scholars). The cults of many saints revered as monastic founders of the 6th century were spread over more than one of the Celtic-speaking regions. These regions also shared a conservative method of calculating the date of \*Easter which brought disagreement with the Churches of Francia and England in the 7th century. However, as the Easter controversy was gradually resolved, the 'Celtic' Churches began to diverge from one another.

The idea of a 'Celtic Church'—decentralized, \*ascetic, and mystical—united in opposition to 'Roman' authority, has largely been discounted by modern scholarship. Some supposed 'Celtic' attributes, such as a lack of separation between monks and secular clergy, were common elsewhere in Late Antiquity; others, like the monastic confederations exemplified by \*Iona, were exceptional even in Celtic areas. Regional phenomena, for instance the Christian sculpture of Pictland, or the precocious, parish-like *plebs*-communities of \*Brittany, can be better appreciated when the 'Celtic Churches' are not forced into a uniform mould.

**Celtic Latin** The term refers here to the \*Latin writings of Celtic \*Britain and \*Ireland c.400–c.800. These regions produced a body of literature comprising \*saints' lives, monastic texts (rules and penitentials), \*Bible interpretation and commentary, theological works, computistica, \*hymns, \*letters, annals, and a small corpus of secular works (\*grammars, poetic commentaries). The earliest known writings from Britain (excluding \*inscriptions) come from ecclesiastics who migrated to the Continent (\*Pelagius, \*Faustus of Riez). Among the earliest island-based writers were the Britons S. \*Patrick, who migrated to Ireland, and \*Gildas, who flourished in Britain (perhaps Wales). The letters of S. Patrick describe the saint's mission to Ireland in the 5th century, while Gildas's *De Excidio Britonum*, a diatribe against corrupt \*priests and rulers, mentions the \*Anglo-Saxon invasions. Uinnianus (6th cent.), a British \*bishop active in Ireland, wrote the earliest Celtic penitential; this became a model for the Irish penitentials transmitted under the names of

S. \*Columbanus (d. 615) and S. Cummean (early 7th cent.). These innovative writings joined monastic instruction with rules governing penances. The name Cummean is also attached to a letter dealing with controversy over the dating of \*Easter. Computistical writings used in this controversy display the reading of Irish scholars; this included works by \*Isidore of \*Seville, \*Macrobius (*Saturnalia*), and \*Boethius (*De Arithmetica*) besides ecclesiastical writers—all used to support a particular arithmetical system of predicting Easter dates. Scientific topics (tides, \*eclipses) are treated in the Ps.-Isidorean *Liber de Ordine Creaturarum*. Theologically interesting is the Ps.-Augustinian *De Mirabilibus Sacrae Scripturae* (c.655), which attempts to show how \*miracles in both Testaments can be reconciled with natural phenomena. This typifies the 'topics approach' of Irish exegesis such as we find in the 'Reference Bible'. Irish hagiography concentrated on native saints beginning with Patrick, Brigit, and Columba. The life of S. \*Columba by \*Adomnán of \*Iona (d. 704) is a masterpiece of the \*genre. The earliest British hagiography, by contrast, is concerned with continental saints with connections to Britain: Ss. \*Germanus of Auxerre and \*Samson of Dol. Hagiography and hymnology coalesce in poems lauding saints, e.g. 'Audite Omnes Amantes' (on S. Patrick), and verses on the abbots of Bangor (from the 'Bangor Antiphony'). One of the finest hymns is 'Altus Pro-sator', a poem on Creation attributed to S. Columba (d. 597). \*Grammar was another well-developed interest of the Irish. The *Ars Asporii* is a christianized \*Donatus of the early 7th century. More influential was the enigmatic Virgilius Maro Grammaticus, whose cryptograms and bizarre linguistic theories were cited over several centuries. Rhetorical contests are featured in the \**Hisperica Famina*, where a judge enumerates 'the faults of Ausonian diction'. One finds evidence of genuine classical tradition in an Irish recension of Philargyrius' commentary on \*Vergil's *Eclogues*. Historiography is limited largely to annalistic writing, the exception being the British \*Nennius'.

Linguistically, Celtic Latin is not a *Sondersprache*, but Late Latin reflecting a fairly good standard across genres. Some words derived from Irish occur in Hiberno-Latin texts, and there are certain identifying features of orthography, some of which show influence of Irish vernacular spellings. \*Greek and Greek-derived words occur with some frequency, e.g. in Gildas, Columbanus, *Hisperica Famina*, Virgilius Maro, and Adomnán.

**Celts** Late Antique writers used the terms *Celtae*, *Keltoi*, and their derivatives to describe the inhabitants of central and western \*Gaul. When referring to language they seem to have intended local dialects of Romance to be understood by the term *lingua celtica*.

Since the early 18th century, scholars have classified the pre-Roman dialects of Gaul and Atlantic \*Spain alongside the ancestral tongues of Gaelic and \*British under the label 'Celtic'. There is little evidence for Continental Celtic dialects surviving into Late Antiquity; whether because of genuine language replacement or the dominance of \*Latin in the written record is unclear. By the 7th century two vernacular Celtic acrolects had emerged which scholars term Old Irish and British. These acrolects were not mutually intelligible and early medieval scholars who noticed similarities between them assumed borrowings of individual words rather than shared inheritance. Whether the contrast between the written standards reflected the grouping of vernacular dialects c.600 is unclear and debate continues as to whether, for example, the British of \*Brittany had inherited any of its character from Gaulish, or, to take another, whether the language of the \*Picts was simply a dialect of British.

In terms of ethnic perception, native scholars had, by the late 7th century, already adopted the idea of a \*Scythian origin for the Irish (influenced by the homophony of the ethnonyms \*Scotti and Scythii) and a Trojan origin for the Britons. This latter had probably been developed, perhaps with reference to specific allied *ciuitates* under the Roman Empire. AW

**cemeteries** See DEAD, DISPOSAL OF CEMETERIES, GERMANIC AND POST-ROMAN WEST.

### **cemeteries, Germanic and post-Roman West**

The excavation and analysis of cemeteries has been a key theme in early medieval archaeology since its origins. The frequent inclusion of distinctively decorated objects in graves meant they were often recognized and reported: the typological analysis and resulting chronologies of these objects long provided the principal means of dating early medieval sites. Systematic study of cemeteries developed from the later 18th century in England and by the mid-19th century in north-west Europe, though earlier antiquarians had catalogued finds from burials accompanied by rich objects such as \*Childeric's tomb, discovered at \*Tournai in 1653. In the 17th century such finds were mainly exploited for religious or political purposes, for example by

promoting \*pilgrimage centres (such as \*Jouarre and S. Germain-des-Près, France) or supporting dynastic claims to legitimacy of actual or potential rulers. The advent of more scientific recording methods did not bring this political use of cemetery finds to an end, and they continued to be employed throughout the 20th century to underpin ethnic and national histories. Commonly this involved matching characteristic finds to a specific cultural group known from the historical sources (e.g. \*Franks, \*Saxons, \*Visigoths, or Angles) and then associating such objects and their spatial distributions with modern political entities. Since particular categories of material culture were identified with specific cultural groups, objects from graves were also used extensively in attempts to correlate archaeological and historical evidence for the \*Barbarian Migrations in the post-Roman West. In addition, scholars deployed cemetery evidence to try and map \*conversion from \*paganism to Christianity, since many assumed that burials containing grave-goods were those of pagans. This tendency was particularly marked in some regions, for example \*Anglo-Saxon England, where the period described in the seminal narrative history of conversion (\*Bede's *HE*) coincided with the gradual disappearance of accompanied burials.

Contemporary archaeologists regard such interpretations as excessively simplistic. Later 20th-century developments in archaeological method and theory encouraged a more sophisticated approach to cemeteries. The first major development was processual archaeology from the 1960s onwards, which led to the application of new scientific techniques; the second was the post-processual movement of the 1980s and later, which brought social and anthropological theories to bear on archaeological evidence. The latter helped archaeologists to appreciate that objects such as those in early medieval graves do not map straightforwardly onto past cultural identities, and therefore that artefact distributions cannot be used simply to map the territories or movements of cultural groups or the appearance of particular religions.

Instead, scholars now argue that burial practices provided a range of different ways to express and create specific cultural identities for the 5th and 6th centuries, and that they can be studied from a variety of different viewpoints. Burial provided not only a theatre for mourning, but also a chance to shape social memory as it related to ethnicity, kinship, gender, age, and many other social realities: the objects buried with the dead could be used to create relationships between the living by representing social status (for example, a young male child from an elite family—who could never have fought in battle—buried with a warrior's sword or other equipment). In \*Merovingian \*Gaul, moreover, the very use of grave-goods appears to have developed

from Late Roman practices and might originally have represented a bid for social legitimacy by barbarian peoples living in the Roman Empire. In addition to examining grave-goods, archaeologists study how social organization might be represented in the spatial layout of burial sites. Examples include communal 'row-grave cemeteries' (widespread north of the Alps in the later 5th and 6th cents.), or smaller clusters of burials which might reflect individual kin groups. The topographical context of burials may provide insights into how early medieval people perceived contemporary geographies or their relationships to past inhabitants (for example when cemeteries were located on boundaries, or when they reused prehistoric burial mounds). Early medieval social identities were not static and cemeteries provide opportunities to analyse change. Later 6th-century graves in both England and northern Gaul, for example, were marked by increasing differentiation between burial assemblages, and the spatial separation of more richly furnished graves from others. Such changes might have served to reinforce the emergence of more marked social hierarchies in this period.

Established scientific techniques enable bioarchaeologists to study aspects of demography and disease. For example, osteoarchaeologists routinely study mortuary remains to identify the age and sex profiles of cemetery populations, but also for evidence of diseases that affect bones and teeth, trauma sustained during life, and even aspects of health care. Developing molecular methods have the potential to revolutionize knowledge about early medieval populations. Analysis of stable isotopes of carbon or nitrogen from skeletons can provide information about an individual's diet as bones developed (specifically levels of fish or meat consumption); isotopes of strontium and oxygen can reflect the surface geology in childhood (and thus have the potential to indicate migrants). Studies of cemeteries in England including \*West Heslerton and the later \*Bamburgh have begun to show that migration patterns were far more complex than suggested by earlier work on historical documents and artefacts from burials. Though few studies have yet been undertaken, archaeologists have also begun to apply DNA analysis to questions of migration, including studies of both ancient and modern populations. Within specific cemeteries, ancient DNA could also be used to compare the spatial organization and treatment of burials representing members of different families. SCT

**census** The systematic assessment and registration of people and property by the Roman state. \*Diocletian reformed the institution to provide the basis for his new tax regime, with a new Empire-wide census probably completed by 296. All evidence suggests that once the Tetrarchic \*tax and census registers were established they became fixed, subject to ad hoc local adjustment rather than regular and universal revisions, perhaps until late in the reign of \*Heraclius. Territorial losses may have prompted his order (recorded in the 13th-cent. *Synopsis Chronike*, 110, 5–7) that 'all the lands of the Romans' be surveyed and reassessed for \*taxation purposes. More frequent censuses followed as part of the fiscal reforms of the later 7th and early 8th centuries.

The \*Caliph \*Umar reportedly echoed Heraclius' move in 640, commanding that all living things in his domains be assessed. The Islamic state certainly developed population census and survey practices, drawing on both Roman and Persian traditions; and, indeed, some (but not all) of the western successor kingdoms also adapted the Roman system they inherited. REF Jones, *LRE* esp. 454–6.

**Centcelles** Fourth-century Roman \*villa, 6 km (4 miles) north-west of \*Tarragona. A range survives, where the \*dome \*mosaic over a large room juxtaposes secular and Christian subjects. The lowest register shows a \*deer \*hunt setting out from a villa, the middle register has Old Testament scenes, familiar from \*sarcophagi, referring \*typologically to the Resurrection. Above, putti evoking the \*Seasons alternate with unidentified enthroned figures with gold and \*purple tesserae. Hauschild considered this the mausoleum of the \*Emperor \*Constans I, who died in Elne (Helena) in 350 on his way to \*Spain. Other scholars think it the residence of local officials or \*bishops. RJW

J. Arce, *Centcelles: el monumento tardorromano. Iconografía y arquitectura* (300–580) (2002).

K. Dunbabin, *Mosaics of the Greek and Roman World* (1999), 251–3.

**centenarius** (military and post-Roman) Term from the Late Roman Empire for the ordinary sub-officer of a military regiment, the leader of a nominal 100-man unit. The term was part of a new system of military ranks developing from the 3rd century. \*Vegetius (II, 7 and 13) saw it as a new term for centurion.

It was used in the regional Frankish administration as part of a hierarchy derived from Roman military ranks (\*Dux, \*Comes, \*Tribunus, Centenarius), in which military and administrative functions were combined. Frankish *centenarii* commonly appear as the subordinates of *comites civitatum*, exercising judicial functions and commanding police associations in \*cities. The name of their command, *centena*, by the 8th century became territorialized as the common term for subdivisions of counties (\*pagus, \*comitatus). The 'hundred', in parallel to the county, had a long history in the regional administrative terminology of European states thereafter. ACM

A. C. Murray, 'From Roman to Frankish Gaul: "Centenarii" and "Centenae" in the Administration of the Merovingian Kingdom', *Traditio* 44 (1988), 59–100.

**centenarius, ducenarius** (civil) Originally the designation of equestrian imperial administrators with salaries of 100,000 or 200,000 *sesterces* respectively, the ranks were retained for officials junior to a *vir perfectissimus*, but senior to a *sexagenarius* (*vir egregius*), whether in post, on their retirement, or simply as a \*title of honour (*CTh* VIII, 4, 3; XII, 1, 5; and specifically for the Sacrae \*Largitiones, *Cjust* XII, 23, 7). The heretic Paul of \*Samosata was considered arrogant for posing as a *ducenarius* rather than as a \*bishop (\*Eusebius, *HE* VII, 30, 8). OPN Jones, *LRE* 530.

**centenionalis** Small \*bronze coin introduced in the \*coinage reform of AD 348. This reform failed to stabilize the Roman monetary system and the *centenionalis* appears to have been struck only up to 356, in which year the *centenionalis* was also described as a forbidden coin (*CTh* IX, 23, 1). The name cannot securely be attached to any specific denomination of surviving coinage. RRD Hendy, *Studies*.

**cento, Greek** A pastiche poetic form, in which lines and phrases are deliberately drawn from an antecedent text and recombined to convey new subject matter. Centos of lines from \*Homer on Christian themes composed by \*Eudocia Augusta comprise the extant bulk of the genre in \*Greek, but a cento from Euripides, the *Christus Patiens* (*Christos Paschon*), attributed to \*Gregory of \*Nazianzus but of undetermined date and authorship, also survives.

Centos reflect Late Antique authors' deep familiarity and sympathy with poetry from the classical past. Prefaces

to their works by Eudocia and (in \*Latin) \*Ausonius (*Cento Nuptialis*) adumbrate the compositional techniques and aesthetics of the form, which achieves its effect by semantic tension between the original context of the reappropriated verses and their new settings. Centos also provide an important indirect witness to the texts of the classical authors from which they derive. MDU

**cento, Latin** Literary form in which an author connects a predecessor's originally discrete lines to create his own new narrative work. Sixteen Latin centos survive from antiquity, all with \*Vergil's *Eclogues*, *Georgics*, and *Aeneid* as their source texts; the Codex Salmasianus (Paris, BN 10318) contains twelve of them. Authors worked at least largely from memory.

Probably the earliest of the extant Vergilian centos is Hosidius Geta's tragedy *Medea*, preserved in Codex Salmasianus and first mentioned by Tertullian (*De Praescriptione Haereticorum*, 39, 5). Seven other centos contain mythological narratives, while two deal with the everyday subjects of \*bread making and dicing, and two more with weddings, one of them by \*Luxorius.

There are also four Christian centos, one of which, the *De Ecclesia*, appears in the Codex Salmasianus. Faltonia Betitia \*Proba paraphrased Old and New Testament material in the 694 lines of the *Cento Probae*.

The most notorious cento is \*Ausonius' *Cento Nuptialis*, an account of a wedding day that concludes with an explicit description of the wedding night. (Petronius' *Satyricon*, 132, 11, where Encolpius describes his *mentula* in a three-line cento, anticipates Ausonius' ribald reuse of Vergil.) Preceding the text is a dedicatory letter in which Ausonius explains the rules for cento composition and describes some of its features. Other ancient statements on the cento come from Tertullian and \*Jerome (*ep.* 53.7). SMcG

**Central Asia (Central Eurasia, Inner Asia)** Vast area in the centre of Asia, located between the Russian

steppe, Siberia, \*China, \*India, and Iran. The core comprises western Turkistan (mod. Kazakhstan, Kyrgyzstan, Tajikistan, Turkmenistan, and Uzbekistan) and eastern Turkistan (Xinjiang, China). Most scholars also include northern Afghanistan, which has strong ties with the Turkic world north of the \*Oxus. For similar reasons, many include Mongolia (Inner and Outer) and portions of the Russian steppe or northern forest zone where Turco-Mongol peoples have historically lived. The term 'Inner Asia' is sometimes used synonymously with 'Central Asia'; 'Central Eurasia' encompasses not only Central Asia, but also the Caucasus and other areas of the Eurasian continent.

Central Asia is bounded in the west by the Caspian Sea, in the south by the mountain chain extending from the Kopet Dag in northern Iran eastward to the Hindu Kush, Pamirs, Karakorum, and Kunlun ranges, and in the east by the Gansu corridor. To the north stretches the Russian and Mongolian steppe and beyond that, the forested taiga zone, punctuated in the middle by the Altai mountain range. Within Central Asia, major geographical features from west to east include the Transcaspian Ustyurt Plateau, Aral Sea, Qara Qum and Qizil Qum deserts, Tien Shan mountains (dividing West and East Turkistan), \*Tarim basin (containing the Taklamakan Desert), and Gobi Desert. This arid region of deserts, high plateaux, steppe, and mountains is characterized by an extreme continental climate. Alpine meltwater feeding rivers like the \*Oxus (Amu Darya), Zerafshan, \*Jaxartes (Syr Darya), Chu, Ili, and Tarim, supplemented by extensive irrigation, makes limited agriculture possible; major bodies of water include the Aral Sea, Issyk-Köl, and Lake Balkhash.

Historically, the regions south of the Oxus were known as Margiana and \*Bactria (or \*Tukharistan), both of which variously came under the Persian (and later \*Arab) province of \*Khorasan. North of the Oxus lay \*Transoxiana, divided into the regions of \*Khwarezm (Chorasmia), \*Sogdiana, \*Chaghanian, Khuttal, and Badakhshan; north of these lay \*Ushrushana, \*Farghana, and \*Chach (Shash). Prior to the rise of \*Islam, Western Central Asia was traditionally influenced more by Persian (and to a lesser extent \*Greek) culture, Eastern Central Asia more by Chinese civilization. The \*Silk Road \*trade network linked the region with China, India, and the Near East, encouraging the spread of commerce, language, literature, and religion. Before the advent of the \*Türks, the area was populated mostly by Iranian-speakers, including the Bactrians, Khwarezmians, and \*Sogdians in Western Central Asia and the \*Khotanese in Eastern Central Asia, along with the non-Iranian \*Tokharians.

These Iranian-speakers developed urban literate societies based on agriculture and trade (the Sogdians were the main middle-men on the Silk Road) and

skilled in art and architecture. Fertile soil and access to adequate water encouraged settlement in the \*Merv oasis and Bactria, along the Oxus, Zerafshan, and Jaxartes rivers, in the Farghana, Chu, and Ili valleys, and in the many oases ringing the Taklamakan Desert. From the mid-6th century on, Turkic influence increased throughout Central Asia, as Turkic groups gained political power, becoming more urbanized and literate and increasingly controlling more of the Silk Road trade; by the Middle Ages, most ruling dynasties were Turkic.

Local forms of \*Zoroastrianism traditionally practised by the Iranian-speakers to the south were supplemented by the missionary religions of \*Buddhism, Christianity, \*Manichaeism, and later Islam. All of these religions also spread to Turkic-speakers in the north, eventually to displace the native Turkic religion centred on the worship of the sky-god Tangri.

In Late Antiquity, various groups gained power in Western Central Asia, including the \*Sasanian Shahs of the \*Persian Empire (3rd cent.), \*Chionites (4th cent.), \*Hephthalites (5th cent.), \*Türks (6th cent.), and finally the Arabs (7th–8th cent.). First the land south of the Oxus and then Transoxiana (in Arabic, *Ma wara' al-nahr*) was integrated into the Arab \*caliphate. Meanwhile, Eastern Central Asia fell within the Chinese sphere of influence, although direct political control by China fluctuated according to the presence of local polities, such as the Saka kingdom of \*Khotan (2nd–7th cent.). Chinese influence in Western Central Asia, rarely more than nominal, ceased completely after the Arab victory at the Battle of \*Talas (751).

To the north, pastoral \*nomads (Xiongnu, Juan-juan, Türks, \*Uighurs, and later Mongols) practised animal husbandry, living in tents and raising livestock; however, when they gained political power, limited urbanism developed, especially under the Türks. The success of steppe nomad polities depended on extensive grazing lands to support their many flocks and herds plus a large, highly skilled, and disciplined cavalry. As Turkic power extended southwards, control of the trade routes also became crucial.

Conflict often occurred between the nomads and the surrounding imperial powers (China, Persia, and later the Arab caliphate), seen by many as an example of the inherent tension between 'steppe and sown'. However, despite the Western and Chinese tendency to despise and fear the barbarian, steppe nomads were typically tolerant of multiple religions and capable of forming multi-ethnic polities ruling over a vast territory for extensive periods of time.

**Cephas** Fortress overlooking the River Tigris (mod. Hasankeyf, Turkey). Originally Assyrian, it was fortified by \*Constantius II around 349, was the base of Legio II Parthica in the late 4th century (\**Notitia Dignitatum*, or. 34) and was strengthened by \*Justinian I (\*Procopius, *Aed.* II, 4) as part of his overall strengthening of the eastern \*frontier. It is probably the 'Sitae', 25 (Roman) miles (35 km) from Tigranocerta of the Peutinger Map, and the 'castron Siton Cifas' of \*George of Cyprus. Excavation has uncovered foundations of a Roman gateway south-west of the bridge, a row of shops, a possible guard-house, and some \*mosaic fragments. AMC

**Ceramaea, Battle of** (AD 747) A significant Roman naval victory won by a fleet commanded by the \*strategos of the \*Cibyrhaeotic \*Theme, over an Arab fleet, allegedly of 1,000 \*dromons, near the harbour of Ceramaea, in \*Cyprus, described by \*Theophanes (AM 6238) and the Patriarch \*Nicephorus (68). MTGH  
 G. Hill, *A History of Cyprus*, 4 vols. (1940–52), vol. 1, 291.

**ceremony, Roman and post-Roman** Ceremonies were conducted throughout Antiquity in a broad variety of domestic, city, military, imperial, royal, and religious contexts. Typical occasions were birthdays, anniversaries, weddings, funerals, arrivals (\**adventus*), departures, receptions, translation of \*relics, inaugurations, coronations, \*victory celebrations, church foundations, and other events. The participants, internal organization, procedures, and location (private house, assembly room, clubhouse, forum, theatre, \*circus, temple, church, parade ground, \*palace, or \*street) all varied with the occasion for the ceremony. Depending on the type of ceremony, a more or less broad spectrum of individuals and groups was actively or passively involved, demonstrating their unity and concord; at the same time, ceremonies were usually marked by rigid social stratification, expressing the internal hierarchy and functional differentiation among the participants.

We are best informed about imperial and royal ceremonies. They have left material evidence of imperial imagery on \*coinage and medallions, in \*sculpture, \*mosaics, and paintings. Literary sources also provide information, particularly \*panegyrics and the *De Ceremoniis* of \*Constantine VII Porphyrogenitus, a 10th-century compilation containing instructions for the performance of court ceremonies, written by the officials responsible for them.

Royal ceremonies expressed the general consensus about the monarch's supremacy and legitimacy, demonstrated different grades of proximity to the sovereign, and also served as an opportunity for the ordering of influence and status among the highest strata of society, the \*court, the imperial and civic \*aristocracy, and the clergy. As can be seen best in surviving Late Antique panegyric texts, ceremonies provided occasions when high-ranking petitioners could approach the emperor, requesting, for instance, tax relief for their hometowns or similar favours. They also provided an occasion for the announcement of imperial policies and achievements—in suitably high-flown terms. At the same time, imperial and royal ceremony also reinforced the sense that political power was in some way a fact of nature, that the ruler enjoyed a close connection to the divine, mediating between the heavenly and earthly spheres. Ceremony was thus closely connected to \*adoratio of the emperor, which persisted in a secularized form after the end of pagan \*imperial cult emperor worship.

The historical development of royal ceremony is in general characterized by strong continuity. Nevertheless, social, cultural, political, and religious changes in Late Antiquity also led to certain transformations, the most prominent being first an increased sense of the sacredness of the imperial office, second the development of its relations with Christianity, and third, especially after the eastern emperors became permanent residents of Constantinople, the development of specific relations with the people and \*Senate of their capital city.

Royal ceremony played a central part in the sacralization of the monarchy. This is evident already in the 3rd century, especially under the \*Tetrarchy. At receptions and festivities within the palace, the enthroned emperor, clad in ceremonial garb and adorned with \*regalia, was greeted with prostration (Gk. *proskynesis*; Lat. *adoratio*) before an orator spoke his \*praises in a panegyric. The emperor's visibility was carefully regulated by ceremonial \*curtains (*vela*), while undesirable sounds were suppressed by the \**silentiarii*. Even victory celebrations came to be conducted in the presence of an emperor seemingly kept aloof from earthly matters.

The process of Christianization reinforced this development insofar as monarchy on earth was

conceived ever more as a representation of the heavenly monarchy of the transcendent Christian God. At the same time, representatives of the increasingly established religion were able to interpret God's will in ways which did not always accord with the emperor's understanding; negotiation was needed for representatives of the Church and the state to know their places. \*Leo I in 457 was the first emperor to accept the imperial \*crown from the \*Patriarch of Constantinople; \*Justin I in 517 received it from the Patriarch in the Circus and \*Constans II in 641 was crowned in the Church of the \*Holy Wisdom.

At the same time that the ceremonies surrounding the emperor were being dovetailed with the expectations of the Church, a symbiosis was emerging between the emperor and the people of Constantinople. The Circus, entered by the people from the city and by the emperor directly from the Great \*Palace, was the arena where this relationship was enacted. That relations between emperor and \*factions were not a matter of stiff formalities is apparent from the *Acta per \*Calopodium* and the \*Nika Riot. Ceremony was not mere spectacle; it was a way for the character and presence of political power to be acknowledged and for political realities to be expressed and explored. JW; OPN

**Černjachov/Sîntana De Mureş Culture** The Russian and Romanian names respectively for the

same archaeological system which spread across Wallachia, Moldavia, and large parts of the Ukraine as far as the River Don in the Late Roman and early \*Migration periods (3rd to 5th cents.). East of the Don, lower average rainfall makes conventional \*farming impossible.

Černjachov is in the Ukraine, near Kiev. Sîntana De Mureş (sometimes Sântana-de-Mureş) is a site in Transylvania. In Romania over 60 sites and cemeteries have been identified and in the former USSR a further 70 cemeteries and around 90 sites have been studied.

The Černjachov/Sîntana De Mureş Culture is commonly regarded as the material culture of the \*Goths and believed to incorporate diverse groups and influences. Open settlements are characteristic, but several small fortified sites are known. Many communities made their own \*pottery and \*iron tools, but specialized manufacturing centres produced grindstones, bone objects, \*glass vessels, and \*salt. Its populations engaged in mixed farming regimes in sometimes substantial \*village communities which clustered along the watercourses and larger rivers of the region. Characteristic finds include \*metalwork and other items strongly reminiscent of contemporary Germanic-dominated regions of north-central Europe but combined with large quantities of wheel-turned pottery resembling Roman provincial types (handmade wares predominate in North-Central Europe throughout the Roman period).

\*Trade with the Roman world is represented by \*wine \*amphorae, \*jewellery, and other objects. The \*amber trade from the Baltic passed through its territory. Distribution of objects in burials suggests a stratified society. In Romania, cemeteries can be very large, with over 500 graves. The site of Bârlat Valea Seacă in Romania has yielded an unusual amount of evidence for specialized workshops that manufactured \*combs from \*deer antlers, a difficult and time-consuming process that produced objects of great importance in the Černjachov/Sîntana De Mureş Culture, as we know from the frequency with which they were placed in graves.

Before the 1970s, the system was often misdated because its remains threw up much good-quality Roman \*silver \*coinage of the 2nd century, but M. B. Ščukin showed conclusively that the system's earliest sites date to the later 3rd century AD. Its characteristic remains then spread throughout the region between the Danube and the Don in the early 4th century before disappearing again in the very late 4th and early 5th centuries. This breakthrough resolved earlier controversies over attribution, making it clear that the system's existence correlated closely—both chronologically and geographically—with the rise and fall of Gothic power in the region. There are textual and archaeological reasons to suppose that many other groups continued to occupy this landscape throughout,

but the system was clearly a product of Gothic political domination.

**Chach** (Shash, mod. Tashkent) District in \*Transoxiana on the \*Jaxartes River. According to the Buddhist traveller \*Xuanzang (I, 30), the cities in Chach were subject to the \*Türks, but individually governed. Resistance from Türks to the \*Arab invasion delayed full Islamization of the area until the 9th century. After the Battle of \*Talas (751), Chach became a base for \*ghazi warfare against pagan Türks on the northern steppe and supplied many troops to the armies of the \*Abbasid \*caliphate (al-\*Baladhuri, *Futūh al-Buldān*, II, 205). Arab and Persian geographers who give an account include Ibn Khurdadhbīh (19–20), al-Muqaddasi (238, 246–7), and the *Hudud al-Alam* (118).

**chahar taq** New Persian phrase (lit. 'four arches') used as a modern technical term for a design common to Sasanian centralized domed architecture in \*fire temples and \*palaces. A *chahar taq* consisted of four piers arranged in a square, from which sprang four barrel vaults. These supported squinches, which, in turn, supported the dome.

MPC

*Enclran* IV/6 s.v. čahārtāq, i. in pre-Islamic Iran, 634–42 (Huff).

**chairs** Very little \*furniture survives from Late Antiquity. Metal parts and decorative fittings from folding chairs of the 3rd century have been excavated from Hanghaus 2 at \*Ephesus and the superb \*ivory throne of \*Bishop Maximian is preserved at \*Ravenna. The masonry bases for the \*synthronon occupied by the clergy survive around the \*apse of many early Christian \*basilicas. An inventory of the 5th/6th century from the little \*village church at Ibion in \*Egypt lists three wooden *cathedrae*, two *sempsellia* (benches), and two \*leather cushions (P.Grenf. II, 111, 34–7).

Most surviving depictions of chairs are of seats of authority. The thrones of the \*emperors shown on the \*Missorium of Theodosius, Christ's throne in the \*mosaic at S.Apollinare Nuovo in Ravenna, the seat of Christ depicted in S. \*Pudenziana at \*Rome, and the empty seats of judgement shown in the Neonian \*Baptistery in Ravenna are of various designs, but alike in having large cushions and decoration in precious \*stones.

In fact chairs (Gk. *thronos*, Lat. and Gk. *cathedra*) were often emblems of authority. Specific thrones were used by the emperor to receive official delegations, in church and at the \*circus (e.g. \*Procopius, *Persian*, I, 24, 44). A \*governor sitting in a \*court of law occupied a bench, where local \**honorati* sat alongside him (\*Libanius, *Oration*, 48, 16), though the seat occupied by Pontius Pilate in the illustrations of the \*Rossano

Gospels would leave them little space. A professor of \*grammar, \*rhetoric, or \*philosophy occupied a chair (e.g. \*Palladius in *\*Greek Anthology*, IX, 174, 5; \*Ausonius, *Professores*, 9, 1 Green; \*Augustine, *Conf.* IX, 2, 4; \*Sidonius Apollinaris, *ep.* II, 11). The throne of S. James the first \*Bishop of \*Jerusalem was still revered at Jerusalem in the time of \*Eusebius (*HE* VII, 19), who also mentions episcopal thrones at \*Corinth (IV, 23, 1), Rome (VI, 29, 4), and \*Antioch (VII, 30, 9).

To be seated when others were standing was an assertion of superiority. \*Constantine I asserted his humility at the \*Council of \*Nicaea by awaiting the consent of the assembled bishops before he sat down (\*Eusebius, *VCon* III, 10, 5). At the contentious Church \*Council of \*Carthage of 1 to 27 June 411, the \*Donatist and Catholic bishops refused to sit down so that Marcellinus, the unfortunate imperial commissioner, had himself to stand throughout the proceedings. S.\*Augustine of \*Canterbury did not rise to greet the seven indigenous British bishops who came to meet him, thereby earning their lasting hostility (Bede, *HE* II, 2). Such matters of \*ceremony were not trivial. NFH; OPN

B. Caseau, 'Objects in Churches: The Testimony of Inventories', in Lavan et al., *Objects in Context*, 560–2.

**Chalcedon** (mod. Kadiköy) \*Harbour \*city opposite \*Constantinople and site of the \*martyrium of S. Euphemia, a Christian \*virgin allegedly killed during the Great \*Persecution. A church was erected over her \*relics, which housed a painting of her martyrdom, described by \*Asterius of \*Amaseia. Pilgrims such as \*Egeria (384) and S. \*Melania the Younger (436) visited S. Euphemia's shrine. When the Fourth Œcumenical \*Council convened in Chalcedon in 451, the saint worked a \*miracle. As the city was often plundered following attacks on Constantinople, S. Euphemia's relics were translated into a newly built church on the European side of the \*Bosporus. Chalcedon fell to the \*Arabs in 674–8 and was utterly destroyed during the Fourth Crusade (1204). **Chalcedon, Council of** Fourth Œcumenical \*Council of the Church, held in \*Chalcedon (mod. Kadiköy), on the Asia coast opposite \*Constantinople in 451. The large council (500–600 \*bishops), mostly Eastern, though with two Western bishops and papal legates in attendance, was called by the \*Emperor \*Marcian, newly appointed as husband of the \*Empress \*Pulcheria, after the sudden death of \*Theodosius II,

to settle the long-running controversy over the nature of Christ, and more immediately to overthrow the council called at \*Ephesus by Theodosius II in 449, which had upheld \*Eutyches, condemned Flavian, \*Patriarch of Constantinople, and implicitly rejected the \*Tome of \*Leo.

The so-called Latrocinium ('Robber Council') of 449 was quickly overthrown, and \*Dioscorus, Patriarch of \*Alexandria, who had dominated the Latrocinium and refused to accept the authority of the new council, deposed. The council issued a 'Definition', which began by reaffirming the authority of the three previous Œcumenical councils, with their \*creeds (this is the first mention of the expanded version of the Nicene Creed, affirmed at the First Council of \*Constantinople of 381), and upheld the authority of \*Cyril of \*Alexandria's synodical letters (accepted at the Council of \*Ephesus of 431), and the so-called Tome of Leo, written in support of Flavian. It then continued, 'following the Holy Fathers', to affirm that in Christ there are two perfect natures, divine and human, united 'unconfusedly, unchangeably, undividedly, inseparably' in a single person, mentioning the title \*Theotokos for the Virgin \*Mary (this part of the definition is based on the Formula of Union associated with the First Council of Ephesus of 431). It appears that, at a late stage, at the insistence of the papal legates, mention of a union 'out of' (*ek*) two natures, was altered to 'in' (*en*) two natures, though many Greek manuscripts appear to have kept the original formulation. The definition resulted in a schism in the East between those who maintained that the council had betrayed Cyril in affirming a duality of natures, and those who believed that it had upheld his teaching (*see* MIAPHYSITES). **Chalcis ad Belum** Garrison town of the \*province of \*Syria Coele (Prima) located 25 km (15 miles) south of \*Aleppo. Birthplace, c.245, of the \*philosopher \*Iamblichus (\*Eunapius, *Lives of the Philosophers*, 457).

In the Roman period it was part of the defence system of the eastern \*frontier and a caravan stop. The term '*Limes* of Chalcis' was first used by \*John Malalas in connection with the campaign when \*Shapur I captured Chalcis and \*Antioch (XII, 26). His notion that the region had been as fortified in the 3rd century as it was in the 6th has been interpreted as an anachronism. The \*Lakhimid \*Mundhir fought campaigns in the

region in 527 and in 554, when the \*Ghassanids killed him. After \*Khosrow I demanded a ransom for sparing the city in 540 (\*Procopius, *Persian*, II, 12, 1–2), \*Justinian I ordered the rebuilding of the fortifications, starting in c.550 (Procopius, *Aed.* II, 11, 1 and 8).

It was occupied during the \*Persian invasion and then taken by the Arabs in 636/7. The early Islamic capital of the military district (\**jund*) of north Syria called \*Qinnasrin was associated with Chalcis ad Belum. A settlement of the early Islamic period was located around the town of Hadir, 4 km (2.5 miles) east of Chalcis. There have been recent excavations at the site.

The city of Qinnasrin should not be confused with the famous \*monastery of \*Qenneshre next to the Euphrates River, nor with Chalcis ad Libanum (\*Anjar). EKK R. Mouterde and A. Poidebard, *Le Limes de Chalcis: organisation de la steppe en haute Syrie romaine* (1945).

**Chaldean Oracles** Fragmentary text traditionally attributed either to the 2nd-century figure Julian the Chaldaean or his son Julian the Theurgist, which formed one of the foundational texts of later \*Neoplatonism. The *Oracles* survive only in fragments, but the work probably originally consisted of a set of oracles spoken by various gods introduced by a dialogue between Julian and the soul of Plato. Later Neoplatonists also cite a commentary on the *Oracles* written by Julian. They contained teachings about gods, daemons (see DEMONS AND DAEMONS), the soul, and the cosmos and helped to introduce \*theurgy into later Platonism. Although alluded to by \*Numenius, the first extended engagement with the text occurs in the 3rd century when \*Porphyry wrote a (lost) commentary on it. \*Iamblichus, \*Proclus, and \*Damascius all also commented on it. The text exercised great influence over the \*Emperor \*Julian. It remained a vital part of Neoplatonic religious life into the 6th century. EW

**Chang'an Stele** See XI'AN STELE.

**chant** Few texts with musical notation survive from earlier than the Middle Ages, but Late Antique Christian writing of many sorts reveals that chant was an important part of the celebration of the \*Eucharist and the \*Liturgy of the Hours. The earliest surviving notated Christian music is the \*Oxyrhynchus Hymn of the late 3rd century. The 42 \**Odes of Solomon*, the words of which survive mostly in \*Syriac, must also pre-date the end of the 3rd century.

The Psalms and other portions of the \*Bible, together with the ordinary parts of the \*Eucharist, the *Kyrie*, *Gloria*, *Alleluia*, *Sanctus*, and *Agnus Dei*, formed a large part of what was sung. The early 5th-century Armenian \*Bible Lectionary of Jerusalem indicates which Psalms were used on specific days, and similar information may be extrapolated from the \*sermons of S. \*Augustine and others.

In addition, \*hymns were not slow to develop. In the \*Syriac-speaking world the \**madrasha* was familiar by the early 3rd century, and in \*Greek the \**Phos hilaron* was considered ancient already in the 4th century. \*Egeria, a pilgrim probably from \*Gaul who visited the Holy Land and \*Egypt in 381–4, mentions the singing of hymns in the churches at \*Jerusalem and also a large choir of boys: 'their voices are very loud' (24, 5). The Council of \*Laodicea in \*Anatolia mentions a choir singing from the \*ambo. Canon 10 of the Fourth Council of Carthage laid down a formula with

which a \*cantor should be admitted to his office: 'See that what you sing with your mouth you believe in your heart and that what you believe in your heart you show forth in your works.'

In the course of Late Antiquity, the \*Greek \*liturgy was enriched by the hymns of \*Romanus the Melodist (d. after 555), the \*Akathistos Hymn, and the compositions of \*Andrew of Crete (d. 740). Roman chant was highly regarded in \*Anglo-Saxon England. It was taught in Northumbria by James the Deacon after 633 (\*Bede, *HE* II, 20). Later, Bede's \*monastery at Wearmouth was instructed in chant by John the Archchanter of S. Peter's, Rome, brought over by Benedict Biscop (*HE* IV, 16), and Putta Bishop of Rochester also worked to spread the Roman method (IV, 2). Later styles of chant as performed in the Middle Ages, about which considerably more is known, reveal particular dialects and musical qualities unique to individual traditions, languages, and churches in both East and West, and it is possible that these might have been present also in Late Antiquity.

Chanting also had a function in theological controversy. In the early 4th century, \*Arius wrote work shanties containing doctrinal messages for those who worked in \*mills or travelled by land or sea (\*Philostorgius, II, 2). The simple accentual quatrains of S. \*Ambrose were sung to sustain his congregations when they were occupying the \*basilicas which the \*empress was trying to confiscate (Augustine, *Conf.* IX, 7, 15). Augustine wrote a lengthy *ABC Against the Donatists* which was clearly intended for popular use. He took a low view of the Donatists' vocal efforts, which he claims sounded like trumpets on a battlefield (*ep.* 55, 18, 34). In 5th-century \*Constantinople, \*Homoean (\*Arian') and Nicene choirs vied with one another in chanting in the \*streets, until the \*eunuch cantor of the Nicene choir was hit on the head by a stone and the Homoeans were silenced by imperial order (\*Socrates, VI, 8).

**charagma (kharagma)** In \*Greek, a stamp or brand. Its meaning in Byzantine legal contexts with reference to \*money has been contested, especially with reference to \*Justinian I's \*edict of 559 referring to \*gold coins of lighter than standard weight, (*EdJust* 11),

leading to suggestions that it referred to debased or otherwise marked metal. While summarizing previous argument, however, Banaji has demonstrated that it almost certainly indicated coined metal. RRD

Banaji, *Agrarian Change in Late Antiquity*, 73–5.

**Charibert I** \*Frankish King (561–7), the eldest surviving son of \*Chlothar I at his death in 561, when he acquired a kingdom comprising most of western \*Gaul, with his capital at \*Paris, following the division of the \*Merovingian realm with his brothers \*Guntram, \*Sigibert I, and \*Chilperic I. He took several wives, including two sisters, for which he was excommunicated by \*Germanus of \*Paris, but left no male heir. The subsequent partition of his own kingdom between his brothers occasioned much civil strife. EJ

PLRE IIIA, Charibertus I.

**Charibert II** \*Frankish King (629–32), who allegedly made a bid for the throne on the death of his father \*Chlothar II (\*Fredegar IV, 56). His brother or half-brother \*Dagobert I made him king in \*Aquitaine, where Charibert conquered Gascony in 631, but then died, possibly at the hands of Dagobert's followers. HJH

PLRE IIIA, Charibertus 3.

Wood, *Merovingian Kingdoms*, 148–9.

**Charioteer Papyrus** \*Papyrus fragment from a codex, found at Antinoe, written not before AD 450, now in the collection of the Egypt Exploration Society, depicting a group of charioteers, dressed in coloured jackets, representing the \*circus \*factions. The style of illustration, typically Egyptian, is similar to the \*Ambrosian *Iliad* fragments. There are parts of a few lines of an unidentified text, written in large, rounded capitals. NAS

E. G. Turner, 'The Charioteers from Antinoe', *JHS* 93 (1973), 192–5.

**chariot-racing** See CIRCUS.

**Charles Martel** (c.688–741) Son of the \*Mayor of the \*Palace \*Pippin II and one Alpaïda. Charles was treated as a peripheral member of the Pippinid family and imprisoned after Pippin's death by \*Plectrude, his widow. He escaped in 716 during a crisis when the family was nearly driven from power. He then fought his way to the leadership of Francia through a series of military victories, in 724 becoming sole Mayor of the Palace. By 741, when he died, he had ruled for some years without a \*Merovingian king, and divided Francia amongst his sons as if he were the ruler. He was, above all, a supremely successful military leader who fought

almost every year and lost only one of his many battles. He reduced each of the Frankish regions in turn, placing his own followers in positions of power. He also defeated an \*Arab invasion from \*Spain in 733, for which he earned a medieval and modern reputation as the saviour of Christendom. He was also accused of stealing church lands to reward his soldiers, leading modern historians at one time to think that in doing so he was the inventor of \*'feudalism'. Present opinion recognizes the considerable myths that have grown up around Charles Martel and emphasizes that we know relatively little about him apart from his record of extraordinary military success. **Charour** (fl. c.6th cent.) The putative author of a unique \*Coptic text lamenting the decline of the Pachomian community. LSBM

ed. (with FT) L. T. Lefort, *Œuvres de S. Pachôme et de ses disciples*, 2 vols. (CSCO 159, 160; Scr. copt. 23, 24; 1956), vol. 1, 100–4; vol. 2, 100–8.

L. MacCoull, 'The Prophecy of Charour', *OrChrist* 91 (2007), 44–55.

**charters, Anglo-Saxon** The earliest \*Anglo-Saxon charters date from the 7th century; there is some debate about whether their introduction should be associated with S. \*Augustine of \*Canterbury or \*Theodore of \*Tarsus. Charters were originally used to record royal grants of land or privileges to the Church and were written in \*Latin, usually on single sheets of parchment. They are formal (and formulaic) documents which usually include a proem (an introductory section), a dispositive section outlining the substance of the donation, some information about the boundaries of the land given, a sanction clause, a dating-clause, and a witness-list.

The surviving corpus of Anglo-Saxon charters includes texts which range in date from the latter part of the 7th century through to the Norman Conquest, and contains over 1,000 texts (usually cited by their number in Sawyer's *Catalogue*), approximately 200 of which survive in their original single-sheet form (rather than as later copies). Most of the extant charters were preserved in the archives of religious houses as the title-deeds for estates granted to the community (*bocland*). During the 8th and 9th centuries charters became increasingly formulaic and began to be used also to record grants of land to (and from) lay beneficiaries. From the 9th century the boundaries of the land granted were more routinely recorded in English. Unlike contemporary documents produced on the Continent, Anglo-Saxon charters outline spiritual

consequences rather than monetary fines for those who infringed the terms of the grant. HFF

Texts of Anglo-Saxon charters are edited in the British Academy Anglo-Saxon Charters Series known as *The Electronic Sawyer*: <http://www.esawyer.org.uk/>.

P. Chaplais, 'Who Introduced Charters into England? The Case for Augustine', *Journal of the Society of Archivists* 3/10 (1969), 526–42.

**charters, Gallic** By far the richest record of charters to survive from the barbarian kingdoms derives from \*Merovingian \*Gaul. Almost 50 original charters are extant, the earliest written on \*papyrus, and those from c.660 onwards on parchment. Numerous examples are also preserved in later copies. They survive from the 7th century onwards, although \*Gregory of \*Tours describes 6th-century kings issuing charters, and some later confirmations of 6th-century grants survive. The charters are crucial sources for all aspects of \*Frankish history, including the activities of the \*aristocracy, political events, social structure, the nature and extent of \*literacy, institutional continuity from the Roman Empire, and dispute settlement.

Most extant charters record donations of land, or grants of \*immunity, from kings or high-status individuals to churches, although the Frankish \*formulae collections suggest that charters were used extensively at a variety of social levels and for a far greater variety of purposes. Churches alone had the institutional continuity and motive to preserve documents in their favour: all of our original royal charters are from the \*archive at \*S. Denis, and later collections from churches make up the bulk of the rest.

The language, form, and script of most charters derives from Late Roman bureaucratic practice, although the \**placitum*, a form recording disputes settled in the presence of the king, may have developed independently in 7th-century northern France. However, the Merovingian period saw the decline of Roman state organs and archival institutions, such as the \**gesta municipalia*. Storage of charters accordingly moved to private archives, the charter form became more personalized, including personal signatures, and single charters came to assume central importance in their own right as proof of ownership. P. Fouracre, 'Placita and the Settlement of Disputes in Later Merovingian Francia', in W. Davies and P. Fouracre, eds., *The Settlement of Disputes in Early Medieval Europe* (1986), 23–43.

**charters, Lombard** The use of written instruments by \*Lombard rulers to record or assign ownership of land is recorded by \*Paul the Deacon in his description of \*Alboin's \*gift by way of a *praeumaticum* to \*Felix of Treviso (*History of the Lombards*, II, 12). It continues with the confirmations given to the \*monastery of \*Bobbio by successive Lombard kings from the early 7th century onwards. About 50 documents survive in all from the 6th and 7th centuries, primarily on \*papyrus and mostly from \*Ravenna. Lombard material from both royal and ducal writing offices is complemented by so-called 'private' \*charters that begin from c.710—notably from \*Lucca, \*Pisa, and \*Milan—and add a further 50 items concerned mainly with the transfer of land and property.

The survival rate of charters extends significantly beyond 750, but those charters that survive from before this date are testament to the importance of written record in Lombard \*law—in fact \*Rothari's *Edictum* prescribed severe physical \*punishment for the forgery of charters (Rothari, 243). Evidence from the 8th century suggests that written charters became essential for \*security for those manumitted and that traditional unwritten \*manumission custom was insufficient as evidence in cases of dispute. C. La Rocca, ed., *Italy in the Early Middle Ages* (2002).

**charters, Spanish** The \*Visigothic \**Book of Judges* envisages the conduct of business transactions and legal proceedings in writing (e.g. II, 3, 3; II, 4, 3; II, 5, 5), but only slight evidence of this survives from the Visigothic period. For the 6th century, there are medieval copies of a donation of 551 and a \*will of 576, both granted by Vincent of Huesca, \*deacon and then \*priest; the texts correspond with the Roman \*law of the *Breviarium of \*Alaric II*.

Five original parchment charters have also been preserved from the late 7th and early 8th centuries: a comital mandate, a royal decree, the text of an \*oath, a commutation, and a purchase-sale. These can now be complemented by some four dozen fragmentary charters inscribed on slate (the \*Visigothic Slates) from rural Avila and Salamanca, datable to the 6th and 7th centuries. Some are as partial as a few words, but they document the application of Visigothic legislative norms and legal formulaic language in even the most remote areas of \*Spain. GDB

A. Becker, *Rom und die Chatten* (Quellen und Forschungen zur hessischen Geschichte 88, 1992).

**Chelles** (Lat. In Cale, dép. Seine-et-Marne, France) Double \*monastery on the Marne founded in 658 by Queen \*Balthild, widow of \*Clovis II, ruled by Abbess Bertila, who came there with nuns from \*Jouarre. Previously a \*Merovingian \*palace (Calae), where \*Chilperic I and his wife \*Fredegund frequently resided and the king died in 584. The community's members included \*Anglo-Saxon and Frankish aristocratic women such as the Northumbrian Princess Hereswith, sister of S. Hild of \*Whitby (\*Bede, *HE* III, 8 and IV, 23), and Swanahild, second wife of \*Charles Martel, and it became a favourite of the Carolingians. \*Relics of Balthild and Bertila are preserved in Chelles. RLJ *DHGE* 12 (1953), 604–5 (van Doren).

J. Laporte, *Trésors de Chelles: sépultures et reliques de la Reine Bathilde (+ vers 680) et de l'Abbesse Bertille (+ vers 704)* (1991).

**Cherson and Tauric Chersonese** Cherson was a Greek colony located in western Crimea, near

Sevastopol, founded in the 6th century BC. It was incorporated into the Roman \*province of Lower \*Moesia in the 2nd century AD. Situated strategically in Crimea and along the sea routes of the northern Black Sea, excavations have yielded evidence of \*fish salting and manufacturing, as well as an economically integrated agricultural hinterland, with ceramic finds attesting the city's commercial connection to the Mediterranean throughout the 6th and into the 7th century. Archaeological evidence also points to a broad continuity in both the prosperity and urban fabric of the \*city, throughout the period, while \*Procopius (*Aed.* III, 7, 10) records the restoration of the city's walls during the reign of \*Justinian I. In the 7th century, the city also served as the place of banishment for Pope \*Martin I and the Emperor \*Justinian II. SSF A. Bortoli and M. Kazanski, 'Kherson and its Region', in A. E. Laiou, ed., *The Economic History of Byzantium: From the Seventh through the Fifteenth Century*, vol. 2 (2002), 659–65.

M. Kazanski and V. Soupault, 'Les Sites archéologiques de l'époque romaine tardive et du haut Moyen-Âge en Crimée (IIIe–VIIe s.): état des recherches (1990–1995)', in M. Kazanski and V. Soupault, eds., *Les Sites archéologiques en Crimée et au Caucase durant l'Antiquité tardive et le haut Moyen-Âge* (2000), 253–93.

**Chersonese** (Gk. for 'peninsula') The Thracian Chersonese is the Gallipoli (Turkish Gelibolu) Peninsula in modern European Turkey, in Late Roman times in the \*province of \*Europa, \*Dioecesis \*Thraciae, and the site of a Byzantine defensive \*wall from the 5th century onwards.

The Tauric Chersonese is the Crimean Peninsula on the north shore of the Black Sea and also the site of a Byzantine defensive \*wall. The \*city of \*Cherson, on the south-west coast, has been extensively excavated. Legend suggests that Clement of \*Rome died a \*martyr in \*exile there c. AD 100, and \*Timothy the Cat, \*Patriarch of \*Alexandria, was certainly exiled at Cherson from 464 to 475 for resisting the definitions of the \*Council of \*Chalcedon. \*Procopius says that \*Justinian I consolidated the Roman alliance with the \*Goths of the Crimea and rebuilt the city walls of Cherson (Procopius, *Aed.* III, 7, 10–17). A \*silver \*reliquary with \*silver stamps of Justinian has been excavated from the \*altar of a cruciform church in the city. Justinian also opened a mint at Cherson, which operated until the 7th century, apparently producing only \*bronze coins, which were distinctive in style and made extensive use of \*monograms. Pope \*Martin I died in exile at Cherson. In the 8th century it was under \*Khazar rule. ABA; RRD; OPN

**Chester** (England) The legionary fortress and associated civilian settlement of Deva Victrix was founded in the 70s AD and occupied beyond the withdrawal of Roman troops in the early 5th century. It remained an important regional centre in post-Roman times using surviving buildings. ACR

D. J. P. Mason, *Roman Chester: City of the Eagles* (2001).

**Chester Beatty manuscripts** A group of \*Greek and \*Coptic biblical and extra-biblical \*papyri, mostly dating to the 3rd and 4th centuries AD, purchased in 1929/30 by Sir Alfred Chester Beatty (1875–1968) for his private collection of books and manuscripts in Dublin.

They include a 3rd-century Greek copy of the Book of Revelation, a bilingual Greek–Latin glossary on S. Paul, and Greek and Coptic versions (in the Sahidic and sub-Akhmimic dialects) of various books of the Old Testament, the Gospels, the Acts of the Apostles, and the Pauline epistles. Non-biblical works include a 4th/5th-century Greek copy of the Book of Enoch from the Ethiopic \*Bible, the *Apocalypse of \*Elijah*, the \*martyr \**Passion* of S. \*Phileas of Thmuis, and the Book of Jannes and Jambres. \*Manichaean texts include the \*Manichaean Psalm Book. Among the most recent identifications are fragments from a late 2nd/3rd-century Coptic codex preserving an early Christian homily (P. Chester Beatty 2026 + P. Crosby-Schøyen 193), and possibly an Eastern lectionary composed in the Pachomian \*monastery at \*Phbow (mod. Fāw Qibli) (Phbow has been indicated by J. M. Robertson as the place of provenance of both the Chester Beatty and the \*Bodmer manuscripts). MPe

**Chichek** See IRENE.

**Childebert I** King of the \*Franks (511–58), one of the four sons of \*Clovis I who received a share of the kingdom upon their father's death, with \*Paris as his capital. He conspired with his younger brother \*Chlothar to kill two of the orphaned children of their brother \*Chlodomer. His quarrels with the other \*Merovingian kings led at various times to civil war, but he also joined them in extending Frankish power in \*Burgundy and southern \*Gaul, and in attacking \*Italy and \*Spain. He brought a \*relic of S. \*Vincent from Saragossa back from his second expedition to \*Spain, and was buried in the church he dedicated to the saint in Paris (now S. Germain-des-Prés). EJ

*PLRE* II, Childebertus.

**Childebert II** (570–96) \*Frankish King from 575. Son and heir of \*Sigibert I, his early years as king were a minority, dominated by governors and \*court parties. His mother \*Brunhild was not without influence, but this faded with the rising importance of those around \*Egidius, \*Bishop of \*Reims. In 577 he was adopted by his uncle \*Guntram and declared an heir as part of the Treaty of Stone Bridge. In 581, under the influence of a new court party, his temporarily childless uncle \*Chilperic made him an heir as part of the Treaty of Nogent, directed against Guntram. However, with the mutiny of Childebert's armies against their commanders in 583 and the assassination of Chilperic in 584, relations with Guntram began to improve, and were cemented by the Treaty of \*Andelot in 587. In 585 Childebert came of age and his mother Brunhild reasserted her influence. He inherited Guntram's kingdom on the latter's death in 592. On his own death in 596, his kingdom was divided between his sons \*Theudebert II and \*Theuderic II. The various expeditions of his armies into Italy, linked with imperial \*diplomacy and coercion, had mixed results.

In the \*letters of \*Gregory the Great, he appears incidentally and as a correspondent (*epp.* V, 58–9, 60; VI, 6). He and his mother also figure in the poems of \*Venantius Fortunatus, usually as addressees (*Carmina*, X, 7–8; *Appendix Carminibus*, 5, 6; cf. X, 11). His surviving legislation is the *Decretio Childeberti Regis* of 596. The principal sources for his activities are Gregory of \*Tours (*HF* V–X) and Fredegar (IV, 5–8 and 15–16). ACM

*PLRE* IIIA, Childebertus II. *Decretio*, ed. A. Boretius in *Capitularia Regum Francorum* (MGH Capit. vol. 1, 1883), I, no. 7, 15–17.

**Childebert III** (c.678/9–711) \*Frankish King from 694. Succeeded his brother \*Clovis III as sole ruler during the era of the \*Mayor \*Pippin II. Said in the \**Liber Historiae Francorum* (50) to have been 'a famous and just lord', but often included amongst the *rois fainéants* by subsequent writers. PJF  
*LexMA* 2, 1816–7 s.n. Childebert III (U. Nonn).

**Childebert the Adopted** \*Frankish King (?656–62) Identified variously as the son of \*Grimoald or of \*Sigibert III of \*Austrasia, he assumed the Austrasian throne in place of Sigibert's exiled son \*Dagobert II, as the nebulous focus of the 'Grimoald coup' (\**Liber Historiae Francorum*, 43; *Catalogi Regum Francorum Quattuor*, 2 and 3). The precise year and manner of his death are unknown. JHo

**Childeric I** (d. 481/2) \*Frankish King from before 456 and son of Merovech (\*Gregory of \*Tours, *HF* II, 9), from whom the \*Merovingian dynasty took its name, and the first Frankish King about whom much is known. Gregory of Tours tells us that he was exiled by the \*Franks for sexual misdemeanours, and lived in \*Thuringia for eight years (*HF* II, 12). Since he was back in power by 463, he must have become king well before 456. In 463 he fought at the Battle of \*Orléans alongside the Roman general \*Aegidius (*HF* II, 18), and thereafter became a dominant force in northern Gaul. His young son \*Clovis (Chlodovechus) succeeded him (*HF* II, 27).

In 1653 a \*tomb was found under the Church of S. Brice in \*Tournai, which, together with other valuable items, contained a seal \*ring with his portrait and his name and title (in \*Latin). This is now generally accepted to be Childeric's tomb. Most of the rich \*gold and \*garnet \*jewellery from the burial was stolen from the Cabinet des Médailles in Paris in 1831, but fragments survived, and a good impression can be gained from the illustrated publication of the grave and its contents, by Jacques Chifflet (1655). In 1980s the area around the tomb was excavated by Raymond Bruet, and three pits

of (sacrificed?) horses were found, which seems to confirm Gregory's assertion that he was a pagan. EJ

**Childeric II** (c.655–675) \*Frankish King from c.662. The youngest son of \*Clovis II and \*Balthild, he succeeded \*Childebert the Adopted as King of \*Austrasia (*VBathildis* 5). After the death of his brother \*Chlothar III in 673, he was also made ruler of \*Neustria–\*Burgundy by the opponents of his brother \*Theuderic III and the \*Mayor \*Ebroin (\*Fredegar Continuatus, 2), but this reunification of the Frankish kingdom ended when he was assassinated alongside his pregnant queen \*Bilichild in 675 (\**Liber Historiae Francorum*, 45; *Passio Prima Si. \*Leudegarii*, 5). *LexMA* 2 s.n. Childéric II, 1818 (U. Nonn).

**Childeric III** \*Frankish King (743–51). Last king of the \*Merovingian dynasty, after a six-year interregnum. He was deposed with the endorsement of Pope \*Zacharias and relegated to a \*monastery; \*Pippin III was anointed king. RVD  
*LexMA* 2 s.n. Childéric III, 1818–19 (U. Nonn).

**childhood** While considered a distinct period of life, childhood was not generally idealized by ancient thinkers in Late Antiquity. Although almost all sources advocated love and care for children (and, to a degree, understanding them as innocents), demographic realities meant that mortality rates for minors were extremely high. Over 50% of funerary \*inscriptions in \*Rome commemorate children of 15 years of age or younger, a figure that roughly persists into Late Antiquity. Seasonal death rates also disproportionately affected the under-aged: the burial site at Lugnano (24 km/15 miles west of Terni in Umbria) provides an instance of a single, local outbreak of a deadly disease. Like the broader population, most children probably also suffered periodically from malnutrition and other health problems, conditions more critical for those still in the process of physical and mental development.

Disease and other dangers meant that \*death was a prominent possibility in childhood. Scholars have therefore debated the extent of emotional investment parents had in newborns and small children. Archaeological data from 47 infant burials at Lugnano suggest that both infants and late-term fetuses merited

commemoration and post-mortem protection. The burials from an early 5th-century regional \*epidemic of \*malaria also show the persistence of \*magic and explicitly \*pagan \*sacrifices. In \*cities, commemoration of children did not change markedly in Late Antiquity: the traditional remembrances of a child's good nature, beauty, and innocence all feature prominently in funerary inscriptions. Christianity added new dimensions to such inscriptions, consistent with its moral values and spiritual expectations, but did not greatly change the sentiments expressed.

Children were typically nursed until the age of 2, usually by wet-nurses, although Christian writers encouraged mothers to breastfeed their children (e.g. \*Ambrose, *ep.* 63, 108 and \*Prudentius, *Cathemerinon*, VII, 57–8). Infants were baptized in the 3rd and 4th centuries (e.g. \*Cyprian, *De Lapsis*, 25; *ep.* 64, 2), but adults were hesitant to impose on them at an early age the obligations associated with \*baptism (e.g. Tertulian, *On Baptism*, 18): \*Augustine's mother, for example, was reluctant to agree to her son's request to be baptized when suffering from a life-threatening illness during his boyhood (*Confessions*, I, 11, 17). In the 5th century, childhood baptism became widespread. It was considered part of a child's spiritual protection, supplementing—and not always replacing—customary formulas (such as are found in \*papyri from Late Antique \*Egypt) and such protective devices as scarlet armbands, \*bells, \*amulets, and small Gospel books hung around the neck (\*John Chrysostom, *Homily*, 12 = PG 61, 105–6 and *Homily*, 19 = PG 49, 196).

Once children had reached a certain age, usually 6 or 7, childhood was thought to have begun in earnest. Christian children generally became catechumens and participated in church activities and rituals. For many children, becoming *pueril/puellae* marked the start of formal education. Schooling in the Liberal Arts still formed the basis of \*education in the West and the system of *paideia* in the East, and, as the careers of \*Ausonius and Augustine indicate, was a powerful engine for social mobility. Learning texts by heart and corporal punishment remained components of the curriculum, especially at an earlier age (e.g. Ausonius, VIII Green = *ep.* 22 Evelyn White). Boys attended formal schools, learning successively their letters, \*grammar, and \*rhetoric. Girls were generally, although not exclusively, tutored at home. While the place of religious education took greater prominence in the 4th and 5th centuries with Christianization, traditional secular learning remained essentially intact in the West until the 6th century as is apparent, for instance, from \*Ennodius, *Paraenesis didascalica*. \*Cassiodorus' *Institutiones* (composed in the mid-6th cent.) unified, summarized, and ossified the Christian and secular educational traditions in the West. In the East, the secular tradition,

for which the works of \*Libanius offer much evidence, never disappeared, as may be seen in the series of scenes in the life of a youth called Kimbros depicted on \*mosaics from an unknown site (C. Marinescu et al., in A. Cohen and J. B. Rutter, eds.), and religious education continued alongside it. Christian authors such as \*Basil (e.g. his *To Young Men on How to Profit from Classical Greek Literature*) and \*Gregory of Nazianzus promoted the virtues of a classical education.

For a youth of a more humble background, childhood and becoming a *iuvenis* meant the beginning of work. There is considerable evidence from inscriptions, Christian and otherwise, to show both boys and girls employed in a variety of work (C. Laes, in C. Laes et al., eds.). Most of these inscriptions mention simple manual labour, including building work, \*farming, and \*grain transport, but there are also references to more skilled trades. There are also occasional references to children being apprenticed in highly skilled occupations, such as accountancy and work as a scribe. The decline of \*slavery towards the end of Late Antiquity probably increased the use of free (albeit poor) child labour.

Attitudes concerning childhood as a concept changed somewhat over the course of Antiquity. Christians believed that children were individuals with eternal souls, and thus merited a new kind of attention and care. But they were still half-formed individuals and needed guidance and correction. Like the entire human race, they were distorted by sin and thus needed moral guidance and the common responsibility of both parents (\*Sidonius Apollinaris, *ep.* V, 16, 5). Patristic authors offered advice in matters of corporal punishment, \*asceticism, the moral complacency of parents, and the perils of religiously mixed marriages. More generally, they encouraged active parental involvement in a child's upbringing.

Government also took an interest in minors and there was a continuation of greater imperial involvement (begun in the 2nd century) in their protection. Preservation of patrimonies (*CTh* II, 16, 2–4), general care for a child's welfare (*CTh* III, 17 and *NovMaj* 6, 1), and even Christian-influenced laws (e.g. protecting the children of apostate parents, *CTh* XVI, 7, 2 and 6) were all considered areas upon which government should regulate.

**Chilperic I** \*Frankish King (561–84), son of \*Chlothar I, grandson of \*Clovis I. Initially he inherited a smaller kingdom than his three half-brothers, centred on \*Soissons, but acquired additional territory after the death of \*Charibert I in 567. He fought repeatedly with \*Sigibert I and \*Guntram, especially over control of \*Tours and \*Poitiers, before forging a temporary alliance with his nephew \*Childebert II. He negotiated with the \*Visigoths in \*Spain, and briefly married the Visigothic Princess \*Galswintha, who died in suspicious circumstances; his favoured wife was \*Fredegund. He sent envoys to the \*Emperor \*Tiberius II, and exhibited various cultural and theological interests, including the writing of copious religious poetry; one \*hymn in honour of S. \*Medard survives. In a \*panegyric \*Venantius Fortunatus praised Chilperic's virtues (*Carmen*, 9, 1), but in reporting his assassination in 584, \*Gregory of \*Tours comprehensively denigrated him as 'the Nero and Herod of our time', particularly for his treatment of the Church (*HF* VI, 46). The only one of his many sons to survive him was the infant \*Chlothar II.

**Chilperic II** \*Frankish King (715–21), formerly a monk named Daniel, but supposedly a son of

\*Childeric II (d. 675). He was promoted as a \*Merovingian king by \*Neustrian magnates led by \*Ragamfred. His regime was defeated by \*Charles Martel.

RVD

*LexMA* 2, 1825–6 'Chilpéric II' (U. Nonn).

**Chilperic II of Burgundy** The son of King Gundioc, he became a king of the \*Burgundians c.474. He became \*Magister Utriusque Militae in 474, under the \*Emperor \*Julius Nepos, when his brother Gundobad was \**patricius* in \*Italy; he himself is referred to as *patricius* in the *Life* of S. Lupicinus (one of the \*Jura fathers). \*Sidonius Apollinaris (*ep.* V, 6 and 7) calls him 'our tetrarch', a reference to the division of the Burgundian kingdom with his brothers \*Gundobad, \*Godegisel, and \*Godomar. He seems to have ruled in \*Lyons and Geneva. The date of his death is unknown. \*Gregory of \*Tours (*HF* II, 28) claimed that he was murdered by Gundobad, who afterwards agreed to send Chilperic's daughter \*Chlothild to marry \*Clovis, King of the \*Franks, and that many years later Chlothild encouraged her sons to invade \*Burgundy in revenge for Chilperic's death.

**China** After the fall of the Han dynasty in AD 220, central China divided—the Three Kingdoms period (200–80). The Jin dynasty (265–420) succeeded in reuniting the country but from about 400 China was again split, this time on north–south lines (the Northern and Southern Dynasties). Many of the rulers of the north were from the steppe and it was under these, such as the Xiongnu Northern Liang (397–439) and the Tuoba Northern Wei (383–535), that people, goods, and ideas were exchanged along land routes secured under the Han. These routes connected China with \*Central Asia, and thence to \*India, the \*Persian Empire, and beyond by land and sea. The rulers of the south also continued \*trade and diplomatic contacts through sea and land routes with south and south-east Asia and, indirectly, further afield. Turkic, Iranian, Tibetan, and other peoples ruled kingdoms in what is now north-west China and the Tibetan plateau.

This period is sometimes presented as one of slow development and limited international contacts, in contrast to the succeeding Sui (581–618) and Tang (618–907) dynasties, who reunited central China from 589. However, there is evidence that diplomats, monks, and \*merchants continued to use both north and south routes developed since the Han by land and sea. It was during this period that \*Buddhism became established in China and hundreds if not thousands of Chinese pilgrims travelled by land and sea to India. These included \*Faxian, who went by land, via Central

Asia, and returned by sea, via Sri Lanka. In 429 and 433 Buddhist nuns were taken from Sri Lanka to Guangzhou and travelled on to Nanjing to carry out the ordination of Chinese nuns. By the 4th century there were communities of \*Sogdian merchants from Central Asia in major towns along the land routes and, by the 5th century a sizeable community of Arab and Persian merchants in Yangzhou on the Yangzi River, many of whom probably arrived by sea.

The Chinese and \*Sasanian \*courts had direct contact, the Chinese recording over ten embassies arriving in China in the 5th and 6th centuries. The Sui sent an embassy to the Sasanians and contact was continued under the Tang, with the Sasanians requesting Chinese aid against the \*Arabs. Sasanians were given refuge in China after the \*Arab conquest. Peroz ruled an area in Sistan (\*Sagastan), probably with Chinese support. He visited China around 673, leaving his son as hostage at the Tang court. Persians brought \*Zoroastrianism, \*'Nestorian' Christianity (the \*Church of the East), and \*Manichaeism to China in the 6th and 7th centuries, the Sogdians playing an important role in transmission of the last.

There was indirect contact between the Roman Empire and China during this period, but little evidence of direct links. Two Nestorian monks are credited by \*Procopius and \*Theophanes with smuggling \*silk worms out of China in 551 on behalf of \*Justinian I. While there is already evidence that silk and the mulberries whose leaves the silk worms feed on were cultivated in the Eastern Roman Empire by the 5th century, and little reason for believing in a Chinese monopoly, demand for Chinese silks continued. In 568–9 a Sogdian embassy brought gifts of silk to Justinian I, starting a relationship whereby the Sogdians traded silk from China and Central Asia, travelling through the Caucasus to bypass Persian and then Arab taxation. One document records the Sogdians being quizzed at \*court at \*Constantinople about the Central Asian \*Hephthalites, intelligence that might have informed Procopius' account.

Chinese histories report the arrival in 643 of an embassy from Fulin, most probably Late Antique \*Syria. The 'Western Regions' chapters, a stable part of Chinese dynastic histories during this period, all contain a description of this region, also called Daqin. These briefly described the boundaries, peoples, customs, and goods produced, including storax, valued as a drug in China. Daqin was also the subject of two 8th-century Chinese paintings, no longer extant, and in 719 an embassy from Central Asia presented the Chinese court with a pair of \*lions on behalf of the Romans.

Indirect contacts by a combination of land and sea routes are known, through Central Asia by land or from southern China by sea to the ports of India, Persia, and the Red Sea, routes already recorded in the 1st-century

*Periplus of the Erythraean Sea*. Goods valued in China included African \*ivory, Baltic \*amber, and Roman and Persian \*glass, as well as many goods ascribed to the Romans, including \*dogs, narcissus, coral, and storax.

**China and Central Asia, Christianity in** Christians in \*Central Asia are first noted by \*Bardaisan (d. 222), who mentions them in his *Book of the Laws of Countries* amongst the Kushans in \*Bactria (ed. and tr. Drijvers, 60–1). The \*Syriac *Doctrine of the Apostles* (c.250) describes how the apostle Aggai evangelized 'Gog and Magog', perhaps referring to the northern steppes (Mai, *SVNC* vol. 10, 8, 174), but this is undoubtedly legendary, along with references to the apostle Thomas evangelizing the Chinese (CSCO 167, Scr. arab. 18; p. 138; CSCO 168, Scr. arab. 19, 140–1). Although other \*Syriac-speaking Churches were later involved marginally in Central Asia, the \*Church of the East was always the main Christian presence in the area. A formal ecclesiastical hierarchy in Central Asia is evident as early as the Third General Synod of that Church in 424, when the \**Synodicon Orientale* refers to \*bishops at \*Merv and \*Herat (ed. and tr. Chabot, 43, 285).

The first group outside the \*Persian Empire to be significantly affected by Christianity were the \*Hephthalites, who replaced the Kushans in \*Bactria by the 5th century. \*Cosmas Indicopleustes mentions Christians amongst the 'Bactrians and \*Huns' (III, 65–6), around the time when \*Patriarch Mar \*Aba I (540–52) consecrated a bishop for them, c.550 (Bedjan, *Histoire*, 266–9; GT: Braun, *Ausgewählte Akten*, 217–18). This is not to be confused with the \*Armenian missions to the Caucasian Huns described by \*Zacharias Rhetor (XII, 71 para. o). Merv had a \*metropolitan by the Seventh General Synod (554), and by the Ninth General Synod (585), Herat had a metropolitan and Badghis, in Hephthalite territory, a bishop (\**Synodicon Orientale*, 109, 165, 366, 423).

Christianity continued to spread along the \*Silk Road, through \*Sogdian and Turkic territory, eventually reaching \*China. \*Theophylact Simocatta (V, 10, 13–15) describes Turks in the rebel army of \*Bahram VI Chobin in 591 who had \*crosses \*tattooed on their foreheads, the result of advice from Christians to ward off the \*plague. The mission of \*Aluoben (Alopen) to Xi'an (Chang'an), in China in 635, recorded on the

\*Xi'an stele (781), must have passed through Central Asia and may have included Central Asian participants, alongside the Persian Christians who led the mission. Notably, the stela was erected by Yazdbozid, the son of 'Milis, priest from \*Balkh' (P. Y. Saeki, *Nestorian Documents and Relics in China*, 68, 11\*). As the stele records, Christianity, known as *Jingjiao* (the 'Luminous Religion'), flourished as long as the Chinese rulers of the Tang dynasty remained religiously tolerant. There was apparently a concerted effort to translate Syriac texts and ideas into Chinese, as evidenced by Christian texts discovered at \*Dunhuang (P. Y. Saeki, *Nestorian Documents and Relics in China*, 113–314). However, Christians in China probably remained a small minority, consisting mostly of foreigners, such as Persians and Sogdians, as suggested by names on both the Xi'an stele and the recently discovered Luoyang pillar (814/15).

An important figure in the 7th century was Elia, Metropolitan of Merv, who converted a Turkic ruler and his army c.644, near either the \*Oxus River or the Murghab River, according to the *\*Chronicle of Khuzestan* (CSCO 1–2, Scr. syr. 1–2, 34–5 (text), 28–9 (tr.)). \*Tabari records that Elia subsequently gave \*Yazdegerd III, the last Shah of Persia, a proper burial (R. S. Humphreys (ET), *History of al-Tabari* XV, 89). Unfortunately, Elia's commentaries, \*letters, and church history are not extant (Assemani, *BiblOr* III/1, 148). According to Ibn at-Tayyib, a Patriarch Isho'yahb, probably \*Isho'yahb III (650–8), appointed metropolitans for Herat, India, China, and \*Samarkand (CSCO 167, Scr. arab. 18, p. 121; CSCO 168, Scr. arab. 19, p. 123), although 'Abdisho' bar Berikha dates these metropolitanates to the patriarchate of Saliba-Zakha (714–28), noting that others ascribe them to Ahai (410–14) and Shila (503–23) (Mai, *SVNC* vol. 10, 141–2, 304). The influence of the Church in Central Asia is evident in a letter by Isho'yahb III referring to more than twenty bishops and two metropolitans in the East, probably referring to those beyond the Oxus River (CSCO 11–12, Scr. syr. 11–12, 280 (text), 202 (tr.)).

The \*Arab conquest of Central Asia brought Christians there into contact with \*Islam. Narshakhi describes how, after an \*Arab army under \*Qutayba captured \*Bukhara in 709, a Christian church in the city was converted into a \*mosque (R. N. Frye (ET), *History of Bukhara*, 53). \*Melkite Christians deported to Seleucia-\*Ctesiphon in 540 were further relocated to Shash (Tashkent) by \*Caliph al-Mansur in 762, where they continued to live for several centuries. Meanwhile, the missionary expansion of the Church of the East continued under Patriarch Timothy I (780–823), who describes in his letters the conversion of an unidentified king of the Turks (probably the Qarluq ruler) and his people c.782/83, and the planned consecration of a

metropolitan for the same Turks, along with the Tibetans, c.792/3 (R. Bidawid (FT), *Lettres du Patriarche Nestorien Timothée I*, 117, 124; O. Braun, *OrChrist* 1, 308–11). Around the same time, Timothy refers to the death of the metropolitan of China (CSCO 74, Scr. syr. 30, p. 109; CSCO 75, Scr. syr. 31, p. 72). Christianity later declined in China due to the imperial edict of 845 against foreign religions, and in Central Asia due to the steady advance of Islam, including the Samanid capture of the Qarluq capital Talas in 893 (R. N. Frye (ET), *History of Bukhara*, 86–7). It would only be revived under the Mongols.

Various archaeological sites and artefacts affirm the Christian presence in Central Asia in Late Antiquity, including the Kharoba-Koshuk church in Merv, ossuaries with crosses from Samarkand and Mizzadkan, a monastic church and Syriac cliff \*inscriptions near Urgut, two \*silver vessels and a cloth from Sogdiana with Christian themes, an ostrakon from \*Panjikent, Sogdian coins with crosses on the reverse from around Samarkand and Bokhara, two churches excavated in Aq-Beshim, ostraca with Syriac or \*Sogdian inscriptions from \*Talas/Taraz, a wall painting with a Christian scene from \*Turfan, and crosses found at various locations. Although most of the Christian texts from Turfan date from the medieval period, they nonetheless point to a tradition of using both Syriac and local languages (Pahlavi, Sogdian, \*Persian, and \*Uighur) in Central Asia, with biblical translations generally made from the \*Peshitta.

**Chindasuinth** \*Visigothic king (r. 642–53), elected and anointed at the age of 79 after usurping the throne from Tulga (\*Fredegar, IV, 82). He secured his rule by executing or exiling hundreds of Visigothic nobles and confiscating their property; in 646, the Seventh \*Council of \*Toledo made further provision for the severest punishment of rebels. Urged by \*Braulio \*Bishop of Saragossa (631–51), he had his son \*Reccesuinth crowned joint ruler in 649 (Braulio, *ep.* 37–8), and issued \*coinage with both of their images. An active legislator, he commissioned the compilation of a law code (the \**Book of Judges* or *Leges Visigothorum*) for both Visigoths and Hispano-Romans, which was promulgated by Reccesuinth in 654. He also had literary interests (Braulio, *ep.* 26, 39–41); the \*letters exchanged between him and Braulio are replete with rhetorical courtesy (*ep.* 31–3). He sent Taio (Bishop of Saragossa 651–64) to \*Rome for works of \*Gregory the Great, and patronized the poet \*Eugenius II (Bishop of Toledo 646–57), who nonetheless wrote a scathing epitaph of him (*carmen* 25). **Chinwad Bridge (MP Činwad Puhl)** In \*Zoroastrianism, the place where the deceased meets the personification of their spiritual attributes (the *dēn*) and their thoughts, words, and deeds are weighed. If the good thoughts outweigh the bad, the *dēn* appears young and beautiful, the bridge widens, and the soul passes on to paradise. If not, the *dēn* appears old and

diseased, the bridge narrows, and the soul plummets into hell. POS

*EncIran* V/6 s.v. Činwad puhl, 594–5 (A. Tafazzoli).  
Skjærvø, *Spirit*, 32–3.

**Chionites** East Iranian tribe connected with the Kushans, first mentioned by name in \*Ammianus Marcellinus' description of the \*siege of the Roman fortress-city of \*Amida in 359, where they were serving in the \*army of \*Shapur II (309–79), led by their King Grumbates. The Chionites may be identical with the \*Huns, mentioned in 5th-century \*Bactrian documents, where the name Gurambad is also found. In the indigenous post-Sasanian tradition, they were perhaps identified with the Khyons, in the \**Avesta* a mythical people who waged war against the Iranians at the time of Zarathustra, but later incorporated into \*Sasanian traditional history, where we are told they were chased out of the \*Persian Empire by \*Khosrow I son of \*Qobad I (r. 531–79). POS

*EncIran* (2006) s.n. Xiongnu (Hsiung-nu) (E. de la Vaissière).

**Chios** Large east Aegean island, opposite the Çeşme peninsula of western Turkey. Important \*tax and \*census records survive from the early 4th century. Long a producer of mastic and \*wine, Chios benefited from increasing maritime traffic to \*Constantinople along the Asia Minor coast. Under \*Justinian I, passing Egyptian ships brought date-palm leaves to a \*Miaphysite monk to weave his monastic mats (\*John of \*Ephesus, *Lives of the Eastern Saints*, 51). Remains of a \*basilica with floor \*mosaics in the main harbour town may be from a church of S. Isidore mentioned by \*Gregory of \*Tours (*Gloria Martyrum*, 101). A small coastal settlement at Emporio to the south includes a three-aisled basilica and hilltop fortress, which was occupied into the late 7th century. MLR

**Chiragan** (dép. Haute-Garonne, France) \*Villa of exceptional scale and complexity in \*Narbonensis Prima, near Martres-Tolosane, renowned in particular for its collection of reliefs and statuary, largely in local \*marble. These include a series of imperial \*portraits associated with the \*Emperor \*Maximian and his family, as well as busts of emperors and others down to the

early 5th century (often with their noses deliberately broken before dumping), representations of the Labours of Hercules and other images of classical \*pagan gods, and copies of Greek works. The collection's purpose is unclear but the villa was perhaps the residence of a \*governor or high-ranking magistrate.

**chlamys** A large half-moon cloak (for the shape see *ANRW* II.12.3 (1985), 385–6; Plutarch, *Alexander*, 26) of classical Greek origin equated with, and in Late Antiquity supplanting, the Roman general's *paludamentum*. Often of weft-faced wool twill, sometimes in two layers, it incorporated two tapestry-woven \**segmenta* (\**tablia*) along the straight edge. Secured on the right shoulder with a crossbow or more elaborate \*jewelled brooch, its corners reached the ankles front and back. As the ultimate symbol of military, administrative, and political authority, its quality (\*silk on occasion), shade of \*dye, and *segmenta* reflected the wearer's status. Senior civilian officials wore white (as in the \*mosaic in S. Vitale, \*Ravenna) and the \*emperor wore \*purple. JPW

*RE* 3/2 (1899), 2342–6 (Amelung).

**Chlodio (Clodio, Chlogio)** (fl. 440s) \*Frankish leader who invaded the area around Arras and was defeated by \*Aëtius at Vicus Helena (\*Sidonius Apollinaris, *Carmina*, V, 211–13). \*Gregory of \*Tours (*HF* II, 9) calls him a king of the Franks (the first whom he could name), who was based in *Dispargum* (Duisburg?) before he moved to capture \*Cambrai from the Romans and then occupied the region as far as the Somme. Rumour had it, concludes Gregory, that Merovech and his son \*Childeric I were of his line. \*Fredegair and the \**Liber Historiae Francorum* add dubious biographical detail, and assign him a twenty-year reign. STL  
*PLRE* II, 'Chlogio', 290–1.

**Chlodomer** \*Frankish King (511–524) The eldest surviving son of \*Clovis I and \*Chlothild, he inherited a portion of his father's kingdom, with his residence at \*Orléans. In 523 he killed the Burgundian King \*Sigismund, but died the following year in battle at \*Vézère against his successor \*Godomar. Chlodomer's sons were eliminated from the succession by his brothers. RVD

*PLRE* II, Chlodomer;

M. Heinzelmann, 'Gallische Prosopographie', *Francia* 10 (1982), 580–1.

**Chlothar I** \*Frankish King, 511–61. The youngest son of \*Clovis I and \*Chlothild to inherit a portion of his father's kingdom, with his residence at \*Soissons. With his brother \*Childebert I he murdered Chlodomer's sons in 524, defeated the \*Burgundians in 534, and invaded \*Spain in 541; he also fought against Childebert and his nephew \*Theudebert I, and killed his rebellious son Chramn. After 558 he reigned as the sole Frankish King. His numerous wives included \*Radegund, whom he married after helping \*Theuderic conquer \*Thuringia in 531. His sons included \*Charibert I, \*Guntram, \*Chilperic I, and \*Sigibert I. He was buried at Soissons in the church he had begun to build in honour of S. \*Medard. RVD

*PLRE* II, Chlothacharius.

M. Heinzelmann, 'Gallische Prosopographie', *Francia* 10 (1982), 582–3.

**Chlothar II** (584–629) Son of \*Chilperic I and his Queen, \*Fredegund, and a \*Frankish King almost from birth (\*Fredegair, IV, 3), although \*Gregory of \*Tours, the principal source for his early years, in indirectly calling his paternity into question, reflects widespread rumours and the view of the rival \*Austrian court (*HF* VI, 41; VIII, 9 and 31). Chlothar's early years were a minority dominated by his mother (d. 596/7) and other Neustrian nobles and by the interventions of the senior \*Merovingian, his uncle \*Guntram, who died in 592 (\*Fredegair, IV, 14; *HF* VII, 7; VIII, 18 and 42 and 44; X, 11 and 28). His small kingdom was centred on \*Rouen, but he made efforts to expand his dominions. \*Paris was taken in 596 (Fredegair, IV, 17) and lost in 600 (Fredegair, IV, 26). He met with little success until the deaths of his cousins \*Theudebert II in 612 and \*Theuderic II in 613, after which he soon took the kingdoms of Austrasia and \*Burgundy, brutally executing the dowager Queen \*Brunhild, and eliminating by various means Theuderic's sons, the great-grandsons of Brunhild. He now ruled a Frankish kingdom united for the first time since the death of his grandfather \*Chlothar I in 561. In 617 he cancelled the \*tribute paid by the \*Lombards in return for a lump sum. In 622, he appointed his young son \*Dagobert to rule the kingdom of Austrasia. With the death of the Burgundian \*Mayor of the Palace \*Warnachar, he assumed direct rule of Burgundy in 626. All subsequent Merovingian kings traced their descent from Chlothar II (Fredegair, IV, 37–55).

He is the addressee of a \*letter from \*Gregory the Great (*ep.* XI, 51 of AD 601). Two pieces of significant legislation of his survive: the so-called *Praeceptio* (actually the *Constitutio*) of Chlothar II, possibly

from 613 (although some scholarship has attributed this to Chlothar I); and the \*Edict of Paris of 18 October 614. ACM  
PLRE III, Chlotharius II.

Chlotharii II praeceptio 584–628 and Chlotharii II edictum anni 614 Oct. 18: ed. A. Boretius in MGH *Capitularia Regum Francorum* I (1883) in MGH *Leges*, nos. 7 and 8, 11–17.

**Chlothar III** (c.649–73) \*Frankish King (657–73), the eldest son of \*Clovis II and \*Balthild, who inherited the \*Neustro-Burgundian kingdom at his father's death. His mother acted as regent until she was ousted in 664; the \*Mayor of the Palace \*Ebroin remained a dominant figure throughout his reign (\**Liber Historiae Francorum*, 44–5). PJF  
*LexMA* 2, 1871–2 'Chlotar III' (U. Nonn).

**Chlothild** (d. c.545) Daughter of \*Chilperic II of \*Burgundy. After killing Chilperic, his brother, \*Gundobad agreed to send her to marry King \*Clovis I of the \*Franks (\*Gregory of \*Tours, *HF* II, 28), to whom she bore Ingomer (who died in infancy), \*Chlodomer, \*Childebert I, and \*Chlothar I. Although her family were \*Homoean (\*Arian) Christians according to \*Gregory of \*Tours, he portrays her as a major influence on Clovis's conversion to Catholic Christianity. After Clovis's death, Chlothild lived a religious life in the Church of S. \*Martin at \*Tours (*HF* II, 43), but remained politically active; Gregory claims she inspired her sons to attack Burgundy in 523 to avenge her father (*HF* III, 6 and 1). She was buried in S. Peter's in \*Paris (later S. Geneviève), alongside Clovis (*HF* IV, 1). Her *Life* dates from the Carolingian period. EJ

**chorepiscopus** (Gk. 'country bishop', 'rural bishop') *Chorepiscopi* emerged in the 3rd century in the eastern part of the Empire. They were numerous in Asia Minor in the 4th century, where in some places they had the authority and functions of a \*bishop, but elsewhere were under the direction of the local bishop. The office appears in the 5th century in \*Latin-speaking lands, first at the \*Council of Riez (439), becoming more common in some regions, especially \*Germany, but never becoming universal. *Chorepiscopi* were teachers, supervised \*deacons and \*priests, and in some places ordained clergy, anointed, administered the sacrament of \*Penance, and consecrated churches. *DDC* 3 (1942) s.v. 'chorévêque', 686–95 (Leclef).

**Choricus of Gaza** (fl. c.525–50) Orator and teacher in \*Gaza. He held the publicly funded \*chair of \*rhetoric in Gaza after his teacher, \*Procopius of Gaza. His surviving works include two encomia on \*Bishop Marcian, containing substantial descriptions of the churches of S. Sergius and S. Stephen, a double encomium for two local notables, Aratus and Stephanus, and an improvised encomium of the \*Dux Palaestinae, \*Summus. We also have \*funeral orations for Marcian's mother Maria, and for Procopius of Gaza, as well as epithalamia and introductory talks (*laliai*).

These epideictic speeches evoke the urban culture of Gaza with its public and private celebrations and reveal the networks that linked intellectuals with representatives of the Church and the secular authorities. They also illustrate the intellectual ambience of the \*city and the interaction between school and civic \*rhetoric in this period. The use of classical and mythological allusion is carefully modulated to fit the subject of each speech, being frequent in the epithalamia for Christian couples but far more restrained in the speeches for Marcian and his mother. Choricus engaged with popular culture and its critics in his *Defence of the Mimes* which provides a rich array of arguments to counter the frequent criticisms of these comic \*actors.

More directly linked to Choricus' teaching activity is his collection of \*declamations. The subjects include judicial and deliberative speeches on historical and fictional situations and on themes drawn from \*Homer's *Iliad*. Each is prefaced with introductory remarks identifying the issue and the approach taken by the speaker, making them valuable testimony to the practice of declamation in the 6th century. RW

**Christ, iconography of** The \*cross, the *Agnus Dei* (Lamb of God), the *hetoimasia* (empty throne), the anchor, and the \*fish are symbolic representations found in a wide variety of media from terracotta \*lamps to \*mosaics. Early images of Christ incarnate are experimental, as Christian patrons portrayed him in various roles. Christ as the \*Sun, as Philosopher, as Law Giver, and as \*Miracle worker are common in the 3rd and 4th centuries. These portrayals show Christ as an actor in a narrative who can compete with \*pagan gods such as Apollo, and perform miraculous feats of healing

or offer protection and counsel. Christ is shown with or without a cruciform halo, bearded to indicate an older figure, or beardless to show a youthful god. This experimentation is seen in Christ's \*hairstyle which ranges from short to long and curly and in a range of colours from white to red and from blonde to black. Gradually this becomes standardized as the bearded dark-haired Christ with long hair, and a cruciform halo, who remains an actor in his narratives, but is also a more iconic and static figure as the Pantocrator, or Judge. **Christianity, Aksumite** A form of Christianity is attested early in the 4th century, was officially adopted at the capital c.340–50, and spread widely through the kingdom by the early 6th century. \*Rufinus records that \*Frumentius, arriving in \*Aksum c.320, found Christians among the foreign trading community there (*HE* X, 9–11). \*Coinage and \*inscriptions of King \*Ezana indicate his conversion midway through his reign, but it is clear that the new religion was not widely adopted beyond the capital until 100 to 150 years later. This last development is demonstrable archaeologically and is attributed in Ethiopian tradition to the activities of the \*Nine Saints from the Eastern Roman Empire who founded churches and \*monasteries, some of which are still in use, in several areas. By the early 6th century, the Aksumite kingdom was thus predominantly Christian through the greater part of its territory. Christianity has been firmly embedded in the highlands of Eritrea and northern \*Ethiopia ever since that date, although the area has become increasingly isolated from co-religionists since around the 9th century, and many of its features may be traced back to its Aksumite origins.

\*Ge'ez, still in use as the liturgical language, was the principal vernacular of ancient Aksum, but the limited availability of written sources means that continuity can be most clearly demonstrated in matters which relate to buildings and artefacts. \*Marble chancel \*screens, imported in prefabricated form from the \*Constantinople vicinity around the 6th century, were imitated in wood for several centuries afterwards. Characteristic artefacts such as processional \*crosses, \*baptismal tanks, and vellum manuscripts incorporating canon tables were already in use during Aksumite times. Aksumite churches were \*basilican, following an architectural style already present in northern Ethiopia during pre-Christian times, and such churches—both built and rock-hewn—continued to be created and used long

## Christianization

afterwards, being supplanted by the now widespread round churches only around the 14th century. DWP S. C. Munro-Hay, 'Sainly Shadows', in Raunig and Wenig, *Afrikas Horn*, 137–68.

**Christianization** See CONVERSION AND CHRISTIANIZATION.

**Christians, persecution of** Until the early 4th century AD, Christians were regularly subjected to local pressure, backed by threats of \*torture and execution, to conform to the practice of civic worship which formed the core of public life in the \*cities of the Roman Empire. At three times such pressure was universal and directed from the centre by the imperial government, under the \*Emperor \*Decius (249–51), in 257–9 under the Emperor \*Valerian, and during the Great Persecution which began in 303 and lasted till 306 in \*Britain, \*Gaul, \*Spain, and \*Africa, but until the \*Letter of \*Licinius of 313 in \*Anatolia and \*Oriens (including \*Egypt). Thereafter commemoration of the persecutions was integral to the practice of Christianity.

### Sources

Most \*martyr passions, descriptions of the sufferings of individual Christians, are romanticized accounts written long after persecution was a live threat. The *Collection of Ancient Martyrdoms* made by \*Eusebius of Caesarea is lost. No more than two dozen passions survive which on objective criteria can be said to reflect actual events and contemporary attitudes (Barnes, *Hagiography*, 357–9). There is, however, copious other evidence for the persecutions. An exchange of \*letters (X, 96–7) between the Emperor Trajan and Pliny the Younger, governor of \*Bithynia in the first decade of the 2nd century, lays down procedure for dealing with Christians. The treatises and over 80 letters of \*Cyprian, \*Bishop of \*Carthage, are vivid evidence of attitudes and events during the Decian and Valerianic persecutions. The \*Festal Letter of Easter 306 from \*Peter, Patriarch of \*Alexandria, provides a (remarkably lenient) tariff for penance for Christians who had lapsed during the Great Persecution. Eusebius preserves contemporary documents from the 1st century onwards and information from the Great Persecution of his own time in his *Church History* (HE) and *On the Martyrs of Palestine*. \*Lactantius' *On the Deaths of the*

*Persecutors* (Mort.) describes in vitriolic detail and with the insight of a political insider God's vengeance on emperors who dared to persecute Christians. Further contemporary records of Christian attitudes and pagan motives are furnished by such writers as Justin Martyr, Tertullian (e.g. *To the Martyrs*), and \*Origen (e.g. *Preparation for Martyrdom*).

### Pagan motives

The initial impetus to make Christians conform was local, as is indicated by the correspondence of Pliny and the letter concerning the \*Martyrs of \*Lyons (Eusebius, HE V, 1–2), and local concerns were apparent as late as the last stages of the Great Persecution. Romans were not particularly intolerant of unusual beliefs or religious practices, though they might find them funny (e.g. Apuleius, *Metamorphoses*, VIII, 24–IX, 10). But the only technology which cities had for securing the sustained cooperation of the forces of Nature was to perform the regular round of civic celebrations in honour of their public gods; the anger of the gods if they were ignored might give rise to 'pestilence and droughts, wars, \*famines, locusts, mice and hailstorms' (\*Arnobius, I, 3).

Christians considered the practice of public religion incompatible with their worship of the entity which had created the entire universe out of nothing. They were prepared to offer \*prayer for the emperor's safety (*salus*) and for communal well-being, but were not willing to offer \*sacrifice to him or to the communal gods (e.g. Athenagoras, *Legatio*, 37; Tertullian, *Ad Scapulam*, 2). They were persecuted therefore not for what they did but for what they refused to do. It is true that they had occasionally to defend themselves against accusations that Christian worship involved orgies and the eating of babies (e.g. Eusebius, HE V, 1, 52; Athenagoras, *Legatio*, 3; Minucius Felix, 9 and 28–31), and accusations of immorality were manufactured by pagans as late as 311/13 (Eusebius, HE IX, 5), but Pliny had known that such *flagitia cohaerentia* amounted to nothing (*ep.* X, 96, 2 and 7–8). It was because they refused to participate in public worship of the community's divine protectors that Christians were rounded up and brought before the \*governor as he made the rounds of his \*province trying capital cases. The treatment they then received might depend heavily on the personal predilections of the governor (Tertullian, *Ad Scapulam*, 3–5).

### General persecutions

It is unclear why in 250 Decius decided to order that the entire population of the Empire should sacrifice and obtain a \*libellus certifying their compliance. He might have been seeking divine support in the campaign against \*Goths and \*Carpi (in which he was killed);

whether or not he intended to entrap Christians he certainly did so. \*Bishops who suffered imprisonment and death included Babylas of \*Antioch, Alexander of \*Jerusalem, and Fabian of \*Rome (Eusebius, *HE* VI, 39, 1–4). \*Dionysius of \*Alexandria escaped and Cyprian of Carthage went into the country, from where he continued to direct church affairs. Decius' successor, \*Trebonianus Gallus, threatened to sustain the persecution, but it ended with the \*accession of Valerian in 253.

However, Valerian came under pressure from his ambitious \*Praefectus Praetorio, and in 257 moved to enforce the practice of public worship. Dionysius of Alexandria describes how the judge at his trial pressed him to worship 'the natural gods', because other Christians would follow his lead (*HE* VII, 11). He was sent into \*exile, as was Cyprian of Carthage. A year later, an imperial \*rescript to the \*Senate and \*letters to governors initiated further executions, including those of Cyprian and Sixtus (Xystus) II of Rome (Cyprian, *epp.* 80–1). After the Persian capture of Valerian in 260 his son \*Gallienus explicitly restored 'freedom of action' and their buildings and cemeteries to Christian churches (Eusebius, *HE* VII, 13).

More information is available about the causes and course of the Great Persecution which began on 23 February 303 and persisted till 306 in the western half of the Empire and, in fits and starts, until 313 in the East. Lactantius describes how the insubordinate Caesar \*Galerius was able to bring political pressure to bear on \*Diocletian (*Mort.* 9–11). Edicts ordered the destruction of church buildings, the confiscation of scriptures, and the dismissal of Christians from the imperial service, and then the imprisonment of clergy who were to be coerced into sacrificing (*HE* VIII, 2, 4–5; VIII, 5, 1; VIII, 6, 8–10). Lactantius describes the demolition of the church at \*Nicomedia (*Mort.* 12), documents in the \*Optatan Appendix record the confiscation of Christian books in Africa which gave rise to the \*Donatist schism, and two copies of the \*report of proceedings in the trial of \*Phileas, Bishop of Thmuis, by the \*Praefectus Augustalis survive on \*papyrus. The Fourth Edict of the persecution issued early in 304 enjoined universal sacrifice (*MartPal* 3, 1; *Mort.* 15, 4). It was not enforced in the West. Indeed, persecution ceased altogether in the West in 306 with the \*accession of \*Constantine I in Britain, Gaul, and Spain (*Mort.* 24, 9) and the usurpation of \*Maxentius at \*Rome (Eusebius, *HE* VIII, 14, 1).

Eusebius recounts the trials and martyrdoms which continued in fits and starts in the East, in general in the *Church History* (*HE* VIII) and in the two recensions of his chilling memoir *On the Martyrs of Palestine* which describes their effect on his own comrades and his teacher, the martyr \*Pamphilus. In the spring of 311, on his deathbed the Emperor Galerius issued an edict,

reproduced in full by Lactantius (*Mort.* 34) and Eusebius (*HE* VIII, 17), stating his motives for starting the persecution and decreeing that there might be Christians once more and that they might assemble in their conventicles. Eusebius evokes the lights in the churches that \*Eastertide (*HE* IX, 1). The lull was not to last. From the autumn of 311 onwards \*Maximinus Daza resumed persecution in Anatolia and \*Oriens. He was responding in part to local pressure, apparent from the \*petitions sent to him from places as disparate as Antioch, \*Tyre, \*Lycia, and \*Pisidia (Eusebius, *HE* IX, 2 and 7) and to the \*oracles uttered by a statue of Zeus Philios set up at Antioch by \*Theotecnus, the city's \*Curator Rei Publicae. Peter of Alexandria, the biblical scholar \*Lucian of Antioch, and \*Methodius, Bishop of Olympus in \*Lycia, were all martyred. Persecution ceased only when Maximinus Daza was eliminated by Constantine's ally, the Emperor \*Licinius, who issued the Letter of Licinius on 13 June 313 promising the resumption of toleration and the restitution of Christian property (*Mort.*, 48; Eusebius, *HE* X, 5, 2–14).

Thenceforth, methodical persecution of Christians ceased in the Roman Empire. The name of only one martyr is known from the reign of Licinius, and the Emperor \*Julian (361–3) was too canny to enforce a centrally planned persecution as he knew that martyrdoms simply stiffened Christian resistance. In the late 4th century Basil could look back on the persecutions as 'the good old times when God's churches flourished, rooted in faith, united in love' (*ep.* 164, 1). The persecution of Christians in \*Gothic territory in the time of S. \*Sabas, in the Persian Empire under \*Shapur II, and in \*Najran in the early 6th century, however, were to evoke comparable spiritual strength expressed in martyr passions whose literary manner resembled those composed in the Roman Empire.

### Christian reaction

From the pagan point of view the persecutions could be deemed successful. Cyprian describes queues snaking up the side of the Capitol at Carthage keen to do their public duty and sacrifice (*De Lapsis*, 8–9, cf. 24–6). Furthermore persecution generated division within the Church between the lapsed and rigorists who resented them, such as the \*Novatianists after the Decian Persecution, and after the Great Persecution the Donatists in Africa and the \*Meletians in Egypt. Documents generated by bishops regulating reconciliation, such as Cyprian's *On the Lapsed* and Peter of Alexandria's Easter Letter of 306, reveal a broad range of stratagems adopted by Christians to frustrate the authorities, from bribery and feigning an epileptic seizure to sending pagan friends, or even Christian slaves, to sacrifice in their place (Peter, *Canons*, 12 and 5–7). Simply running

away, however, becoming a refugee for Christ, was commended (e.g. *de Lapsis*, 10; Peter, *Canon* 13), not least because Christ himself (Matt. 10: 23) advocated it. But the heroes of the Church were the martyrs, those who were prepared to sustain their witness to Christ despite torture and intimidation up to the point of execution. The terror and trauma of persecution and the spirit of their resistance to it ensured that their stories were told, their \*relics venerated, and their sufferings continued to be formative in the development of Christian spirituality. ## Christians, persecution of, Persian Empire

Some form of Christian persecution is mentioned in a 3rd-century \*inscription erected by the high priest \*Kerdir (Kartir), who lists Christianity among foreign religions that he 'smote' and drove from the land under \*Bahram II (r. 276–93). It was however under \*Shapur II (r. 309–79) that persecutions became violent. The earliest incident was in Shapur's ninth year at Karkā d-Bēt Slok (\*Kirkuk), but persecutions mostly occurred after 341, caused apparently by the refusal of \*Symeon bar Sabba'e, the \*metropolitan of \*Seleucia-Ctesiphon, to collect a special tax to finance Shapur's offensives against \*Constantius II. \*Martyr passions describe the persecutions and executions in detail. The cited crime is often collaboration with the Romans. A list of Persian \*martyrs is appended at the end of the *Syriac Martyrology of 411*.

Occasional persecutions happened under \*Yazdegerd I (r. 399–421), when in one case, a Christian priest destroyed a \*fire temple built next to a church. Further instances occurred under \*Bahram V (r. 420–38) and

\*Yazdegerd II (r. 438–57)—the events from 446 are recorded in the *Acts of Ādur-hormizd and of Anābid*. The reign of \*Khosrow I (r. 531–79) also witnessed periodic martyrdoms of individuals (though not large-scale persecutions), probably caused by proselytism. This was forbidden and punishable by death according to the treaty of 562, which granted Christians freedom to practise their faith but not to convert others. While the Persian authorities targeted those who stepped outside the normal conventions, in the late period large-scale persecutions were not the norm and the \*Catholicus and hierarchy of the \*Church of the East were an integral part of the imperial \*administration.

The martyr passions which have survived in \*Syriac and \*Greek (mostly translated into Syriac from Greek), with additional information from \*Armenian authors, are of varying historical value: some were written shortly after the events, occasionally by eyewitnesses, others are more or less reliable literary compositions based on tradition. The trials are described in detail and provide information about the workings of the courts at the time, and information about the location of the trials and about the martyrs themselves provides valuable details about administrative history and historical geography. Fragments of \*Sogdian translations have been found at \*Turfan. POS

**Christians under Islam** The 7th-century \*Arab conquests established Muslim hegemony over a majority non-Muslim, mostly Christian, non-Arab population. A significant number of Christians were in close contact with the Muslim Arabs at this early period, joining them as \**marwali* ('clients'), either through \*conversion, manumission, or association, or interacting directly with them as outsiders. \*Arabic-speaking Christians, deserting Byzantine troops and other Christian groups, are said to have joined the conquest \*armies and are also mentioned amongst those being assigned allotments in the garrison cities in the conquered areas. *Marwali* were enrolled on the Muslim

military register (*\*diwan*) but the extent of their entitlement to military stipends (*'ata*) is debated in the sources. Others interacted directly with the new rulers because they continued to run the *\*administration* or were involved in trading and other commercial activities in the garrison cities where the Arabian conquerors were overwhelmingly located. Religious leaders, such as patriarchs and *\*bishops*, were involved in the negotiating of peace treaties with the conquerors and many continued to be closely associated with the new rulers' *\*courts*. The vast majority of Christian subjects, however, did not experience any interaction with the Arabs at this time. Although administrative and fiscal changes were introduced, these were executed by the same local officials as had been in charge before the conquests with the occasional presence of Arabian soldiers. Arabian settlement outside the garrison cities remained low until the 8th century, and the estates that had come into the possession of Arabian elites often continued to be managed by local managers.

Relations between Muslim authorities and Christian subjects was governed by the *\*Qur'ānic dhimma* status. Monotheists were guaranteed personal safety, protection of their property, and freedom to practise their religion in exchange for regular tribute payments (*\*jizya*). Land administered by Christians was subject to a higher tax than that in Muslim hands. While documentary sources indicate that these taxes were levied from the beginning of Arabian rule, their religious character is not explicitly expressed and references to religious communities are lacking. Whether out of theological (a pluralist *\*umma* incorporating people of different faiths) or pragmatic (minority rule under continuing military threat) conviction, Arab rule did not, at this period, confront Christian institutions or individual believers negatively in a systematic manner. Muslim rule even seems to have brought some relief to *\*Miaphysite* communities who had suffered Byzantine-sponsored *\*Melkite* persecutions in the immediate pre-Islamic period, while interreligious Christian strife continued at the new rulers' courts.

A range of administrative adjustments and governmental measures at the end of the 7th and beginning of the 8th century reflect a change of policy aimed at more direct managerial involvement and an Islamization and Arabization of rule. Surveys of people, land, and cattle allowed for greater tax yields, as did close observation and control of taxpayers' movements. Resulting economic pressure led to fugitives and an increase in the number of Christians wanting to join the *umma* through conversion as well as other expressions of financial distress. At the same time, public expressions of Muslim faith appeared on *\*coinage*, in new buildings such as the *\*Dome of the Rock* (completed 691–2) with its famous *\*inscription* addressing Christians directly,

and in the documents produced by the chancery which used, it was now decided, only Arabic, at the expense of local administrative languages, and no *\*crosses* or other Christian expressions of faith were allowed. The decision to have Muslim administrators replace Christian ones at the lower levels of the administration reduced opportunities for indigenous Christian elites, who were forced into lower administrative positions or to find alternative careers, for example in the Church and *\*monasteries*. In other cases walls were literally drawn up between religious practitioners. In 706 the decision was made to build a large congregational *\*mosque* on the site of the Church of John the Baptist in *\*Damascus* where up to then Christians and Muslims had been worshipping together. The new *\*mosque* was decorated with *\*mosaics* in Byzantine style but using innovative images without any living creatures depicted. For the first time, monks were taxed and anecdotes about strained relations between the Muslim authorities and religious leaders increase. In the literary domain borders were drawn sharper with Muslim-Arab expressions against assimilation with the subjected population and polemical writings increasing. The Pact of *\*Umar*, ascribed in the Muslim sources to the time of *\*Caliph Umar I* (r. 634–44) and gaining important legal force in the Muslim tradition, seems to have been a product of this period as well, with its impositions of distinct *\*dress* and behaviour in an attempt to keep religious groups clearly separated reflecting in fact a situation of more intense interaction.

While in the public and political arena religious demarcations were more forcefully drawn affecting the lives of individual believers in real ways, religious principles did not dictate the social order. The ecclesiastical claim, from the late 7th century onwards, to legal authority was a response to the existence of a pluralist legal system in which Christians moved between Muslim courts, *\*bishops'* courts, and informal Christian legal arenas. Besides the prohibition against Christian men marrying Muslim women, no restrictions on social contacts existed. Interreligious contacts allowed for exchange of ideas and skills.

In the 8th century Arab permanent settlement outside the garrison cities increased also due to the growing presence of Arabs at lower echelons of the administration. While different areas and communities of the Islamic Empire experienced different settlement patterns and related processes of convergence, this intensified interaction through exchange and intermarriage, eventually led to the more general processes of Arabization and, intensifying over the subsequent centuries, conversion. With more Christians using Arabic, a Christian Arabic intellectual and literary tradition developed from the mid-8th century in which theological and philosophical developments were expressed

and which made important contributions to Islamic culture for the centuries to come. PMS

**Christian symbols on coins** These began to appear on Roman (and, later, derivative western) \*coinage from the 4th century onwards. \*Constantine I introduced a \*cross on some of his coins but also continued to use pre-Christian symbols. Combinations of pre-Christian and Christian \*iconography continued until the 7th century when the cross on steps and later the bust of Christ signalled a clear move towards a visually Christian coinage. Aksumite \*coinage replaced pre-Christian iconography with Christian religious symbols from the mid-4th century onwards. RRD

**Christmas** Early Christian chronographers posited a number of possible dates for the day on which Jesus was born. The first evidence of liturgical celebration of the anniversary on 25 December (a.d. viii Kal. Jan.) is in the \**Codex-Calendar of 354* (*Fasti Consulares* and *Depositio Martyrum*).

Christians were concerned with the chronological patterns in world history and they believed in keeping anniversaries accurately (e.g. \*Cyprian, *ep.* 36, 2 on \*martyrs' \*festivals). There was a common belief that perfect people lived mathematically perfect lives, and using Jewish and Roman calendars it was calculated that either the Crucifixion or the Resurrection took place on 25 March in the equivalent of AD 29 (e.g. Tertullian, *Against the Jews*, 8; \*Lactantius, *Mort.* 2). 25 March was therefore identified as the day of Christ's conception (though the liturgical celebration of the

Annunciation is known only from the 6th cent.), and the date of 25 December for the anniversary of Christ's birth could be calculated easily from that of his conception (e.g. \*Augustine, *De Trinitate*, IV, 5, 9). The probability that this was the process of reasoning is reinforced by the fact that Christians who made their calculations from Greek calendars placed Christ's Passion on 6 April, and so celebrated the \*Epiphany (for them the equivalent of Christmas) on 6 January.

The Calendar section of the *Codex-Calendar of 354*, which lists exclusively civic rather than Christian festivals, is the only text to place on 25 December one of the rather numerous civic festivals of the \*Sun, the Natalis Invicti, the festival of the Unconquered Sun, celebrated with chariot-racing (*CIL* I/1, 356–7, cf. 409–10). Medieval writers interested in suggesting continuities between pagan and Christian celebrations, in particular a frequently quoted scholiast on the \*Syriac writer Bar Salibi (d. 1171), liked to think that the Christian festival simply supplanted the celebration of the Sun. There were certainly 5th-century bishops who felt obliged to remind their people at Christmas to honour not the Sun but the Creator of the Sun (Augustine, *Sermon*, 190; \*Leo I, *Sermon* 22, 6). **Christodorus of Coptos** (fl. 500) A leading poet of the reign of \*Anastasius I. His lost works, mentioned by the \**Suda*, included epic \**patria* of \*Constantinople (in twelve books), of \*Thessalonica (in 25), and of Nacle (a \*city near Heliopolis in \*Egypt), \*Miletus, \*Tralles, and \*Aphrodisias. Also lost is *On the Students of the Great Proclus* (one verse is quoted by \*John Lydus); *Lydiaca*, probably a *patria* for \*Lydia; and *Isaurica*, an epic poem on Anastasius' war in \*Isauria in the 490s. Surviving works include two funeral \*epigrams for John of Epidamnus (\*Consul of 467; *Anth. Pal.* VII, 697–8), and an *Ecphrasis of the Statues in the Zeuxippus Baths* in Constantinople (*Anth. Pal.* II), probably delivered at the \*Baths themselves. The *Ecphrasis* (in 416 hexameter verses) consists of a series of short epigrams on about 80 \*statues. The collection had a prominent Trojan theme and the poem compares Anastasius to Pompey and the poet himself to \*Homer. Christodorus' style was influenced by \*Nonnus. He should not be confused with another Christodorus from Egyptian \*Thebes, also mentioned in the *Suda*, who wrote an *Ixeutica* ('fowling') in verse and a collection of the \*miracles of Ss. \*Cosmas and Damian. **Chromatius of Aquileia** (\*bishop 388–406/7) Preacher and leader in the northern Italian \*city of \*Aquileia. Chromatius led an \*ascetic group 369–72 which included \*Rufinus, \*Jerome, Heliodorus, and others 'like a chorus of the blessed' (Jerome, *Chron.* 247f. Helm). As a \*priest he spoke at the \*Council of Aquileia in 381 in favour of the Nicene position. Jerome credited Chromatius with eliminating the \*Arians in the city (*ep.* 7). He mediated in the dispute between Jerome and Rufinus in 401 and funded works for both. His final act seems to have been to advocate on the part of \*John Chrysostom in 405, in response to which Chrysostom sent a \*letter to Chromatius (*ep.* 155). There survive 45 \*sermons, misidentified until the mid-20th century, and a partial commentary on S. Matthew's Gospel. The sermons confirm the image of Chromatius as leader of the city in the face of growing threats, especially after the siege by \*Alaric in 402 (*Sermon* 16). RJM

### **Chronica Theodericana (Anonymus Valesianus II)**

Modern title for anonymous extracts preserved in a single 9th-century manuscript (Cod. Berol. Phillippus 1885) which provide valuable information on the years from the elevation of \*Julius Nepos as \*emperor in the West (474) to the death of the \*Gothic \*King \*Theoderic (526). The excerpts focus on Theoderic's rule which is divided into 30 good years (chs. 36–78) followed by three bad years (chs. 79–96), calculating from 493 when his rule in \*Italy was recognized by the \*Emperor \*Anastasius I. Attention is also paid to contemporary events in the East. Sources used include \*Eugippius' *Life of \*Severinus*, local \*Ravenna annals, and oral accounts. Because the author was a \*Homoousian ('Catholic'), a Roman supporter of Pope \*Symmachus, wrote in Ravenna in the 530s/540s, and was conscious of the connection of East and West, he is sometimes identified with \*Maximian, \*Bishop of Ravenna (546–53). However, the manuscript heading *ex libris chronicorum inter cetera* implies multiple original sources rather than a single one. BC

### **Chronicle, Maronite**

Anonymous \*Syriac record written shortly after 664, covering the period between the end of the reign of Alexander the Great and the year 664. The author, a \*Maronite living in \*Palestine, witnessed \*Arab–Byzantine battles (siding with the latter). He saw also the \*Arab civil war between \*Ali (murdered in 661 'while praying in \*Hira') and \*Mu'awiya (d. 680, siding with the latter). He records also the tense relations between various Christian communities and the \*Umayyad Caliph Mu'awiya. AHA

**Chronicle of 452** See CHRONICLES, GALIC.

**Chronicle of 511** See CHRONICLES, GALIC.

**Chronicle of Arbela** A history of \*Syriac Christianity in \*Adiabene under the Parthians and \*Sasanians (ms. Berlin Or. fol. 3126). A. Mingana (1907), its first editor, attributed the *Chronicle* to a 6th-century author, Meshiha-Zeka ('Christ has conquered'), writing to a friend called Pinhes. The work presents in chronological order short narratives concerning the \*bishops of \*Arbela (mod. Erbil), covering a period from the 2nd to the beginning of the 6th century, as a catalogue of the bishops of the see of Arbela. The *Chronicle* claims that there were already seventeen Christian bishops in the \*Persian Empire at the time of the rise of the \*Sasanian dynasty in the 220s.

Since the study by P. Peeters (1925) and the analysis of J. M. Fiey (1967), who considered that the *Chronicle* was a forgery by Mingana and thus historically unreliable, scholars have been divided on its authenticity. Some ancient sources were undoubtedly used in this document. CJ

**Chronicle of Edessa** (ms. title: *Stories of Events in Brief*) An important source for the history of the \*city of \*Edessa from the year 133/2 BC (A.Gr. 180) i.e. the beginning of the kingdom of \*Osroene, until AD 540. It systematically notes the floods of the River Dayzan and provides data on the succession of the \*bishops of the \*city, the construction of churches, and other local matters. It was based on the royal and episcopal \*archives of Edessa, completed with information on other regions of \*Syria and \*Mesopotamia and on the religious history of the Roman Empire. The extant

chronicle is an abbreviated version, edited in the 6th century, surviving in \*Syriac in a single manuscript (Vat. Syr. 163), of a more extensive text, not preserved, the *Original Chronicle of Edessa*, excerpts of which can also be found in other \*Syriac \*chronicles. WW

*GEDSH s.v.* Chronicle of Edessa, 97–8 (Van Rompay).

ed. (with LT) I. Guidi, *Chronica minora*, 1 (CSCO 1–2, Scr. syr. 1–2 (1903), 1–13: text; 1–11: tr.).

**Chronicle of Khuzestan** Important 7th-century east \*Syrian chronicle, written in \*Syriac, also known as the *Guidi Anonymous* after its original editor. It begins with the reign of the \*Sasanian King \*Hormizd IV (579–89) and ends with the early \*Arab conquest. The title 'Episodes taken from Ecclesiastical and Secular Histories' given in the manuscript (Baghdad, Chaldean Monastery 509; formerly Alqosh ms 169) suggests that the text consists of brief extracts from a larger work. They furnish a chronological account of the main events in the \*Church of the East, as well as the lives of the \*patriarchs, prominent figures, and scholars.

The *Chronicle* concludes with an appendix probably taken from another author. It relates the arrival of the Arabs and the defeat and death of \*Heraclius, and gives additional hagiographical details and information on the founders and architectural features of important cities. In contrast to the first part, the second is much more detailed. Its well-informed author must have been a \*bishop or a \*metropolitan who lived in the years when Isho'yahb III was \*catholicus (r. 649–59). Pierre Nautin proposed that he should be identified with Elias of \*Merv who is known to have written *Ecclesiastica* (\**Chronicle of Seert*, PO 13, 513), but this is uncertain. FJ

P. Nautin, 'L'Auteur de la Chronique Anonyme de Guidi: Élie de Merw', *RevHistRel* 199 (1982), 303–14.

**Chronicle of Monemvasia** Document important (and controversial) for the history of \*Slavic and \*Avar settlement in the Peloponnese between the 6th and the 9th centuries. Although widely used for the early history of the Slavs, the *Chronicle's* authorship, date of composition, and basic historicity are much debated. Four versions with substantial differences exist. ABA

**Chronicle of Seert** Anonymous ecclesiastical history in \*Arabic lacking its first and last parts. It survives in a single manuscript found in Seert (mod. Siirt, south-east Turkey), which accounts for its conventional title. The chronicle in its current condition covers the period from 252, during the reign of the Roman \*Emperor \*Treboianus Gallus, to 650, the era of the monastic writer \*Sahdona. Coverage of the years 422–88 is missing. It is a major source for Christianity in the early and late \*Sasanian periods and in the first centuries of \*Islam in the Eastern Roman Empire, \*Arabia, and Asia. The biographies of such ecclesiastical leaders as \*Isho'yab II (628–45) who witnessed the advent of \*Islam shed much light on both political and church affairs. The fact that the Arabic language of the chronicle is heavily influenced by \*Syriac indicates the author's extensive reliance on \*Syriac sources. It has been argued that an Arabic *Abridged Ecclesiastical History* (*Mukhtasar al-akbbar al-bi'yya*) published by B. Haddad in 2000 from a Baghdad manuscript of 1137 might be the missing first part of the *Chronicle*, but this is unlikely as the two texts have substantially discrepant accounts of the same events, which suggests that they relied on different sources. AHA

**Chronicle of Zuqnin** Universal chronicle written in \*Syriac in 775–6 by a monk of the \*Monastery of Zuqnin north of \*Amida (mod. Diyarbakır), formerly misnamed the *Chronicle of Pseudo-\*Dionysius of Tel Mabre*. Conveniently divided into four parts, the first three compile early sources while the fourth is largely

the author's own contribution. Part I draws on \*Eusebius' *Chronicle* and *Ecclesiastical History*, Part II the entire \*chronicle known as the *Chronicle of \*Joshua the Stylite*, and Part III the third part of the *Ecclesiastical History* of \*John of \*Ephesus. Part IV, which deals with the 7th and 8th centuries, discusses at length the harsh economic policy of the \*Abbasids in Upper \*Syria (particularly between 770 and 775), Arab–Byzantine warfare, conflicts within the \*Syriac Orthodox Church, and mass conversions to \*Islam. In writing, the author borrows ideas, expressions, and themes from John of Ephesus and the *Chronicle* of Joshua the Stylite. AHA

**chronicles, Gallic** The *Gallic Chronicle* of 452 is an anonymous continuation of \*Jerome's *Chronici Canones*, written in Valence or \*Marseilles. It is a pessimistic account of the collapse of \*Gaul and the entire Roman Empire in the face of \*barbarian invasion and the spread of \*heresy. The *Gallic Chronicle* of 511 is an epitome of an anonymous continuation of Jerome (surviving with it as an epitome), probably written in \*Arles.

**Chronicles, Short Greek** Modern name for a wide range of chronicle snippets and annotations contained in later Byzantine or post-Byzantine manuscripts scattered across several collections. They date events by day and month as well as by year or \*indiction which explains their value to modern Byzantine historians. Almost all cover events in the latter centuries of Byzantine history and were written after the events they record. Very few document events within the timespan of Late Antiquity. BC

ed. (with ET and comm.) P. Schreiner, *Chronica Byzantina Breviora* (CFHB 12), vol. 1 (texts, 1975), vol. 2 (comm., 1977), vol. 3 (ET, 1979).

**chronicles, Spanish** In the late 5th century \*Hydatius, \*Bishop of Lemica in \*Gallaecia, continued \*Jerome's \*Latin translation and continuation of \*Eusebius' *Chronicle*. Scholars have often commented on the apocalyptic character of the text and its focus on \*Spain, both of which may reflect the breakdown of Roman power.

The *Chronicle of Saragossa*, now known as the *Consularia Caesaraugustana*, survives as marginal annotations to the 6th-century *Chronicle* of the African \*Victor Tonnensis, Bishop of Tunnuna, and covers events in north-east Spain. \*John of Biclár, Bishop of \*Gerunda, continued Victor down to the conversion of the \*Visigoths to Catholicism in 589, innovating by presenting parallel accounts of Visigothic and Byzantine history.

\*Isidore, Bishop of \*Seville, wrote two redactions of his *Greater Chronicle* and included an epitomized version in his *Etymologies*. All of Isidore's chronicles epitomized Jerome and his continuators severely.

The *Chronicle of 741* and the *Chronicle of 754* (formerly referred to as the *Chronica Byzantino-Arabica* or *Chronica Muzarabica*) both continue John of Biclár and incorporate information derived from Isidore's *History of the Goths*, adding new material on the \*Arab conquest of Spain in the early 8th century. **chronicles, Syriac** Some \*Syriac chronicles have a local focus. Those originating in Roman territory include the text known as the *Chronicle* of \*Joshua the Stylite, written shortly after 506, preserved as the second part of the *\*Chronicle of Zuqnin* (775/6). The *\*Chronicle of Edessa* was written slightly after 532 using the royal \*archives of the city. Stemming from the area of the \*Persian Empire, the *\*Chronicle of Arbela* is said to be of the 6th century and concentrates on Christianity in \*Mesopotamia, while the brief *\*Chronicle of Khuzestan* (also called the *Guidi Anonymous*) covers the end of the \*Sasanian period, the beginning of \*Islam, and the impact of these important events on \*Mesopotamia.

World chronicles include the *Chronicle* of \*Jacob of Edessa (d. 708) which continues the *Chronicle* of \*Eusebius of \*Caesarea. Anonymous chronicles dated between the 8th and 10th centuries tend to end their world coverage with a record of recent local history. This is the case of the *Liber Caliphorum*, also called the *Chronicle of 724*, which ends with a list of \*Umayyad \*caliphs and the exact duration of their reigns without naming the contemporary Byzantine \*emperors. The universal *\*Chronicle of Zuqnin* ends with a lengthy discussion of \*Abbasid economic policy in northern \*Syria between 767 and 775; it was formerly erroneously known as the *Chronicle* of Pseudo-\*Dionysius of Tel Mahre.

The *Chronicle of 819* covers secular and religious affairs from Christ to 819, the year in which Dionysius of Tel-Mahre (d. 845) was consecrated Patriarch of the \*Syrian Orthodox Church. It relies on the *Chronicle of Edessa* for the early period and draws extensively for the 7th and 8th centuries on the \*archives of the \*Monastery of Mar \*Gabriel at Qartmin on the \*Tur 'Abdin, ending with a discussion of political events between 762 and 819 relevant to the Church. It lists 'Abbasid caliphs and \*Syriac Orthodox \*patriarchs, but not their Byzantine contemporaries.

The *Chronicle of 846* covers history from the biblical Jacob to the year 846. It focuses on ecclesiastical history in the 5th and 6th centuries, using \*John of \*Ephesus, \*Zacharias Rhetor, \*Jacob of Edessa, and the Teaching of \*Addai as sources. For the period between the 7th and 8th centuries it draws extensively on the *Chronicle of 819*; for the years between 679 and 784, both ecclesiastical affairs and political events in the Arab and Byzantine worlds are discussed. The chronicle ends with lists of \*caliphs and patriarchs between 784 and 846.

The 11th century witnessed the rise of voluminous universal chronicles in which secular and ecclesiastical affairs are treated separately, while local events are set

within international contexts. This is the case with the *Chronicle* of \*Michael the Elder (Michael the Syrian, d. 1199), the *Chronicle of 1234*, and that of \*Bar 'Ebroyo (Bar Hebraeus, d. 1286). The *Chronicle of 1234*, which begins with the Creation and ends shortly after 1234, includes events of the early 13th century, thus bringing up to date the *Chronicle* of Michael the Elder; it quotes extensively from the now lost *Chronicle* of Dionysius of Tel-Mahre.

### ***Chronicon Altinate* and *Chronicon Gradense***

A pair of medieval chronicles containing a medley of material, much of it mythical, concerning the origins and history of Venice and the fate of \*Aquileia and \*Grado. Some scholars consider the *Chronicon Gradense*, which survives in an 11th-century manuscript, to be part of an early recension of the *Chronicon Altinate*. The three 13th-century manuscripts of the *Chronicon Altinate* preserve contrasting texts, but the most recent Patriarch of Venice they all name was elected in 1201. A catalogue of Roman \*emperors from Julius Caesar to the 13th century closes the *Chronicon Altinate*. The section of the list starting with \*Constantine I specifies the emperors' places of burial and derives from a \*Greek original. OPN

*Chronicon Gradense*, ed. G. H. Pertz, in MGH SS 7 (1846), 39–45.

*Chronicon Venetum* (vulgo *Altinate*), ed. H. Simonsfeld, MGH SS 14 (1883), 5–69.

### ***Chronicon Paschale* (*Chronicon Alexandrinum*)**

Title of an anonymous chronicle written in the 630s and preserved in a single incomplete 11th-century Paris manuscript (Cod.Par.gr.1941). It runs from Creation to the restoration to \*Jerusalem of the True \*Cross on 21 March 630 (though the manuscript is preserved only until 628). It may be the work of two authors before and after the 560s. The *Chronicle* was written in \*Greek at \*Constantinople, possibly at the instigation of \*Patriarch Sergius, and falls into two parts: (1) the period from Creation (dated to 21 March 5509 BC) with a focus on demonstrating the chronological centrality of Christ's incarnation and (2) the period from the \*Emperor \*Diocletian to 630. From 534 to 601 the *Chronicle* provides little information other than marking annual dates, but for contemporary history it is fuller and preserves important documents such as the letter from the Persian King \*Qobad II to the Emperor \*Heraclius in 628. The *Chronicle* made good use of earlier works such as that of \*John Malalas. A detailed prologue situates the author's preferred chronology within differing current methods for calculating \*Easter (putting Christ's Passion at 23 March 5540 AM). Recent research has revealed the value of its information for both chronology (Mosshammer) and 7th-century history (Howard-Johnston). The *Chronicon Paschale* is cited in *ODLA* by the equivalent AD dates in the chronicle. BC

***Chronographia Golenischevensis*** An illustrated chronograph of the second or third quarter of the 6th century, which survives on a collection of broken \*papyrus fragments of the third quarter of the 6th century that have been restored as seven folios of a work closely related to the \*Greek original of the \**Chronographia Scaligeriana*, with the addition of depictions of the Roman months and a synchronistic list of Hebrew, Egyptian, and Athenian months, and illustrated descriptions of Jewish prophets. They are now in the Pushkin Museum in Moscow. It is best known for its entry on the destruction of the \*Serapeum at \*Alexandria, illustrated by an unframed depiction of \*Theophilus, \*Patriarch of Alexandria, standing on the Serapeum. It dates this event to 392, but unfortunately this date has no authority. RWB; NAS

**Chronographia Scaligeriana** Chronicle also known, in its \*Latin form, as *Barbarus Scaligeri* and *Excerpta Latina Barbari*. A Latin translation, made in Corbie in the 780s, of an illustrated \*Greek chronograph compiled probably in \*Alexandria early in the reign of \*Justinian I which had belonged to George, \*Bishop of \*Amiens and \*Ostia (c.767–798). It was made up of three different sections, themselves compilations, namely:

1. a recension of the *Συναγωγὴ χρόνων* (\**Liber Generationis*) of AD 235;
2. a collection of regnal lists culled chiefly from the *Chronographiae* of Julius Africanus of AD 221 and
3. a heavily augmented Greek translation of an early recension of the Latin \**Consularia Vindobonensia Posteriora*.

The original illustrations were never copied into the spaces left for them in the Latin translation. The Greek original (of which a single leaf survives as P. Berol.13296) is closely related to the \**Chronographia Golenischevensis*. The sole manuscript of the Latin is Paris BN lat. 4884 and the modern name derives from its first editor, Joseph Scaliger (1540–1609). RWB; PNB

**chronography and millenarianism** Christian chronography had its roots in the Hellenistic attempts to write universal history and the efforts of the apologists to establish the priority, in time and so authority, of Moses over the significant figures of Hellenic culture. The chronographers found in the latter a series of ready-made synchronisms requiring integration and finally offered the former a framework of unimpeachable reliability, the \*Bible.

The first comprehensive Christian chronography to appear was the *Chronographiae* of Julius Africanus

in 221. In addition to establishing a system of synchronisms, this work had an eschatological concern and a millenarian structure. Working from the biblical assertion that 'one day is with the Lord as a thousand years, and a thousand years as one day' (Ps. 84 (83): 10; 90 (89): 4; 2 Pet. 3: 8) and the six days of creation, the world was expected to last 6,000 years and the Incarnation was dated to 25 March (also the date of creation) in the 5501st year from Adam (= 1 BC) and the Resurrection to 25 March, 5532 years from Adam (= AD 31); these are the dates from Adam as reconstituted by Mosshammer, but they have traditionally been, and still are, presented as 5500 and 5531 respectively.

Africanus seems to have popularized, not originated, the system of millennial days, since it already appears c.204 in \*Hippolytus of \*Rome's *Commentary on Daniel*. A chronicle from Creation to AD 235 is traditionally attributed, perhaps correctly, to Hippolytus himself; it seems to be a reaction to Africanus which lays greater stress on salvation history than scientific chronography. These 3rd-century writers setting the life of Christ in the middle of the sixth millennial day pushed the End of Time back from an imminent tomorrow to a safely distant future (cf. \*Lactantius, *Institutes*, VII, 25, 3–8).

The great milestone in Christian chronography was the publication, shortly before the end of the 3rd century, of the first edition of the *Chronicle* of \*Eusebius of \*Caesarea. Eusebius was wary of millennial speculation and aware of the inconsistencies in the lengths of the OT patriarchs' lives given in the different versions of Genesis. His *Chronicle*, therefore, eschewed any millennialism and began its chronography with Abraham, not Adam. Eusebius' Greek *Chronicle* is lost, but the fact that it can be more or less reconstructed from translations and excerpts is a testament to its popularity and widespread influence. The *Chronicle* comprised two parts; the first, entitled the *Chronography* (which survives only in an \*Armenian translation), was a compilation of the raw material for the second, in the form of king-lists and chronological data from various nations, Barbarian, Greek, and Roman. The second part, the *Canons*, laid out the king-lists in parallel columns along with a running calculation of years from the birth of Abraham and, eventually, Olympiad years. The spaces between the columns, the *spatium historicum*, were interspersed with notices of historical events.

Little survives of the chronographic work in the interval between the early 4th century and the 6th century, but there is evidence of developments. In the early 5th century, two monks of \*Alexandria, Pannodorus and Annianus, each critically revised Eusebius' *Chronicle*, extending the chronology back to Adam, integrating Egyptian and Babylonian material, and

reinstating a millennial structure. Another Alexandrian chronicle of about the same date, the basis of what survives as the *Excerpta Latina Barbari* (\**Barbarus Scalligeri*), suggests that at least beginning from Adam and some millennial speculation became the norm in the genre again, and that the complex and costly tabular form of Eusebius' *Canons* was swiftly abandoned. \*John Malalas introduced a new millennial system into his world chronicle which set the Crucifixion in the year 6000 from Creation, probably in reaction to millennialist anxieties; it did not win a following. The \**Chronicon Paschale* presented complex chronological data and calculations from Creation in order to verify the date of \*Easter.

\*Jerome translated Eusebius' *Canons* (without the *Chronography*) into \*Latin in 380/1, and this formed the basis of most chronographic work in the West. \*Augustine (*City of God*, XXII, 30) accepted the idea of six periods of world history reflecting the six days of creation, but divided them by epochal events and generations, not into thousand-year periods. \*Isidore of Seville combined Jerome's version of Eusebian chronography, in a simplified and abbreviated form, and Augustine's six ages in his *Chronica Maiora* and *Chronica Minora* (*Etymologiae*, V, 38, 39). In the *De Temporibus* (703) and *De Temporum Ratione* (725) Bede accepted the six ages, but revised the received chronographic scheme (derived from the LXX) on the basis of the Vulgate and arrived at an interval of 3,952 years from Creation to the Incarnation. The ensuing charge of \*heresy indicates the prevalent investment in the received system. BMG

**Chrysanthius** (c. 310–c.390) \*Philosopher from \*Sardis who studied under \*Aedesius at \*Pergamum and taught philosophy to the future \*Emperor \*Julian, who appointed him and his wife to the provincial \*priesthood of \*Lydia. He later taught both \*grammar and philosophy to \*Eunapius and is a central figure in Eunapius' *Lives of the Sophists*. EW  
PLRE I, Chrysanthius.

**Chrysaphius** Chrysaphius Ztummas, as \*Spatharius Sacri \*Cubiculi, was a powerful court \*eunuch in the last

decade of the reign of \*Theodosius II. He schemed against others (including \*Cyrus, \*Pulcheria, and \*Eudocia) to promote his own interests, whether political or financial. After advocating a policy of appeasement towards the \*Huns, he tried, unsuccessfully, to have \*Attila assassinated. He was a friend of \*Eutyches, supported the \*Miaphysites and advised Theodosius to convene the 'Robber Council' of \*Ephesus of 449. He supported the Green \*Faction. He was executed soon after Theodosius' death at the behest of Pulcheria or the new \*Emperor \*Marcian. SFT

**chrysargyron** See COLLATIO LUSTRALIS.

**Chrysopolis** (opposite \*Constantinople; mod. Üsküdar (Scutari)) City north of \*Chalcedon on the Asian side of the \*Bosporus and a principal crossing point. In 324 \*Constantine decisively defeated \*Licinius in a battle near Chrysopolis (\**Origo Constantini Imperatoris*, 27, cf. \*Zosimus, II, 26). It was in the path of the Persian \*army which besieged Constantinople in 626. Rebels threatening Constantinople often occupied it, as in 668 when soldiers of the \*Anatolic \*Theme demanded that \*Constantine IV crown his brothers as co-emperors. Its \*monastery of the \*Theotokos, founded in 594 by \*Philippicus, brother-in-law of Emperor \*Maurice, was described by the \*Patriarch \*Nicephorus (40–1) as 'beautiful and venerable'. JPH; OPN

**Chrysopolis** (Struma Delta) See AMPHIPOLIS.

**church architecture** There is little reliable evidence for the buildings in which Christians worshipped prior to the Great \*Persecution and the reign of \*Constantine I in the early 4th century. Places of worship must have existed, as a \*rescript of the \*Emperor \*Gallienus specifically permitted Christians to own them (\*Eusebius, *HE* VII, 13). The \*church orders are cumulative documents rewritten and brought up to date at various times, and passing references in texts such as the apocryphal *Acts of Ss. Paul and Thecla* provide little information about 'house churches'. Stray facts are helpful, such as that at the start of the Great Persecution, the Church of \*Nicomedia could be destroyed in a single morning without the use of fire (\*Lactantius, *Mort.* 12, 2–5).

Physical evidence is equally sparse. The only securely dated pre-Constantinian church building to survive complete is that at the \*frontier fortress-city of \*Dura Europus, a site abandoned to the sands of the Syrian Desert after capture by the Persians in 256. This building was a \*house built in c.232 around a central courtyard,

adapted for use as a church in c.242 and identifiable as such by the wall paintings in the \*baptistry in the western corner of the building. The rooms on the eastern side of the courtyard were combined to provide a single hall for worship, which had a raised platform and a table against its north-east wall and seating alongside; the hall would have held about 75 people. It was therefore smaller than the \*synagogue nearby.

Monumental churches were erected immediately following the Great Persecution. Eusebius of Caesarea preached the \*sermon at the dedication of the cathedral at \*Tyre in which the grandeur of the \*ecphrasis eclipses the architectural detail (*HE* X, 4). Constantine endowed the \*Lateran Basilica at \*Rome (also called the Constantinian Basilica) soon after his victory over \*Maxentius in 312. This, the cathedral of Rome, was planned as a \*basilica, a rectangular building with internal colonnades and an internally semicircular \*apse at one end.

What modern scholars call the basilica layout became the commonest plan for Christian churches in Late Antiquity (the term 'basilica' was more loosely applied in Late Antiquity itself). It owed absolutely nothing to the design of pagan civic \*temples which were not halls for congregational worship, but the home of the god and his \*image; people might gather in the courtyard before its doors. The antecedents of the Christian basilica lay in the civic basilica, a type of hall used for various purposes in the life of a \*city, in particular as law courts (as in the Basilica Nova finished by Constantine at Rome) or as an imperial audience hall (as in Constantine's basilica at \*Trier).

The general layout (though not the decoration) of a substantial urban Christian basilica is well represented by the 5th-century Acheiropoietos Basilica in \*Thessalonica. In a Christian basilica the \*altar stood in the chord of the apse. Seating for the clergy, the \*synthronon, was provided in the semicircle of the apse, and the people, separated by sex, stood in the nave. In a cathedral the centre of the synthronon was occupied by the throne of the \*bishop, on which he would sit to preach. In grand churches the altar might be covered by a canopy or *fastigium*, like the one stolen from the Lateran during the \*sack of Rome in 410 (*Liber Pontificalis*, 46, 4). In such places there would also be an \*ambo, from which \*cantors might sing and the \*deacon chant the Gospel. There were local variations on this plan. There were double-aisled basilicas, such as the mid-5th-century Church of S. \*Demetrius at Thessalonica. In \*Africa large churches sometimes had two apses, as at \*Bulla Regia, where the subsidiary apse housed the font. There were often galleries over the aisles, as in \*Justinian I's church of S. John at \*Ephesus, where clandestine \*Miaphysite ordinations were carried out in the mid-6th century by \*Jacob Burd'oyo. The \*village churches of Arnas and Kefr Zeh on the \*Tur

'Abdin plateau near the Persian \*frontier, though basilical in outline, have no colonnades. In \*Anatolia apses were often polygonal on the outside whereas in \*Greece they were more often semicircular. In time subsidiary apses, sometimes called pastophoria, came commonly to flank the main apse, the \*prothesis to house the bread and wine to be offered at the \*Eucharist, and the \*diaconicon to be occupied by the \*deacons. Large churches were often surrounded by courtyards and subsidiary buildings providing accommodation, and sometimes \*baths, for the clergy, for pilgrims, and for other visitors,

Early Christian \*architects also experimented with other designs. The Golden Church built by Constantine at \*Antioch (\*Jerome, *Chron.* 235g Helm) is the first known to have been an \*octagon, and others followed, including the Church of Ss. \*Sergius and Bacchus built by Justinian I at Constantinople and the Church of S. Vitale at \*Ravenna. Some experiments were prompted by the need to provide appropriate surroundings for particular shrines and to accommodate pilgrims. The most striking of such shrines is the Holy Sepulchre at \*Jerusalem founded by Constantine I, where a circular building covering the Tomb of Christ was separated by a courtyard from the apse of a large congregational basilica. At the Vatican, by contrast, the standard basilica plan was simply adapted by the addition of transepts at the ends of the aisles presumably to aid the flow of visitors around the tomb of S. Peter. Cruciform plans were also sometimes adopted, as at the shrine of S. Babylas, bishop and \*martyr of the persecution under \*Decius, which was built c.379 at Kausiye (Kaoussieh) outside Antioch, or the remarkable edifice of AD 492 at \*Qalat Seman, where the pillar of S. \*Symeon Stylites the Older occupied the centre of the crossing and the \*foliage carved on the \*capitals of the columns surrounding it was represented as if its leaves were being blown about by the up-draught.

One particular set of experiments, the domed basilica, led to a lasting development. At the cathedral dedicated to the \*martyred \*military saints Sergius, Bacchus, and Leontius (*IGLS* 9125) at \*Bosra of \*Arabia in 512/13 a \*dome was placed over the nave of an externally relatively square basilica. A similar layout was employed, using a smaller octagonal dome, at the cathedral at \*Mren in \*Armenia and at the \*Thousand and One Churches in central Anatolia, and, using a square pyramidal dome, at the monastic Church of al 'Adhra at Hah (Bağlarbaşı) on the Tur 'Abdin. The immediate result of experimenting with domes was the mathematical masterpiece which is the Church of the \*Holy Wisdom in Constantinople; its long-term consequence was the cross-in-square design which was the normal plan for most Byzantine churches in the Middle Ages.

From the time of Dura Europus onwards there were wall paintings in churches (though at Dura Europus only those from the baptistery survive). Decoration might be very elaborate. The canopy carried off from the Lateran by the barbarians in 410 weighed 2,205 Roman pounds of burnished silver and had 5-foot statues of the Saviour front and back, as well as statues of the Twelve Apostles each 5 Roman feet high and weighing 90 lb of silver and four angels of similar dimensions (*Liber Pontificalis*, 34, 9). Where it could be afforded, marble was used for floors and wall revetment and was admired both for itself (Paul the Silentiary was a great connoisseur of rare marbles) and because it reflected light into an interior. Wall paintings, such as those at Bawit and the White Monastery in Egypt, and wall mosaics were not manufactured in studios; they were applied directly to the wall. Sometimes they seem to use perspective devices to suggest the real presence of the figures they depict, projected outwards from the wall into the interior of the building. The detail of the liturgy and prayer offered in these churches is difficult to correlate with their architecture, but Procopius expressed, in a characteristically abstract fashion, the experience of the person who goes to the Church of the Holy Wisdom to pray: 'his mind is lifted up towards God and exalted, sensing that He cannot be far away'. And this, Procopius insists, is no first fine careless rapture, it is an experience which recurs on each successive visit (*Aed.* I, 1, 61–2).

**Church of the East** The name taken by the Christian Church in the Persian Empire. The largest of the present descendants of this Church is the 'Assyrian Church of the East', and a smaller body called the 'Ancient Church of the East'.

The Persian bishops styled themselves 'of the East' in the documents of their first council in 410, consciously falling into line with the Church of the 'West', that is, of the Roman Empire. The implicit idea that the Persian Church was a satellite of the Western Church made it politically suspect to the Persian

authorities during times of Persian–Roman wars and tension; this was a factor in outbreaks of persecution of Christians from the 4th century down to the end of the Sasanian era.

A different idea, that the Catholicus of Seleucia-Ctesiphon was one of the five historic and original patriarchs of the Church along with Rome, Constantinople, Antioch, and Alexandria, was propounded by the bishops at a synod in 585 (canon 29). Later, Catholicus Timothy I (d. 823; *ep.* 26) added the claim that the patriarchate of the East had primacy over the others—an idea that had extra purchase when the Church of the East included vast provinces as far eastward as China.

By the 7th century Christians in Persia were divided confessionally, the Syrian Orthodox having established a bishopric in Takrit in 629, whose holder was termed Maphrian. In Syriac sources, however, the terms 'East' and 'Eastern' remain attached to the older Persian Church; the Syrian Orthodox are 'West Syrian'. The name 'Nestorian' for the Church of the East, based on its Christology, is of doubtful accuracy and is rejected by the Church today.

**church orders** Early Christian writings which outline basic Christian teaching and the ordering of church life. They are often attributed to the Apostles (e.g. the *Didascalia Apostolorum*). The *Testamentum Domini Nostri* claims to be the teaching which Jesus himself gave after the Resurrection. Attribution to Jesus himself and to his immediate apostles and followers gave authority to their instructions and articulated the sense that the oral teaching of the Church was inherited from Christ through the Apostles.

The language and literary qualities of church orders indicate that they were all certainly written later than the apostolic age. Their true provenance can be determined only from internal allusions. Like the New Testament, most church orders seem to have been written in Greek, though some survive only in Syriac, Coptic, and Latin translations. Except for the *Apostolic Constitutions*, most of these texts, including *Apostolic Church Order*, *Didascalia Apostolorum*, *Apostolic Constitutions*, *Didache*, and *Testamentum Domini Nostri*, have been known to Western scholarship only since the 19th century. Many theories have been advanced concerning their dating and order, the redaction of individual texts,

and the relation of texts to one another. What does appear clear is that these were 'working texts'; and so were in many cases 'brought up to date' to make them useful for successive generations. This makes assigning dates problematical. While no sure consensus about the historical evolution and relationships of the church orders to one another has emerged, there is general agreement that *Didache* and *Apostolic Tradition* were the two earliest of the extant church orders, and that the other church orders had one or both of these at hand when new orders were composed.

Church orders vary in length and content, but they are generally concerned with discipline and morality, \*liturgy, ministry, church organization, and the qualities and duties of Christian leaders. The *Testamentum Domini Nostri* puts these matters into perspective by opening with a prophecy concerning the End Times. These texts are important for what they reveal about worship and Christian life in the period between the New Testament and the 4th century. P. F. Bradshaw argues that they were 'living literature', prescribing, among other ingredients, ritual practice for communities at \*prayer. There is, however, also the problem similar to that encountered by historians dealing with other prescriptive texts such as imperial legislation, that church orders may, to different degrees, reflect not only what was actually happening in Christian worship in the communities where they were written, but what those who wrote them wanted to be happening. **Cibalae** (mod. Vinkovci, Croatia) \*City of \*Pannonia Secunda, on the \*Via Militaris, and on a tributary of the River Save. It became a *colonia* in the early 3rd century AD. Copious evidence of prosperity in the 4th century includes \*baths, a luxurious town-house with coins of 364/92, a \*glass-kiln, and the \*Cibalae Treasure. Graves north and south of the city contained 4th-century Zwiebelkopf ('onion-head') \*fibulae and bone \*combs.

The first battle of the \*Cibalsean War between \*Constantine I and \*Licinius was fought on 8 October 316 at Cibalae. In 351 \*Constantius II fortified it against the \*usurper \*Magentius (\*Zosimus II, 48–9).

\*Valentinian I was born at Cibalae (\*Ammianus, XXX, 7, 2; Zosimus, III, 36), a fact noted by the \*martyr passion of S. Pollio (BHL 6869), composed for liturgical use no earlier than the late 4th century. The *Passio* of S. Pollio has much in common with the *Passio*

of S. Irenaeus of \*Sirmium (BHL 4466); it mentions no \*relics, but Christian funerary remains at Kamenica one Roman mile outside Cibalae are suggestive of a shrine.

\*Gepid graves of the 6th century have been found in the city's Late Roman *decumanus*, and Cibalae's eastern and central parts appear to have been abandoned in the late 6th century. OPN

A. Rapan Papeša, 'Topography of Cibalae in Late Antiquity', *Opuscula Archaeologica* (Zagreb) 35 (2011), 189–223.

H. Tamas, "'Eloquia divina populis legere": Bible, Apologetics and Asceticism in the *Passio Pollionis*', in Gemeinhardt and Leemans, eds., *Christian Martyrdom in Late Antiquity* (300–450 AD), 179–200.

**Cibalae (Vinkovci) Treasure** A hoard of over 30 kg (nearly 5 stone) of \*silver plate, buried c.400, discovered during archaeological investigations at Vinkovci, Croatia (\*Cibalae, \*Pannonia Secunda), in 2012. It includes platters, bowls, ewers, tableware, and some toilet items (casket, \*mirror). Most pieces are plain but decoration includes a horseman spearing a \*lion; and a shepherd with his flock. RHob

**Cibalsean War** In 316 \*Constantine I attacked his brother-in-law \*Licinius, defeated him on 8 October at \*Cibalae in \*Pannonia Secunda, and pushed east through \*Serdica, finally defeating Licinius at the Campus Ardiensis in \*Thrace. In the peace agreed on 1 March 317, Constantine's sons \*Crispus and the infant \*Constantine II and Licinius' infant son \*Licinius became \*Caesars, and Constantine came to control everything west of the \*Dioecesis \*Thraciae. Licinius' co-emperor \*Valens was deposed and then executed (\**Origo Constantini Imperatoris*, 13–20; \*Zosimus, II, 18–20), and a \*philosopher at Licinius' court had an uncomfortable journey back to \*Nicomedia (Ps. \*Julian the Apostate, *epp.* to \*Iamblichus, 416C–420A; 438D–440A, 448D–449D). In 321 the two \*emperors appointed different \*consuls. Constantine renewed his attack, successfully, in 324. OPN

Barnes, *Constantine*, 100–4.

**Cibyrrhaeotic Theme** Naval element in the \*Theme system. The Cibyrrhaeots are first mentioned in 698/9 (\*Theophanes, AM 6190) when an army returning from trying to counter the \*Arab conquest of \*Africa acclaimed Apsimar, Droungarios of the Cibyrrhaeots, as the \*Emperor \*Tiberius III. In the 8th century they protected the south coast of \*Anatolia, much of it depopulated following the \*Arab conquests. OPN

P. A. Yannopoulos, 'Cibyrra et Cibyrréotes', *Byzantion* 61 (1991), 520–9.

**Çiftlik** Large three-aisled \*basilica (c.500 m<sup>2</sup>/ 5,380 square feet) on the Black Sea coast south of \*Sinope,

with lavish geometric \*mosaics in nave and \*narthex. It was probably a monastic foundation associated with a rural estate of the late 4th century AD.

PJT  
S. Hill, 'Rescue Excavations at Çiftlik (Sinop)', in  
R. Matthews, ed., *Ancient Anatolia* (1998), 285–300.

**Cilician Gates** The main pass through the Taurus Mountains at an altitude of c.1,000 m (3,000 feet) on the military \*road, the \*Pilgrims' Road linking \*Constantinople to \*Antioch. This route was suitable for wagons and other \*vehicles. The pass was used for Roman campaigns against the \*Persian Empire, and was also the main land route for pilgrims from Europe to the Holy Land, such as the \*Bordeaux Pilgrim and \*Egeria. HE *TIB* 2 (1981) Kappadokien, 263–4.

**Cilicia Prima and Secunda** \*Provinces of south-east \*Anatolia in the \*Dioecesis of \*Oriens. The single province of Cilicia created by Vespasian in AD 72 was split by the time of the \*Verona List into \*Isauria in the West and \*Cilicia both within the \*Dioecesis of Oriens. By the time of the \**Notitia Dignitatum* Cilicia had been further subdivided into Cilicia Prima, governed by a \*Consularis from \*Tarsus, and Cilicia Secunda, governed by a \*Praeses from \*Anazarbus (or. I, 62 and 94; II, 12 and 23; cf. \*John Malalas XIV, 24), both with military forces under the \*Comes Orientis (or. XXII, 22 and 30). The *Notitia* also notes state factories (\**fabricae*) manufacturing lances at \*Irenopolis (or. XI, 25). \*Inscriptions from \*Corycus attest to large numbers of artisans.

The craggy, mountainous portion of Cilicia to the west was originally called Cilicia Tracheia (Gk. Rough Cilicia) and included many hidden ports. The flatter eastern portion was called Cilicia Pedias and was a fertile area for growing \*grain, \*wine, and \*olive oil, 'a land abounding in products of every kind' (\*Ammianus, XIV, 8, 1). The Taurus Mountains lie to the north, Mount Amanus to the east, and the Mediterranean Sea to the south. The highlanders of Isauria were a threat to the coastal communities in the mid-4th century (Ammianus, XIV, 2) and in the time of the \*Suda the area retained a reputation for violence: 'the three kappas are the worst—Kappadokia, Krete, and Kilikia' (s.v. *Κάππα διπλοῦν*).

Cilicia was evangelized early, and \*Constantine I particularly selected the shrine of Aesculapius at \*Aegae for closure. Numerous \*bishops from the region attended the \*Council of \*Nicaea in 325. The theologians \*Diodore of \*Tarsus (bp. 378–c.392) and Theodore of \*Mopsuestia (d. 428) had close links with \*Antioch. Some \*temples were converted into churches (Bayliss), and many more churches, such as the grand \*pilgrimage shrine of S. \*Thecla, were built afresh. Some had floor \*mosaics dating from the 5th–6th centuries evoking the \*Earthly Paradise; one such mosaic, found at Adana in 2016, has \*inscriptions in \*Armenian

and quotes a passage from Isaiah (65: 25) about the lion lying down with the lamb.

The \*Pilgrims' Road linking \*Constantinople to the \*Holy Land and the Eastern \*frontier passed through the Cilician Gates. \*Shapur I came from the east to invade the province in AD 260 and \*Constantius II died at Mopsucene while on his way north-west to confront the usurpation of \*Julian in 361. Julian himself was buried at Tarsus. Following the \*Persian invasion of the early 7th century, and a Roman defeat near the Cilician Gates in 613, the Persians controlled Cilicia (\*Sebeos, 115, *VTheod Syk*, 166) and, although the Romans were able to retain \*Seleucia ad Calycadnum at least till 617, Persian naval forces were able to use the \*harbours of Cilicia as bases to extend their aggression along the Anatolian coastline. Excavations at the port-city of \*Anamur suggest a revival of prosperity after 620, following earthquake damage in 580.

Following the \*Arab conquest of \*Syria, the Emperor \*Heraclius withdrew to the north-west and the East Roman authorities appear to have followed a scorched earth policy in Cilicia. Tarsus was held by the Arabs as early as 646 and Arab \*fleets wintered in Cilicia in 672/3, prior to the first \*Siege of \*Constantinople. \*Theophanes records repeated Arab incursions in 703/4 (AM 6195), 704/5 (AM 6196), 709/10 (AM 6201), when they actually penetrated the Cilician Gates and attacked \*Tyana, 711/12 (AM 6203), and 715/16 (AM 6208) when Maslama wintered in Cilicia. During the 8th century the Roman authority for the area was theoretically the \*Cibyrrhaeotic Theme, but under the \*Abbasids, Tarsus and other Cilician fortresses were bases for Arab raiding onto the central Anatolian plateau. **Cimitile** \*Basilica complex established during the 4th century in a necropolis (*coemeterium*) outside Nola (\*Campania); now within the Comune di Cimitile. Though primarily associated with the \*patronage of \*Paulinus of Nola and his wife Therasia, development of this \*pilgrimage site around the \*tomb of S. \*Felix pre-dated and survived Paulinus' residence of 395–431. Restored after archaeological work initiated in the late 20th century, the site now presents an exemplary cult centre built up in Late Antiquity around the tomb of a hero of the age of \*persecution.

As well as outstanding representatives of ecclesiastical architecture the site preserves several precious

examples of 3rd-century Christian figural art. The detailed writings of Paulinus encourage comparison of literary description with physical remains. Phases of development are relatively clear: a mid-4th-century apsidal structure over the tomb of Felix was expanded with a basilica annexe in the later 4th century. Paulinus added a second three-aisled basilica (*nova*), an atrium with fountains, hospices, and residential buildings to accommodate his ascetic community and the crowds attending Felix's January festival. Despite subsequent depredations and flooding, building continued through the 6th century with a \*mosaic-decorated *aedicula* over the tombs of Ss. Felix and Paulinus, a grand \*apse, and additional basilica structures. DET

**cingulum** See BELTS AND BELT BUCKLES.

**Circesium** (mod. al-Busayra, Syria) Roman \*frontier fortress at the south-east corner of the \*province of \*Oshroene, at the confluence of the Middle Euphrates and the River Khabor (Abora). According to \*Ammianus, the site was small and insecure until \*Diocletian extended and reinforced it with walls and towers and gave it civic status (XXIII, 5, 1–2). In 363, \*Julian passed through with his army while advancing into Persian territory. Circesium is listed in the *Notitia Dignitatum* (or. 35, 24) as the base of Legio IV Parthica, which was probably the original garrison under the \*Tetrarchy subsequently transferred to \*Aleppo (Beroea) (\*Theophylact Simocatta, II, 6, 9).

\*Justinian I exiled \*Bishop Nonnus in 518 for his \*Miaphysite sympathies. He also repaired the fortifications and \*baths damaged by the river, transferred the seat of the \*Dux, and added a unit to the local garrison (\*Procopius, *Aed.* II, 6, 1–11). These defensive measures successfully discouraged \*Khosrow I from attacking Circesium in 540. In 580, \*Maurice chose Circesium as his base for invading the \*Persian Empire (Theophylact, III, 17, 5; \*Evagrius, *HE* VI, 17; \*Nicephorus Callistus Xanthopoulos, *HE* 18, 20). During the \*Arab conquest of Roman \*Mesopotamia, the city changed hands twice before being finally captured in 690/1 during the reign of the \*Caliph \*Abd al-Malik b. Marwān. The Arab geographers Istakhri and Ibn Hawqal in the 10th century describe Circesium (Qarqisiā) as a thriving city with gardens, fruit trees, and fields of grain. The course of the river has changed since Late Antiquity. BH

**Circumcellions** Groups associated with the \*Donatists in \*Africa in the 4th century, mentioned first by \*Optatus of \*Milevis (writing about events in the 340s), discussed by both \*Augustine and \*Possidius, and listed as an *ordo* in *CTh* XVI, 5, 52. Their exact identity has long been disputed. Although associated with the Donatists, it is unclear how much coordination existed between the two groups, as many Donatist clergy did not approve of Circumcellion actions. The word Circumcellion, given pejoratively, indicates that they congregated around (*circum*) places used for storing food, specifically \*wine (*cellae*). They preferred to call themselves *Agonistici* (fighters) and probably worked as seasonal agricultural labourers. Known for their slogan '*Laudes Deo*' (Praises to God), the Circumcellions armed themselves with wooden clubs and attacked property (mostly Catholic churches) as well as people (creditors, landowners, and Catholic clergy, especially clerics who had converted from Donatism to Catholicism). It is claimed that they sought \*martyrdom through \*suicide, their preferred methods being precipitation, drowning, and self-immolation. The actual degree to which they harmed themselves and others must be determined through careful analysis of hostile sources. Their attacks, it seems, were more often designed to intimidate than to kill. ETH

Shaw, *Sacred Violence*.

**circus** An urban structure used to stage chariot races, also called a hippodrome. From the 4th to the 6th centuries, the social significance of circuses increased, until they became the primary site of popular interaction with representatives of imperial authority.

**Distribution and maintenance**

The prototypical circus was the Circus Maximus in \*Rome, which served as the model for provincial

circuses in the early and middle Empire. Under the \*Tetrarchy, circuses were frequently constructed alongside \*palaces. These include the Circus of \*Maxentius near Rome, and the imperial complexes in \*Antioch, \*Nicomedia, \*Sirmium, \*Thessalonica, and \*Trier. Although later sources attribute the construction of the circus of \*Constantinople to Septimius Severus, it should be considered as an integral component of the palatial complex constructed under \*Constantine I.

The earliest evidence for circuses in some cities in the East (\*Apamea, \*Edessa, \*Gaza) dates to the 5th and 6th centuries, indicating increased distribution of circuses in Late Antiquity. Eastern circuses were maintained well into the 6th century and racing at \*Alexandria probably continued into the early 7th century. Despite scattered evidence for continued racing in the provinces in later centuries (as recorded for 8th-cent. \*Sicily in the *Life of Leo of Catania*), the circus at Constantinople was primarily responsible for maintaining Late Roman traditions of chariot racing into the Middle Ages.

### Architecture and decoration

The following account is based on the partially preserved and well-documented circus at Constantinople, which shares much in common with the standard circus type of the High Empire. The circus took the form of a long narrow ellipse, with banks of seating for spectators on the long east and west sides and the rounded south end (*sphendone*), and the starting gates (*carceres*) at the north end. A long, high barrier (*euripos* or *spina*) with turning posts at each end, around which the chariots raced, stood in the middle. The imperial box (*kathisma*) was located roughly halfway along the eastern bank of seats.

The circus at Constantinople accommodated roughly 30,000 spectators. By the 6th century at the latest, partisans of the circus \*factions sat in designated areas (\*Procopius, *Persian*, I, 24). Although nothing of the *carceres* in Constantinople is preserved, textual evidence shows that they were two-tiered, with the first storey consisting of twelve gates, and the second storey occupied by changing rooms for the charioteers. The gates were crowned by four \*bronze \*horses (probably the ones now in Venice).

The *euripos* of a standard Roman circus consisted of a row of water-filled basins decorated by statues and punctuated by gaps in which major monuments stood. Three monuments of the Constantinople *euripos* remain in situ: the Egyptian \*obelisk, the masonry obelisk, and the Serpent Column. The northern and southern limits of the *euripos* were marked by the turning posts of the Blue and Green Factions, respectively, and were decorated by their \*victory monuments. The bases of two monuments to the charioteer

\*Porphyrius are preserved in the Istanbul Archaeological Museum.

The imperial box (*kathisma*) was connected to the Great Palace of the \*emperors by a spiral staircase (*kochlias*), and contained multiple balconies and terraces, a changing room, and a dining room. On the base of the Egyptian obelisk are depictions of the Emperor \*Theodosius I and his retinue observing the races from the *kathisma*.

### Races

Races were grouped in meets that occurred over the course of a single day or multiple days. A programme from 6th-century \*Oxyrhynchus (P.Oxy. 2707) outlines a day of six races punctuated by other entertainments (dancers, mimes, a gazelle pursued by hounds). To mark the start of a race, a magistrate dropped a cloth (the *mappa*), and the gates were opened. Simultaneous opening of the gates may have been assured by a mechanical device. A standard race consisted of seven laps. A white line drawn across the surface of the track marked the finishing-line. The winning charioteer took a victory lap and was awarded a palm frond and crown. The base of the Egyptian obelisk depicts the emperor conferring the crown.

Chariot racing was organized by four professional organizations, or \*factions, of which the Blues and Greens held first rank, the Reds and Whites second. Individual charioteers might race for multiple factions over the course of their career. Thus Porphyrius, the most famous of all Late Roman sportsmen, won victories for both the Blues and the Greens.

### Significance

In the earlier Empire, races were staged by private *agonothetes*. In the Late Empire they were a public benefit. By the 6th century races were the primary public entertainment, displacing \*gladiators and \*venationes. The circus was the place where the emperor and the people most frequently encountered one another. There were standardized \*acclamations led by the partisans of the factions, and also the airing of grievances to a representative of imperial authority, as represented by the so-called *Acta per \*Calopodium*. Monuments in the circus could also inspire vigorous criticism of the reigning emperor (*Anth. Pal.* XI, 270-1; \*John Lydus, *Mag.* III, 46).

The centrality of the races to Late Roman political life is reflected in the conceit of the circus as a microcosm, according to which e.g. the twelve gates of the *carceres* correspond to the months and the signs of the \*Zodiac, the seven laps to the planets, the four factions to the elements, and so on (*AnthLat* I, 197 R = 188 SB). While in \*panegyric the conceit may serve as a metaphor for harmony in a well-ruled state (\*Corippus, *In Laudem Justini Augusti*, I, 314-44), in other contexts it

may represent the strife at the heart of political life (\*John Malalas, VII, 4–5). BWA

**circus factions** See FACTIONS.

**Cirta (Constantina)** *Colonia*, capital of \*Numidia, modern Constantine, Algeria. Situated on a steep hill surrounded by gorges, the \*city was of great strategic importance. Cirta was devastated when the troops of the usurper \*Domitius Alexander who had withdrawn there were defeated by \*Maxentius' \*Praefectus Praetorio Rufius Volusianus in 310 (\*Zosimus, II, 12). After 312, \*Constantine I rebuilt Cirta with generous imperial funds, and changed its name to Constantina. The \*Donatist Bishop Silvanus of Cirta was investigated by the \*Consularis Domitius \*Zenophilus in 320, having been accused of handing over scriptures to the pagan authorities during the Great \*Persecution. The \*reports of these proceedings transmitted in the \**Optatan Appendix* afford insight into the \*city council and clergy of Cirta in the early 4th century. A Mithraic cave was equipped for worship at Cirta in the mid-4th century. RB

**cisterns and nymphaea** Closed cisterns and open reservoirs were receptacles for water storage, lined with

plaster or mortar to ensure water retention and potability. Water storage was constructed at domestic, neighbourhood, or municipal scales, supplied by rainwater collection systems, \*aqueducts, or direct spring-captures. Immense hypostyle cisterns with vaults proliferated throughout the Late Roman and Islamic world, where water storage became the object of high-level \*patronage and \*panegyric, celebrated in literary \*ecphrasis (e.g. \*Procopius, *Aed.* I, 11) and commemorated by \*inscriptions (e.g. *SEG* 27, 1015). At \*Constantinople the largest cisterns (the \*Mocius Cistern held c.200 million litres/44 million imperial gallons) were back-ups to the municipal supply and sources for irrigation. In the \*provinces, cisterns were often inserted into pre-existing urban monuments, as for example in the foundations of a \*temple at \*Philippi, or at \*Thessalonica, where pipes coming from the Church of S. \*Demetrius (formerly the site of a Roman \*bath) supplied cisterns built into a cryptoporticus below the Agora, and thence fed a fountain associated with the medical saints Ss. \*Cosmas and Damian. Churches became increasingly noticeable sponsors of water storage (*SEG* 48, 1867) and places for its consumption whether in \*baths (*SEG* 7, 871) or at fountains (*SEG* 49, 717). Miraculous wells, springs, and fountains (Gk. *hagiasma*) became centres for the veneration of the Virgin \*Mary (e.g. \*Blachernae) and saints (e.g. S. Michael at \*Germia). JTP

**cities, Persian and Armenian** There is evidence for Persian and Armenian cities from both archaeology and \*inscriptions, as well as through their mint signatures and in written sources. Iranian urban planning was affected, often dramatically, by Seleucid city foundations, which permanently shifted Iranian urbanism

away from the diffuse model of the Achaemenid period to dense walled settlements, though in the \*Sasanian period rural estates (\**dastgirds*) were still an important complement to the cities and were independent settlements in their own right.

Large cities were primarily royal creations intended as places of \*trade and industry to generate income for the King of Kings so that he could maintain his independence of the noble houses. Many served as royal residences and as monuments to royal achievements, like \*Khosrow I's own \*Weh-andiög-husraw (see KHOKE) and the Better-Antioch-of-Shapur near \*Susa (MP Weh-Andiög-Šābuhr), which was founded by \*Shapur I after his capture of \*Antioch in 256 and built using prisoners of war he brought back to \*Khuzestan from \*Syria.

\*Armenia did not experience Seleucid colonization, but in the period following the dissolution of the Seleucid Empire, cities like Tigranocerta-\*Arzen were implanted by the royal will of the Armenian Artaxiad dynasty, and these affected later settlement patterns. Armenia did not experience the same level of urbanization as Iran, but some of the earlier Artaxiad foundations, such as Artashat, continued in use in Late Antiquity.

Late Antique cities in Iran and Armenia were often built on or near very ancient settlements, like \*Ardashir I's and Khosrow I's foundations near the old Seleucid and Arsacid cities of Seleucia-\*Ctesiphon. Many retained their original Semitic, Elamite, or Iranian names (e.g. MP \*Hamadan cf. Elamite Akmadana, OP Hagmatāna). Some, like \*Susa (Elamite Šušān, OP Čūšā), the Sasanians refounded and endowed with a new name (MP Šūš ī ēr-kar, 'Susa made Iranian'). Others, such as Ardaxshir-Xwarrah (mod. \*Fīruzabad), \*Bishapur (MP Bišābuhr), and \*Gondeshapur, were genuinely new foundations.

Cities may be differentiated from towns and \*villages not merely on the basis of size and \*population, but principally on the basis of administrative criteria. Imperial, religious, and provincial institutions, with their rulers, ministers, bureaucracies, and officials (judges, \*Zoroastrian clergy, the Jewish \*exilarch, and \*bishops of the \*Church of the East), were generally located in cities. Mints, unless they were mobile, were also sited in cities. Consequently, the built environment of the city included both religious and secular buildings on a scale not normally encountered in the countryside (with some exceptions like \*Takht-e Soleyman, MP Ādur-ī Gušnasp). Cities were nodal points in commercial networks and housed traders as well as artisans. Many cities in the Sasanian Empire and Armenia continued to be occupied after the \*Arab conquest, albeit often under new names, though others were founded in parallel or several miles away from a former Sasanian metropolis (e.g. Baghdad).

**cities, Roman** Cities in the Later Roman Empire continued to play the same essential role they had played throughout the Roman period. They were the basic building-blocks of the \*administration: every part of the Empire fell within the territory (Lat. *territorium*) of a *civitas* (in the Latin West) or *polis* (in the Greek East), an administrative district controlled from a central city which gave the *civitas* its name. Administration within each *civitas*, including the all-important raising of \*taxation, was the responsibility of a \*city council made up of the local landed \*aristocracy, known as the *curia* in the West and *boulē* in the East. Cities also served as the principal residence, and a prime focus of allegiance, for the landowners, and as centres of production and exchange, from a local level (with peasants bringing their goods for sale to each city's forum) to the world of international commerce—port-cities like \*Marseilles, \*Ostia, and \*Alexandria saw a constant flow of \*merchants and exotic goods. Some parts of the Empire were dominated by cities whose foundation long pre-dated Roman rule, as in \*Greece and \*Anatolia; in others the urban network was much more recent, as in the \*Balkans, where a number of important cities were founded as late as the \*Tetrarchy. In some regions there was a dense concentration of *civitates*, ruled from a large number of very small centres, as in central North \*Africa; in other areas, like \*Britain, the *civitates* were far fewer in number and more scattered. But everywhere the *civitas* or *polis* was the basis of Roman administration and 'civilized' life.

In Late Antiquity, cities underwent considerable change. Because of the nature of our sources, we are particularly well informed about the changes that affected secular politics, and those brought about by the rise of the Christian Church. The political and military settlement under \*Diocletian and \*Constantine I which brought an end to the Third Century \*Crisis laid the weight of imperial power much more heavily on the cities

and their civic elites than had previously been the case. The burden of taxation was considerably increased (and members of the local *curia* were held personally responsible for any shortfalls), and the number of imperially appointed \*governors of \*provinces was also increased, so that cities and their local administration were now much more closely controlled. The office of \*Curator Rei Publicae (Gk. *Logistes*) became an important link between individual cities and the central government. The result was the end of the golden age of civic autonomy: in the 4th century, aristocrats no longer vied for local civic office, but sought to avoid it, and aspired instead to succeed within imperial service, which was both more profitable and more prestigious and from which they would emerge as \**honorati*. The decline, and eventual demise, of city councils did not however mean the end of the role of cities within secular administration; in the barbarian kingdoms of the West, for instance, royal appointees with the rank of \**comes* replaced the councils in taking responsibility for raising taxes and for dispensing justice.

We are also well informed about the slow process of the Christianization of cities. Each *civitas* and *polis* constituted an ecclesiastical \*diocese, ruled by a \*bishop, since the boundaries of church jurisdictions followed exactly those of the established geographical pattern set by the secular administration, and during this period, before a network of rural parishes was instituted, the urban Church was even more important than it was later. For instance, aristocrats dwelling in the countryside were expected to come into the cities for the major \*festivals of the Church, in order to celebrate them with the bishop in his cathedral. During the 4th to 6th centuries the wealth, prestige, and power of bishops steadily increased, primarily through a steady flow of gifts to the Church. By the 6th century, or even earlier, in both East and West the bishop often served as an effective counterpoint (and occasional rival) to the secular administration within a city, while in the physical landscape churches, including the cathedral, where the bishop had his \*chair, came to replace the traditional secular public buildings of Roman times as the dominant features of the cityscape. In many cities, particularly in the West, inside the walls was a cathedral and a network of smaller churches and urban \*monasteries, while outside there was a ring of \*cemetery churches built over the tombs of \*martyrs. In the case of some important shrines, like those of S. Peter at \*Rome, S. \*Alban at S. Albans, and S. \*Martin at \*Tours, these shrines were so important that they changed the topography of their cities, by drawing wealth and population out of the original inhabited areas and into the former extramural cemeteries.

Another feature of Late Roman times was the ever-increasing importance to urban life of \*city gates and

walls, as the Empire faced growing military threats, both internal and external. The poorly defended, or undefended, cities of the early imperial period were fortified anew, often with an impressive circuit of towers, built to house the \*artillery pieces that had come to play a central role in \*siege warfare. The walls of Rome, built between the late 3rd and the early 5th centuries, and those of \*Constantinople, of the early 5th, are the most impressive \*fortifications of all Antiquity and some of the most impressive of all time. At a provincial level, the nature of city fortifications varied, both geographically and through time: for instance, in the late 3rd century most of the cities of \*Gaul were given very short walled circuits that excluded much of the previous habitation, while contemporary walls in \*Italy were much longer. By the 7th century, urban defence in Anatolia was characterized by the fortification of the ancient acropolis, abandoning the much more extensive low-lying city walls of earlier centuries.

Whether or not cities flourished, economically and demographically, varied enormously, according to their function and to the precise chronological period under consideration. Winning cities of the 4th century were provincial capitals, and, above all, major imperial residences such as \*Trier, \*Milan, and \*Antioch. In the 5th century many cities in the West entered a period of decline (dramatic in places like Britain; much slower elsewhere), but some cities continued to flourish into the 6th century—for instance, Marseilles and \*Ravenna, the one for economic reasons (replacing \*Arles as the primary port of Mediterranean Gaul), the other because it served as the principal imperial and royal residence in Italy. In the East, many cities, for instance \*Ephesus and \*Aphrodisias, remained large and prosperous into the 6th century; Constantinople continued to grow in wealth and splendour until at least the early 6th century. Whether urban decline began in the East before 600 is still a subject of dispute; but there is no doubt that it occurred dramatically in the 7th century, except in the \*Arab-controlled Levant. By 700, many cities of the Empire had wholly disappeared, and the vast majority of those that remained were much smaller and much less impressive than they had been in the 3rd century. BW-P

**cities in post-Roman Western Europe** Nowhere in the West did cities flourish in the post-Roman

period, but their fate varied regionally, depending on local circumstances. The most extreme case was \*Britain, where urban life effectively disappeared during the 5th century. This was because power was now exercised from rural halls (in \*Anglo-Saxon areas) or Iron Age hill forts (in the British kingdoms), because the organized Church ceased to exist under the Anglo-Saxons and became focused on rural \*monasteries in the British west, and because specialized production and exchange became severely attenuated. Only in a few places, like \*Canterbury, did a memory of the city's former role persist, and with it some scattered settlement—but nowhere have levels of settlement been found that can be compared to those of Roman times. In continental Europe, the Roman cities survived somewhat better, sustained by their continued use as centres of secular administration, and, above all, by the network of urban bishoprics and saints' shrines established in the 4th century, which survived relatively unscathed the shocks of the 5th and 6th centuries. Cities like \*Tours shrank considerably in size, but continued to play an important part, focused increasingly on the \*bishop and his cathedral and on the great extramural shrine of S. \*Martin of Tours.

\*Italy was probably the region where the largest number of cities survived, particularly in the Po plain. The new Germanic rulers of Italy, first the \*Ostrogoths and then the \*Lombards, ruled their kingdoms from \*palaces in cities, and established a network of \*duces (dukes) and \*comites (counts) who were also based in cities, and bishops and the Church never left the impressive cathedrals built in the 4th and 5th centuries. There is even good evidence that the Lombard landed \*aristocracy maintained urban residences, just as the Roman aristocracy had done in the past. But even in northern Italy there were cities that completely disappeared, for instance along the Adriatic coast, and recent archaeological work has shown that in those towns which survived the population could drop dramatically, leaving isolated pockets of settlement in what had once been a fully inhabited townscape.

Within what is generally a story of shrinking urban prosperity and size, and of a number of cities ceasing to exist at all, there are a few exceptions. In \*Spain, the \*Visigothic King \*Leovigild established a new city in 578 at \*Reccopolis, naming it after one of his sons—it is small by Roman standards, but it was even supplied with an \*aqueduct (and therefore presumably with \*baths). In 6th-century \*Gaul, continuing demand for Mediterranean goods maintained a flourishing commercial centre at \*Marseilles which expanded beyond its Roman walls. But it is only in the 8th century that clear and more generalized signs of urban expansion can be detected, with wholly new coastal centres, like \*Hamwic (Saxon Southampton), \*Quentovic (near

mod. Étapes), and \*Venice appearing as significant centres of trade and population.

Within the cities that survived there was some continuity but also considerable change. Some elements of Late Roman life persisted well into the medieval period and beyond; these included city walls that had been built or greatly strengthened in the face of the crises of the 3rd and 5th centuries. They were such solid structures that they continued to shape the topography of the settlements within them; indeed in many cases they continued to do so for centuries afterwards. Of the changes that occurred, many had begun in the Late Roman period: in particular the gradual Christianization of the townscape, with the abandonment and demolition of \*pagan \*temples, the building of a great church in each city (the cathedral), and the steady establishment of other ecclesiastical foundations. This process continued into post-Roman times, with aristocratic founders building small churches and monasteries. Also well on the way before the end of imperial rule was the steady demise of the traditional secular buildings that had filled cities of the Roman period: the theatres, amphitheatres, public baths, council halls, porticoed \*forums, and colonnaded \*streets. Some effort was put into maintaining this heritage, for instance in early 6th-century Ostrogothic Italy; but by AD 600 very little survived in other than a ruinous state—amphitheatres, for instance, were beginning to be colonized for housing (as at \*Lucca and Nîmes), and huge numbers of public buildings were demolished in order to reuse their \*marble in churches.

One result of the demise of traditional buildings and the rise of Christian ones was a change in the topography of cities. In the Roman period, most cities had had a clear centre, the forum, generally in the precise middle of the town, at or near where the *decumanus maximus* crossed the *cardo maximus*: here was the main \*temple (the *Capitolium*), the political heart of the city (the council building, or *curia*), the economic focus (with market buildings and the stalls of traders on the forum square), and the most spectacular buildings, surrounded by honorific statues and other monuments. The demise of this traditional centre led to a much more fragmented cityscape, with the cathedral very rarely close to the forum square, and the principal religious focus often an extramural church over a \*martyr's grave as with the grave of S. Peter in the Vatican cemetery at \*Rome. BW-P Wickham, *Framing the Early Middle Ages*, 591–692 (ch. 10 'Cities').

**city chronicles** 'City chronicles' are said to be accounts of imperial and local events that were officially compiled, \*archived, and published or inscribed in all or most major imperial centres, and were then used as historical sources by chroniclers. There is, however, no

ancient evidence for such compilations, save for common entries referring to imperial and local events in a variety of extant Late Antique \*chronicles and \*consularia, from which the existence of an entire genre, 'city chronicles', has been extrapolated. RWB

**city councils and councillors** A city council (Lat. \*curia, ordo; Gk. boule) was the local ruling body, not only of each city, but of the territory (territorium) that surrounded it. Collectively, the city and its territory made up a civitas (plur. civitates). Each imperial \*province contained a number of civitates. A city councillor (Lat. curialis; \*decurio, Gk. bouletes) was therefore a member of the local governing order which composed the local civic \*aristocracy. The most prominent councillors were also members of their provincial assembly (\*conventus provinciae).

Membership of city councils was largely by co-option. A local property qualification, measured by landownership, was normal (e.g. *CTh* XII, 1, 33; 52–3; 72; 96; 115; 133; 140). The property qualification was not necessarily high; Patricius the father of \*Augustine of Hippo was a curialis of \*Thagaste, but a \*patron paid for his son's higher education (*Conf.* II, 3, 5; *Contra Academicos* II, 2, 3). Those obliged to serve were economically independent freeholders. Quantification is not straightforward but estimates are possible: there were probably close to 140,000 aristocratic families across the Empire in the 4th century, and probably under 2,000 civitates, with a typical group of councillors probably numbering around 65–75.

Councillors were liable for \*munera, supporting the administration of the city, for instance supervision of bakeries, the heating of public \*baths, the oversight of tax-gathering, and the maintenance of public order. Even in the High Empire they were not permitted to try cases where the penalty might be capital punishment (e.g. \*Eusebius, *HE* V, 1, recording events at \*Lyons in AD 177). More senior councillors held higher offices. At least in theory, a city with the rank of colonia (as opposed to municipium etc.) replicated the pattern of public institutions of the city of \*Rome itself; coloniae were more common in the West (especially \*Africa)

than in the East, though eastern examples included \*Antioch of \*Pisidia and Ancyra (\*Ankara). A traditional Western structure (though not universal) was for two \*quaestors to oversee civic finances, two aediles to oversee public services and buildings, and two duoviri to oversee local justice and the public games. Eastern provinces combined Hellenic and Roman practices: a single president was more typical, and other officials (e.g. gymnasiarch) were often present.

Imperial influence was particularly marked in \*Egypt, which had mostly been without councils until they were widely introduced under Septimius Severus. Evidence from \*papyri suggests a significant imperial intervention under \*Diocletian, in which positions were abolished, others regulated, and the financial autonomy of councils reduced.

In the late 3rd and early 4th centuries, evolution was pronounced. A senior tier of councillors, the \*principales, probably drawn largely from those who had completed the major civic offices, had come to act as a buffer between the council and external powers—namely, the conventus provinciae and the \*officium of the provincial \*governor. In addition the \*Curator Rei Publicae or Curator Civitatis, and latterly the \*Defensor Civitatis, emerged as local figureheads subject to imperial ratification. These officials had wide financial and judicial oversight.

In the late 3rd century, especially under the \*Tetrarchy, a career imperial bureaucracy developed; \*Lactantius complained that there were more men in receipt of public funds than there were contributing to them (*Mort.* 7, 3; see ADMINISTRATION, ROMAN CENTRAL CIVIL; CIVIL SERVICE, IMPERIAL). This offered increased opportunities for individual aristocrats to seek advancement beyond their local council. Imperial service frequently led to exemption from council duties, though not from membership per se and it was not normally inheritable. In addition, there were attempts by councillors to secure illegal exemptions through the purchase of imperial honours (e.g. *CTh* XII, 1, 65; XII, 1, 71).

An older tradition of scholarship tended to argue that councillors were increasingly marginalized, suggesting that they were in decline numerically and economically from the 4th century onwards. More recent research has tended to highlight the survival of councils into the 6th and even the 7th century (e.g. \*Ravenna in 625: *P. Ital.* 21); and has observed also the continuity between wealthier councillors and the 'notables' (mostly recipients of imperial honours, \*honorati) who came to dominate local public life by the 5th century. The disappearance of councils was therefore often slower and more organic than was formerly supposed. AGS

**city gates and walls** Late antiquity witnessed the construction of some of the grandest and most enduring city walls and gates to survive from the ancient world. As \*cities and military fortresses responded to the greater insecurity of the age, gates acquired a greater significance as boundary places for display and control, while also providing the setting for such \*ceremonies as \*adventus (as illustrated on the largest medallion of the \*Arras hoard), and retaining the function that they had in Near Eastern cities since at least the time of the Psalms as a place for casual social gathering.

The most remarkable examples survive from \*Constantinople matched closely by the fortifications of \*Rome of the reign of \*Honorius. The greatest gate was the Golden Gate at Constantinople built under \*Theodosius I, a preliminary component in the plan for the new land walls completed under his grandson \*Theodosius II. Retaining the triple \*arch design established from triumphal arches in Rome and elsewhere, the \*marble-clad gate combined a monumental entrance flanked by huge rectangular towers discreetly decorated with \*sculpture and moulding. In Rome the Honorian gates replicate the ashlar cladding but are all single portals, although Christian symbols are more prominent (and may have had an apotropaic function, like the copies of Christ's \*Letter to \*Abgar carved on the walls of Late Roman \*Edessa). An idea of the scale and decoration of the earlier gates at Constantinople is indicated from other gates in the \*Balkans surviving from the \*Tetrarchy, notably those at \*Split, \*Gomzigrad, and Hisar in Bulgaria. A feature of 3rd-/4th-century gates is the frequent use of decorative niches found especially on the military gates of the lower Danube \*frontier at Tropaeum Traiani and also at the new fortress city of \*Amida in \*Mesopotamia.

Indeed the grandest gates often come from frontier zones, and by contrast entrances at the new urban \*fortifications of \*Anatolia are less imposing. The north gate of \*Sergiopolis-Rusafa represents the most architecturally complex gate from the early 6th century.

This is a triple arch preceded by a forecourt and decorated with luxuriant mouldings and \*capitals. In these cases display triumphed over military necessity, as gateways were also the setting of \*acclamations for the builder and \*emperor. In the following century the need for greater security demanded increased protection, although display is still apparent at \*Ephesus and \*Ankara in the later 7th century. JCr

**Cividale del Friuli (Roman Forum Iulii)** \*City north of \*Aquileia in the \*Friuli region of north-east \*Italy which became prominent when \*Gisulf made it the seat of a \*Lombard \*Dux from 569 (\*Paul the Deacon, *HL* II, 9). Only patches of the city's Roman configuration are known; archaeological analyses indicate a Late Roman (4th/5th-century) reinforcement to the earlier *colonia* wall which enclosed an oval settlement, flanking the Tagliamento River, as Cividale was charged with controlling the Alpine crossings.

The Lombard takeover is marked by new \*burial rites such as weapon burials in both old and new \*cemeteries ('Roman' cemeteries include S. Giovanni-Cella to the north of the town; 'Lombard' cemeteries include 'Pertica', 'Gallo', and 'Ferrovia' to the west). Various 7th-century intramural burials, some high status (e.g. the 'Tomb of Gisulf'), are known. The finds are displayed in the Museo Archeologico Nazionale.

The \*Avars sacked Cividale in 610 (*HL* IV, 37), but ecclesiastical, monastic, and artistic remains survive from 8th-century Cividale. Most prominent structurally is the Tempietto/Oratory of S. Maria in Valle, east of the episcopal/patriarchal \*palace, beneath the Palazzo dei Provveditori. This features \*stucco, sculpted, and painted works of c.760; notably the Altar of the \*Dux \*Ratchis, of c. AD 740, whose main face depicts a beardless Christ girded by muscular \*angels, and the \*marble baptismal font and canopy associated with Callistus (737–56), the first \*Patriarch of Aquileia to be settled at Cividale (*HL* VI, 51). **civil service, imperial** The present entry considers service in the imperial civil \*administration as an occupation, including entry qualifications, career progression, and compensation and the way these characteristics developed over time. For an outline of administrative departments and functions, see ADMINISTRATION, ROMAN CENTRAL CIVIL and NOTITIA DIGNITATUM.

Large-scale expansion in the Roman imperial bureaucracy is now known to have pre-dated the \*Tetrarchy, notwithstanding \*Lactantius, *De Mortibus Persecutorum*, 7, which lambasts \*Diocletian on this score. The expansion was initially associated with an increase of military \*administration, particularly during the 3rd century. A tendency for administrative careers to become separate from combat and other field careers had the effect that by the later 3rd and early 4th centuries, a substantial civil service had emerged. For this reason, although the civil service continued to be referred to as a \*militia, it was effectively distinct from the military \*administration. The \*Theodosian Code reflects this separation; its Book VIII, Titles 1–11, in particular, is focused on the civil service.

As a result, some modern scholars have thought that a distinct *noblesse de robe*—a nobility of imperial servants—emerged from the time of the Tetrarchy and \*Constantine I. But although the award of honours and titles in return for imperial service was a signal feature of the Late Empire, it is not entirely clear that this nobility formed a distinct social group. It is probable that most civil servants were long recruited from landed families in the \*provinces, and that holding office in the imperial civil service was in practice not particularly hereditary till much later (see ARISTOCRACY, CIVIC; ARISTOCRACY, IMPERIAL). Variation over time is certain. The 6th-century bureaucracy at \*Constantinople might more readily be considered a distinct *noblesse de robe*. Still later, following the losses of provincial territory to the \*Arab conquests in the 7th century, a palace-dominated 'mandarinate' could be said to have emerged.

The monopolizing of the imperial civil service by aristocrats of one degree or another was largely ensured by the entry qualifications and the requirements of career progression. These tended to presuppose an education in the liberal arts, with a particular focus on \*rhetoric and sometimes \*law. This implied an education of a kind that was difficult for plebeian families to obtain. In the eastern provinces, well into the 5th century, there was the added demand of learning \*Latin as a language of government. Rather idiosyncratically, one

suspects, \*John Lydus later complained that Latin had fallen out of use (*Mag.* II, 12; III, 42, 68).

The service was hierarchical. At each level of local administration the \*governor of a province, the \*Vicarius of a \*dioecesis, and the \*Praefectus Praetorio had an \*officium with a core of principal officers, supported by assistants (\*adjutor) and a body of middle-ranking administrative staff (\*chartularii). Below them were junior administrators (\*exceptores) as well as teams of enforcers (bailiffs, guards, and torturers). In the departments of the central (palatine) administration, the situation was more complex, as grading structures varied between departments. For example \*agentes in rebus were graded by analogy with non-commissioned army officers, whereas the staff of the Sacra \*Scriinia, and the two financial ministries, the \*Res Privata and the Sacrae \*Largitiones, had their own distinctive structures.

Positions and advancement could be secured by various means. \*Letters of recommendation, followed by an audience, are abundantly attested in the 4th century, as in the numerous letters of \*Libanius and \*Symmachus. These, though, were not the exclusive means, as there was also a rise in the authorized sale of offices (e.g. *Cjust* XII, 19, 7 of AD 443/4). There was a marked tendency for senior positions in an officium to be held on a short tenure—often just one year. Promotion was therefore constantly occurring. It could be achieved through personal merit (\*meritum) but also through \*patronage (see SUFFRAGIUM). These were not necessarily mutually exclusive, and, in all cases, the influence of those recommending candidates was likely to have been significant. Advancement by seniority also occurred but should not be overestimated. A limiting feature was the recurrent tendency of emperors to prohibit or restrict movement between departments.

Remuneration naturally varied. On the staff of provincial governors, salaries appear to have averaged between 1½ and 5 \*solidi per person per year—though one must allow for differentials between grades in any given case. Conversely, a senior aide (the \*Cancellarius) to a \*Praefectus Praetorio might earn a solidus per day (John Lydus, *Mag.* III, 36–7). For some staff, there were opportunities to supplement this income through fees (\*sportulae) charged to litigants, which might secure an official as much as 1,000 solidi in a year. On retirement, officials could also receive a large cash settlement and a fee from a new junior entrant to the officium as well as honours and privileges. Conversely, the initial purchase of office could be expensive, with often modest compensation in the early years of service.

The Late Roman civil service operated in ways alien to many modern expectations, but such central features as purchase and patronage would have been immediately recognizable in 18th-century England. The possibility

that it was actually effective therefore remains a persistent point of interest for modern historians. AGS

**clarissimus** See TITLES OF HONOUR, ROMAN.

**Claros** \*Temple of Apollo on the coast of \*Anatolia near the \*city of Colophon housing an \*oracle as important in Antiquity as \*Delphi and \*Didyma. In the sanctuary 431 \*inscriptions record the visits of deputations up to the early 3rd century AD. Dedications to 'the gods and goddesses in accordance with the understanding of the Clarian oracle of Apollo' are known from places as distant as \*Caesarea of \*Mauretania (*ILS* 3230) and Housesteads on \*Hadrian's Wall (*RIB* 1579).

The temple itself has yielded no texts of the oracle's utterances, but they have been found as far away as \*Gaul. An inscription from \*Hierapolis of \*Phrygia offers advice on countering an \*epidemic in the city in AD 166. Other utterances are more theological. They include a long henotheistic text engraved in full on an \*altar built into the city walls at Oenoanda of \*Lycia, excerpted selectively by \*Lactantius as a testimony to the original universality of belief in the unity of God (*Inst.* I, 7, 1) and quoted again by the *Tübingen Theosophy* (13). The religious antiquarian \*Cornelius Labeo wrote a (lost) book *On the Oracle of Clarian Apollo* (\*Macrobius, *Saturnalia*, I, 18, 21) and it is likely that his approximate contemporary the \*Neoplatonist polymath \*Porphyry included texts from Claros in his (now fragmentary) collection of *Philosophy from Oracles*. **classicism** Modern concept used to describe a style in the fine arts which uses the formal language of the Graeco-Roman past, considered as a model aesthetically, and even ethically for the values it encodes (such as rationality and clarity). 'Classical' art is characterized by a fondness for three-dimensional images, the 'naturalistic' (if often highly idealized) treatment of organic forms, and the creation of spatial illusion in two-dimensional media.

New \*aesthetic values (influenced by political, religious, and social change) emerged in Late Antiquity, favouring elements like \*frontality and vertical composition. The word *modernus*, first used in Late Antique \*Latin to denote contemporaneity, expresses the self-consciousness of the period and its distance from earlier Roman times. However, the classical heritage remained alive as an undercurrent throughout the period and periodically emerged in the fine arts to constitute what modern scholarship has sometimes characterized as artistic 'renaissances'.

For instance, after the period of the \*Tetrarchs, when \*sculpture had been characterized by squat proportions and the heavy use of the drill, the imperial \*portraits of \*Constantine I (306–37), with their idealized features, youthful smoothness, and long hair, echoed the portraits of the first \*emperor, Augustus, while the female portraiture of the period readopted \*hair styles of the 2nd century.

Stylistic classicism was, however, seldom straightforward. The plastic arts of the \*Theodosian period (late 4th–earlier 5th century) are 'classical' in their fine proportions and in the coherent display of garments and the underlying body, both in large-scale sculpture, and in small-scale work (such as the \*Missorium of Theodosius, or the \*ivory \*diptychs). However, the concept of a \*Theodosian 'renaissance' conceals the fact that such phenomena went hand in hand with 'modern' art forms, like frontality or the paratactical sequence of figures (both seen on the \*obelisk base of \*Theodosius I in \*Constantinople).

A major feature of classical art, portrait sculpture, had virtually ceased by the mid-6th century; but in other media classical forms appear through the 6th century and even into the 7th: for instance, the heavily 'classicizing' floor \*mosaics of the \*Great Palace of Constantinople are now reliably dated to the earlier 6th century, while in \*silver work (which can be dated by \*silver stamps) classicism is a feature of the early 7th century (as in the David Plates from the \*Cyprus Treasures of the time of \*Heraclius). **Claudian (Claudius Claudianus)** (b. c.370) \*Epic and panegyric poet. A native of \*Alexandria whose first language was no doubt \*Greek (and of whose compositions in Greek a fragmentary *Gigantomachia* survives), Claudian nonetheless made his fortune in \*Italy as the \*court poet and chief propagandist of \*Stilicho. He may have won fame and connections as a professional 'wandering poet' even before he arrived in \*Rome c.394, and, certainly, his talents soon won him entry to the highest ranks of society in the Western Empire. He made his mark in \*Latin with a glittering poem of \*praise for the joint \*consulship in 395 of Anicius Olybrius and Anicius Probinus, the young sons of \*Petronius Probus, doyen of the Christian senatorial \*aristocracy. He passed almost immediately into the circle of Stilicho at the court in \*Milan, celebrating the third consulship of the child-Emperor \*Honorius the following year. His services were amply rewarded: he received the \*title of *vir clarissimus*, appointment to the position of *Tribunus et Notarius*, an introduction to a rich bride arranged by Stilicho's wife \*Serena, and the singular honour of a statue in \*bronze erected in the Forum of Trajan (*CIL* VI, 1710). \*Orosius (VII, 35) and \*Augustine (*Civ. Dei* V, 26) denounce him as a \*pagan, but they may have been misled by the conservative and classicizing character of his poetry, which remains loyal to the divine machinery and belief in Rome's destiny made sacrosanct by \*Vergil's *Aeneid*. Whatever his personal religious belief, he was evidently acceptable to the devout house of \*Theodosius and wrote both a \*hymn *De Salvatore* (*Carmina Minora*, 32) and a poem on the Phoenix, a traditional theme found in, for example, Ovid (*Metamorphoses*, 15. 391–407), but also one understood since Clement of Rome as Christian \*allegory (*Carmina Minora*, 27). Since his last datable poem was written to commemorate Honorius' sixth consulship in January 404, and there is no indication that he celebrated Stilicho's second consulship (405) or his victory over \*Radagausius (406), it is likely that he died in 404.

The bulk of the poetry preserved for us is politically charged, and provides rich, if tendentious, evidence for the dynastic ambitions of Stilicho, for his machinations against the ministers of Honorius' brother, the Eastern Emperor \*Arcadius, and for his campaigns against the \*Goths under \*Alaric. They include \*panegyrics on the third, fourth, and sixth consulships

of Honorius (396, 398, 404), as well as on those of the eminent bureaucrat and scholar Mallius \*Theodorus (399) and of Stilicho himself, in three books (400), along with epics on Stilicho's suppression of the revolt of \*Gildo, \*Comes Africae (*De Bello Gildonico*, 398), and his war against Alaric in northern Italy (*De Bello Getico*, 402), while the \*invectives *In Rufinum* (396–7) and *In Eutropium* (399) set out Stilicho's case against the \*Praefectus Praetorio \*Rufinus and the \*eunuch consul \*Eutropius, his political opponents in the court of \*Constantinople. An *Epithalamium* and a collection of *Fescennina* celebrate the marriage of Honorius to Stilicho's daughter Maria in 398. Also preserved is a miscellany of poems on various subjects that collectively stands in contrast to the ceremonial and epic poetry: many take the form of verse epistles, epigrams, and idylls, while those that are openly encomiastic, most notably the *Laus Serenae* (*Carmina Minora*, 30), are nonetheless more informal in tone than the great set-pieces written for public consumption. Transmitted separately is an unfinished epic in three books, *De Raptu Proserpinae*, of uncertain date but tentatively associated by some with documented shortages in the \*grain supply in 395–7.

Claudian's mastery of classical Latin poetic idiom and metre, along with his deep familiarity with the canonical poets of the Empire, command respect. So too does his flexibility in adapting the literary tradition to his sometimes unpromising subject matter. The panegyrics and epics are suffused with the patriotic language and ideals of Vergilian epic, while Lucan's grim poem of civil war is employed to give colour to the treacherous designs of Stilicho's enemies against the unity and peace of the Empire. In *De Raptu Proserpinae*, on the other hand, the influence of Ovid and Statius can be felt in the brilliant tableaux of the underworld, the emotional speeches of Ceres and her daughter, and the occasional whimsy and humour with which the myth and its long literary history are treated. Juvenal, another author widely read in the 4th century, so \*Ammianus Marcellinus claimed (XXVIII, 4, 14), has been adapted with spirit and ingenuity in the bitter satire of the invectives. In his turn Claudian served as a useful model for \*Sidonius Apollinaris and \*Corippus, and his celebrated paean to \*Rome at *Stil.* 3. 130–73 and description of the \*City's monuments in *VI Con. Hon.* celebrated the idea of \*Rome as *Roma Aeterna*. MJD

**Claudianus Mamertus** (c.425–471/4) Christian \*philosopher and \*priest at \*Vienne whose extant writings are the *De Statu Animae* (c.470) and two \*letters: one to \*Sidonius Apollinaris (Sidonius, *ep.* 4, 2); another to the \*rhetor Sapaudus. Educated in literature and rhetoric, Claudianus apparently also studied under \*Eucherius, \*Bishop of \*Lyons (434–c.449). He became a monk then priest at Vienne, where he shared the labours of his brother, Mamertus, Bishop of Vienne (c.463–c.474). He was a friend and correspondent of Sidonius (*ep.* 4, 3), to whom he dedicated his *De Statu Animae*, and similarly exemplifies the precious state of letters and learning in later 5th-century \*Gaul. At Vienne, he presided over a philosophical salon that attracted educated Christian laymen as well as clerics. Sidonius praises his erudition and style along with his command of \*Greek as well as \*Latin literature (*ep.* 4, 11; 5, 2). The extent of Claudianus' direct knowledge of Greek writers remains unclear, but he commanded a

wide range of classical Latin authors as well as \*Hilary, \*Ambrose, \*Jerome, and especially \*Augustine, by whom he was profoundly influenced. His debate with \*Faustus of Riez over the nature of the soul highlights the serious philosophical engagement that distinguishes him among his contemporaries. Against Faustus' assertion (following \*John Cassian) of the soul's corporeal nature (Faustus, *ep.* 3), the *De Statu Animae* argued, somewhat polemically, for the soul's incorporeality. Claudianus' counter-attack drew upon a mixture of \*Pythagorean and \*Neoplatonic doctrines, filtered through Augustine and, either directly or indirectly, \*Porphyry as well as biblical and Christian writers. Also at issue was an alternative to Faustus' explanation of the generation of the Son from the Father, part of Faustus's broader defence of Trinitarian doctrine. Sidonius' *ep.* 4, 11, an obituary, includes Claudianus' metrical \*epitaph. DET

**Claudius II Gothicus** \*Augustus 268–70. M. Aurelius Claudius Gothicus, sometimes M. Valerius Claudius Gothicus, an army officer at \*Pavia (Ticinum), was acclaimed \*emperor on the assassination of \*Gallienus (\*Aurelius Victor, 33, 28; \*Zosimus, I, 41). Having entered on his consulate at \*Rome, Claudius proceeded to the \*Balkans and won a crushing victory over \*Gothic invaders at \*Niš (Naissus) in 269. He moved westwards to \*Sirmium where, in August 270, he died of disease (\*Zosimus, I, 46). The \*Senate accorded him a \*gold statue on the Capitol (\*Eutropius, IX, 11; \*Jerome, *Chron.* 221k Helm). He was succeeded briefly by his brother \*Quintillus, and then by \*Aurelian, one of the officers who had plotted against Gallienus.

Claudius' reputation as a hero was invoked two generations later. In 310, \*Constantine I disposed of his father-in-law the retired \*Augustus \*Maximian. Publicists promoted the claim that Constantine's imperial connection pre-dated the \*Tetrarchy, that Constantine was actually descended from Claudius, 'the first to re-establish the dissolved and lost *disciplina* of Roman rule' (*PanLat* VI [VII], 2, 2). **clausula** See PROSE RHYTHM, LATIN.

**clavus** One of a pair of \*purple vertical stripes, running from shoulder to hem, that formed the typical decoration of the Roman tunic. Wide *clavi* (*clavi lati*) were distinctive of \*senatorial rank. While the *clavi* continue to appear in representations of saintly male figures throughout Late Antiquity, in actual practice they had been gradually replaced by shorter and more ornate shoulder bands reaching down to the breast or waist. G. Fabre, 'Recherches sur l'origine des ornements vestimentaires du Bas-Empire', *Karthago* 16 (1973), 107–28.

**cleanliness** See SANITATION AND HYGIENE.

**Clermont** (*civitas Arvernorum*: dép. Puy-de-Dôme, France) Joined with Montferrand in the 17th century, and now forms part of Clermont-Ferrand. Clermont was the *civitas*-capital of the \*Auvergne. Its Late Antique history is better known than that of most Late Roman towns in Gaul, particularly because of its association with two well-known writers: \*Sidonius Apollinaris became its \*bishop in 470, and \*Gregory of \*Tours was born there in c.539. Sidonius tells of the \*Visigothic attempts to capture the town between 471 and 475, and of the heroic attempts of \*Ecdicius to defend it. Gregory recounts many stories of its early Church, and reports the traumatic events of 523/4, when the area was devastated by King \*Theuderic I of the \*Franks in reprisal for an attempt by some local aristocrats to switch their allegiance to \*Childebert I. Between the mid-520s and 551, Gregory's uncle \*Gallus was bishop. Thereafter there was a damaging dispute between Cato and Cautinus over the bishopric, which Gregory describes in some detail, before the contested accession to the see of his friend and mentor \*Avidius; the *Passio* of S. \*Praejectus (*BHL* 6916) and the *Life* of S. \*Bonitus (*BHL* 1418) show that similar conflicts within the Church of Clermont were still recurring in the later 7th century. The relative profusion of sources means that the gradual accumulation of churches and \*monasteries in and around Clermont is unusually well documented. Gregory in particular mentions several of them, including the cathedral built over part of the \*forum complex by Namatius in the 5th century (described at *HF* II, 16), as well as a \*synagogue. The archaeology of the Late Antique city is limited by comparison, but its exiguous wall-circuit, enclosing barely 3 ha (7 acres), should probably be dated to the early 5th century. EJ; STL

CAGaule, 63/1 (1994).

*Topographie chrétienne*, vol. 6 (1989), 27–40; 16/1 (2014), 81–6.

I. Wood, in Wormald, *Ideal and Reality*, 34–57.

**Cleveland Marbles** Eleven statuettes of Docimian \*marble, in Cleveland, Ohio since 1965. They are probably of the later 3rd century and comprise four representations of the prophet Jonah, and one \*Good Shepherd, together forming the most conspicuous known set of sculpture with a Christian subject from the era prior to \*Constantine I. UG

E. Kitzinger, 'The Cleveland Marbles', *IntCongChrArch* IX, Roma, 21–7 settembre 1975 (Città del Vaticano, 1978), 653–75.

**clibanarii** Term used to describe heavily armoured \*cavalrymen, sometimes on armoured \*horses. It is derived from *clibanus*, \*Latin for cooking pot, a reference to the effects of heat on heavily armoured troops. Often used as a synonym for \*cataphract; distinctions between the two terms often appear arbitrary. HE

**client kingdoms** States on the edge of the Roman and \*Persian Empires which received financial or military support in return for pursuing military, \*trade, or diplomatic policies that served imperial interests. The Romans and Persians competed for influence over several smaller kingdoms, such as \*Armenia or \*Lazica, or tribes, such as the \*Jafnid, \*Nasrid, and \*Hujrid \*Arabs, which occupied territory between their empires. In addition, each empire sought to control new kingdoms established on their \*frontiers or even on former territories, such as the \*Visigoths, \*Vandals, \*Sueves, \*Burgundians, \*Franks, \*Ostrogoths \*Alans, \*Huns, \*Hephthalites, or \*Kidarites. Rome and Persia's struggles to gain control over client states focused on regions that were important strategically, like the \*Caucasus, or commercially, such as the Red Sea for the Indian Ocean trade or \*Central Asia for the \*silk trade.

Relations between the empires and their client kingdoms could change markedly with the fortunes of each. The early Persian Empire eventually replaced all client kings with members of the \*Sasanian family. Later, these were replaced with a governor (\*marzban). Kingdoms such as Armenia in particularly strategic areas might be partitioned into \*provinces. As the western half of the Roman Empire fragmented into autonomous kingdoms, the Eastern Empire attempted to co-opt the new Germanic kingdoms.

Along with financial support, Rome and Persia gave client kings \*gifts, money, and court \*titles; \*conversion to (or apostasy from) Christianity or \*Zoroastrianism was also an element in \*diplomacy. \*Regalia, such as the cloaks granted to Armenian satraps by Roman emperors before \*Justinian I, symbolized political

realities (\*Procopius, *Aed.* III, 1, 16–23). The right to provide the King of the Laz with his insignia (*ta symbola*) was explicitly defined in treaties between the Romans and Persians (\*Peter the Patrician, fr. 14, Müller, *FHG* IV, 189). When \*Tsathes, the King of Lazica, submitted to \*Justin I, he was baptized, given a court title, and invested with a Roman-style \*chlamys but retained his Persian-style \*tzangia or red boots (\*Theophanes, AM 6015; cf. \*ChronPasch AD 512 and \*Malalas, XVII, 9). The ability to give gifts to those perceived as clients was also disputed, as it was understood that this was a mark of independent \*diplomacy (\*Menander Protector, fr. VI, 1, 515–44).

Although Rome and Persia attempted to portray powerful nomadic empires, such as the Huns, Hephthalites, or \*Türks, as clients, the Romans and Persians were on occasion arguably reduced to tributary status themselves. For example, in the 5th century the Huns extracted huge indemnity payments from the Romans, reaching a peak under \*Attila; the Romans made Attila a \*Magister Militum and portrayed the payments not as \*tribute but as 'military provisions' (\*Priscus fr. II, 35–8; IX, 3, 1–10; XI, 2, 627).

**clientship** See PATRONAGE.

**climate and climate change** Climate has been studied primarily from a scientific perspective using proxy data, such as pollen, stable isotopes derived from polar ice cores, and geological data. Both long-term trends and short-term oscillations and variations have been detected in a variety of records including ice cores, tree-rings (dendrochronology), pollen, lake sediments, speleotherms (stalactites, stalagmites), and mollusc shells. Recent public concern about global warming has led to heightened interest in reconstructing past environments, including that of the Late Antique Mediterranean.

Global climate has been generally stable over the course of the Holocene (the current geological period which began about 11,700 years ago). Long-term climate trends depend on solar activity. Short-term climate oscillations often depend on the Sun (e.g. sunspot activity) and its effects on ocean currents and atmospheric temperatures. Volcanic events have also been linked to short-term climate change. The evidence at present only rarely permits the observation of short-term

climate impact and charting local or regional change remains challenging.

Cyclical and anomalous climatic events have affected historical time. Beginning around 400 BC, lower temperatures and a wetter environment define the Sub-Atlantic Period marked in Europe by the expansion of beech forest. This long-term cooling trend was interrupted by the so-called Roman Warm Period (RWP) or Roman Climatic Optimum beginning c.280 BC and ending no later than AD 300–500. The RWP was the warmest climate phase of the late Holocene. During the RWP, average annual temperatures were as warm as, or even warmer than, those of the present and may have been as much as one degree Celsius higher than at present. Warmer temperatures allowed for longer growing seasons in northern latitudes, especially in \*Gaul, the Rhineland, and in the British Isles.

At the end of Late Antiquity, temperatures around the world decreased. These centuries of global cooling, which spanned AD 500–800, have been referred to as the \*Migration Period Pessimum (MPP), the Dark Ages Cold Period, or the Vandal Minimum Period (VMP). As the warmer climate of the RWP meant slightly longer growing seasons and better summer growing conditions for plants in the northern latitudes and uplands of the Roman Empire, the MPP reversed these conditions; pollen data from northern Europe indicate that forests retreated in some regions even though human pressure on these landscapes had diminished.

Multiple types of proxy data indicate that the MPP witnessed a period of especially cool temperatures in the mid-6th century. In this instance low temperatures may be linked to volcanic-forcing, related to increased activity. The so-called \*Dust Veil of 536 produced an atmospheric haze which obscured the Sun and had dramatic impacts on the climate. Global tree-ring data indicate that plant photosynthesis was greatly reduced and crops probably diminished in many areas. The AD 536 event was probably caused by one or more volcanic eruptions—Ilopango (El Salvador) or proto-Krakatoa (Indonesia) have been suggested—as well as by possible impacts from meteorites or a \*comet. The resultant conditions of the 'Year Without Summer' are described by \*Cassiodorus (*Variae*, XII, 25; ET: Barnish (1992), 179–80): the Sun was cast blue and the full moon was dimmed, the summer was one of frost and drought, and crops perished. Tree-ring evidence suggests that unseasonal cold lasted from 536 to 545 and possibly as late as 550 in some places.

Millennial-scale precipitation trends in the Mediterranean Basin were largely functions of the interaction of the jet stream and sea surface temperatures in the North Atlantic which influenced storm tracks

over Europe and \*Anatolia. In the climate record these periodic oscillations are expressed in a seesaw pattern: \*Spain and the south-east Mediterranean experienced similar long-term fluctuations in precipitation in reverse to trends over the lands of the Central Mediterranean Basin and Anatolia. These long-term patterns affected the weather in the Late Antique Mediterranean, Spain, and Late Antique \*Palestine (mod. Israel, Jordan, and the Palestinian Territories), and southern Anatolia gradually became cooler and drier after AD 500. At the same time the lands of the Central Mediterranean Basin and Anatolia experienced cooler and wetter weather. Climate change may have been influential in the end of the intensive farming regime in Anatolia known as the Beyşehir Occupation Phase which largely coincided with the peak period of Late Antique urbanism.

Scholars remain divided as to the level of agency to attribute to climate when assessing the transformations of Late Antiquity. Historians and classicists tend to be conservative in their views and often favour anthropogenically driven models of change, whereas archaeologists and climatologists generally view environmental phenomena as more important. On the whole, while present evidence suggests an inhospitable climate at the end of Late Antiquity, the precise effects of this remain under debate.

**climes, Greek and Roman** A clime (Gk. κλίμα, Lat. *clima*) is a belt on the Earth that straddles a circle of constant geographical latitude. The clime is usually identified by the length of the longest day of the year, expressed in equinoctial hours (i.e. the modern hour). Thus, \*Rome was sometimes said to be in the clime of fourteen hours. This was one of three common ways of specifying latitude. The others are the length of the noon shadow on the day of equinox and the altitude of the celestial pole (in degrees). In non-technical writing, it was often held that there are seven climes.

Eratosthenes and Hipparchus both listed places that lie on circles of constant latitude. Building on their work, Strabo (*Geography*, II, 5, 34–6) described the climes from 13 to 17 hours, generally by half-hour steps, with the latitude expressed in terms of the equinoctial shadow. The fullest extant treatment is in the astronomical and geographical works of \*Ptolemy. In Ptolemy's table of ascensions (*Almagest* II, 13), the climes are listed as

|          |                       |        |
|----------|-----------------------|--------|
| 12 hours | Equator               | 0° 00' |
| 12½      | Avalite Gulf          | 8 25   |
| 13       | Meroe                 | 16 27  |
| 13½      | Syene                 | 23 51  |
| 14       | Lower Egypt           | 30 22  |
| 14½      | Rhodes                | 36 00  |
| 15       | Hellespont            | 40 56  |
| 15½      | Middle of Pontus      | 45 01  |
| 16       | Mouths of Borysthenes | 48 32  |
| 16½      | Southernmost Britain  | 51 30  |
| 17       | Mouths of Tanais      | 54 01  |

But in other tables (*Almagest*, II, 13) Ptolemy pares this down to seven climes from Meroe to the Borysthenes by half-hour intervals. In his *Geography* and in *Almagest*, II, 6, he describes many more.

\*Pliny's list of climes (*Natural History*, VI, 39, 211–20) helped popularize the subject in the Roman world. Pliny discusses seven climes with day lengths ranging from 14 to 15.6 hours, which he attributes to the ancients, but says that recent writers have added others. \*Martianus Capella (VIII, 876) lists eight climes, with the northernmost eighth passing above Lake Maeotis (Sea of Azov) and below the Riphean Mountains. In the early 7th century, \*Isidore of Seville (*Etymologiae*, III, 42, 4) listed seven, from Meroe to the Borysthenes, with place associations that descended ultimately from Ptolemy.

JCE

O. Neugebauer, *A History of Ancient Mathematical Astronomy* (1975), 43–5, 333–6, 725–33.

**climes, Persian** In \*Zoroastrian cosmogony the earth is divided into seven climes (Pahl. *būm ī haft kišwar*) separated by waters, forests, and mountains (\**Bundabishn*, 8, 5), with Ērānwēz, the mythical homeland of the Iranians, being located in the central clime, Xwanirah. Passage between the climes is only possible through the guidance of the gods or \*demons (\**Menog-e Xrad*, 9, 5). In Zoroastrian eschatology we find references to seven 'renovation-makers' (Pahlavi *frašgird-kardār*)—including the final revitalizer \*Sosyans, located in Xwanirah—who each inhabit a clime respectively (\**Dadestan-e Denig*, 35, 4–5). Xwanirah, the birthplace of the heroes of old and of the 'Good Religion' (i.e. Zoroastrianism, Pahlavi: *web-dēn*) prior to its spread, is the most important clime and thus, \*Ahriman produces more evil there in order to attempt to subdue it.

YSDV

*EncIran* V/7 (1992) s.n. 713 (A. Tafazzoli).

**clipping of coins** The illegal practice of removing from the edges of coins a small quantity of metal mostly

practised on \*gold and \*silver, which afforded greater profit, even if it was difficult to obtain an appreciable quantity of metal because gold circulated by weight. The practice is attested by \*John Chrysostom (*On the Epistle to the Galatians*, 1, 6). Clipped gold and silver coins have been found all over the Roman Empire, from \*Britain to \*Egypt. The *Sententiae* of \*Paul (V, 25, 1) delineated penalties differentiated according to the social status of the criminal, but a law of AD 343 (*CTh IX*, 22, 1) applied the death penalty. FC

### Clitunno, Tempietto del See SPOLETO.

**cloisonné** A technique by which a network of raised cells is soldered on a base metal plate (mostly \*gold, \*silver, or gilded \*bronze) and filled with \*enamel, cut \*glass, or precious \*stones. While in the Eastern Roman Empire cloisonné enamelling emerged as a complex figural art, in \*Merovingian Europe garnet cloisonné was popular. For this the cut and polished flat garnet plates were placed over a bedding paste, backed by a light-reflecting patterned gold foil, and set into cells forming complex patterns. AH1

### cloth See TEXTILES AND TEXTILE MANUFACTURE.

**Clovis I (Chlodovech, Chlodwig, Ludovicus)** (c.466–511) \*Frankish King (481–511) Clovis was the son of \*Childeric I and Basina of \*Thuringia, and a member of the \*Merovingian dynasty of Frankish kings. In 481, he succeeded his father as King of the Salian Franks in an area between the lower Rhine and the Scheldt, roughly corresponding to the Late Roman \*province of \*Belgica Secunda, where Childeric and Clovis were probably recognized by the Roman Empire as military commanders subordinate to the \*Magister Militum. Clovis spent much of his reign expanding his territory, latterly at the expense of other Frankish leaders whom he eliminated, including \*Ragnachar of \*Cambrai, \*Sigibert of \*Cologne, and Chararic, but initially by defeating various non-Frankish rivals for power in Gaul. At the Battle of \*Soissons in 486, he defeated \*Syagrius, son of \*Aegidius, whom \*Gregory of

\*Tours styled 'King of the Romans', and expanded his power in northern \*Gaul. He subsequently fought with the \*Thuringians and the \*Burgundians, though both groups remained independent until after his death. His sister Audofled had married \*Theoderic, the \*Ostrogothic King of \*Italy, whose diplomatic efforts to prevent war between his kinsmen Clovis and \*Alaric II, King of the \*Visigoths, proved unavailing. In 507 Clovis defeated and killed Alaric II in battle, extending Frankish power south of the Loire into \*Aquitaine. Theoderic soon intervened to limit the southward expansion of the Franks and their Burgundian allies, but Clovis returned to \*Tours in triumph, and received some form of imperial recognition from the \*Emperor \*Anastasius I. At his death in 511, his much-expanded kingdom was divided among his four sons: \*Theuderic I, \*Chlodomer, \*Childebert I, and \*Clothar I, setting a precedent for future divisions of the Frankish kingdom between multiple rulers.

In addition to extending his realm, Clovis consolidated his power through \*law. In the secular sphere, he may have presided over the first codification of Salic law into the \**Lex Salica* or *Pactus Legis Salicae*; while this text is not precisely datable, it was certainly codified before the year 507. In the religious sphere, he summoned the first \*Council of \*Orléans in 511, shortly before his death. This church council reformed and standardized religious practice throughout his kingdom, and strengthened ties between the Gallo-Roman \*bishops and the king. He also made \*Paris his capital and was buried there in the Church of the Holy Apostles, which he had founded, and which subsequently became S. Geneviève.

At an unknown date, Clovis married Chlothild, niece of the Burgundian King \*Gundobad, who had killed her father \*Chilperic II. Chlothild was a Catholic, and according to Gregory of Tours, she made determined efforts to convert her husband, only for their first son to die shortly after his \*baptism. Ultimately, Gregory relates how during a battle against the \*Alamans, Clovis promised God that he would convert in exchange for \*victory. After winning the battle, Clovis was baptized in the Catholic faith by \*Remigius, Bishop of \*Reims, on \*Christmas Day, leading to the \*conversion of the Franks as a whole. Two controversies surround Clovis' conversion: the year in which it occurred, and the faith from which he converted. The traditional interpretation, derived from Gregory of Tours's account, suggests that he converted directly from \*paganism to Catholicism in or soon after 496, and that combating \*Homoean (\*Arian) \*heresy was part of Clovis' rationale for his war against the Visigoths. An alternative interpretation, based primarily around a \*letter of \*Avitus of \*Vienne (*ep.* 46), suggests that Clovis may have initially flirted with

Homoean ('Arian') Christianity, and that his \*baptism as a Catholic took place as late as 508, after his victory at \*Vouillé. It is unlikely, in any event, that religious differences played a significant part in Clovis' dealings with rival barbarian kingdoms. EMB

**Clysma** Capital of a \*nome, with a \*harbour on the Gulf of Suez and, with \*Aila, the most important

\*harbour on the northern part of the Red Sea in Late Antiquity. The harbour was connected to the \*Nile by Trajan's canal to \*Babylon (mod. Cairo). Clysma rose to prominence after the 4th century, perhaps in correlation with the disruption of the route which carried Indian Ocean goods to \*Coptos overland by way of \*Myos Hormos and \*Berenice. \*Papyri of the 4th and 5th centuries refer to villagers cleaning the canal, perhaps in connection with revitalized activities at the harbour. The pilgrim \*Egeria knew it as the place where the Children of Israel crossed the Red Sea. Under \*Anastasius I, a *commercium* controlled foreign \*trade at Clysma. Clysma's commercial importance increased under \*Justin I and \*Justinian I, and the *Martyrium of \*Arethas* (c.530) mentions that Clysma could send twenty ships to assist a Roman-backed Aksumite military expedition. KS

**Codex Amiatinus and related leaves** Three complete \*Vulgate Bibles, in uncial \*script, were produced under \*Abbot Ceolfrith (688–716) at \*Wearmouth-Jarrow (\*Bede, *Historia Abbatum*, 15). One, a gift for \*Rome, is now in Florence (ms. Amiatino 1). Other related leaves are in the British Library: the Midleton Leaves (Addit. 45025), Greenwell Leaf (Addit. 37777), and Banks Leaf (Loan ms. 81). NAS  
*CLA* II, 177; III, 299; Add. p. 351.

R. Marsden, *The Text of the Old Testament in Anglo-Saxon England* (Cambridge Studies in Anglo-Saxon England 15, 1995).

**Codex Argenteus** The 'silver book' is one of the earliest and most important \*purple codices of Late Antiquity. Now in Uppsala University Library (with a further fragment bearing the final words of S. Mark's Gospel, found in 1970 in a \*reliquary in Speyer), this Gospel book was penned in \*silver uncial \*script on purple pages, in a treasure binding. It was probably made for the \*Ostrogothic King \*Theodoric in \*Ravenna or \*Brescia and contains the Gospels in the 4th-century translation of the \*Bible into the Gothic language and alphabet, attributed to \*Ulphilas, missionary

from \*Constantinople to the \*Homocan (\*Arian) Goths of \*Moesia (modern Ukraine, Bulgaria, and Romania). The decoration consists of a few large, framed initials and, at the bottom of each page, a silver architectural arcade enclosing the \*monograms of the Four Evangelists. One hundred and eighty-seven of the original 336 leaves were preserved at the former Benedictine abbey of Werden (near Essen, Rhineland); it has been in Uppsala since 1669. MPB

**Codex-Calendar of 354** The *Chronograph of 354*, as it is more appropriately termed, is a copiously illustrated compendium of dates and other information put together in 353/4 by the calligrapher Furius Dionysius \*Filocalus for a Roman \*senator called Valentinus. It survives in whole or in part in various manuscript copies ranging in date from Carolingian times to the 17th century.

The manuscript tradition is complex and it would appear that a number of documents have accrued to it which did not form part of the original compilation. The most important of these additions are the \**Liber Generationis*, the \**Breviarium Vindobonense* (called in Mommsen's edition the *Chronica Urbis Romae*), the \**Consularia Vindobonensia Priora*, and the \**Notitia XIV Regionum Urbis*.

The *Chronograph* was originally composed of an illustrated section which comprised the following: a dedication to Valentinus, \*personifications of the \*cities of \*Rome, \*Constantinople, \*Alexandria, and \*Trier, an imperial dedication and a table of anniversaries of imperial \*accessions (*Natales Caesarum*), seven tables for the days of the week with their ruling planets and their effect on human affairs (*Imagines Planetarum VII*), three lists of the signs of the \*Zodiac and their astrological effect (*Effectus XII Signorum*), an illustrated monthly Calendar, and portraits of the \*consuls of 354 (\*Constantius II and \*Gallus Caesar).

This was followed by an unillustrated section, containing a list of \*consuls from AUC 254 (= 509 BC) to AD 354 (*Fasti Consulares*), a list of the dates of \*Easter from 312, subsequently extended into the early 5th century (*Cyclus Paschalis*), a list of those who had held office as \*Praefectus Urbi at Rome from 254 to 354, a list of the burial places of recent \*bishops of Rome (*Depositio Episcoporum*) organized by the anniversary of their deaths and starting on 27 December, a list of Christian \*martyrs and Christian festivals similarly organized and starting with 25 December (*Depositio Martyrum*), and a chronological list of bishops of Rome from S. Peter to \*Liberius (352–66) (*Episcopi Romani*, the so-called Liberian Catalogue).

The text was not composed expressly for the *Chronograph*. The *Depositio Episcoporum* was derived from an original compiled in 336, as the latest bishop listed according to the anniversary of his death (\*Sylvester) died on the last day of 335, but two subsequent bishops (one of whom died in 336) have been added at the end to bring the list down to 352.

The *Chronograph* contains valuable information. The *Fasti Consulares* is one of the two most complete lists of consuls and their dates (the other being the \**Descriptio Consulium*). The table of dates of Easter covers the years 312–411, using a 532 cycle comparable to that of \*Victorius of \*Aquitaine. The list of Prefects of the City is complete from 254 to 354. The *Depositio Martyrum* and the *Fasti Consulares* are the earliest texts to mark 25 December as the anniversary of the birth of Christ, and also contain the names of such martyrs as S. Agnes, S. Sebastian, and S. \*Lawrence, who are likely to be historical even though their surviving \*martyr passions are fictional. The compiler of the Liberian Catalogue drew on the same material later used by the early 6th-century \**Liber Pontificalis*. The whole is more than a miscellany; it illustrates the Late Roman preoccupation with associating together human events and the mathematics of chronology in a way which gave rise to the science of computus. OPN; NAS

HLL 5, section 531.2. Text: ed. T. Mommsen, 'Chronographus Anni CCCLIII', in *Chron. Min.* I (MGH Auct. Ant. 9, 1892).

**Codinus** See PATRIA OF CONSTANTINOPLE.

**coemptio** (Gk. *synônê*) Refundable requisition or forced sale, specifically \*taxation in kind. *Coemptio* developed as the counterpart to the monetary commutation (\**adaeratio*) of \**annona*. It constituted a form of fiscal levy, inasmuch as the state fixed the amount refunded of \*grain or other foodstuff. This was helpful to the state when it needed to supply an \*army in a

particular region. It was applied at a rate that was probably advantageous to the state, or at least at a rate that offset the effect of any rise in prices in regional markets. The basic function of *coemptio* in the Late Roman period was to enable the state to obtain supplies directly when it needed to do so, without recourse to market exchange. By contrast, the development of *coemptio* in the 6th and 7th centuries in the Byzantine East is debated; it may have preserved its original character as an exceptional levy or it may have been transformed into a periodical tax obligation. **cohortales** Generic term for staff in the provincial \*administration, responsible for assisting a provincial \*governor with legal and financial matters. Numbers varied by \*province, but 100 appears to be a common number. They were paid at similar rates to soldiers, though often had the ability to extract additional fees for their services. Like soldiers, they were theoretically hereditary, though numerous laws show that many evaded or ignored this requirement. Others were attracted to service as *cohortales* as this was felt to be less onerous than serving as a \**decurio* on a \*city council and also because *cohortales* were exempt from military service. See also ADMINISTRATION, ROMAN PROVINCIAL.

**coinage, Aksumite** The kingdom of Aksum issued its own coinage in \*gold, \*silver, and \*copper alloy from

the late 3rd to the mid-7th centuries AD. For the greater part of this period, the designs on issues in silver and copper were emphasized by selective gilding. Estimates for the date of the first issues, under King Endybis, range between 270 and 290. All inscriptions were initially in \*Greek, although under the kings WZB and MHDYS unvocalized \*Ge'ez was employed. From the early 6th-century reign of \*Kaleb, Ge'ez was used on the locally circulating silver and copper, with Greek continuing on the internationally circulating gold. The coins provide evidence of a broadly agreed sequence of rulers until Kaleb, but evidence for subsequent reigns is disputed. Initially, both obverse and reverse showed the king's portrait; this continued on the gold throughout the series, but distinct reverse types were employed on silver and copper from the 4th century. Use of the royal portrait on both sides of the coins may have been inspired by southern \*Arabian usage, although the weight-standard of the gold seems to have been based on that prevailing in the Roman Empire. Aksumite religion was almost invariably indicated by a symbol—crescent-and-disc initially, the cross after \*Ezana's adoption of \*Christianity—above the royal portrait. DWP

**coinage, Anglo-Saxon** The \*Anglo-Saxons reintroduced monetary circulation and minting into post-Roman \*Britain on the model of the Merovingian \*coinage. Merovingian coins were already circulating in Britain from the 6th century onwards. From the 7th century the Anglo-Saxons minted their own \**tremisses* (often called \**thrymsas*, but more probably corresponding to the Old English *shelling*, of which the *thrymsas* represented one-third). They minted, on Merovingian standards of weight and fineness, very few \**solidi*. Their design was also inspired by Merovingian productions. As in \*Gaul, the fineness dropped constantly till in the last quarter of the 7th century the gold coinage was replaced by \*silver.

Silver pennies (often inappropriately described as \**sceattas*), again similar in weight and dimensions to Merovingian \**denarii*, were then minted in much larger quantities than the previous gold coins, and in the 8th century coin production extended from south-east England northwards and westwards. After a brief interruption around the mid-8th century, coinage was revived by King Offa of Mercia, with broader and

thinner pennies influenced by the coins of the Merovingian \*Pippin III. Most coins are uninscribed or imitate the legends of their models. Another group is inscribed with unknown words, sometimes using \*runes, or with the names of the moneyer, of the mint, of the \*bishop. Only a few bear regal names (such as those of Eadbald of Kent on gold, and Aldfrith of Northumbria and Offa on silver). In the 8th century Northumbria developed a regal coinage. FC

**coinage, barbarian** See COINAGE, ROMAN AND POST-ROMAN.

**coinage, Burgundian** The \*Burgundians started minting \**solidi* at the end of the 5th century, under \*Gundobad (whose \*monogram was added to the coins) and probably also under \*Godegisel. Earlier productions are possible but not surely identified. The Burgundians minted \*pseudo-imperial \*gold coins in the names of \*Valentinian III, \*Anastasius I, \*Justin I, and \*Justinian I, two denominations of \*silver coins, and one of divisional similar to Roman AE4. Mints have been identified at \*Lyons, \*Chalon-sur-Saône, and Geneva. Minting ceased with the conquest of the kingdom by the \*Franks in 532. Coin circulation in the kingdom was regulated by *Constitutiones Extravagantes*, 21, 7 (MGH LL nat. Germ. 2, 1 [1892], 120–1) This identified four kinds of coin minted with less pure gold which could be accepted only for the quantity of metal contained in them. The identification of these coins is somewhat problematic. FC

**coinage, civic** In the Eastern Roman Empire many \*cities produced their own \*coinages for local circulation. This was a continuation of the tradition practised

by cities since Hellenistic times and earlier. Most of these coinages were of base metal (copper, \*bronze, or brass), but a few were of \*silver or debased silver. The Severan period in the early 3rd century witnessed the greatest number of civic communities issuing their own coins. It is thought that \*debasement of imperial silver coinage in the mid-3rd century made civic coinage unprofitable to produce, because the number of cities making such coins declined rapidly during this period. The last civic coinage was issued at \*Perge in \*Pamphylia for the \*Emperor \*Tacitus (AD 275–6). KETB

**coinage, Frisian** \*Frisia was a region whose importance in international \*trade increased dramatically in the 6th century, as it became a crossroads for routes connecting the Atlantic coasts, Scandinavia, the Rhône Valley and the Mediterranean, and \*Constantinople. Coins of different provenances were circulating here, as demonstrated by the local \*hoards.

Coins were minted locally in many 'irregular' mints, which adopted forms similar to the \*Merovingian 'moneyers' coinage'. \*Dorestad, the main commercial centre and mint of the region, was for long periods under \*Merovingian control, and the moneyers Rimoaldus and Madelinus from Maastricht were active there. The productions of Madelinus served also as models for the 'Frisian imitations', and so were coins which were seem to have been minted further north and themselves also often imitated Merovingian productions.

Uninscribed \*silver \**sceattas* were also minted in Frisia. In the third quarter of the 7th century these probably came to be a substitute for \*gold coins and, at least to start with, they continued the designs of the coins of the moneyer Madelinus. FC

A. Pol, 'A New Sceat of the Dorestad/Madelinus-Type', *Studies in Early Medieval Coinage* 1 (2008), 119–22.

**coinage, Islamic** Early Islamic coins used pre-Islamic numismatic terminology and iconography. The \*Arabic for \*gold, \*silver, and \*copper coins is, respectively, \**dinar* (Lat. *denarius*), \**dirham* (Gk. *drachma*), and *fil* (Lat. *folles*). No coins minted by \*Muhammad or the first two \*caliphs survive, and between 652 (the earliest extant coins bearing marks attributable to the \*caliphate) and 691, *dinars* and *fil*

retained Byzantine imperial \*insignia and the \*Cross, while *dirhams* retained images of the \*Sasanian Shah's bust and the \*Zoroastrian \*fire altar. These 'Arab-Byzantine' and 'Arab-Sasanian' coins are identifiable as 'Islamic' only by their \*inscriptions: first, one- or two-word Arabic phrases such as *jayyid* ('valid tender'), or *bism-Allah* ('in the name of God'); in 661 the caliph's name appears on some *dirhams* (in \*Pahlavi, not Arabic); between 681 and 696 further Muslim pious inscriptions were added. In 691/2 an Arab-Sasanian coin of the governor of \*Sistan, 'Abd al-'Aziz b. 'Abd Allah b. 'Amir, replaced the usual image of the fire altar with text reciting the Muslim profession of faith, though in Pahlavi, not Arabic (Mochiri, 169). It anticipated the major innovations of the Caliph \*Abd al-Malik in \*Damascus.

In 691, following the Second \*Fitna (\*Arab Civil War), 'Abd al-Malik began some unprecedented experiments, replacing the fire altar on Arab-Sasanian *dirhams* first with an image of a standing swordsman (perhaps the caliph), then a spear (*anaza*) and prayer-niche (\**mihrab*) (possibly an arch) (Treadwell, 13–15, 19–21). On Arab-Byzantine *dinars*, he effaced the Cross and replaced Byzantine imperial \*portraits with the standing swordsman. In 696, he made final, comprehensive changes, issuing coinage stamped only with circular and horizontal bands of Arabic text recording the mint, date, and pious Muslim formulae. 'Abd al-Malik's aniconic design was a radical and complete Arabization and standardization: he minted these coins in all provinces of the caliphate and created a standard for Islamic coinage—subsequent \*Umayyad and \*Abbasid issues perpetuated the text-only format.

High-quality Abbasid *dinars* spread widely in Late Antiquity; even Offa, King of Mercia (r. 757–96) in central England, struck (poorer-quality) imitations of the *dinars* of al-Mansur with a passable rendering of the Arabic inscriptions, demonstrating the value ascribed to Abbasid coinage in distant England. **coinage, Lombard** The \*Lombards started minting shortly after the invasion of \*Italy (AD 568). Earlier coin productions cannot be identified with certainty. At first they minted only \*gold in the form of \*pseudo-imperial coins (almost entirely \**tremisses*), on the weight standard of the Eastern Roman Empire and with a high

degree of fineness. Starting with \*Cunincpert (AD 688–700) a regal gold coinage was inaugurated, which continued till the Carolingian invasion, showing a constant reduction in fineness.

A regal \*silver coinage was also developed in parallel. This was introduced under \*Perctarit (AD 672–88); it was minted probably in small quantities and production was interrupted around 730. Gold was minted additionally in Tuscany in the form of an autonomous municipal coinage bearing the name of the town, starting c. AD 700. Under Gisulf I (689–706), the Duchy of \*Benevento also started to mint pseudo-imperial gold coins showing the \*monogram of the \*Dux; Grimoald III (788–806) added his full name to the coins and introduced a silver \**denarius*, minted, though not continuously, till the mid-9th century AD. The principality of Salerno also minted *solidi* and *denarii* in the 9th century. FC

A. Rovelli, 'Some Considerations on the Coinage of Lombard and Carolingian Italy', in I. L. Hansen and C. Wickham, eds., *The Long Eighth Century* (2000), 195–223.

**coinage, Merovingian** Since their settlement on the territory of \*Gaul the \*Merovingians started minting coins. As in other \*successor states, \*gold was initially minted as \*pseudo-imperial coins (mostly \**tremisses*), though \*silver and \*bronze coins sporadically bear the name of the kings. The coins show heterogeneity in style, which hints at a multiplicity of mints; this was characteristic of later Merovingian coinage. Weight, iconography, and fineness are homogeneous, and hint at centralized control.

A national coinage first developed under \*Theudebert I, around 539. In different towns gold coins were minted in the name of the king, an innovation which scandalized the East Roman historian \*Procopius (*Gothic*, III, 33). This innovation did not have further success, and national coinage was developed only with \*Sigibert I (after 561), while the Provençal area went on minting pseudo-imperial coins (known as 'quasi-imperial') till the early 7th century. National coins seldom bear the name of the king. They mostly have a record of the locations (c.800) where the coins were minted and of the moneyer (*monetarius*), presumably an official controlling the production. They more seldom indicate the institution (e.g. *racio fisci*) responsible for the minting.

Nevertheless regularities in weight and fineness hint at centralized control. A reform was consistently

introduced c.585 raising the fineness to c.95% and changing the weight standard to a *tremissis* of 7 \**siliquae*. Fineness declines progressively later, reaching c.50% around the middle of the 7th century. After this the gold coinage was abandoned and replaced by the silver coinage typical of the Carolingian period. FC G. Depeyrot, *Le Numéraire mérovingien: l'âge de l'or*, 4 vols. (1998).

P. Grierson and M. Blackburn, *Medieval European Coinage*, vol. 1: *The Early Middle Ages (5th–10th Centuries)* (1986).

**coinage, Ostrogothic** After their conquest of \*Italy, the Ostrogoths, like \*Odoacer before them, continued to mint \*gold, \*silver, and divisional coins in \*Rome, \*Ravenna, and, in their earlier years, in \*Milan. During the \*Byzantine invasion Ticinum (\*Pavia) had a mint, and silver was minted in \*Sirmium.

The gold coinage consisted of \*pseudo-imperial coins. One medallion with the portrait and titulature of \*Theoderic constitutes no exception since it was minted for a special distribution and was not a normal coin. Silver was mostly minted as half- or quarter-*siliqua*. The divisional coinage was reformed at the end of the 5th century to a system analogous to the reformed \*Vandal and East Roman systems, with pieces valued at 40, 20, 15, 10, 5, and 2.5 \**nummi*.

\*Cassiodorus' *Variae* contain considerable information about coins and their circulation. The supervision of minting was still in the hands of the \*Comes Sacrarum Largitionum (*Variae*, 6, 7), while *Variae*, 7, 32 is the \*formula for the superintendent of a mint (maybe with the title of \*Procurator). **coinage, Persian** \*Sasanian coinage was produced throughout the \*Persian Empire in mints which were apparently tightly controlled. Coins form a crucial primary source for Sasanian monetary, economic, political, and art history.

The primary denomination of Sasanian coinage was the \*silver drachm, inherited from the Parthians, though \*Ardashir I increased the weight from 3.7 g to 4.2 g. Most rulers produced fractional silver and \*copper coinage. Small numbers of prestige \*gold issues were produced for purposes of publicity and to compete with \*Roman and Kushan gold. The use made of Sasanian coinage as \*money within the empire is unclear,

except for limited textual evidence for the payment of taxes in coin.

Iconographically, Sasanian coinage remained very consistent from the 3rd to the 7th centuries, though in point of style its portraits and reverses become progressively stylized. Coins usually bore the royal portrait on the obverse and a \*fire altar with two attendants on the reverse, Sasanian coins contained multiple rims, and late Sasanian coins characteristically included astral symbols outside the rims. Legends were in Pahlavi. They include the name and titles of the King of Kings on the obverse and on the reverse the phrase 'fire of (name of king)' and, at times, a slogan. Minting location is occasionally indicated. Each king adopted a personal \*crown with divine and astral symbols. These were, by and large, unique to him. Exceptions are in cases of an initial co-regency (e.g. Ardashir I and \*Shapur I) and in the late Sasanian period when crowns become very stylized and often similar. If a king suffered a serious defeat, he might adopt a new crown (e.g. \*Narseh).

Sasanian coinage was used extensively in \*trade, especially with \*Central Asia and \*China, and it formed a model for types struck in areas adjacent to the Persian Empire, such as those ruled by the \*Hephthalites and \*Kidārites. After the \*Arab conquest, in areas of the early \*Umayyad \*caliphate formed from the heartlands of the Sasanian Empire Arab-Sasanian issues imitated Sasanian design but with \*Arabic legends, until the coinage reform of \*Abd al-Malik in the 690s created a new, aniconic Muslim coinage. The form of the Islamic silver \*dirham nonetheless owed its distinctive silver fabric and wide flan to Sasanian minting techniques. The primary work of reference for Sasanian coins is the *Sylloge nummorum Sasanidarum*, whose volumes are organized by individual coin collections.

**coinage, Roman and post-Roman** The coined metals which circulated legally within the Roman state, and the coinage issued by successor powers of Rome in parts of the West, based on Roman models, were a multi-metallic system with interrelated precious and base metal denominations.

Roman coinage was issued by multiple mints throughout the Empire, with stringent control maintained over the production of precious metal coinage, which was regarded as a state prerogative. In addition to

functioning as an economic medium, Roman coinage was a vehicle for state representation. Late Antiquity most strikingly witnessed a move away from naturalistic imperial \*portraiture, though the imperial portrait and the \*emperor's name remained a standard and significant part of \*gold and \*silver coin designs. Roman coinage also frequently bore \*personifications of cities, depictions of military figures, and, from \*Constantine I, some \*Christian symbols.

Throughout Late Antiquity Roman coinage was plagued by \*debasement and \*inflation, precipitating periodic reform. It is consequently characterized by enormous complexity, often reflecting a real lack of systematization at the point of production. Civil wars and revolt by \*usurpers in Late Antiquity contributed to monetary irregularity, as competing parties frequently issued currency simultaneously. Nevertheless, significant trends in precious- and base-metal coinage in this period paved the way for subsequent post-Roman minting.

In precious-metal coinage, gold replaced silver as the dominant metal in the Roman monetary system. The silver \*denarius had been at the heart of classical Roman coinage. From the 2nd century AD onwards severe debasement and weight reduction reduced its value and reliability. Attempts to stabilize the silver coinage proved unsuccessful. \*Diocletian's coinage reform of AD 294 included a silver denomination but focused on a new gold coin, the \*solidus. In response to continued instability, \*Constantine I reformed the Roman coinage again in 312. The weight of the solidus was reduced but it was retained as the standard precious-metal denomination. From this point, silver coinage would play only a sporadic and subsidiary role in what was effectively a bi-metallic gold-\*bronze Roman coinage.

Roman base-metal coinage in Late Antiquity poses severe challenges for numismatists as erratic weights and (often) crude minting defy classification into a clearly demarcated denomination system. In the East Roman Empire the problem of the copper coinage was resolved by the coinage reform of \*Anastasius I in AD 498. Widely considered the beginning of a distinctively Byzantine coinage, this reform stabilized the relationship of the gold coinage (centred on the Constantinian-weight solidus) with the copper \*nummus, the lowest denomination and theoretical unit of account. The 40-nummi coin, or \*follis, became the dominant low-denomination coin in what remained a highly monetized Late Roman economy.

In those areas of the West which came under the authority of non-Roman rulers in Late Antiquity, post-Roman coinages were produced following to differing degrees Roman monetary practice. Post-Roman coinages initially adopted the previously Roman prerogative of minting gold. The sole right of the Roman emperor to be depicted on gold coinage was asserted fiercely

though ineffectively by \*Procopius when the \*Merovingian king \*Theudebert I of Francia issued his own solidi in 534 (\*Gothic, VII, 33), reflecting the importance of minting gold coinage as a prestige activity representative of government privilege inherited from Roman coinage. Subsequently, however, there was a gradual shift towards silver as the dominant precious-metal coinage in the Late Antique West. While the design and weight standard of gold coinage in the post-Roman West represented a clear continuity with Roman coinage, the generally lower volume of base-metal issues and the diverse levels and forms of state control over minting are clear discontinuities. **coinage, Suebian** The \*Suebes minted \*gold, \*silver, and \*bronze coins. Gold was minted at first as \*pseudo-imperial coins. The chronology is difficult to define: pieces in the name of \*Honorius could have been minted c.450, at a time of tension with \*Valentinian III, recalling the \*emperor who granted the treaty of AD 418. Only in the last years of the kingdom did a national production show the name of the place of minting. The name and portrait of the last king before the \*Visigothic conquest, Audeca, also appears on one \*tremissis. Silver coins are known from the mid-5th century onwards, and they indeed bear the name of the dead Emperor Honorius on the *recto*, explicitly mentioning the King \*Rechiarus on the *verso* (*iussu Rechiaris regis*): this is the first monetary production mentioning the name of the local king; this would not have been acceptable on gold. Suebian coins were not abundant and are very irregular in weight and fineness. FC

**coinage, Vandal** The \*Vandal Kingdom was the only Roman-Germanic kingdom which minted no \*gold, though gold coins from other regions circulated and were used as a unit of account, as demonstrated by the \*Albertini Tablets. After some sporadic production under \*Geiseric, which followed on from minting by \*Boniface, the last \*Comes Africae, the Vandals started producing \*silver coins in three denominations (seldom 100 \*denarii, regularly 50 and 25 denarii) systematically under \*Gunthamund. Divisional coins were also minted, and it was probable that the \*follis, with a value of 42 \*nummi and submultiples of 21, 12, and 4 nummi, was first introduced in late 5th-century \*Africa; this reform was later adopted also in \*Ostrogothic \*Italy and in the Eastern Roman Empire. This introduction of the follis led to an extensive countermarking of older coins with the values 83 and 42. Such countermarked coins, like all Vandalic coins, were widely circulated around the Mediterranean, thus demonstrating the vitality of the kingdom's \*trade. The copper coinage was minted by the royal administration, but was organized on a local level as 'municipal coinage'. FC

**coinage, Visigothic** The \*Visigoths started minting in \*Gaul shortly after the treaty of AD 418, producing \*pseudo-imperial \*gold \*solidi. This production continued in Spain, till under \*Leovigild and \*Hermenegild (c. AD 580), it gave way to a national gold coinage. From then on, Visigothic gold coins, which went on being minted till the \*Arab conquest of Spain, show a constant reduction in fineness. Their weight standard had always been that of the Eastern Roman Empire (with the exception of the period between \*Alaric II and Leovigild, when the 'Germanic' standard of 21 \*siliquae was adopted) but this standard seems to disappear at the beginning of the 8th century.

Alongside gold the Visigoths also minted copper: these extremely small coins have been identified only since the 1990s. The number of mints, from Leovigild onwards at least, was extremely high (more than 80 are attested): at least part of this production was probably organized privately. Nonetheless there was a strong central control on coin production, as revealed by legislation concerning \*counterfeits and circulation of coins. FC RIC X.

**coinage legislation** The production and circulation of \*coinage was regulated in the Late Antique world through \*laws, some of which survive in the \*Theodosian Code (mostly titles IX, 21; IX, 22; IX, 23) and in \*Justinian's Code (mostly title IX, 24). Further texts are contained in the \*Sententiae of Paul (V, 25).

Laws regulated the problem of \*counterfeit coinage. Earlier laws, since the time of Sulla, had dealt with counterfeiting. After the end of provincial and civic \*coinages in the late 3rd century, minting of coins was reserved to the imperial mints, with the possible exception of authorized persons permitted to produce divisional coinage through casting. A law of 326 (CTh IX, 21, 3) punished only false casting (*falsa fusio*); by a law of 371 (CTh XI, 21, 1) the practice was certainly forbidden to everyone, and a further law of 393 (CTh IX, 21, 10) explicitly repeals any possible earlier imperial permission to engage in it. The presence of the imperial portrait on the coins is probably at the root of the identification of this kind of crime with *maiestas* (\*treason), as enacted in 389 (CTh IX, 21, 9). Penalties changed through time: \*Constantine I established the death penalty, at least for counterfeiting \*gold coins (CTh IX, 21, 1). In the Roman-Germanic kingdoms and in the Eastern Roman Empire the punishment was the amputation of a hand. Punishments are laid down also for the persons on whose property forgeries were made.

'Free coinage', i.e. opportunities for private persons to bring their own gold bullion to a public mint and have it transformed into coinage, was legal at some periods. A law of 369 (CTh IX, 21, 7) forbids the practice, while a law of 374 (CTh IX, 21, 8) permits it, on payment of one-sixth of the sum minted.

There was also legislation concerned with tampering with legal coins, especially by \*clipping. In 317 \*Constantine enacted that this also should be punished with the death penalty (CTh IX, 22, 1). Another form of tampering with legal currency was melting down coins, in order to separate out the \*silver in them; in times of \*inflation and of an increase of the value of silver, this could be lucrative. A law of 349 (CTh IX, 21,

6) asserts that this abuse is prevalent for the *maiorinam pecuniam* (the larger divisional coins), and establishes the death penalty as its punishment.

The circulation of coinage was also regulated by laws, which are often difficult to understand, as the terms used in them can no longer be connected with specific coins. Gold coinage had to be accepted in payment, so long as it bore the portrait of a recognized \*emperor and was of full weight (*CTh IX*, 22, 1; *NovVal*. 16). A law of 352 (*CTh IX*, 23, 1) forbids, under penalty of death, the melting down of legal currency, and also its export. It establishes a limit of 1,000 \**folles* which \*merchants could take with them outside the Empire, under penalty of \*exile, and it explicitly underlines that legal currency cannot therefore be an object of commerce, of sale, or of purchase, and that forbidden currency, i.e. currency which has undergone \*demonetization, may not be used.

Demonetization of the coin called the \**decargyrum* was ordered in 395 (*CTh IX*, 23, 2). The activities of money changers were regulated by law; in particular there were regulations concerning the change of gold coinage into divisional coins (\*Symmachus, *Relatio*, 29; *NovVal* 16). A series of laws (*NovVal* 16, *Nov Maj* 7, 15, and *NovJust* 128, 5) also established an official system of weights to check regular gold coins.

Further laws defined, in relation to gold, the value of particular emissions which were to be accepted at a lower value because of their metal content (*Nov Maj* 7, 14). Only with the birth of national coinages in the barbarian kingdoms of Western Europe were these forbidden on imperial territory, as is made clear by \*Gregory I the Great (*Reg. Ep.* 6, 10). Roman-Germanic kingdoms also generated considerable legislation concerned with the problems of coinage and counterfeiting (e.g. \**Book of the Judges*, VII, 6, 2) and the acceptance of gold coinage of lower fineness (\**Lex Burgundiorum*, 21, 7). **coins, metal content of** Three main metals were used for \*coinage in Late Antiquity: \*gold; \*silver; and copper. In general the gold was carefully refined and was of a high standard of purity. However, from about the time of Severus Alexander (AD 222–35) Roman imperial gold coins appear not to adhere to any consistent weight standard. During the third quarter of the 3rd century (approximately AD 253 to 274) there are also signs of \*debasement of gold by alloying with silver. From AD 274 the quality of the gold coinage was restored, and \*Constantine I's introduction of a new denomination, the \**solidus*, in AD 309, saw the weight standard stabilize at 72 to the pound, and it remained at this weight throughout Late Antiquity. However, in the middle of the 4th century *solidi* are found alloyed with silver. To what extent this episode, or the 3rd-century one, represents deliberate debasement is hard to say. Silver naturally occurs alloyed with gold and the 'debasements' may be the result of careless refining. However, \*Valentinian I (AD 364–75) insisted that *solidi* be refined to a high standard; from this point on they are consistently of high quality and generally marked \*OB (*obryzum*, 'pure gold').

The silver coinage suffered severe debasement by alloying with copper in the 3rd century. \*Aurelian's reform of AD 274 fixed the silver content at about 5% fine. Such base alloys are generally termed *billon* rather than silver. Attempts to introduce a new silver coinage at the end of the 3rd century were not very successful, and for most of the first half of the 4th century the coinage of the Roman world was composed mainly of gold and billon. In the 350s silver coinage began to be coined in quantity once again. Whether silver coins had a fixed relationship to gold is debatable; their value may have floated on the market. From Valentinian I the silver coinage was guaranteed high purity and was marked \*PS (*pusulatum*, 'purified'). From the early 5th century the quantity of silver produced declined, and coinage in this metal is generally uncommon afterwards.

During the 3rd century the traditional copper and copper alloy coinages of the early Empire ceased to be produced. For much of the time during the 3rd and first part of the 4th century, small change was supplied by the billon coinage. After AD 348 a series of copper, or copper alloy, denominations were introduced alongside billon issues, and by the time of Valentinian I billon coinage was eliminated altogether, in favour of copper or copper alloy, usually \*bronze (an alloy of copper and \*tin, often with lead added). **Collatio Legum Romanarum et Mosaicarum** (*A Comparison of Roman and Mosaic Laws*) Anonymous 4th-century \*Latin work, more correctly referred to by its transmitted manuscript title: *Lex Dei quam praecepit dominus ad Moysen* (*The Law of God, which the Lord Commanded to Moses*). As it survives, it consists of sixteen titles, each opening with an Old Testament prescription attributed to Moses (from the Torah/Pentateuch), with which Roman legal rules are then shown to be in accord. The structure partly mirrors the second half of the Ten Commandments and treats of matters mostly criminal, but some civil. These topics are, in sequence, \*homicide, assault, cruelty to slaves, \*adultery, \*homosexuality, incest, \*theft, false witness, witness by family members, deposit, cattle-rustling, arson, removing boundary markers, kidnapping, sorcery, and intestate \*succession. The biblical quotations are close to Vetus Latina rather than Vulgate versions of the Latin \*Bible. The Roman legal materials are taken from the writings of the five jurists later canonized in \*Theodosius II's 'Law of Citations' (Papinian, Paul, Gaius, Ulpian, Modestinus) and the \*Gregorian and \*Hermogenian Codes, and a single law of \*Theodosius I from 390 (*Coll.* 5, 3; cf. *CTh* IX, 7, 3). Probably written in \*Rome, the work's nature and purpose is very divergently interpreted by scholars, who dispute its date (either early 4th century with later editing, or c.390, or after) and its author's identity (Jewish or Christian). It preserves the Tetrarchic \*Manichaean Law and the Tetrarchic \*Marriage Edict. SJJC

**collatio lustralis** (Gk. *Χρυσάργυρον*) Tax, instituted by \*Constantine I and collected every four years (*lustrum*) from \*merchants and traders. \*Anastasius I abolished it in the East in 498; \*Joshua the Stylite (31) describes the week's \*festival at \*Edessa celebrating its abolition. It was payable in both \*gold and \*silver, but nearly all laws after 372 mention payment only in gold (*CTh* XIII, 1). This tax was levied upon individual tradesmen, including all craftsmen, market gardeners, fishermen, \*merchants, and prostitutes, irrespective of income or the level of trade engaged in; it was in no way a sales tax. Those in the imperial \*administration, those selling the produce of their own land, and certain clerics were exempt. Representatives from each particular trade were responsible for tax collection and the management of exemptions on a local level. It is not clear what proportion of state revenue this tax raised, although according to several ancient authors, the tax was an enormous burden on those subject to it (\*Libanius, *Oration*, 46, 22; \*Zosimus, II, 38; \*Evagrius, *HE* III, 39). The proceeds paid for provisions for the troops and other public expenditure. AAB

Jones, *LRE* 431–2.

Delmaire, *Largesses*.

**Collectio Avellana** Scholarly name given to an assemblage of nearly 250 documents (mostly \*letters) concerning the relationship between Roman \*bishops, their ecclesiastical peers, and lay authorities between the 4th and 6th centuries. Probably gathered into its current form shortly after the death of Pope \*Vigilius (554), the collection is an important instance of attempts by Roman partisans to put together a distinctive history of the see of \*Rome characterized by editorial decisions to include and exclude individual documents. The sympathies of the *Collectio Avellana* editor(s) are evident when compared with papal biographies (e.g. that of \*Damasus) contained in the \**Liber Pontificalis*, a document that began to take shape at roughly the same time. Both collections are now seen as revealing the partisan nature of Roman ecclesiastical politics in the period and as disproving the narrative, perpetuated by papal figures and their supporters, that Roman bishops were understood by clerics and the laity alike to enjoy wide authority in ecclesiastical matters. Pioneering technical work on the two surviving 11th-century manuscripts was done in the 19th century, culminating in O. Günther's critical edition. Günther challenged the view, then prevalent, that the collection was a miscellany, believing instead that there was a logic to the editorial decisions. Blair-Dixon advances this theory significantly by arguing that the editor was motivated by the conflict between \*Justinian I and Vigilius and thus assembled those texts that would most concretely justify a specific view of papal authority

vis-à-vis the Roman government. That objective, however, did not necessitate a sanitizing of previous papal improprieties, especially if the guilty pontiff had been complicit with the imperial government. GED

ed. O. Günther, 2 vols. (CSEL 35, 1895–8).

A new edition with ET and monograph is being prepared by La Banda Avellana, based at Loyola University in Chicago, who promise publication of papers from their conferences of 2011 and 2013.

**Collectio Hispana** Collection of \*canon law of the 7th century in three recensions: the *Isidoriana* (633/6, possibly composed by \*Isidore of \*Seville), now lost, and two derivations, the *Juliana* (c.681), and the *Vulgata* (c.694). Its final form, containing canons from 66 \*councils and 103 decretals, was widely disseminated and considered authoritative in Western Europe until the Gregorian reforms of the 11th century. As reconstructed, the *Isidoriana* contained decretals from \*Damasus to \*Gregory I, canons from \*councils of the Church in the Greek East, in \*Africa, and in \*Gaul, and the records of councils in \*Spain arranged chronologically by \*city from \*Elvira (300/6) to \*Toledo IV (633). The *Juliana* and *Vulgata* added subsequent Spanish councils to Toledo XVII (694), and some supplementary documents pertaining to previous councils. Later 7th-century editors assembled thematically organized versions, such as the *Excerpta Canonum* (656/6), which contained summaries of each canon, and was appended to the chronological version in some manuscripts. The collection does not include all Spanish provincial councils of the period. RLS

**Colluthus of Lycopolis** (fl. late 5th–early 6th cent.) \*Epic poet from the Thebaid in \*Egypt. Along with an unknown number of encomia, he wrote (according to the \**Suda*) a poem on the Calydonian Boar hunt in six books, and an epic poem on the Persian Wars (*Persica*), which probably dealt with the campaign of \*Anastasius I against the Persians in AD 502–6. Only one work survives: the *Abduction of Helen*. This miniature epic (in 394 lines) tells part of the story told in the *Cypria*: the judgement of Paris, beginning with the wedding of Peleus and Thetis and concluding with the elopement of Helen and Paris and their arrival in Troy. The debt to Homer is obvious, but linguistically the work owes much to \*Nonnus' *Dionysiaca* and contains clear traces of Hellenistic scholarly sophistication. RECS PLRE II, Colluthus.

ed. (with comm. and IT) E. Livrea (1968).

ET A. W. Mair in *Oppian, Colluthus, Tryphiodorus* (LCL 219, 1928), 535–71.

**colobium** An ample tunic, usually made of linen, either sleeveless or with short sleeves. It was considered appropriate attire for \*Constantinopolitan \*senators within the \*City (*CTh* XIV, 10, 1 of 382). It also formed part of the dress of \*Egyptian monks. In early artistic representations of the Crucifixion, Christ wears a \*purple *colobium* with golden \**clavi* (e.g. on the lid of a \*reliquary formerly in the Treasury of the Sancta Sanctorum, Vatican). **Cologne** (*metropolis civitas Agrippinensium, id est Colonia*: Nordrhein-Westfalen, Germany) Capital \*city of the Roman \*province of \*Germania Secunda. Cologne was an important military and economic centre on the Rhine \*frontier, renowned especially for its \*glass production. Several \*emperors were temporarily resident there, and its Praetorium, rebuilt in the later 4th century, served as a regular base for imperial generals, one of whom, \*Silvanus, launched a failed usurpation attempt in 355. The \*Franks took the city soon afterwards, but were expelled by the \*Caesar \*Julian. However, barbarian incursions intensified after the breaching of the frontier in 406/7, and by c.450 Cologne had fallen under the control of Franks known as Ripuarii who used the city as their capital. After their King, \*Sigibert the Lame, was defeated by \*Clovis I in the early 6th century, Cologne became an important \*Merovingian centre.

In 1959, two high-status burials of a woman and a boy, dating from 525/50, were discovered beneath Cologne cathedral. They contained an impressive array of grave-goods, including \*gold \*jewellery, fine weaponry, and child-sized wooden furniture.

Cologne's first \*bishop is attested in 313, though a lengthy lacuna in its bishop-list extends through the 5th and early 6th centuries. The city's early Christian sites included the bishop's church, probably on the site of the present cathedral, and the churches known today as S. Gereon, S. Ursula, and S. Severin. CRD

**colonnade** See STREET.

**colonus** A *colonus* in Late Roman law and society was a farmer. Those holding such status comprised both those who worked their own property subject to imperial \*taxation, as well as those who worked land owned by others either as tenants or as agricultural labourers. Those *coloni* who worked for others acquired the status of *coloni adscripticii* if they agreed to their employer paying directly to the imperial authorities those taxes for which they were liable, in which case they and their children were legally tied to remain resident on the employer's property. PS

P. Lemerle, *An Agrarian History of Byzantium* (1979).

**Columba of Iona, S.** One of \*Ireland's leading saints. Columba or Colum Cille ('dove of the church') was born c.520 into the powerful north-western dynasty Cenél Conaill. He founded the monasteries of Derry, Durrow, and \*Iona. Iona, established in 563 (565 according to \*Bede *HE* III, 4), was in the kingdom of Dál Riata in the western isles of Scotland. Although a later tale claims that Columba was deliberately exiled from Ireland, he probably established Iona in the context of the monastic movement that swept through Ireland during the 6th century. His life, a classic example of Latin \*hagiography composed by \*Adomnán, ninth Abbot of Iona (d. 704), depicts him as a great abbot who followed an austere lifestyle dedicated to learning and to missionary work especially among the \*Picts. He was reputedly versed in native poetry and in the works of \*John Cassian and \*Basil of \*Caesarea. He died in 597. EB

**Columbanus, S.** (d. c.615) Irish monk, missionary, and scholar, trained in Bangor, founder of \*Luxeuil, Annegray, and Fontaines in the Vosges, and \*Bobbio in north \*Italy. Columbanus arrived in \*Gaul c.590. His first foundations were sponsored by \*Childebert II and \*Brunhild and gained support from numerous members of the Frankish nobility. After a conflict with \*Theuderic II and Brunhild he was exiled, travelled through the kingdoms of \*Clothar II and \*Theudebert II, and died shortly after the foundation of Bobbio, which was supported by the \*Lombard King \*Agilulf. Luxeuil became after Columbanus' death the centre of a network of \*monasteries that followed his Rule. He is credited with introducing Irish monastic practices, especially the use of penitentials, on the Continent. His uncompromising position in the controversy about the date of \*Easter was abandoned by his successors. Six \*letters, thirteen \*sermons, two monastic rules, a penitential, and a number of poems and short ascetic treatises survive. ADi Opera (CPL 1104–17), ed. G. S. M. Walker (with ET) (Scriptores Latini Hiberniae 2. 1957).

**Comacchio (Lat. Comiaculum)** Town 25 km (15 miles) north of \*Ravenna, near the Po delta. Recent archaeology has revealed a trading and productive centre of the later 7th century, exploiting the islands and dunes in a complex lagoon, with \*glass- and \*metalwork shops, pile-built structures and wharves, and two \*monasteries, a \*cemetery, and a cathedral of the 8th century. A treaty of AD 715/730 with the \*Lombards refers to \*tolls due from residents and \*merchants on the Po. Reference to the inhabitants as *milites* may signify that they were occasionally employed by the Byzantines in naval actions. NJC

**combs** During Late Antiquity and the period of the \*Barbarian Migrations, combs made of bone and especially of antler are common in graves and on production sites throughout Northern and Central Europe. They attest to a concern for personal appearance, and their association with funerary rituals suggests symbolic or magical significance. This is exemplified by the 7th-century \*Niederdollendorf Stone, a gravestone found in the Rhineland, on which a sword-equipped warrior is depicted combing his hair. PSW

**Comentiolus** (fl. 582–602) \*Scribo (583), \*Dux or \*Comes Rei Militaris (584), \*Magister Militum Praesentalis (585), Magister Militum in \*Spain (589), Magister Militum in \*Oriens (589–91), Magister Militum in (?) \*Thracia (598–601). A close associate of the Emperor \*Maurice, he served throughout the Empire, though chiefly in the Balkans, before being executed by \*Phocas in 602 following Maurice's overthrow. \*Theophylact Simocatta portrays him as an ineffective commander who often shirked his duties. GBG

PLRE III, Comentiolus 1.

Whitby, *Maurice*, 98–104.

**comes, post-Roman** General term for a royal courtier, common in the \*Burgundian, \*Frankish, \*Ostrogothic, and \*Visigothic kingdoms; in the Frankish kingdom, synonymous with *grafio*. Some *comites* held more specific titles, e.g. \*Comes Stabuli, indicating offices with particular spheres of activity, but all *comites* acted on behalf of the king in a wide range of functions. *Comites* were involved in the making of law, e.g. the *Lex Romana Visigothorum* (\**Breviarium of \*Alaric*) and the Burgundian *Liber Consitutionum* (\**Lex Burgundionum*), and in its administration, in the administration of \*taxation, and in military leadership. In the Burgundian kingdom, Burgundian and Roman *comites* were paired for the administration of justice, reflecting an early stage in the assimilation of the two groups and the need to maintain the equitable sharing of resources between the groups established at the Burgundian settlement.

*Comites* were also placed in charge of specific towns, as *comites civitatum*, where they were the king's representatives and administrators across the range of government business, and acted as the main judges for cases which were not resolved by local, often extra-judicial, means. The position does not appear to have

been known in the Roman \*provinces. Its functions probably replaced some of those of the provincial \*governor, or the \*Curator Rei Publicae or \*Defensor Civitatis. The relatively small size of barbarian kingdoms when compared to the Roman Empire enabled such local officials to remain part of the royal court. PSB

**comes, Roman** Although often translated as 'count', the root meaning of *comes* is 'companion', an allusion to proximity to the \*emperor. As such it was a term which had long been used informally to refer to those who accompanied the emperor when travelling. In Late Antiquity, however, it became a formal title for a range of offices associated with the imperial \*court, most prominently the financial officials known as the \*Comes Sacrarum Largitionum and \*Comes Rei Privatae.

A specifically military usage also emerged (Comes Rei Militaris), referring to officers commanding detachments of the \*field army. The title was also used for the commander of the coastal defences of the English Channel, the \*Saxon Shore (Comes Litoris Saxonici), and in other military contexts (e.g. \*Comes Domesticorum, Comes \*Excubitorum).

In addition to these functional designations, the term was employed to denote an honorific rank. This was granted, initially by \*Constantine I, to leading \*senators and officials as a reward for service. By the end of the 4th century, however, it had been distributed so widely that it had become devalued, except for those assigned to the highest of its three grades.

The title had an afterlife in the western \*successor states, most commonly in the title Comes Civitatis, held by officials in the \*Ostrogothic and \*Visigothic kingdoms with responsibility for resolving disputes between \*Goths living in the territory of their \*city. In the \*Frankish kingdoms, officials with this title had a wider remit, overseeing justice, tax collection, and the military levy. ADL

Jones, *LRE* 104–5, 257–62, 526.

**Comes Commerciorum** Title of imperial officials responsible for collection of \*tolls on foreign \*trade. Three are listed in the \*Notitia Dignitatum under the \*Comes Sacrarum Largitionum in the East, with responsibility for trade throughout the East and \*Egypt, the lower Danube and Black Sea, and \*Illyricum. Their title had changed to *commercarii* by the late 5th century. ADL

Jones, *LRE* 826.

**Comes Domesticorum** Commander of the \**protectores domestici* and member of the \*emperor's \*Consistorium. The \*Notitia Dignitatum (13 [occ.], 14 [or.]) shows the post split into separate infantry (Comes Domesticorum Peditum) and cavalry (Equitum) commands. The Comes could be promoted directly to \*Magister Militum. CMK

Jones, *LRE* 372 and 636.

Gavin Kelly, *Ammianus Marcellinus: The Allusive Historian* (2008), 119–22.

**Comes Domorum** Official in charge of \*imperial estates, subordinate to the \*Comes Rei Privatae. May be identical with Comes Domorum per Cappadociam (in charge of the \*Domus Divina per Cappadociam) subordinate from late 4th century to the \*Praepositus Sacri Cubiculi. CMK

Delmaire, *Largesses*, 220–3.

Kaplan, *Propriétés*, 10–16.

**Comes Orientis** Title of the \*Vicarius of the \*Dioecesis of \*Oriens, with headquarters at \*Antioch. Replacing the Vicarius Orientis (last attested in 325), this post is probably the only permanent survival of \*Constantine I's *comites provinciarum*. In 535/6 \*Justinian I merged the office of the \*Consularis of \*Syria Prima with that of the Comes Orientis (*NovJust* 8, 5) but in 542 the Comes is once more exerting authority over neighbouring \*provinces (*NovJust* 157). CMK; OPN

Jones, *LRE* 105; 281; 374.

G. Downey, *A Study of the Comites Orientis and the Consulares Syriae* (diss. Princeton, 1939).

**Comes Rei Privatae** Powerful palatine official heading the \*Res Privata, responsible for the administration and revenues of state-owned property. Member of the \*Consistorium with \*rank of \**illustris* (at least by the 380s). The post had been suppressed by the end of the 6th century, and its main duties subsumed by the \*Sacellarius. CMK

Jones, *LRE* 411–27.

Brandes, *Finanzverwaltung*, 32–48.

Delmaire, *Largesses*, esp. 25–124.

**Comes Sacrae Vestis** Official responsible for the imperial wardrobe (Vestis Sacra) housing vestments, \*regalia, crown jewels. The Comes was a \*eunuch (\**castrens*) from the imperial household (\*Cubiculum). Sourcing and supply were the responsibility of the Vestiarius, under the control of the \*Comes Sacrarum Largitionum. CMK

Delmaire, *Largesses*, 464–70.

**Comes Sacrarum Largitionum** Powerful palatine official heading the Sacrae \*Largitiones, responsible (alongside the \*Praefectus Praetorio) for \*taxation and revenue. Member of the \*Consistorium with the \*rank of \*illustris (at least by the 380s). The post was suppressed in the early 7th century, and its main duties transferred to the \*Sacellarius and Logothetes. CMK Brandes, *Finanzverwaltung*, 18–27, 498–510. Delmaire, *Largesses*, esp. 25–124.

**Comes Stabuli** Officer at the imperial \*court, formerly entitled the \*Tribunus Stabuli. \*Stilicho is apparently the first so attested (*CIL* VI, 1731), and later Comites Stabuli include \*Aëtius and \*Ariobindus Dagalaiphus.

The title was used in \*Merovingian \*Gaul, for the courtier in charge of the king's \*horses. Loyalty was a prerequisite, since the king entrusted his person to his horse, and several Comites were deployed as ambassadors or on delicate missions. PSB

Jones, *LRE* 625–6 and 1148.

P. S. Barnwell, *Kings, Courtiers and Imperium* (1997).

**comets** The common Greek terms are κομήτης ('long-haired') and πωγωνίας ('bearded') star (ἀστήρ). Aristotle (*Meteorology*, 344a23–4) uses the former for roundish objects and the latter for elongated ones. In Latin, the Greek loanword *cometes* is common, as is *sidus crinitum* (or *stella crinita*), 'hairy star'. Both λαμπάς and *fax*, 'torch', occur; but it is not always evident whether a torch is a comet or a shooting star, so this must be decided by context. \*Pliny (*Historia Naturalis*, II, 22, 89–90) distinguishes about a dozen different types.

Opinions differed about whether comets were celestial or atmospheric entities, but they were often considered portents of war, \*plague, death of a ruler, etc. (\*Isidore of \*Seville, *Etymologiae*, III, 71, 16–17) or merely of dry, windy conditions (Aristotle, *Meteorology*, 344b28; \*Ptolemy, *Tetrabiblos*, II, 13, 102). Although some pre-Socratics had considered comets to be planets, or the conjunctions of planets, Aristotle held that they resulted from the combustion of the hot, dry exhalation from the Earth, and so discussed them in the *Meteorology* rather than in *On the Heavens*. Posidonius (frs. 131a, 131b) similarly held that comets are formed when a dense portion of air is shot into the ether, which carries it around. The most detailed ancient argument in favour of comets being eternal celestial objects is given by Seneca (*Quaestiones Naturales*, VII, 22–30).

Babylonian records include sightings of comets, which are relatively common from the middle of the 3rd century BC onward. Greek and Roman observations of comets are usually rather vague about the position in the night sky where the comet was seen. By contrast,

Chinese records are richer and more precise. This difference in treatment perhaps reflects the mainstream Graeco-Roman view that they are transitory, non-celestial things and the Chinese view of them as 'guest stars'.

Several Late Antique authors were less interested in the physical causes of comets than in their significance and effect. \*Servius, commenting on \*Vergil's allusion to comets in *Aeneid*, X, 272–3, notes that the Stoics had identified 32 different types of comet whose names and effects were enumerated by \*Avienius. He cites the pseudonymous astrologer Petosiris and the work on comets of Campestris (or Campester), a \*Latin author of the 2nd/4th century AD, who is also cited in the discussion of comets in the *De Ostentis* (10–15) of the 6th-century scholar \*John Lydus. The Christian author \*Lactantius foretells that the Second Coming of Christ in the middle of the Easter Vigil will be preceded by a 'sword falling from heaven' (*Inst.* VII, 19, 4; cf. for a comet as a sword Josephus, *Jewish War*, VI, 5, 3) and the Christian poet \*Commodian tells of a 'fiery chariot and a firebrand streaming in the stars to forewarn the peoples of the fire' (903). **comitatenses** First attested during \*Constantine I's reign (*CTh* VII, 20, 4 [325]), the term designated military units serving in the central \*field army, as distinct from those units assigned to frontier \*provinces (subsequently known as \*limitanei). The term had its origin in these units 'accompanying' the emperor, although the development of multiple field armies during the 4th century diluted its significance and led to the emergence of an elite category of unit, the \*palatini. Field army units generally enjoyed higher status and rewards than limitanei. The \*Notitia Dignitatum includes chapters listing the individual units in the field \*armies of the late 4th and early 5th century. In addition to infantry \*legions (often descendants of legions of old, albeit significantly smaller in size), they comprised \*cavalry \*vexillationes and a new type of \*infantry unit, the \*auxilia. Units of limitanei temporarily reassigned to a field army were referred to as pseudo-comitatenses. ADL Jones, *LRE* 607–86.

**Comitatensian Mint** Late Roman mint attached to the imperial \*court, producing precious metal \*coinage. During the late 3rd and early 4th centuries minting personnel appear to have been part of the imperial retinue (*see* COMITATUS) and where possible to have used existing minting facilities to issue precious-metal \*coinage from wherever the court might be. This appears to have arisen from the mobility of the imperial courts under the \*Tetrarchy and the dynasty of \*Constantine I, from the increasing centralization of precious-metal bullion in the court treasury, and from the need of the court for coinage. From the mid-4th century, increasingly settled imperial capitals reduced the role of the Comitatusian Mint. RRD

Hendy, *Studies*, 386–98.  
RIC VI, VII.

**Comitatus** The immediate entourage of the \*emperor including both military and civilian officials who travelled with him (cf. *CIL* III, 6196). Within this mobile entourage, the soldiers were called \*comitatenses and the personal bodyguard the \*Scholae Palatinae.

The imperial \*court in the 3rd and 4th centuries was constantly mobile, largely thanks to the military demands placed on emperors, which drew them to the \*frontiers to campaign; in the 3rd and 4th centuries only \*Gallienus (from choice) and \*Maxentius (from necessity) spent long periods at \*Rome. When the emperor arrived at a new \*city, he was ritually ushered in, along with his Comitatus, with an \*adventus. The billeting of the Comitatus could be a burden on local people. The Comitatus developed for each emperor of the \*Tetrarchy were elaborated upon by later emperors. It is important in indicating a break with the traditional model of legionary organization within the Empire (Potter, *Companion*, 165). If necessary, a prefect could command the *comitatenses* (e.g. \*Zosimus, II, 14, 2).

There were a number of important \*Scriinia (departments) within the Comitatus, which included the \*Comitatensian Mint and secretaries who dispensed imperial \*letters and \*constitutions. These departments underwent a shift in leadership in particular in the 330s under \*Constantine I. They continued when the East Roman \*court ceased to be mobile and settled down permanently at \*Constantinople from the late 4th century onwards. SEB

**comitatus** (barbarian) Term used by Tacitus (*Germania*, 13–14) to denote bands of Germanic warriors

whose allegiance to their lord (*princeps*) made his protection their most sacred obligation (*sacramentum*), ascribing to his glory their martial deeds and receiving in return their warhorse, their 'gory and victorious' weaponry, and copious, if crude, banquets. Scholarship of the 19th and early 20th centuries considered relations of this type characteristic of all Germanic barbarian \*aristocracies, as late as \**Beowulf* and the Battle of Maldon of August 991. Although the existence of such lord–retainer relations is evident from both written and archaeological evidence, the characteristics of the *comitatus* as described by Tacitus cannot be assumed to have been universal among ancient Germanic peoples. AR *RGZ* s.v. Gefolgschaft, X (1998), 533–55 (Landolt, Timpe, Steuer).

**Commentariensis** Senior officer in the \**officium* of a \*Praefectus Praetorio, \*Vicarius, or provincial \*governor. He led a department concerned with criminal trials, providing a secretariat in the criminal court, and overseeing prisoners, guards, and torturers. AGS Jones, *LRE* 587, 592–3.

**commerce** *See* TRADE.

**Commodian** \*Latin poet, of uncertain date and origin. Scholars have argued for the mid-3rd and the mid-5th centuries, with recent critical opinion inclining to the earlier date. Various parallels with the writings of S. \*Cyprian suggest an \*African provenance for his poems, but other references imply a special knowledge of \*Syria. His *Instructiones* contains two books, 80 poems in all, the first addressed to \*pagans, Judaizing pagans, and \*Jews, the second to Christians, with particular poems addressed to various groups in the Church. The poems are apologetic and protreptic in nature, and each book concludes with powerful eschatological language. Most poems are \*acrostics: the first words of each line spell out the titles to the poems. The *Carmen apologeticum*, the title normally given to Commodian's other poem, is strongly protreptic in nature, addressed to Jews and pagans, beginning with an account of biblical history and the coming of salvation and concluding with a detailed account of the End of the World. Both poems imitate the classical hexameter, but without regard to quantities. MJR *HLL* 4, section 498.

**Companions of the Prophet** Also known as the *Sahāba*, were the earliest converts to and adherents of Islam. This included both family members and friends of \*Muhammad. The definition of the term 'Companion' varied, sometimes ranging from those who were close to and had spent extensive time with Muhammad to anyone who had even minimal contact with him. The Companions were significant for the Islamic tradition as they related the sayings and deeds of Muhammad, a major source, alongside the \*Qur'ān, for the development and articulation of \*Sunni \*law.

In the competition which erupted after Muhammad's death, disagreements about which of his Companions would succeed as leader of the community would crystallize into the Sunni/\*Shi'i divide. Sunnis eventually adopted a position whereby they agreed to the righteousness of all the Companions. Shi'is adopted a range of narrower views, from accepting a small number of the Companions to rejecting most of them and deeming only Muhammad's cousin \*'Ali and the latter's descendants proper leaders of the Muslim Community. **compensation** An injured Roman could, in later Antiquity, claim consequential damage as well as loss of profit suffered as a result of the damage or destruction of his property by using the *actio legis Aquiliae* (*InstJust* 4, 3; *Dig.* 9, 2; *CJust* III, 35). In the case of personal injuries, medical expenses and loss of financial income could be claimed, but no compensation.

Title 62 of the \**Lex Salica*, written during the reign of the \*Merovingian King \*Clovis (c.466–511), placed a value (*wergeld*) on every human being and piece of property. If a person was killed, intentionally or accidentally, the guilty party had to pay a *wergeld* as restitution to the victim's family or the owner of the property. If payment was not made, a blood \*feud would ensue. RvdB

**compulsores** Officials from the \*Res Privata, Sacrae \*Largitiones, and financial staff of the \*Praefectus Praetorio sent to \*provinces to enforce the collection of \*taxation. Like \**canonicarii*, they were subject to imperial regulation to prevent profiteering (*CTh* I, 16, 11; *NovMaj* 2, 2; 7, 14; *CJust* X, 19, 9). CMK

RE III (1899) s.v. *Canonicarius*, cols. 1488–90 (Seeck).

Jones, *LRE* 450–1, 457, 468, 589.

**Concesti Treasure** Collection (now in the Hermitage Museum, St Petersburg) of \*Hun \*gold and Roman \*silver, including an \*amphora bearing \*Dionysiac and \*hunting scenes and a helmet, dated c. AD 400. Discovered near Concesti by the River Prut, Romania, in 1812, it probably constitutes the burial goods of an \*Ostrogothic prince. HAHC

M. Kazanski, 'The Sedentary Elite in the "Empire" of the Huns and its Impact on Material Civilisation in Southern Russia during the Early Middle Ages (5th–7th Centuries AD)', in Chapman and Dolukhanov, eds., *Cultural Transformations*, 213–35.

Matzulewitsch, *Byzantinische Antike*, 123–37.

**Concordia** \*City in \*Venetia et Histria near modern Portogruaro in the Veneto, approximately 40 km (25 miles) east of \*Aquileia. Concordia housed imperial \**fabricae* for arrow production, the importance of which may explain attacks by \*Alaric in 408 (\*Zosimus, V, 37) and \*Attila in 452 (\*Paul the Deacon, *Historia Romana*, XIV, 9–11). \*Lombards captured the city in 614. The military importance of the city elides with its religious history: the extant Trichora Martyrium of c. AD 350 was apparently dedicated to soldier \*martyrs of the Great \*Persecution (*BHL* 2303, cf. Delehaye, *Origines*, 332–3). This site became part of a more extensive Christian burial complex, with the addition of the Basilica Apostolorum in 489 to accommodate a small host of \*relics (\*Chromatius, *Sermo*, XXVI, 1). The complex was destroyed in the late 6th century. MSB  
P. Croce da Villa, 'Evoluzione dell'impianto urbano dell'antica Concordia: la forma Urbis dal I sec. a.C. al VII sec. d.C.', in *Concordia: Tremila Anni* (2001), 125–45.

**concubine** A woman taken as a mistress to avoid producing legitimate offspring. Roman concubinage was a monogamous union typically lasting for years. Affluent young males often kept a concubine until they married a woman of their own social standing (e.g. \*Augustine, *Confessions*, IV, 2, 2; VI, 12, 21–VI, 15, 25). Concubines were typically slaves or freedwomen, while freeborn women are rarely attested. The Church disapproved of concubinage but could not stop it. Many Christian authors advised that young men should reject the lowborn concubine rather than marry her. Some men wanted to leave property to their concubine and illegitimate offspring, but this was considered immoral and was legally restricted, especially by \*Constantine I (*CTh* IV, 6). \*Justinian I improved the position of concubines and their children. In the post-Roman West, concubinage continued to flourish. Compulsory celibacy created concerns about clerical concubinage in the 6th century. AAR

Arjava, *Women and Law*, 205–18.

Evans Grubbs, *Women and the Law*, 150–4, 166–76.

**conductor** In Roman \*law, one who lets movable or immovable property from a so-called *locator*; also one hired to perform a task when the property of the hirer is involved. Liability for damaged property was uncertain, as is evidenced by extensive legal writings on the matter (\**Digest*, XIX, 2; *CJust* IV, 65). AAB

**confederations** See TRIBES AND CONFEDERATIONS, GERMANIC BARBARIANS AND 4843 TRIBES AND CONFEDERATIONS, CENTRAL ASIA.

**congiaria** Imperial monetary \*donative, recorded up to 354. Roman \*coinage commemorated *congiaria* up to the 2nd century and thereafter bore the more general term *liberalitas*. RRD  
CAH XII (2005), 352, 362, 411.

R. Duncan-Jones, *Money and Government in the Roman Empire* (1994).

C. Noreña, 'The Communication of the Emperor's Virtues', *JRS* 91 (2001), 149–68.

**Conimbriga and Aeminium** (mod. Coimbra, Portugal) Conimbriga was a Celtic settlement and Roman \*city in the \*province of \*Lusitania. It is notable for its archaeology, with a large \*forum, and well-preserved Late Roman \*city walls from the mid-3rd to 5th century. The aristocratic family Cantaber lived there. It was conquered by the \*Suebes in 464/5 and sacked comprehensively in 466/7. \*Bishop Possidonius moved from Conimbriga to nearby Aeminium with the remaining population in c.589, taking the city name with him. Aeminium, a Roman foundation under Augustus, is also archaeologically notable, with a cryptoporticus beneath the Museu Machado de Castro, and Late Roman walls. C. Servius Lupus, builder of the \*lighthouse of \*Corunna, came from there. GDB  
PECS s.v. Aeminium (Coimbra) Beira Litoral, Portugal (J. Alarcão).

**Conon** General dispatched from \*Constantinople in 537 with reinforcements to \*Belisarius in \*Italy. He later commanded in Ancona, \*Naples, and \*Rome, where his soldiers killed him for embezzling supplies (548). PNB

PRLE III, Conon I.

**consecratio** When an \*emperor died he was traditionally accorded *consecratio*, a \*temple and cult separate from his grave site. Under the \*Tetrarchy these distinctions began to merge. The emperors of the Tetrarchy claimed while still alive a relationship with the gods (especially Jupiter and Hercules) conceptually similar to that of deified emperors (*divi*). Consecration thus became an extension of the virtual divinity the emperor had exhibited even while alive. The imperial

grave site became the focus of reverence toward the deceased and affirmation of his (and his successor's) legitimacy.

\*Constantine I was buried at the Holy Apostles in \*Constantinople, a building architecturally reminiscent of an imperial mausoleum. He was depicted on coins (e.g. *RIC* VIII \*Antioch 37) ascending to heaven in a chariot (formerly that of the \*Sun) met by the \*Hand of God. The *consecratio* accorded to him appears analogous to the honour accorded \*martyrs; the emperor could be conceived of as ascending to heaven after death, so bridging the distance between traditional *consecratio* and Christian theology, while also being involved in the processes of Christian \*liturgy and \*prayer; his mausoleum was equipped with facilities for 'divine rites and mystic liturgies' appropriate to a building dedicated to Christ's Apostles (\*Eusebius, *VCon* IV, 68–73).

Such redirection of pagan *consecratio* imagery was avoided in official art after Constantine, and tensions between Christian beliefs and inherited political imagery were resolved in favour of the former. The idea of the emperor's ascent remained, but even for a pagan such as the poet \*Claudian the heaven to which \*Theodosius I ascended in his poem *On the Third Consulship of Honorius* (163–84) was one depopulated of the gods who would have been an earlier emperor's celestial companions; the mythology had been secularized. \*Ambrose, \*Bishop of \*Milan, preaching Theodosius' funeral \*sermon, could be more explicit: a host of \*angels leads the emperor on, a crowd of saints follows him. As for the people of Milan where Theodosius was being buried, 'clearly you are blessed, you who receive one living in paradise, you who will hold, in the venerable dwelling-place of his body when it is buried, one who lives in that city which is above' (*On the Death of Theodosius*, 56). JND

Diefenbach, *Römische Erinnerungsräume*, 153–212.  
MacCormack, *Art and Ceremony*, 93–158.

**Consentius** Gallo-Roman nobleman. As a young \*tribunus, he carried messages between \*Valentinian III and \*Theodosius II, but made no profit from office. In 455/6 he was \*Avitus' \*Curopalates. After 462/6 he enjoyed literary \*otium on his seaside estate near \*Narbo, receiving a long poem from \*Sidonius Apollinaris (*carmen* 23) and later a \*letter (VIII, 4). He wrote poetry, knew about theatrical performance, was a gentleman jockey in chariots, and once won. OPN  
PLRE II, Consentius 2.

**Consistorium** Fixed imperial advisory council whose members, called \*Comites Consistoriani, stood (Lat. *consistere*) while in the \*emperor's presence. Until the \*Tetrarchy the analogous body was called the Consilium Principis. \*Constantine I appointed permanent

members. They often met at the Consistorium in the Great \*Palace at \*Constantinople, built by Constantine and described by \*Corippus (*In Laudem Justini Minoris*, 3, 191–9). From at least the reign of \*Constantius II, the Consistorium was the principal forum for debating legislation, and perhaps a place where frank speech with the emperor could take place (Brown, *Power and Persuasion*, 66). Laws carried the names of emperors, but *consistoriani* greatly shaped and influenced Late Roman legislation (Bury, *Theodosius to Justinian*, I, 23). The \*Magister Officiorum, \*Comes Rerum Privatarum, the \*Quaestor Sacri Palatii, and the \*Comes Sacrarum Largitionum, among other senior officials, belonged to the Consistorium. It often received envoys (\*Ammianus, XXVIII, 1, 24–5), and could also function as a supreme court, where accusations such as \*treason were tried. The emperor presided over its meetings, called a \**silentium*. Its power and influence waned after the reign of \*Justinian I, who ended its function as an advisory body. SEB

**consolation** Rhetorical genre and philosophical argument designed to alleviate grief and comfort the bereaved.

#### *Greek consolation*

The ancient Greek practice of writing consolatory speeches was taught in the \*rhetorical \*schools of Late Antiquity, as demonstrated by the prescriptions of rhetorical handbooks (\*Menander Rhetor, *Treatise*, II, 413, 5–414, 30). Consolation could be delivered in the form of a speech (especially a \*funeral oration), a treatise, or a \*letter. Christian consolation altered the themes and dynamics of secular consolation: \*death was no longer the final frontier, and the hope of a life beyond and of salvation was proffered to instruct as well as to comfort. Funeral orations like that delivered by \*Gregory of \*Nazianzus on \*Basil of \*Caesarea (*Oration*, 43) and letters like those by Basil of Caesarea to the parents of a dead youth (*epp.* 5 and 6) deployed the techniques of consolatory literature by offering solace for grief at the same time as advising restraint in its exercise.

#### *Latin consolation*

Works by Cicero and Seneca were shaped by Ancient Greek consolations and these were in turn influential in Late Antiquity. \*Lactantius quotes the consolation Cicero wrote for himself on the death of his daughter. Latin Christian consolation took several literary forms, from \*Cyprian's treatise *On Mortality* (addressing a congregation facing \*persecution and \*plague), to

\*Ambrose's \*funeral orations on the \*emperors \*Valentinian II and \*Theodosius I and on his brother, \*Jerome's prose letter to a friend (*ep.* 60), and prose and verse works by \*Paulinus of Nola (*Carmen*, 31 and *ep.* 13). It made heavy use of biblical imagery and elaborated on theological ideas of salvation and resurrection. However, \*Boethius' influential *Consolation of Philosophy*, written while the author was in \*prison, makes little explicit reference to Christian doctrine. In it, the author converses with a female \*personification of \*Philosophy who offers consoling wisdom about divine providence, theodicy, and fortune. SJL-R

**Constans I** Caesar from 333 and Augustus 337–51. Youngest son of \*Constantine I and \*Fausta, born in the early 320s. He was appointed \*Caesar on 25 December 333 and became \*Augustus with his brothers \*Constantine II and \*Constantius II after their father's death in 337. He was assigned \*Italy, \*Africa, and \*Illyricum. In 340 he gained control of the western half of the Empire after Constantine II was killed while invading Italy. Relations between Constans and Constantius II could also be marked by tension; for instance in the mid-340s Constans commanded Constantius to restore the Nicene \*Athanasius as \*Patriarch of \*Alexandria. However, a \*panegyric by \*Libanius (*Oration* 59), from the 340s (possibly 348/9), celebrated the unity of the two brothers. Constans's reign was marked by campaigns against \*Sarmatians and \*Franks, and a brief visit to \*Britain in 343.

Before his father's death, Constans was engaged to Olympias, daughter of the \*Praefectus Praetorio Ablabius, but did not marry her. He was allegedly attracted to young men, but this may be hostile propaganda associated with his overthrow by \*Magentius in 350, when Constans was killed in the town of Helena (Elne) in Gaul, and was possibly buried at \*Centcelles.

**Constans II** (630–68/9) Emperor 641–68/9. Baptized as Heraclius and proclaimed as Constantinus but known as Constans II, he was the son of \*Constantine III and grandson of \*Heraclius. Constans became sole emperor in 641 after the deposition of \*Heraclonas by the general \*Valentinus, who would dominate the first years of Constans's reign until he was lynched in 644/5.

The predominant challenge of Constans's reign was the \*Arab threat. \*Egypt was surrendered in 642, and \*Africa, \*Armenia, and the \*frontier in \*Anatolia suffered intensifying raids. Constans adopted a belligerent policy and developed Roman naval power, leading to the temporary recapture of \*Alexandria in 645/6. However, the Arabs, particularly under the leadership of \*Mu'awiya, constructed their own fleet, striking \*Cyprus in 649. In 653 Constans personally led an expedition into Armenia, advancing as far as \*Dvin and temporarily restoring communion with the Armenian episcopate. However, Mu'awiya then launched a massive attack by land and sea. Hurriedly returning, Constans led the Roman \*fleet to a decisive defeat at the bay of \*Phoenix off the coast of \*Lycia in c.655 and was almost captured. Seeming imperial defeat was averted through storms, through Roman attacks which ravaged the Arab fleet, and because of the outbreak in 656 of the First \*Arab Civil War.

This vital breathing space was probably when the \*Theme system was instituted. Constans also began a series of campaigns to reassert Roman authority and garner resources for the eventual resumption of war with the Arabs. In 658 Constans campaigned against the \*Slavs, and then in 660 led a progress through Transcaucasia resulting in the submission of the local notables. In 662–3 Constans crossed to \*Italy and attacked the \*Lombards, forcing some form of accommodation. Also in 663 Constans became the last Roman emperor to visit \*Rome, where he is accused of pillaging \*bronze from monuments to turn into \*coinage (\**Liber Pontificalis*, 78). Then in the autumn of 663 Constans established himself at \*Syracuse in \*Sicily, where he would remain for the rest of his reign.

Constans inherited the \*Monothelete Christological policy of \*Heraclius and increasing dissent from it in the West. In an attempt to reach compromise, Constans issued the \**Typus* in 648 banning discussion of the subject. Pope \*Martin I, encouraged by \*Maximus Confessor, refused to comply, and convened the \*Lateran Council of 649 which condemned Monotheletism. Affronted, Constans had Martin and Maximus arrested, tried for \*treason, and eventually mutilated and \*exiled.

Arab raids restarted in 662, and Constans's increasingly unpopular rule generated a string of rebellions and

conspiracies. Eventually, in either 668 or 669 he was assassinated in a \*bathhouse in Syracuse, and \*Mezezius the \*Comes of the \*Opsikion was proclaimed emperor.

**Constantianus** General in \*Dalmatia (536–40), \*Italy (540–4), against the \*Gepids and \*Heruli (549), and \*Slavs (551). He was \*patricius (562) and a trusted counsellor to \*Justinian I.

PNB

PLRE III, Constantianus 2.

**Constantia-Tella** (Tella de Mauzelat, mod. Viranşehir, Turkey) City strategically located between \*Edessa and \*Dara, headquarters of the \*Dux Mesopotamiae in 363–527 and 532–40 and a bishopric of \*Osrhoene. It was rebuilt by \*Constantine I to replace Tetrarchic Maximianoupolis (\*John Malalas, XIII, 12). \*Justinian I raised the height of the circuit wall and made it stronger by inserting new towers and changing the material in some places. He also diverted the stream which ran outside the city and built fountains in side it (\*Procopius, *Aed.* II, 5).

Parts of the city walls and towers, a warehouse with transverse arches, scattered architectural fragments, and some \*inscriptions have survived. Other inscriptions and a tetrapylon recorded in the past have disappeared. Further archaeological fragments from the city have been gathered in the nearby village of Oğlakçı.

Constantia was the see of \*John of Tella and the birthplace of \*Jacob Burd'oyo, both instrumental in

## Constantina

the establishment of the separate \*Miaphysite \*Syriac Orthodox Church. Jacob died in \*Egypt and his \*relics were brought back to Tella to his \*monastery (Phe-siltha) in 622. The monumental octagonal church photographed by Gertrude Bell 1 km (0.6 miles) west of the city walls may have been built for him. Only one pier of this church now survives. The Tektek mountains south of Constantia also contain Late Antique remains which have not been studied. EKK

**Constantine** (Algeria) See CIRTÀ.

**Constantine, legends of** Mythmaking about \*Constantine I started early, with the *Life of Constantine* of \*Eusebius of \*Caesarea. Although an important historical source for Constantine, it also represents him as an ideal ruler. \*Socrates (*HE* 1, 1, 2) criticized Eusebius

for being keener to eulogize Constantine than to produce an accurate narrative. Memories of the historical Constantine were already diminishing two generations after his death (\*John Chrysostom; *PG* 49, 216).

Fading knowledge of Constantine's reign permitted the growth of the myths in the *Actus Sylvestri*. The original \*Latin *Actus Sylvestri* probably originated in \*Rome in the 5th century; it was popular in the Middle Ages. Its main components are Constantine's vision of Ss. Peter and Paul, his conversion and \*baptism by \*Sylvester (\*Bishop of Rome), his cure from leprosy, the building of the \*Lateran Basilica, \*Helena's conversion to Christianity, and her discovery of the True \*Cross. The *Actus Sylvestri* is the Latin response to the Greek tradition, and to the negative pagan tradition represented by \*Julian, \*Eunapius, and \*Zosimus. In the 6th century, the story about Constantine's baptism was also known in the East; a \*mosaic in the Church of \*S. \*Polyeuctus in \*Constantinople refers to it and it became an important element in the Byzantine Lives of Constantine.

The *Constitutum Constantini* or *Donation of Constantine* is an 8th-century quasi-juridical confection closely related to the *Actus Sylvestri*. It narrates how Constantine presented Sylvester with secular rule over Rome and the Western Empire, made the emperor subservient to Rome's bishop, and gave the See of \*Rome supremacy over all other sees. Although its genuineness was already contested in the 12th century, it was conclusively exposed as a forgery by Lorenzo Valla in the 15th century.

*Libellus de Constantino Magno Eiusque Matre Helena*, a late medieval text by an unknown author, is a unique biographical legend about Constantine and Helena. It tells how Helena went from \*Trier to Rome, and was raped by Constantius resulting in the birth of Constantine whom Helena brought up secretly. Constantine was kidnapped by two \*merchants because of his royal \*physiognomy. The merchants presented him to the emperor, Constantine married the emperor's daughter, and the couple lived with Helena in Rome. Later Constantius recognized Constantine as his son, Constantine and his wife became heirs to the Greek and Roman Empires, and Constantius and Helena were united. There are references to Constantine's baptism by Sylvester, Helena's journey to \*Jerusalem, and her discovery of the True Cross.

## Byzantine Lives

In the Eastern Church Constantine was venerated as *isapostolos*, or the Thirteenth Apostle, and a saint, often together with Helena; their joint saint's day was 21 May. Details about his life were included in menologia, in particular the *Synaxarium Ecclesiae Constantinopolitanae*. Some 35 *vitae* are catalogued in the *Bibliotheca*

*Hagiographica Graeca*; the best known were composed in the 9th–11th centuries. The published *vitae* are named after their principal editors: Winkelmann-*Vita* (BHG 365z, 366, 366a), Guidi-*Vita* (BHG 364), Opitz-*Vita* (BHG 365), Halkin-*Vita* (BHG 365n), Gedeon-*Vita* (BHG 363). The *vitae* have the following format: parentage and birth of Constantine, upbringing at imperial court, flight to Constantius in England, wars against barbarians and \*Maxentius, \*Constantine's Vision of the Cross, his baptism in Rome, his war against \*Licinius and expeditions against the Persians, the foundation of Constantinople, discovery of the Cross by Helena, the \*Council of \*Nicaea, and his death. Apart from Helena, the Christian \*eunuch Euphratas plays an important role in some of the *Lives*: it is he who advises Constantine to adopt Christianity, was the architect of the sewer-system of Constantinople, and tricked the \*senators of Rome into settling in Constantinople.

Both in the western and eastern tradition, myths about Constantine also occur in other legendary cycles and narratives such as the Helena cycle, the Constantia cycle, and narratives about British saints.

From the 7th century onwards Constantine gradually became a model for Byzantine emperors and western medieval rulers. The legendary material clearly pictures Constantine as the ideal and exemplary Christian emperor.

**Constantine, Life of (Cod. Angelicus 22)** A later Byzantine life of the \*Emperor \*Constantine I, named

the Opitz Life because it was first edited in 1934 by Hans-Georg Opitz, from a 10th/11th-century Vatican manuscript (Cod. Angelicus 22, fols. 1–54) now complemented by more recently discovered fragments in the 13th-century Codex Sabbaiticus gr.366, fols. 9–22. It begins in 311 at \*Rome, is well informed, and is based on identifiable sources and also an anonymous \*Arian Historiographer. It was used by the church historian \*Philostorgius.

**Constantine, Vision of Cross of** In \*Eusebius' narrative of \*Constantine I's campaign against \*Maxentius in 312, the \*emperor and his \*army see a \*cross in the \*sky shortly before noon. Constantine subsequently \*dreams he should make a Christian military standard called the \*labarum (*VCon* I, 26–32). Eusebius says Constantine told him the story himself, speaking on \*oath. \*Lactantius' account of the same campaign (*Mort.* 44) has Constantine dreaming he was commanded to mark his soldiers' shields with the 'heavenly sign of God'. Some scholars conflate these events with a vision of Apollo which a panegyrist in 310 says Constantine saw in \*Gaul (*PanLat* VI (VII), 21, 4–7). Others detect an assurance of Christian eschatological hope. \*Rufinus, 90 years later, is the first to call it a \*conversion experience (*HE* IX, 9); such interpretations lived long in legend (see CONSTANTINE, LEGENDS OF).

**Constantine I the Great** (\*emperor 306–37) The first Christian Roman emperor and one of the decisive figures of Western history.

*Early life, rise to power, and supreme rule*

Constantine was born in 272/3 at Naissus (\*Niš) in the \*Balkans. His father \*Constantius I rose to become a \*Caesar in \*Diocletian's \*Tetrarchy, although Constantine's mother \*Helena was apparently of humbler birth.

Constantius became \*Augustus on the abdication of Diocletian and \*Maximian on 1 May 305, but died at \*York on 25 July 306. Constantine was with his father when he died and was promptly hailed as emperor by Constantius' \*army.

Constantine's authority during the six years of civil war and internal tension which followed was initially restricted to \*Gaul, \*Britain, and \*Spain. However, on 28 October 312, having marched through northern Italy, Constantine defeated his western rival \*Maxentius outside Rome at the Battle of the \*Milvian Bridge and took possession also of \*Italy and \*Africa. The following February Constantine's sister was married to \*Licinius, the emperor at that time in charge of the \*Balkans. The alliance freed Licinius' to attack and defeat his eastern rival \*Maximinus Daza, so that by the end of that summer Constantine in the West and Licinius in the East were the only emperors left.

The alliance with Licinius was not secure. In 316 Constantine attacked his colleague, marching across the \*Balkans and winning a battle at \*Cibalae. However, the \*Cibalensean War was not decisive, and on 1 March 317 the two emperors made peace; they proclaimed as their Caesars Constantine's adult son \*Crispus and Licinius' baby boy, also called \*Licinius, and Constantine took possession of all Licinius' European territories except \*Thrace.

The peace did not last. In 321 the two emperors refused to recognize each other's nominees for the \*consulship and in 324 Constantine attacked again. This time he led an army across Thrace while his son Crispus commanded a \*fleet which defeated Licinius' admiral at the Dardanelles, so making decisive Constantine's victory at the Battle of \*Chrysopolis on the Asian side of the Sea of \*Marmara on 18 September. Constantine received Licinius' surrender the following day at \*Nicomedia of \*Bithynia. The following 8 November he founded \*Constantinople and proclaimed as a Caesar his son \*Constantius II (then aged 7).

Constantine had four sons, but in 326 his eldest son \*Crispus by his first wife \*Minervina was executed for obscure reasons. Constantine's second wife \*Fausta was killed at around the same time. On Constantine's death in 337 the empire was divided among his three sons by Fausta: \*Constantine II, \*Constantius II, and \*Constans.

### Relations with Christians

When Constantine became an emperor in 306, the Great \*Persecution had been in progress for over three years. \*Lactantius clearly states that Constantine's first act upon becoming an emperor was to suspend the Great Persecution in the territories which he controlled (*Mort.* 24, 9). Evidence about any earlier associations Constantine may have had with Christianity is tenuous

and circumstantial. It may be that his mother Helena had Christian connections before the Great Persecution, but definite evidence of her Christian piety all dates from after 324. Constantine chose the Christian apologist Lactantius as tutor to the ill-fated Crispus, so it may be that Constantine and Lactantius had been acquainted at Nicomedia before the persecutions when Constantine was a young officer at Diocletian's \*court. The author of a \*panegyric reports that in 310 Constantine had a religious vision of the \*Sun (*PanLat.* VII (VI), 21), but the significance of this is unclear. In 312, during the Milvian Bridge campaign, occurred the famous Vision of the Cross; although neither of the two contemporary Christian sources who report this event calls it a \*conversion, it was clearly a religious experience, and no doubt the victory over Maxentius in the ensuing battle confirmed Constantine's sense that he and the Christian God were fighting on the same side.

Certainly from this point onwards it is possible to see Constantine's involvement in Christian affairs. In the summer of 313, after Licinius had defeated Maximinus Daza, Licinius issued instructions to provincial governors in the East, the \*Letter of Licinius, effectively bringing to an end the persecution of the Christians; the terms had been agreed between Licinius and Constantine earlier in the year (Lactantius, *Mort.* 48, 2-12; Eusebius, *HE X*, 5, 2-14).

At the same time Constantine funded the foundation of the cathedral of \*Rome, the Constantinian \*Basilica, now S. John Lateran (\**Liber Pontificalis*, 39). Christian property lost during the Great Persecution was restored (*Letter to Anullinus*, in Eusebius, *HE X*, 5), the imperial treasury was opened to bishops (*Letter to Caecilian*, in Eusebius, *HE X*, 6), and Constantine legalized the Church's right to receive bequests (*CTh XVI*, 2, 4 of 321). Bishops gained additional legal privileges over the manumission of slaves and enlarged powers of mediation in \*bishops' courts (*episcopalis audientia*), while clergy received exemption from curial duties (*Letter to Anullinus*, in Eusebius, *HE X*, 7).

Constantine also tried to resolve the \*Donatist Controversy in \*Africa, a conflict arising from disagreement about the conduct of bishops during the Great Persecution. In 314 he took the step, unprecedented for an emperor, of summoning a council and making the \*Cursus Publicus available to the bishops who travelled to \*Arles to attend it. Constantine compared the council's judgement to that of God (*Letter to the Bishops*, in *Optatan Appendix*, 5), but was unable to enforce the verdict against the Donatists. Resolution was not achieved for another century.

Later, when he came to the East in 324, Constantine discovered deeper divisions afflicting the eastern Church, where the doctrinal debates now known as the \*Arian Controversy were already raging. Initially,

Constantine expressed the hope that the 'trivial' and 'unworthy' questions in dispute could be settled amicably (*Letter to Alexander and Arius*, in Eusebius, *VCon* 2, 64–72). Once he recognized the significance of the debates, Constantine summoned what became the first œcumenical \*council to \*Nicaea in May–July 325. The largest Christian gathering yet held, the Council of Nicaea also witnessed his Vicennalia (20th \*anniversary) celebrations, which Eusebius compared to 'an imaginary representation of the kingdom of Christ'. After the final session he invited the bishops to dine at the \*palace (*VCon* III, 15). The composition of the original Nicene Creed unfortunately failed to resolve all the questions at issue. Over the following decade Constantine exiled several leading bishops, including \*Eusebius of Nicomedia and \*Athanasius of \*Alexandria, but his quest for harmony was again in vain and the questions involved did not reach a lasting resolution till the Council of \*Constantinople in 381.

In the following year his mother Helena visited the \*Holy Land where she founded churches at \*Bethlehem, where Jesus was born, and on the Mount of Olives, where he gave his last teaching and ascended into heaven. Around the same time Constantine ordered the destruction of the principal pagan \*temple at \*Jerusalem. The demolition crew discovered the Tomb of Christ, the scene of the Resurrection, and Constantine promptly ordered that a church should be built over the place; the building work was seen by the \*Bordeaux Pilgrim in 333 and the church was ready for consecration in 336.

It was probably during the \*Easter vigil at Nicomedia in 325 that Constantine delivered to the Christians at his \*court the lengthy address known as the *Oration to the Holy Assembly* (*Oratio ad Sanctos*). The speech starts by celebrating the resurrection of Christ and places it in a philosophical context. It goes on to place the Christian mission into a broader historical context, in a way which would have seemed familiar to any reader of Lactantius' *Divine Institutes*—and incidentally is the first Christian utterance to interpret \*Vergil's *Fourth Eclogue* as a prophecy of the birth of Christ. It ends with an extensive exposition of the notion that the Christian God punishes persecuting emperors—precisely the argument of Lactantius' *On the Deaths of the Persecutors*. The whole is suffused with the conviction not only that Constantine has the support of the Christian God, but that he is actually doing God's work. The same conviction is advanced in surviving \*letters written by the emperor and preserved in full by Eusebius' *Life of Constantine*, notably a general letter to the provincials of \*Palestine (*Letter to the Provincials of Palestine*, in *VCon* II, 24, 42) and diplomatic letters to the King of Persia, the youthful \*Shapur II, to whose care he commends the Christians of the \*Persian Empire (Personal Letter to

the King of Persia in *VCon* IV, 8–13). It is true that Constantine did not himself receive \*baptism until he was in his last illness, but this was not at all unusual for potential Christians who held public positions of responsibility and did not wish to be subject to the regime of \*penance as it was administered in the 4th century. Constantine's sense of mission is palpable: 'The Supreme . . . examined my service and approved it as fit for own purposes' (*VCon* II, 28, 2).

### *Constantine and traditional religion*

What is remarkable about Constantine's policy towards Christians is the complete reversal of fortune which it represents. A religion which the previous regime had tried to repress suddenly received unprecedented favour. It is the first step which counts.

It did not, of course, mean that all practice which might be deemed pagan disappeared immediately. At some point Constantine made a law against \*sacrifice. The law itself is lost but it is cited in a law of 341 made by his son Constans I (*CTh* XVI, 10, 2). Temple treasures were confiscated including \*bronze from their \*roofs (Eusebius, *VCon* III, 54). Some temples were destroyed, including that at Jerusalem and others at \*Aphaca (the birthplace of Adonis), of Aesculapius at \*Aegae of \*Cilicia and at \*Heliopolis (Baalbek), still a stronghold of paganism in the 6th century (Eusebius, *VCon* III, 55–8). Others were not: 'let them keep if they wish their sanctuaries of falsehood' (*Letter to the Eastern Provincials*, in *VCon* II, 56, 2).

Mars and Hercules appear occasionally on Constantine's coins as late as 320/1, as does the \*Sun, but Christians were quite capable of appropriating the Sun as symbolic of their Most High God. When Constantine declared Sunday to be a day of rest in 321 he hailed the Dies Solis, the day of the sun (*CTh* II, 8, 1) and permitted Christian soldiers to attend church while commanding non-Christian soldiers to attend a religious parade where a monotheistic prayer was recited (Eusebius, *VCon* IV, 18–20).

His non-Christian subjects reacted in various ways. The pagan poet \*Palladas was not afraid to express his disgust. The Roman \*Senate was more circumspect. The \*Arch of Constantine, which they erected in 315 next to the Colosseum, attributed Constantine's success to 'the inspiration of the divinity (*instinctu divinitatis*)', a careful phrase acceptable to Christians and pagans alike. Even the \*imperial cult survived in a modified form. One of Constantine's sons approved a \*petition from \*Hispellum in Umbria for a temple and \*priesthood honouring the imperial family, although he insisted that the temple 'must not be defiled by the evils of any contagious superstition' (*CIL* IX, 5265). Constantine did not mince words when expressing his disgust at the pollution caused by pagan practice but if Eusebius truly thought

the emperor encouraged the building of churches because soon 'almost everybody would in future belong to God, once the polytheistic madness had been removed', Eusebius was an optimist (*VCon* II, 45).

### Secular matters

The impact of Constantine went far beyond religion. He replaced the Tetrarchic system from which he had emerged, and reunited the Roman world under a single ruler, while recognizing that it was necessary to have cooperation between those responsible for defence of the three principal \*frontiers, on the Rhine, on the Danube, and in the East. He was in fact fortunate that following on the cracking victory of \*Galerius of 298 all was quiet on the eastern front until the final year of his reign. He campaigned, however, against the \*Sarmatians on the Danube frontier.

The political and economic reforms initiated under the Tetrarchy were completed, fulfilling the transition from the Third Century \*Crisis to the more stable conditions of the 4th century. Constantine introduced the \**solidus* as the dominant \*gold unit of the late Roman economy.

Above all, Constantine is associated with Constantinople. Work began at the site of the ancient city of Byzantium shortly after Constantine's conquest of the east, and the new city was consecrated on 11 May 330. The urban layout resembled other Tetrarchic cities like Trier and Nicomedia, but Constantinople swiftly surpassed those rivals and acquired the title 'New Rome'. Its geographic location as an administrative and economic centre and its defensive strength made Constantinople the greatest city of the Eastern Roman and Byzantine Empire.

In his last years, Constantine came into conflict with \*Sasanian Persia. Constantine was preparing for war in 337 when his final illness struck. According to Eusebius, the emperor desired to be baptized in the River Jordan but was unable to complete the journey and so received baptism in Nicomedia. Constantine died at Pentecost, on 22 May 337, and was buried in his mausoleum church of the Holy Apostles in Constantinople (*VCon* IV, 61–73). DMG; OPN

### SOURCES

More of Constantine's personal utterances survive than is known from almost any other Roman emperor. His Easter sermon the *Oration to the Holy Assembly* is preserved among the works of Eusebius, and is in need of re-editing:

ed I. A. Heikel, *Eusebius Werke*, I (GCS 7, 1902), 151–92.

ET M. J. Edwards in his *Constantine and Christendom* (TTH 39, 2004), 1–62.

Many of Constantine's letters survive, preserved by Eusebius of Caesarea (*HE* X and *VCon*) and in the *Optatan Appendix*, 3, 5–7, 9–10.

For the years up to 313, Lactantius, *On the Deaths of the Persecutors*, written in 313/15, provides essential detail. The dedications of the second edition of his *Divine Institutes* reflect his estimate of the emperor, and his other works give insight into the Christianity of Constantine's circle.

Eusebius's *Church History* (*HE*) provides the impressions of a provincial bishop, frequently revised by the author, up to 325.

Eusebius' *Life of Constantine* is a panegyric biography by a man who had met Constantine and corresponded with him but was not an intimate. It was long regarded with suspicion particularly by H. Grégoire and others, as Constantine is, after all, the subject of considerable later fiction. However, the publication in 1954 of a papyrus of one of the imperial letters preserved in the *Life* has caused opinions to be revised.

ed. F. Winkelmann, *Eusebius. Über das Leben des Kaiser Konstantins: Eusebius Werke*, I, 1 (GCS 57, rev. edn. 1991).

*NEDC* analyses the sources (39–43) and catalogues Constantine's movements (68–80).

### STUDIES

The bibliography on Constantine is enormous and space is available only for more recent work.

T. D. Barnes, *Constantine and Eusebius* (1981) marked a watershed in the empirical study of Constantine, as it was based on a close reading of the sources. References to Barnes's subsequent work, and a useful summary of earlier historiography, may be found in:

T. D. Barnes, *Constantine: Dynasty, Religion and Power in the Later Roman Empire* (2011).

P. Stephenson, *Constantine: Unconquered Emperor, Christian Victor* (2009) is a recent biography.

Among works concerned with specific aspects may be noted the following:

John Noel Dillon, *The Justice of Constantine: Law, Communication, and Control* (2012) is concerned with law and administration.

- H. A. Drake, *Constantine and the Bishops: The Politics of Intolerance* (2000) considers Constantine and the Church.
- N. Lenski, ed., *The Cambridge Companion to the Age of Constantine* (rev. edn. 2012) collects essays on a range of topics.
- R. Van Dam, *The Roman Revolution of Constantine* (2007) uses two inscriptions to consider the impact of Constantine on those he ruled.
- J. Bardill, *Constantine, Divine Emperor of the Christian Golden Age* (2011) is good on the physical evidence for Constantine.
- E. Hartley, J. Hawkes, M. Henig, with F. Mee, eds., *Constantine the Great: York's Roman Emperor* (2006) is an exhibition catalogue with helpful essays.

**Constantine I the Great in art** Constantine's earliest coin portraits were still in the style favoured by the \*Tetrarchs (square head, thick neck, stubble, short-cropped hair, furrowed brow). By 306, however, the \*Trier mint was using a clean-shaven boyish portrait with the dynasty's hooked nose; this became more manly from 310, as may be seen in \*sculpture on the reworked heads of the \*Arch of Constantine (dedicated 315).

After 312, a \*marble colossus was recut to represent Constantine in the manner of Jupiter and displayed in the \*Basilica Nova (the Basilica of \*Maxentius or of Constantine) at \*Rome. Coins after 324 showed Constantine with diadem and head tilted heavenward; on those from 330, his face was fleshier, his locks extending down his neck, ending in tight curls. Constantine (or \*Constantius II) appears thus in a \*bronze head from a monumental statue now in the Capitoline Museums. Other important depictions include the Ada \*Cameo, the Great Cameo formerly in Utrecht now in Leiden, and the lost radiate statue in the Forum of Constantine at \*Constantinople. JB

- Bardill, *Constantine*, 11–27, 34–6, 203–17, 227–30.

**Constantine II** (316–40) \*Caesar from 317, then \*Augustus 337–40. Son of \*Constantine I and \*Fausta, born in 316 (suggestions that he was born in 317 and his mother was a \*concubine are generally rejected). He became Caesar on 1 March 317, following the \*Cibalensean War. After the execution of his half-brother \*Crispus in 326 Constantine was his father's eldest surviving son and heir. Despite his youth Constantine was assigned administrative and military duties during his father's reign (e.g. he was associated with

campaigns against \*Sarmatians and \*Alamans). He was married before 335; his wife's name is unknown. After his father's death in 337, Constantine became Augustus, sharing the Empire with his brothers \*Constantius II and \*Constans I. Based in \*Trier (where he had been installed since 328) he ruled \*Gaul, \*Britain, and \*Spain. He was killed in 340 in \*Italy, near \*Aquileia, in a conflict with his brother Constans. SFT

*PLRE* I, Constantinus 3.

*NEDC* 44–5 and 84–5.

Barnes, *Athanasius and Constantius*, 218 (movements).

**Constantine III** (d. 411) Flavius Claudius Constantinus was \*Augustus 407–11. In spring 407, following the barbarian crossing of the Rhine, Constantine, a common soldier, was proclaimed \*Augustus by the \*army in \*Britain, supposedly because of his auspicious name (\*Orosius, VII, 40; \*Zosimus, VI, 2–6 and 13). He immediately took many troops to \*Gaul, where he regained the Rhine \*frontier and occupied Gaul and \*Spain. Establishing his residence at \*Arles, the seat of the \*Praefectus Praetorio of Gaul, he made his son Constans joint Augustus. In 409, promising help against \*Alaric the \*Visigoth, he was recognized by the \*Emperor \*Honorius. But in the same year Britain revolted and Constantine's \*Magister Militum in Spain, \*Gerontius, proclaimed as Augustus his client \*Maximus (\*Olympiodorus, fr. 16, Orosius, VII, 42, \*Gregory of Tours, *HF* II, 9). In 411, Honorius' general Constantius (later \*Constantius III) invaded Gaul and besieged Constantine in Arles. The general Edobichus tried to relieve the siege but was defeated and killed and the usurper \*Jovinus was then proclaimed at \*Mainz, so Constantine had himself ordained as a \*priest and surrendered to Honorius' general Constantius. Ordination did not prevent Constantine from being beheaded soon afterward. RWM

**Constantine III** (612–41) Emperor 641. Son of \*Heraclius I by his first wife \*Eudocia. Constantine was created \*Augustus while still a baby, on 22 January 613. In 629/30 Constantine married the daughter of the general \*Nicetas, and their son was \*Constans II. On Heraclius' death in January/February 641, Constantine became senior emperor, with his half-brother

## Constantine IV Pogonates

\*Heraclonas junior Augustus. However, after only four months he fell ill and died, rumour declaring he was poisoned by his stepmother \*Martina. MTGH PLRE III, Heraclius Constantinus 38.

Haldon, *Seventh Century*, 51–2.

Kaegi, *Heraclius*, 73, 265–8.

Stratos, *Seventh Century*, II, 175–85.

**Constantine IV Pogonates** (c.650–85) \*Emperor 668–85. Crowned co-emperor by his father \*Constans II in 654, Constantine remained in \*Constantinople during Constans II's western campaigns, becoming senior emperor in 668/9 following Constans II's assassination, with his brothers \*Heraclius II (\*Heraclonas) and Tiberius as junior emperors.

Constantine immediately sailed to \*Sicily to crush the \*usurper Mezezius. Having successfully reasserted control over Roman forces in the West, Constantine hurried back to Constantinople, for \*Mu'awiya had launched an all-out attack on the Empire. In most accounts the centrepiece of this assault was a sea blockade and \*siege of Constantinople between 674–8, finally broken by the Roman \*fleet and the first recorded use of the secret weapon \*Greek Fire. However, Howard-Johnston has argued that there was no siege, but rather a decisive Roman naval victory in 674. This combined with the insurgency of the Mardaite in \*Syria and Palestine forced Mu'awiya to agree a peace treaty and the payment of a limited \*tribute. Whatever the precise chronology, the empire won a significant victory, and imperial prestige was enhanced.

Victory permitted resources to be committed in the \*Balkans, where a \*Slav siege of \*Thessalonica was lifted and the \*Avars recognized Roman supremacy. However, \*Bulgar migration into \*Thrace threatened the Empire's tenuous position, leading to the dispatch of an imperial fleet to the mouth of the Danube in 680. This was defeated in a surprise attack, which forced Constantine to recognize the Bulgar occupation in a treaty in 681.

Meanwhile, at the Sixth Ecumenical \*Council, convened at Constantinople between 3 November 680 and 16 September 681, Constantine abandoned \*Monothelete Christology. This restored doctrinal unity with the West, and tacitly acknowledged the fact that after the \*Arab conquests the pacification of \*Miaphysites was less important than supporting Chalcedonians in the provinces that remained.

In 681/2 Constantine, despite opposition from the soldiers of the \*Anatolic Theme, deposed and mutilated his brothers, in order to secure his own position and that of his son \*Justinian II. Constantine died, possibly of dysentery, in July or September 685. MTGH PBE Konstantinos 2.

Stratos, *Seventh Century*, IV.

**Constantine V Copronymus** (718–75) \*Emperor 741–75. Constantine was crowned co-emperor in 720 by his father \*Leo III. The nickname 'Copronymus', dung-named, stems from a polemical account of Constantine befouling his baptismal \*font, and evinces the distorting opprobrium heaped upon Constantine in the sources opposed to his supposed \*Iconoclast policies.

Following Leo's death in 741, Constantine faced civil war against his brother-in-law \*Artavasdus, then \*strategos of the \*Opsikion theme, who provided the guard for \*Constantinople. Artavasdus seized the capital, while Constantine fled to the \*Anatolic theme. Eventually Constantine defeated Artavasdus, and in 742/3 besieged and then stormed Constantinople. Artavasdus and his sons were captured, blinded, and banished to a \*monastery.

Secure on the throne, Constantine undertook a series of administrative and military reforms. In particular, the overly powerful Opsikion theme was broken up, and a new elite force loyal to the emperor, called the \*tagmata, was created at Constantinople.

Taking advantage of the \*Arab civil war in the \*Caliphate, Constantine raided \*Armenia and \*Syria in the 740s–50s, garnering prestige for himself, and transferring people to depopulated \*Thrace. This created a buffer zone in the East and helped to stabilize the Arab–Byzantine \*frontier, while strengthening imperial control in the Balkans. However, this led to renewed conflict with the \*Bulgars. From 759 to 775 Constantine led nine expeditions into Bulgar territory, successfully reaffirming imperial domination in the south and central \*Balkans. However, in the West setbacks occurred: the exarchate of \*Ravenna fell in 751 and popes increasingly allied themselves with the Carolingian \*Franks.

Security, and the cessation of the \*plague after 746/7, led to economic and demographic recovery. Constantine was also able to undertake significant renewal of Constantinople's urban infrastructure, including rebuilding the \*Aqueduct of \*Valens and the Church of the \*Holy Peace.

Constantine is most remembered for his role in \*Iconoclasm. Although recent work has significantly downplayed the significance and extent of imperial policy, Constantine did lead a theological campaign which appealed to preceding Christological controversies to denounce the creation of \*icons. His ideas were formally endorsed at the Council of Hieria in 754. However, it is doubtful whether there was any great campaign of \*icon destruction, or much persecution. More positively, Constantine promoted the \*Eucharist and the \*Cross as the true symbols of Christianity.

Constantine married three times and had numerous sons, the eldest of whom was Leo IV, who was born in 750, crowned in 751, and succeeded in 775. MTGH PBE Konstantinos 7.

**Constantinople** (mod. İstanbul, Turkey, Graeco-Roman Byzantium) Principal \*city of the Eastern Roman Empire. Following its foundation by \*Constantine I in 324 on the site of the small city of Byzantium, Constantinople expanded rapidly. One reason for the growth in population was the frequent presence of the imperial \*court. During the 4th century the rulers of the eastern half of the \*Empire often resided in Constantinople and lived there permanently from the time of \*Arcadius (395–408) to that of \*Heraclius (610–41). About 20,000 people may have been living in Byzantium in 324; by the mid-5th century Constantinople probably had a population of about 375,000. \*Zosimus, no admirer of Constantine (II, 35; cf. II, 30–2) complained that the \*streets had become dangerous to walk in because of the sheer number of people and animals, and that the buildings were clustered much too closely together. Land had to be reclaimed from the sea to provide further building space.

#### *Food and water supply*

The rapid growth placed great strain on the city's ability to sustain its population. Its hinterland was not

particularly productive agricultural land; \*grain was imported from \*Egypt and from 332 onwards a free \*grain dole was instituted, like that at \*Rome. This had the effect of placing the imperial \*administration directly in charge of the city's grain supply, so freeing the \*emperor from manipulation by local landowners of the sort which \*Julian encountered at \*Antioch in 362. To provide the necessary volume of grain, between 2,400 and 3,600 vessels had to arrive in the city every year, far more than the existing \*harbours on the Golden Horn, the city's northern shore, could accommodate. New harbours were constructed on the city's southern shore, like that of Julian in 362.

Water was a greater problem because Byzantium had only one natural source of fresh water, the small River Lycus, which in any case tended to dry up for six months of the year. There was only one \*aqueduct, dating from the reign of Hadrian, to bring in water from further afield. A new network of \*aqueducts had to be constructed stretching 100 km (60 miles) inland, which delivered water to the Nymphaeum Maius reservoir. The vulnerability of the system became apparent after the Battle of \*Adrianople in 378 because aqueducts could easily be cut if an enemy force controlled \*Thrace. Three immense open-air \*cisterns were built with a combined capacity of 1,000,000 litres (220,000 imperial gallons) to provide an uninterrupted supply.

#### *Local government*

Constantine founded a \*Senate for his new city (*Origo Constantini Imperatoris*, 6, 30; cf. \*Sozomen, II, 3, 6), but it was his son \*Constantius II who provided Constantinople with a lasting system of local government. A \*Proconsul of Constantinople is first attested in 342, and in 359 Constantius appointed the first \*Praefectus Urbi for the city, an office conceived of as parallel to the \*Praefectus Urbi at Rome (\*Socrates, II, 41; Sozomen, IV, 23, 3). He also put the \*Senate of Constantinople on a formal footing, and by the time of his death it numbered, according to \*Themistius, fewer than 300 men (*Oration*, 34, 13).

The Senate of Constantinople differed from that at Rome, which had at its core the 'Romans of Rome', men such as \*Symmachus and \*Praetextatus. It differed also from a normal \*city council, comprised of the local landowners, all the men of the city who had a certain property qualification. Especially after the late 4th century, when the \*court settled permanently in Constantinople and stored their \*archives in watertight rooms under the seating of the Hippodrome (\*Circus), the Senate came to be composed of those in the senior ranks of the central imperial \*administration. The notables who were influential in the local affairs of 4th- and 5th-century Constantinople came from the court, men like the \*patrons of S. \*Daniel the \*Stylite, Marcus the

*\*silentarius*, Gelanius the chamberlain, *\*Cyrus* the Praefectus Urbi and *\*Praefectus Praetorio*. Men like Cyrus rose to be senators by achieving high office in the imperial administration; they might own land along the *\*Bosporus*, as Gelanius did, but they owed their positions to their service at court. Together with the *\*army* and the people assembled in the Hippodrome the Senate took part in dramatic political decisions, such as the *\*acclamation* as emperor of *\*Justin I*, and in formal *\*ceremonies*. But they were also responsible, alongside the Praefectus Urbi appointed by the emperor, for the mundane regulation of local government.

### Monumental architecture

The defensive walls built by Constantine for his new city enclosed an area much greater than the former small city of Byzantium; the imperial mausoleum at the Church of the *\*Holy Apostles* (on the site of the present Fatih Camii) was inside their circuit. The two principal *\*roads* passed through the walls, that coming from *\*Adrianople* and the north-west, and, coming from due west and *\*Selymbria*, the *\*Via Egnatia*, the processional way which passed through the Golden Gate at the *\*Hebdomon*. The two main roads met inside the city west of the Forum of Constantine, a large circular square with at its centre a *\*porphyry column* (now Çemberlitaş) bearing a statue of Constantine himself, which Constantine constructed immediately outside the former walls of Byzantium. This led down to the *\*Augustaion*, the square flanked by the Great Church of the *\*Holy Wisdom* (consecrated in 360), the Senate House, and the entrance to the *\*Great Palace*, over the principal gateway of which was a painting of Constantine with the sign of the Saviour behind his head trampling on a dragon (*\*Eusebius*, *VCon* III, 3). The Great Palace was directly connected by a spiral staircase to the imperial box (the *kathisma*) located opposite the finishing line in the Circus (Hippodrome). The layout of palace and circus was designed for the performance of impressive *\*ceremonies* and owed much to the urban plans developed under the *\*Tetrarchy* in such cities as *\*Trier* and *\*Thessalonica* (and probably *\*Nicomedia*).

Constantine also beautified Constantinople with works of art brought from elsewhere in the Empire, 'stripping bare almost all the cities' (*\*Jerome*, *Chron* 232g Helm). The central reservation of the Hippodrome was embellished with *\*sculpture* brought from all over the Mediterranean world, including the Serpent Column from *\*Delphi*, cast in *\*bronze* in the 5th century BC. The Senate House was decorated with statues of the Muses brought from Mount Helicon; before its doors stood the statue of Zeus from *\*Dodona* and Athena from the island of Lindos. Over 80 assorted statues adorned the rebuilt *\*Baths of Zeuxippus*. These

sculptures were all divorced from their original civic and religious contexts and functions, and were exhibited purely as works of art.

*\*Theodosius I* further enhanced Constantinople as a setting for imperial ceremony. Between about 386 and 393 the Forum of Theodosius, previously the Forum Tauri (mod. Beyazit Square), Constantinople's largest public square, was laid out on land between the walls of ancient Byzantium and those constructed by Constantine. It centred on the tall column of Theodosius and featured a triumphal *\*arch* and an equestrian statue. Constantine's successors also continued to decorate Constantinople with works of art brought from elsewhere in the Empire. An 800-ton *\*obelisk* of Pharaoh Thutmose III (1549–1503 BC) from Egyptian *\*Thebes* and a *\*bronze statue* of Hercules by Lysippus from Rome were placed in the Hippodrome. With the permanent presence of the court came further grand buildings and public works to reflect the city's new importance. The Forum of Arcadius, built from 404, was adorned with a column similar to that in the Forum of Theodosius. The *\*Notitia Urbis Constantinopolitanae* compiled around AD 425 catalogues the buildings in the city's fourteen regions.

### Temples, churches, and monasteries

Three civic temples on the Acropolis of the old city of Byzantium were destroyed under Theodosius I (*\*John Malalas*, XIII, 39); the site of the Temple of the *\*Sun* became a courtyard, that of Artemis was made a gambling den still known in the 6th century as 'The Temple', and that of Aphrodite the site of the carriage house for the Praefectus Praetorio, with free lodgings for penniless prostitutes nearby. The only person ever known to have offered a pagan *\*sacrifice* at the Temple of the Fortune of the City mentioned by Zosimus (II, 31, 2–3) is the Emperor Julian (Sozomen, V, 4, 8).

Constantine built *\*martyria* for S. Acacius and for the local *\*martyr* S. *\*Mocius*, on the anniversary of whose execution, 11 May, he chose to dedicate the city. The *Notitia* lists only fourteen churches in the city of Constantinople. Two of these were the large imperial basilicas of the *\*Holy Wisdom* (Hagia Sophia), completed and consecrated in 360 and rebuilt at the beginning of the 4th century, and the Church of the Holy Apostles which had been the burial place of most emperors since Constantine. This number expanded rapidly during the 5th century with the encouragement of the *\*Empress Pulcheria*. In his *Buildings*, *\*Procopius* mentions 33 churches built, embellished, or repaired through the efforts of *\*Justinian I* (527–65).

At the same time the importance of Constantinople increased in the Church at large. *\*Bishops* came to the city for three Œcumenical *\*Councils*; the first Council

of \*Constantinople in 381 convened by Theodosius I, the second in 553 convened by \*Justinian I, and the third in 680–1 convened by \*Constantine IV. The first Council of Constantinople gave the Patriarch of \*Constantinople, because the city was New Rome, precedence immediately following that of \*Rome (\*Sozomen, VII, 9, 2–3) and Canon 28 of the Council of \*Chalcedon confirmed this honour.

Monks began coming to the city and its environs in the late 4th century; S. \*Isaac the Monk is said to have been the first, and Ss. \*Alexander the Sleepless (d. 430) and \*Daniel the Stylite (d. 493) were famous \*holy men of the next century. By the mid-6th century, there were also some 80 \*monasteries in the city. Some of these had formed spontaneously around individual holy men and their disciples, others had been established as formal institutions by a private \*patron, such as the \**patri-cius* Studius who set up his Monastery of \*S. John the Baptist (mod. Imrahor Camii) in 463 or \*Anicia Juliana who built her enormous Church of S. \*Polyeuctus in 524–7. It was partly in this tradition that the \*Empress \*Theodora gave shelter to monks who shared her \*Miaphysite sympathies.

### Defence

Following the Sack of \*Rome in 410, greater thought was given to the defence of Constantinople. The geography of the site on a narrow promontory with sheltered harbours made it easily defensible on three sides. The current in the southern Bosphorus was also a defensive advantage; running at three to four knots or more, it made it very difficult to bring \*ships close inshore to mount a naval assault. Successive rulers built on these advantages. Constantine provided a set of defensive walls across the promontory and in 378 these were enough to deter the victorious \*Goths from following up their victory at Adrianople with an attack on the city. By the early 5th century, however, settlement had spread out far beyond the limits of the original fortifications. In 413 \*Anthemius who was acting as regent for the young \*Theodosius II ordered the construction of a new set of walls that stretched 7 km (nearly 5 miles) across the peninsula and incorporated a considerable new area into the city. Walls along the seaward sides were added in 439 and the Land Walls were reinforced by an outer wall and moat in 447. Three-tier defences therefore enabled Constantinople to survive the determined \*sieges of the \*Avars and Persians in 626, and of the \*Arabs in 674–8 and 717–18.

### Fire, earthquakes, and civil unrest

For much of the period, however, external attacks were a lesser danger than natural catastrophes. As buildings were packed ever closer together, accidental fires were a

constant hazard during the summer months. The first serious fire, recorded by \*Marcellinus Comes, devastated the area alongside the Golden Horn in August 433. In September 464 a fire which broke out in one of the dockyards of the Golden Horn damaged eight of the city's fourteen regions.

Situated close to the North Anatolian fault, Constantinople experienced regular \*earthquakes. In 396 an earthquake had emperor and people praying together in public. A series of tremors over four months during 437 forced thousands to flee the city for the safety of suburban Hebdomon. A single long earthquake in 480 brought down the statue on the Column of Theodosius, as well as levelling many houses, porticoes, and churches. Liturgical commemorations of the city's deliverance from these earthquakes subsequently entered the civic religious calendar.

Outbreaks of civil unrest among Constantinople's tightly packed and volatile population were equally destructive. The Hippodrome could hold 100,000 people, and especially after the emperor and court settled permanently in Constantinople, it became a political meeting ground as much as a place of entertainment, as is apparent in the dialogue between the factions and the emperor's spokesman in the *Acta per \*Calopodium*. This meant that the chariot races in the Hippodrome were often a flash point where the rivalry between the Blue and Green \*factions would spill over into violence. In 498, a riot led by the Greens caused considerable damage to the stadium and the area round about. The \*Nika Riot of 532, when the Blues and Greens made common cause, was perhaps the most devastating of these popular uprisings.

### Reconstruction under Justinian

Constantinople's buildings, infrastructure, and monuments received significant restoration and embellishment during the reign of Justinian I, following damage caused by an earthquake in 526 and the Nika Riot of 532. The *Buildings* of \*Procopius, written to \*praise the emperor, provide a voluble record of these improvements. The Church of the Holy Wisdom had been severely damaged in 532 and was replaced by a radical design with a \*dome 55 m (180 feet) high. Although damaged by an earthquake in 558, the building has stood ever since. The Church of the Holy Apostles and numerous other churches which had not been damaged in the disturbance were rebuilt anyway; many of Justinian's churches boasted domes, the churches of Ss. \*Sergius and Bacchus and the Church of the \*Holy Peace (Hagia Eirene) being two surviving examples. The Senate House and the portico around the Augusteum were reconstructed. A column was erected in the Augusteum, topped by an equestrian statue

of Justinian himself. The Bronze Gate (the Chalke Gate) of the Great Palace was rebuilt and provided with \*mosaics depicting Justinian, his wife Theodora, and his generals' victories over the \*Vandals and \*Ostrogoths. Justinian also made earnest efforts to improve the water and \*food supply. Several new cisterns were constructed, underground rather than in the open air, greatly increasing the amount of water that could be stored. A vast granary was built on the island of \*Tenedos so that grain ships could deposit their cargoes there when adverse wind conditions made it impossible for them to pass through the Dardanelles (Procopius, *Aed.* V, 1, 7–16).

The problems of food and water supply were never completely overcome: there was a severe grain shortage in May 555 and a drought in November 562. Constantinople's population began to decline during the 6th century. In the spring of 542, the Justinianic \*Plague arrived in the city from \*Egypt and took a severe toll on the urban population. The \*epidemic subsided the following year but further outbreaks followed in 558, 573, and 599 culminating in another major outbreak in 747.

With the loss of Egypt in the early 7th century the grain dole ended and the population began to decrease. After 600 no monumental building was undertaken till the closing years of the 8th century. In 626 Avar and Persian armies cooperated to besiege the city and it was saved, so it was believed, by the intervention of the Virgin \*Mary. Half a century later in 674–8 came the first Arab sieges and in 714 the Emperor \*Anastasius II, foreseeing the siege which was to transpire two years later, ordered out of the city all those who could not lay up supplies for three years. Only in the 9th century did Constantinople's population start to grow once more and new building resume. JPH; OPN

#### Constantinople, churches and monasteries of

\*Constantine I dedicated \*Constantinople to the God of the \*martyrs (\*Eusebius, *VCon* III, 48, 1) and provided the city with \*martyria of S. Acacius and of the local martyr S. \*Mocius, as well as the Church of S. Michael at \*Sosthenion on the \*Bosporus (\*Sozomen, II, 3) the city's first cathedral, (Hagia Eirene: \*Socrates, I, 16 and 37; II, 6), and the imperial mausoleum at the \*Holy Apostles. His son \*Constantius II attended the consecration of the first Church of the Holy Wisdom (Hagia Sophia) in 360. Later legend, especially as represented by the \*Patria of Constantinople, was to augment substantially the list of supposed Constantinian foundations.

The city was soon fortified by powerful \*relics, including those of Ss. Andrew the Apostle, Luke, and Timothy, the prophet Samuel, and in the mid-5th century S. \*John Chrysostom. Monks began to appear in the late 4th century with S. \*Isaac the Monk and spread swiftly up and down the Bosporus, transforming its sacred landscape, so that by the mid-5th century an aspiring \*ascetic might deem the city 'a second Jerusalem' (*VDanStyl* 10). For all that, the \**Notitia Urbis Constantinopolitanae* composed in c.425 enumerates only fourteen churches in the city. This number had increased to over 30 by the mid-6th century if Procopius' *Buildings* are any indication. OPN

Mathews, *Churches of Istanbul*, is a photographic record.

Janin, *ÉglisesCP*, is a comprehensive record for the City.

Janin, *Grandscentres*, covers the Asiatic shore of the Bosporus.

Dagron, *Naissance*, 391–409 separates fact from fiction.

#### Constantinople, churches and monasteries of,

**Balaban Ağa Mescidi** A 5th-century, \*brick-built, vaulted rotunda (diameter: 10.5 m (35 feet)), 400 m (1,300 feet) north-west of the Forum Tauri, of uncertain original function, now demolished. Inside, six niches with windows opened from a central hexagonal space. JB

Müller-Wiener, *Bildlexikon*, 98–9.

Mathews, *Churches of Istanbul*, 25–7.

Bardill, *Brickstamps*, 70–2, 110–11, pl. XII.

**Constantinople, churches and monasteries of, Beyazit, Basilica A** The southernmost of three churches found north of the Mese, c.200 m (660 feet) west of the Forum Tauri. It is possibly of the early 6th century. JB

Mathews, *Churches of Istanbul*, 28–33.

Mathews, *Early Churches*, 67–73.

Bardill, *Brickstamps*, 131–2.

**Constantinople, churches and monasteries of, Beyazit, Basilica B** The north-eastern of three churches found north of the Mese, c.200 m (660 feet) west of the Forum Tauri, probably to be identified with the Theotokos of the Diakonissa, built c.597/8. JB

Mathews, *Churches of Istanbul*, 28–33.

Janin, *Églises CP* 174–5 (Theotokos of the Diakonissa).

Bardill, *Brickstamps*, 131–2.

**Constantinople, churches and monasteries of, Holy Apostles, Church of the** On the northern branch of the Mese, inside \*Constantine I's fortification \*walls, its precise location, near the present Fatih Mosque, is uncertain. It was possibly built by \*Constantine I as his burial place; alternatively, Constantine may have been buried in a typical domed mausoleum to which \*Constantius II attached the church. A third possibility is that Constantine built both a mausoleum and the adjacent church. In 359, mausoleum, church, or both became unsafe and Constantine's body was moved to the Church of S. \*Acacius. It was returned before 361, when \*Constantius II was buried alongside his father. Constantius apparently changed the burial scheme, since we do not hear again of the twelve empty tombs (*thekai*) of the Apostles that had surrounded Constantine's \*sarcophagus. Indeed, on 1 July 356 relics of S. Timothy were buried at the Holy Apostles, not in a *theke* but below the \*altar, and relics of Ss. Andrew and Luke joined them in 357. In 370, the church was dedicated (or rededicated); we know it had a cruciform plan. \*Justinian I rebuilt it, again on a cruciform plan, rededicating it on 28 June 550. He added another mausoleum which was to serve him and later emperors up to Theophilus. JB

Janin, *Églises CP* 41–50.

Müller-Wiener, *Bildlexikon*, 404–11.

Bardill, *Constantine*, 367–84.

**Constantinople, churches and monasteries of, Holy Peace, Church of the (Hagia Eirene)** Large church, located north of the Great Church of the \*Holy Wisdom, ascribed by the 5th-century church historian \*Socrates to \*Constantine I; the ascription is not improbable since the \**Notitia Urbis Constantinopolitanae*, which locates it in Region II, describes it as the 'Old Church' (*ecclesia antiqua*). The dedication suggests

commemoration of the peace established by imperial \*victory. It apparently served as \*Constantinople's cathedral until \*Constantius II built the Holy Wisdom, and also during the rebuilding of the Holy Wisdom, after the fire there in 404. Hagia Eirene was destroyed during the \*Nika Riot of 532 and rebuilt by \*Justinian I as a domed \*basilica. Another fire in 564 consumed the atrium and part of the \*narthex. An \*earthquake in 740 apparently damaged the upper storey and \*dome, and rebuilding occurred after 753. Excavations on the south flank have exposed a stair ramp that gave access to the gallery. Used as an armoury after the Ottoman conquest, the church survives as Aya İrini.

**Constantinople, churches and monasteries of, Holy Wisdom, Church of the** Great Church of Constantinople, and seat of the \*Patriarch of Constantinople. The reconstruction of Hagia Sophia was the centrepiece of Justinian I's architectural \*patronage.

Although medieval authors attributed to \*Constantine I the construction of the first Church of the Holy Wisdom, the earliest source (\*Socrates, *HE* II, 16) credits \*Constantius II, and it was in his reign that the church was consecrated in 360. After the expulsion of the Patriarch \*John Chrysostom in 404, the patriarch's partisans set fire to the church. It was back in use by 406, but not rededicated until 415. While some early sources refer simply to the 'Great Church', Socrates already names it 'Sophia'; the reference is probably to the Wisdom of God. Of the earlier structures, only the Sceuphyllacium (treasury) remains. Severely damaged in the \*Nika Riot of 532, the original \*basilica was completely rebuilt, although excavation has revealed portions of its west end and retrieved substantial amounts of architectural \*sculpture.

Justinian's new church was designed by \*Anthemius of \*Tralles and \*Isidore of \*Miletus (\*Procopius, *Aed.* I, 1, 24), and the project was supervised by Phocas, the \*Praefectus Praetorio (\*John Lydus, *Mag.* III, 76). The building, consecrated in 537, represents a radical experiment never imitated by later Byzantine architects. Its design collapses the standard distinction between 'basilicas' and 'centrally planned churches', and can be understood both as a three-aisled basilica with a single \*apse and as a double shell centred upon the massive \*dome. Structurally the church is anchored by its four massive pillars, which are concealed by the thin walls

that divide nave from aisles, and which support the arches upon which the base of the dome rests. Procopius analysed the space as an exercise in abstract \*mathematics, a harmonious essay in solid \*geometry (*Aed.* I, 1, 31–48). A \**kontakion* by \*Romanus the Melodist asserts that the church 'imitated heaven', while an anonymous 6th-century *kontakion* describes it as an 'all-holy Tabernacle' for the Christians. Romanus also contrasted the speedily rebuilt Hagia Sophia with the Temple in \*Jerusalem, which still lay in ruins.

The ambitious first dome of Hagia Sophia collapsed in 558, and was reconstructed in more judicious fashion, thereby losing, according to \*Agathias, something of its power to instil wonder (*Histories*, V, 9, 5). Shortly after the rededication of 562, \*Paul the \*Silentiary composed a verse \*ecphrasis that celebrates the material splendour of the interior, and a second poem describing the \*ambo. The original decoration of the church was mostly aniconic, and depended for its effect on skilfully cut \*mirror revetments, intricately carved basket \*capitals and entablatures, and ornamental \*mosaics possibly of Persian inspiration. Holy figures did appear on the chancel \*screen and \*altar cloth. The \*monograms of Justinian and \*Theodora were emblazoned upon the capitals and chancel screen.

Situated just north of the Augustaeum, where an equestrian statue of Justinian crowned a lofty column, and offering access to the imperial Great \*Palace through its eastern end, Hagia Sophia stood at the centre of religious and civic ceremony alike. Indeed, its centrality helped to efface the distinction between the two. The church already figures in the 5th-century \*ceremony related to the \*accession of \*Leo I, during which the \*emperor removed his \*crown in the narthex, presented \*gifts at the altar, and heard a reading from the Gospels, before the patriarch restored his crown and he went out to the palace (*De Ceremoniis*, I, 91). In Justinian's church, the eastern end of the south aisle formed the imperial compartment, which the emperor left to participate in the Lesser Entrance, the Great Entrance, and the \*Kiss of Peace. Traces of these rites and of the original liturgical furnishings are preserved in the multi-colored \*marble inlays that articulate the nave pavement. BWA

Mathews, *Churches of Istanbul*, 206–8.

Müller-Wiener, *Bildlexikon*, 186–7.

**Constantinople, churches and monasteries of, S. Polyeuctus, Church of** A 5th/6th-century \*basilica in \*Constantinople located in the quarter of Constantianae on the Mese between the Church of the \*Holy Apostles and the Forum Tauri (close to the Şehzade Mosque and the Atatürk Bulvarı in the modern Saraçhane quarter). The first church was built in the early 5th century by the \*Empress \*Eudocia, perhaps to house \*relics of S. Stephen, but it eventually received its \*patrocinium from S. Polyeuctus, a \*military saint from \*Melitene. In 524–7, the aristocratic matron \*Anicia Juliana invested considerable funds in having the church completely renewed. Contemporary literary sources say the building rivalled not only those erected by the \*Emperors \*Justin I and \*Justinian I, but also Solomon's Temple, whose measurements (recorded in Ezekiel 40–1) it reproduced. The extraordinarily rich architectural \*sculpture and interior decoration carved from \*Proconnesian \*marble display deeply undercut ornament. A poem was inscribed on the building's inner entablature; parts of the \*inscription were found during excavations in the 1960s and could be identified with a 76-line \*epigram quoted in the *Palatine Anthology* (1, 10), praising Anicia Juliana for surpassing Solomon and providing a description of the building; it is therefore the most important source for reconstructing lost parts of the church, e.g. its golden ceiling and \*dome, which probably was a prototype for the roofing of Justinian's Great Church of the \*Holy Wisdom. \*Gregory of Tours knew of the church's magnificence, and of the patron saint's reputation for punishing perjury (*Gloria Martyrum*, 102). Literary sources attest the church until the 11th century, when it decayed and its decoration was reused elsewhere in the City (Pantokrator Monastery). After the Fourth Crusade (1204) several pieces (e.g. the so-called Pilastri Acritani) were brought to Venice to be reused as \*spolia in S. Mark's Basilica. The excavated parts of the architectural sculpture are now in the Istanbul Archaeological Museum. KMK

Müller-Wiener, *Bildlexikon*, 186–7.

Mathews, *Churches of Istanbul*, 206–7.

**Constantinople, churches and monasteries of, Ss. Sergius and Bacchus, Church of** Begun probably after 532 by Justinian I and \*Theodora in the Palace of Hormisdas, where they had lived before assuming the \*purple. It was completed by 536 and survives as Küçük Ayasofya Camii. The quadrangle of the exterior walls surrounds eight piers standing at the corners of an octagon. These support eight arches from which springs a sixteen-sided \*dome containing eight windows. At ground- and gallery-level, two columns stand between adjacent piers, those at ground-level crowned by melon \*capitals, those at gallery-level by Ionic impost capitals. On alternate sides of the octagon the columns stand behind the piers to form a semicircular niche (\*exedra) topped by a semi-dome. The ground-floor columns carry a horizontal entablature carved with eleven verses in \*Greek mentioning Justinian, Theodora, and S. Sergius, but not S. Bacchus. The extant dome may be a later

repair, the original having been raised on an octagonal drum, as at San Vitale in \*Ravenna. On the church's flank stood Justinian's \*basilica of Ss. Peter and Paul, built c.519 (\*Procopius, *Aed.* I, 4, 1–8). By 536, both churches formed a single \*monastery ruled by the same abbot.

**Constantinople, Councils of** It was common at \*Constantinople for 'home' synods to be summoned by the \*bishop of the \*City, and attended by whatever bishops were available. Distinct from these are the following Ecumenical Councils of Constantinople, summoned by the \*emperor.

Constantinople I (381) was summoned by \*Theodosius I to confirm his re-establishment of Nicene orthodoxy as the faith of the Empire. A substantially revised version of the Nicene \*Creed was attributed to this council by the Council of \*Chalcedon (451), and this is the version of the creed still used by Christians. It goes back to the time of the council and may well have played some part in its proceedings, but it does not appear that the council formally adopted it.

Constantinople II (553) was summoned by \*Justinian I to confirm his own edicts against the \*Three Chapters, that is, the person and writings of \*Theodore of \*Mopsuestia (d. 428), and the writings critical of \*Cyril of \*Alexandria and the First Council of \*Ephesus (431) by \*Theodoret of \*Cyrrhus and \*Ibas of \*Edessa (d. 458). These writings were criticized for supporting the \*heresy of \*Nestorianism. Their condemnation was intended to demonstrate to the critics of Chalcedon that the imperial Church, which upheld Chalcedon, was not Nestorian. Pope \*Vigilius, at this date resident in Constantinople, was summoned to the council, but refused to attend and protested against its proceedings. After the council he was held prisoner, and after six months capitulated, confirming the council's decrees.

The Council of Constantinople of 662 was summoned by \*Constans II to condemn the champions of dyotheletism (the doctrine of two wills in Christ), including \*Maximus the Confessor and the deceased \*Sophronius of \*Jerusalem (d. 638) and Pope \*Martin I (d. 655). From 680, when Constantinople changed its stance, memory of this council was suppressed and its ecumenical status denied.

Constantinople III was held in 680–1. From 633 till 680 the \*court and \*Patriarchate of Constantinople maintained a policy of encouraging, but never formally defining, the doctrine of one will in Christ (\*Monotheletism), as a way of placating non-Chalcedonians (\*Miaphysites). Most of the popes of this period, however, interpreted this stance as a formal adoption of heresy. In 680, however, when it appeared more important to please the papacy than the non-Chalcedonians of \*Syria and \*Egypt (provinces now lost to the Empire), the Emperor \*Constantine IV adopted the Roman position, and with the help of Roman delegates

## Constantinople, food supply of

secured from the council a decree formally defining two operations and two wills in Christ. RMP

No acts for 381 or 662 survive.

The acts of the council of 553 (CPG 9336–62) are published in *ACO IV/1* (1971) and those of 680–1 (CPG 9420–37) in *ACO Series 2, II/2* (2 parts, 1990 and 1992).

**Constantinople, food supply of** The supply of \*Constantinople with staple foodstuffs was put in place in 332 when \*Constantine I granted some 80,000 free \*bread rations to the city's inhabitants, a quantity that could feed a population of around 300,000, a number which surpassed Constantinople's population at the time. Though we are better informed about the provision of free \*grain, similar arrangements seemed to have been in place for \*olive oil, \*wine, and perhaps \*meat. The baked bread was handed out to those entitled to receive it in various enclosed buildings (*gradus*) throughout the \*City. The right to free bread was linked to owning a \*house in the City irrespective of economic standing; recipients were recorded in lists and received tokens with which they could collect their bread rations.

Grain came almost exclusively from \*Egypt until the early 7th century; thereafter mostly from \*Sicily. It seems that the core number of rations was augmented under \*Theodosius I, but remained stable thereafter. The city population grew in the 5th and 6th centuries, so there were many who had no entitlement to free bread. These individuals could purchase bread at prices that were controlled and subsidized by the state. Fresh \*vegetables were cultivated both within and at a short distance from the city walls. DSt

Sirks, *Food for Rome*.

**Constantinople, foundation of** \*Constantine I founded \*Constantinople on 8 November 324, weeks after overthrowing his eastern colleague the \*Emperor \*Licinius, and dedicated it on 11 May 330, the anniversary of the execution of S. \*Mocius, a local \*martyr of the Great \*Persecution.

The \*city of Byzantium had occupied the promontory south of the Golden Horn at the southern end of \*Bosporus since the 7th century BC. Its situation is described by a Greek geographer of the Early Roman Empire, Dionysius of Byzantium. Though the city was well sited to control seaborne contacts between the

Black Sea and the Mediterranean and (a more immediate concern in the 4th century) the movement of troops between the \*Balkans and \*Anatolia, it had never been a large place, not least because it was difficult to provision with food and water. From 332 onwards Constantine provided food and at the same time assured his political control of the city by having tax \*grain brought in annually from \*Egypt by the \*grain fleet.

Constantinople was not intended by Constantine as a permanent residence—emperors came to live there permanently only at the very end of the 4th century, during the reign of the Emperor \*Arcadius. Like his predecessors during the \*Tetrarchy, Constantine was regularly in motion between the Empire's \*frontiers, and between cities within easy reach of such frontiers, such as \*Trier, \*Milan, \*Serdica, and \*Antioch. The Tetrarchic residence closest to Constantinople was \*Nicomedia of \*Bithynia, which \*Diocletian had hoped to transform into a second Rome (\*Lactantius, *Mort.* 7, 10). Constantine had a similar ambition for his new city; a Senate House was built near the Great \*Palace and the local \*council was absorbed into a new 'Senate of Constantine', whose members also included \*senators, senior figures in the imperial \*administration adlected by the emperor himself.

The city was provided with appropriately imperial monuments. An oval Forum of Constantine was built with a \*porphyry column bearing a statue of the emperor at its centre, so moving the city's ceremonial centre away from the old Acropolis of Byzantium and its civic \*temples (in the grounds of the Ottoman Topkapı Palace). Grand houses and a reappointed thermal establishment, the Baths of Zeuxippus, lined the processional \*street leading down from the Forum of Constantine to the Augusteum, which was flanked by the Senate House, decorated with statues of the Muses brought in from Mount Helicon, and by two temples. One of these temples contained an antique statue of the Mother of the Gods, brought over from \*Cyzicus but altered so that the goddess was no longer taming \*lions but seemed to be guarding the City by her \*prayers (\*Zosimus, II, 31). The other held a \*personification of the \*Fortuna of Rome, a class of monument whose presence many 4th-century Christians were prepared to countenance even in cities where they had gained the upper hand.

Constantine also rebuilt the city's \*circus and decorated its central reservation (*spina*) with famous works of art, many of them pagan \*sculptures, brought from cities all around the Empire, divorced from their cultic context and displayed as objects for aesthetic admiration. The seats of the circus could be reached from the city, but, as with the circuses in earlier Tetrarchic cities, the imperial box (approximately on the site of the modern Blue Mosque) could be reached directly from the emperor's palace.

Constantine dedicated Constantinople to the God of the \*martyrs (Eusebius, *VCon* III, 48, 1). The Church of the \*Holy Wisdom was planned, though it was not completed and consecrated until 360. The highest point of the palace was decorated with a jewelled \*cross (Eusebius, *VCon* III, 49), and the emperor's tomb was surrounded by twelve cenotaphs, one for each of the Holy Apostles.

In time, legend came to encrust understanding of the circumstances of the foundation of the city. On the one hand, learned Byzantines such as the 6th-century historian \*Hesychius Illustis liked to posit a continuity between their city and all that was best in the classical past. On the other hand the origins of institutions and calendar customs characteristic of the God-protected city of the Christian Middle Ages were ascribed to Constantine. \*Festivals, especially imperial festivals (e.g. \*John Malalas, XIII, 8, 322), did indeed become integral to the public life of Constantinople, but unlike any earlier city in the Roman Empire, Constantine's foundation dared to risk living without a calendar of what Eusebius referred to as 'feasts of demons' (*VCon* III, 48, 2).

**Constantinople, Great Palace of** The Great Palace was located at the southern part of the promontory immediately east of the Hippodrome (\*Circus). The two structures were built together to provide an imperial residence with an adjacent public space where the \*emperor could participate in public spectacles, as shown on the base of the surviving \*obelisk of \*Theodosius I. This arrangement imitates the relation of the imperial \*palaces on the Palatine Hill in \*Rome overlooking the Circus Maximus, and also \*Galerius' palace and hippodrome at \*Thessalonica. Unlike that at Rome, the new imperial palace at Constantinople was not centrally located. In part this reflects the axial character of the new city's design, but it also ensured that the palace and its \*gardens would benefit from maritime views across the Sea of \*Marmara towards \*Bithynia.

Only fragments of the palace survive, and the original core, the Daphne (the private imperial quarters) and other structures, lies beneath the Sultan Ahmet Camii (Blue Mosque). A great fire before the First World War revealed the underlying terraces which were constructed

to accommodate the expanding palace. These terraces extend across the eastern flank of the hillside and define a series of levels rising to the original palace and the Hippodrome. One of the best-known structures, the Apsed Hall (Mosaic Museum) with its spectacular floor \*mosaics, probably dates to c.580 showing how the palace continued to evolve up to the 7th century. Many of the other known structures survive only as foundations and huge vaulted basements, not dissimilar to the surviving remains of \*Diocletian's palace at \*Split. Recent excavations close to the Four Seasons Hotel have revealed the site of the Chalke (Bronze) Gate which gave access from the Augustaeum Square next to the Church of the \*Holy Wisdom, linking the palace with the city's main ceremonial way, the Mese.

Much of our knowledge of the palace derives from varying interpretations of later texts, especially the 10th-century *Book of Ceremonies*. There have been a number of attempted reconstructions since the 19th century, although, significantly, as recognition of the limitations of the written accounts has increased, such reconstructions have appeared less precise and less confident.

One problem is our ignorance of the approaches to the original palace. Immediately north-east of the palace were the \*Baths of Zeuxippos. Before reaching the private imperial quarters, the Daphne, there seem to have been two public spaces, the Tribunal and the oval court of the Onopodium. One potential approach was below the Cathisma (imperial box) from the Hippodrome, but this is known to have been connected to the palace by a spiral stair (the Cochlias). An alternative approach might have been by a road parallel to the Hippodrome.

Over time, the original core of the palace acquired further kiosks, open courts, and churches. The first known church was constructed to house the \*relics of S. Stephen in 429 and from around 400 we learn of the Porphyra, the \*porphyry-clad imperial birthing chamber. In 498 the Chalke (Brazen) Gate formed a new ceremonial entrance at the south-east end of the Augustaeum square and close to this were the barracks of the palace guards and store chambers. Amongst the Late Antique buildings mentioned in texts were the great dining room known as Hall of the Nineteen Couches, the late 6th-century Chrysotriclinus (Golden Hall), and the *Trullus* (Dome), an oval or egg-shaped building.

Whilst no traces survive, they represent the same pattern of innovative architecture recognized across the \*city at a number of noble houses such as the palaces of \*Lausus and Antiochus, as well as the Myrelaeum and the complex in Gülhane Park. In the palace the floors, vaults, and walls will have been richly decorated with \*marble and mosaics depicting variously Christian images, triumphal themes, and imperial \*portraiture similar to the figures of \*Justinian I and \*Theodora in \*Ravenna. The large Apsed Hall, not identified from

## Constantinople harbours

texts but the palace building best known from its remains, displays in its second phase of c.580 a complex and sophisticated artistry unmatched in any secular context elsewhere in the city. JCr

**Constantinople harbours** \*Constantinople was blessed with an outstanding maritime setting (\*Procopius, *Aed.* 1, 5, 2–13). Since classical times \*harbours were strung around the eastern end of the peninsula and important excavations at Yenikapı, on the site of the Theodosian Harbour, have revealed for the first time the city's maritime wealth with the remains of 37 ships dating from the 5th to the 11th century together with numerous artefacts, \*pottery, and bones, an important resource for future study. The inlet of the Golden Horn provided an excellent natural harbour with the Neorion and Proosphorion harbours on the north side of Byzantium.

As the new city developed from the 4th century onwards, major installations were constructed beside the Sea of \*Marmara. First was the Julian Harbour (mod. Kumkapı), later renovated by \*Justin II and renamed the Sophiane, with a number of store buildings nearby. To the west was the Theodosian Harbour (mod. Yenikapı) at the mouth of the Lycus stream. Excavations indicate that it dates back to Roman times and the outline is apparent from the site of the Ottoman gardens. Despite there being few textual references, excavations have shown the harbour remained active into the 12th century. As well as a large number of \*ships, the excavation revealed traces of timber jetties (Gk. *skala*) many of which can be dated by dendrochronology. Other landing stages and jetties were found around the city's littoral, all attesting to the lasting importance of the city's maritime life. JCr

*RIC* VII, VIII, IX, X.

**Constantinople, see of** Constantinople (the 'city of Constantine') was founded by \*Constantine I on the site of the Greek \*city of Byzantium in 330. The unimportant see of Byzantium became the see of the capital of the Empire, with its \*bishop close to, if not actually part of, the imperial \*court. The notion of major sees exercising authority over regions of the Roman Empire had been established in 325 at the \*Council of \*Nicaea (\*Canon 6, which mentions \*Alexandria, \*Rome, and \*Antioch), before Constantinople existed. The prestige attached to the principal imperial residence was bound to attach itself to its episcopal see so at the first Œcumenical Council held in \*Constantinople in 381, canon 3 asserted that Constantinople's bishop should enjoy 'the privileges of honour' after the Bishop of \*Rome, because 'it is new Rome'. No mention was made at that council of any jurisdictional consequences of the canon; indeed, canon 2 seems to rule out any such thing. In the decades after the council, there is evidence that the Bishop of Constantinople began to assume a certain overall jurisdiction over \*Asia Minor. At the Council of \*Chalcedon in 451, canon 28 asserted the privileges accorded to Constantinople at the earlier council were equal to those of Rome, to which it stood 'in second place', given that both cities were imperial cities, omitting the qualification 'of honour'. Clearly some jurisdiction was envisaged by this assertion, as is borne out later in the canon, where the right to ordain the \*metropolitans of \*Pontus, \*Asia, and \*Thrace is assigned to Constantinople, as well as bishops of these dioceses who work among the 'barbarians'. From the 6th century, the \*Patriarchs of Constantinople assumed the title 'Œcumenical Patriarch', an honorary title referring to its pre-eminent position in the *oikoumene*, that is, the Roman Empire. This was attacked in the West, e.g. by Pope \*Gregory the Great, as incompatible with the claims of the see of Rome. Appeal to the foundation of the see by the Apostle Andrew, thus representing Constantinople as an apostolic see comparable with Rome, is not found in the early period. AL

Dagron, *Naissance*, 454–87.

**Constantinople, sieges of** Unsuccessful attempts to capture the \*City were made in 626, by the Persians, \*Avars, and \*Slavs and by \*Arabs in 674–8 and 717–18.

In June 626, a Persian force under the command of \*Shahrwaraz arrived at \*Chalcedon, and the vanguard of an army of Avars and Slavs reached the Land Walls of Constantinople. The Avars attacked the fortifications with siege \*artillery and attempted to link up with their allies on the other side of the \*Bosporus by launching small canoes (\**monoxyls*) to ferry the Persians across. The Avar projectiles made little impact on the Theodosian Walls, however, and the *monoxyls* were easily intercepted and destroyed by warships. The siege was lifted on 8 August, the victory being widely attributed to the Virgin \*Mary who the \**Chronicon Paschale*, the principal source for these events (*s.a.* AD 626) claims was seen on the Land Walls by the Avar \*Khagan. One of the preludes to the \*Akathistos Hymn offers \*praise to the Virgin for thus freeing the city from danger.

Constantinople was under siege again between 674 and 678 when an Arab fleet based at \*Cyzicus blockaded the city by sea. According to \*Theophanes (AM 6164–5), the Roman naval forces had the benefit of the weapon known as \*Greek Fire. The naval assault made little impression and on withdrawing the Arab fleet was then scattered by a storm.

The Arabs began a second attempt to capture Constantinople in July 717. A land army under the command of \*Maslama, the brother of the \*Caliph, marched across \*Anatolia to link up with a fleet that had sailed into the Sea of \*Marmara. At the Dardanelles, Maslama crossed to the European side, then marched north to the Land Walls of Constantinople where he constructed a series of earthworks parallel to the Byzantine defences. The siege was serious; though Constantinople was invested by both land and sea the blockade was never total. Greek Fire drove off Arab ships, allowing supplies to reach the City and boats to fish in the Bosporus unmolested. During the severe winter the besiegers were reduced to near-starvation. In August 718, the siege was lifted and Constantinople was not again seriously threatened by a Muslim army until the late 14th century. JPH

J. P. Harris, *Constantinople: Capital of Byzantium* (2007), 40–50.

**Constantinople, topography and secular buildings of** In the conclusion to the \**Notitia Urbis Constantinopolitae* (241), the author writes of Constantinople as 'the product of the labour of the human hand,

supported also by the collaboration of the elements and the happy gifts of nature'. Few \*cities have the exceptional setting of Constantinople; roughly triangular in outline and almost surrounded by the sea, it was vulnerable to land assault only from the west. This side was heavily fortified, first by the \*city gates and walls of \*Constantine I and from the 5th century by the land walls of \*Theodosius II, the greatest urban fortification constructed in Antiquity. Whilst the sea ensured security, it also gave access to the Black Sea and Mediterranean for communication and commerce, as well as furnishing plentiful \*fish throughout all seasons. \*Harbours lined the Golden Horn on the north side of the peninsula, and new \*harbours were created along the southern flank to permit the unloading of the \*grain fleet from \*Egypt. The last great imperial city, it surpassed any other new foundation since Ptolemaic \*Alexandria.

### *Setting and planning*

Graeco-Roman Byzantium was a middle-ranking city, even if it did benefit from restoration by Septimius Severus. Both the centuries of later urban accumulation and attrition, and also the very multi-layered nature of the Byzantine literary sources concerned with the creation and growth of the new Constantinian city, make it difficult to describe the city's early development. These various writings about Constantinople's urban history date from different eras, and provide subtle and specific reworking of the city's foundation myths which often emphasize the reputation of particular founders, from the mythical Byzas, to Septimius Severus, Constantine, or \*Justinian I. Commentators still fail to recognize the variants and nuances in these accounts written over centuries and as a result there are often quite discordant chronologies for the major structures within the city. The archaeological remains are poorly understood, although the very recent huge excavations at Yenikapı and elsewhere in the city, all associated with the new \*Bosporus tunnel and metro, reveal the vast potential for urban archaeology within the old city.

Little is known for certain about how the new city was planned, except that various sources suggest Constantine emptied the cities of the east for his new foundation (\**Origo Constantini Imperatoris*, 6, 30; \*Jerome, *Chron.* 232g Helm). Later tradition identified seven hills, like those of imperial \*Rome, although in practice the topography of the city comprised a broken ridge beginning at the eastern promontory of the acropolis of Byzantium, the later site of the Topkapı Sarayı, and continuing to the north-west, overlooking the inlet of the Golden Horn. Here were located in a row six of the seven hills; the last was located to the south-west, the isolated Xerolophos (Dry Hill), separated by the

valley of the Lycus Stream (Bayrampaşa Deresi) which flowed into the Sea of \*Marmara at the Theodosian harbour (Yeni Kapi). A feature of the new urban planning in this hilly terrain was the need to construct terraces and embankments; these are well documented around the Topkapı Sarayı and the Great Palace of \*Constantinople, but underpin many of the great avenues and the \*Forum of \*Arcadius and the Column of \*Marcian, indicative of the enormous manpower resources required to create the new city.

Cities freshly founded as imperial residences during \*Diocletian's \*Tetrarchy include \*Thessalonica and \*Antioch, but Constantine's ambition at Byzantium seems to have been far greater. The new city shared the key elements of the palace and \*circus with a great square to the north, the Augusteum, beyond which was later constructed the Great Church of the \*Holy Wisdom. The other essential monument in the new imperial foundations of the late 3rd and early 4th centuries was an imperial \*mausoleum, the best documented being that at \*Gamzigrad. Situated on the prominent fifth hill the mausoleum of Constantine (the Church of the \*Holy Apostles) was close to the boundary of the new city. Other Tetrachic capitals did not witness such extensive urban expansion; instead of rectangular \*streets with arches, Constantine constructed a new forum with a \*porphyry column and statue announcing the expansion of the new city to the west of old Byzantium. From here new colonnaded thoroughfares ran westwards, initially the central street known as the Mese, which were to create a bold Y-shaped frame for the newly planned city. Along these routes were to develop new *fora* including those of Theodosius, Arcadius, and another marked by the column of Marcian. They were to be the focus for imperial and religious \*processions throughout the city's life. These axes present an urban layout which conforms to an eastern Roman pattern, known from cities such as \*Apamea and \*Palmyra. One cross street perpendicular to the Mese can be documented from within the Covered Bazaar, the Portico of Domninus (Uzun Çarşı); others are more difficult to identify, but commentators have suggested that there is evidence for systematic orthogonal planning in parts of the Late Roman city.

Almost nothing survives of domestic housing; written sources suggest multi-storey dwellings, comparable to those at Alexandria, Rome, or \*Ostia. The *Notitia Urbis* (16, 37) claims there were 4,388 \*houses (*domus*)—as distinct from the more than 44,000 *insulae* noted in the roughly contemporary \**Regionary Catalogues of Rome*. In the 5th century the most densely occupied areas were the 6th and 7th regions, between the shore of the Golden Horn and the modern Covered Bazaar and Sülemaniye districts. A number of noble

houses are recorded, and surviving remains of a monumental complex are known close to the Hippodrome, and the major streets (Myrelaion).

### *Harbours and stores buildings*

The main harbour of Byzantium was next to the Strategeion, the agora close to the Golden Horn (mod. Sirkeci), and adjacent to this was the shipyard at the Neorion. Important artificial harbours were constructed on the south side of the peninsula facing directly onto the Sea of Marmara and later at \*Hieria across the Bosphorus. To the east the Harbour of Julian was linked by a direct road north to the Mese, and to the west of this was the larger Theodosian Harbour. Both were provided with major granaries (Horrea Theodosiana and Alexandrina), although other \*barns and grain-stores are known by the Golden Horn. Recent excavations at Yenikapı on the site of the Theodosian Harbour have shown that this remained in use into the middle Byzantine period. Over 35 \*ships have been recovered but only a few date from Late Antiquity.

### *Water supply and baths*

The new expanding city required additional \*water supplies, and unlike most ancient cities it had no river and limited local springs or wells. To overcome this deficit the western hinterland of Constantinople contains some of the most remarkable monuments of ancient hydraulic engineering, as extensive as the \*aqueducts of Rome and longer than the aqueduct of \*Carthage or those around the Bay of \*Naples. These works include aqueduct channels and bridges extending up to 454 km (282 miles) to the west of the city constructed over less than a century from the mid-4th century onwards. Within the city the clearest representation of this great system is the Bozdoğan Kemerı, often termed the Aqueduct of \*Valens, a 4th-century Roman aqueduct bridge 971 m (3,186 feet) long, together with over 150 \*cisterns ranging in size from the open-air Cistern of \*Aspar to the covered Basilican Cistern and the scores of smaller cisterns beneath the old city.

The first aqueduct for the city of Byzantium was constructed under Hadrian and was sourced from springs in the Belgrade Forest. No remains have been identified, but it is estimated that it entered the city at an elevation of 35 m (115 feet) above sea level to supply the Roman city and later provided for the Great Palace, the Baths of Zeuxippos, and the Basilican Cistern. It was approximately equivalent to the Ottoman Kırkçeşme line. Within two decades of the new city's foundation, a longer-distance line was initiated, extending as far as the springs at Pınarca and Danamandıra. This system was completed in 373 and the channel entered

the city at a height of c.59.5 m (195 feet) capable of distributing water to those more elevated parts of the city created by Constantine. In the early 5th century more distant springs were incorporated into this line as far away as Vize. The exact date of this additional line is not known from historical accounts, but the channel was led across five colossal bridges comparable with any in the Roman world. The long-distance system delivered these waters at a high enough level to cross the long Bozdoğan Kemerli into the heart of the new city around the Forum of Theodosius and on towards the Binbirdirek covered cistern. Later restorations are attested under Justinian when the Basilican cistern (Yerbatan Saray) was constructed and into the early 7th century. The Valens line was cut following the \*Avar \*siege in 626, but was restored under \*Constantine V in 766; the Hadrianic line continued throughout the Byzantine era, although the long-distance line was given up in the late 12th century.

Within the city water was distributed by water channels; large stone pipes are found beneath some of the main streets and ceramic and lead pipes ensured distribution to public fountains and private houses. Private supply was carefully controlled and charged according to the diameter of pipes. Despite a number of imperial edicts there is evidence for abuse of the water supply for \*irrigation outside the city and for private consumption.

### Fortifications

Few cities in the ancient world possessed the strategic importance of Constantine's new foundation. Situated at a unique junction of sea and land routes between the Empire's European and Asiatic \*provinces the city was to remain almost impregnable for nearly a millennium. The surviving Theodosian Land Walls are amongst the most prominent Late Antique monuments in modern Istanbul. Nothing survives from Constantine's walls although they remained an element of the city's topography and in c.360 \*Libanius singled out Constantinople's new walls as the one feature of the city which surpassed his native Antioch.

The work on the extension of the city under \*Theodosius I began with the construction of the Golden Gate in 391 and this structure demonstrates the intention to construct the line often associated with his grandson Theodosius II and directly associated with the new threat of \*Alaric's \*Goths. These walls extend for 6.5 km (4 miles) from the shore of the Sea of Marmara to the Golden Horn. They were completed between 405 and 413, although the line of the Sea Walls was probably not finished until 439.

From east to west the Land Walls comprise four main elements: an inner wall, an outer wall with an inner terrace, a second outer wall alongside the ditch,

and the wide ditch. Rising 30 m (nearly 100 feet) from the bottom of the ditch to the parapet of the inner wall across 60 m (c.200 feet) they represent the most powerful and complex urban fortifications in the ancient world. The inner wall rises 9.8 m (32 feet) above the inner terrace formed between the two inner and outer walls and was constructed of bands of \*brick courses alternating with small limestone blocks. The inner wall is shielded by the inner terrace built up with soil dug from the square-section outer ditch, 7 m (23 feet) deep and 20 m (66 feet) wide. Posterns in the side walls of the projecting towers of the inner wall opened onto the inner terrace and clearly demonstrate that the system was constructed as part of a single grand design which was able to ensure the city's security for nearly a millennium. The wall was pierced by ten gates and many posterns. The greatest of these was the Golden Gate, a unique example of a triple portal gateway flanked by massive rectangular towers, all clad in \*marble from the island of \*Proconnesus. Although outer walls (*proteichismata*) became a common feature of Late Antique defences in the east, the scale of the Theodosian Land Walls remains unprecedented, combining in effect two outer walls together with such a depth and height of passive defence strengthened by layered firing platforms and towers which ensured the security of the city throughout many later sieges, falling only to treachery or deceit.

In 447 just as \*Attila's \*Huns ravaged \*Thrace a massive \*earthquake destroyed parts of the Land Walls; \*inscriptions record that the works were restored in 60 days. Construction of the Long \*Walls in Thrace under \*Anastasius I ensured increased security for the city and its suburbs throughout much of the 6th century. No significant restoration to the Land Walls is attested under Justinian, but repairs to the walls were undertaken by \*Justin II. The siegeworks raised by the Avars in 626 posed the first serious threat to the walls, but the Avars and their Persian allies were successfully resisted after a ten-day siege. The important shrine of the \*Theotokos at the \*Blachernae remained excluded from the city's defences until after the Avar \*siege, but was included by a new Wall built under \*Heraclius soon after their withdrawal. The city's defences continued to be maintained and strengthened especially by the \*Iconoclast emperors, \*Leo III, Constantine V, and Theophilus.

### Urban dynamics

It is difficult to provide a systematic outline of the construction process of the new city. By the time of Constantine's death we can be certain the palace, hippodrome, forum, mausoleum, and walls were definitely completed, together with the Baths of Zeuxippos, which may possibly have been begun under Septimius

Severus. Some projects took longer; individual buildings like the Baths of Constantianae were begun in 345 but not completed until 427 and then renamed the Theodosianae. A crucial element of the emerging 4th-century city was the need to provide for water across the more elevated areas of the new city. Following the completion of the Aqueduct of Valens in 373 it is possible to see a number of other new projects taking off, including new baths and imperial forums. After the middle of the 5th century new major projects dwindle in number, perhaps because there was saturation and less demand, although in the next century under Anastasius and Justinian not only new churches but also enormous new underground cisterns were constructed; the Yerebatan Sarayı and Binbirdirek both created new massive water storage in the crowded heart of the city. The construction of the new Theodosian Land Walls also represented a radical change in plan, pushing the boundaries of the city over 1 km (c.1,100 yards) to the west. This zone, never formally a region of the city, by the end of the 5th century contained three huge open reservoirs, a number of aristocratic houses, \*monasteries, and market \*gardens. While they may never have fulfilled their full potential, these secure open spaces provided a valuable buffer for the future. JCr

The topography and secular monuments of Constantinople are catalogued by Müller-Wiener, *Bildlexikon* and (not always accurately) by Janin, *CPByz*. The early development of the city is studied in Mango, *Développement* and Dagron, *Naissance*.

Mango, *Studies* is an important collections of papers.

T. Honoré, *Justinian's Digest: Character and Compilation* (2010).

**Constantius** (fl. 500–10) \*Ligurian *vir illustris*, office-holder at \*Ravenna under \*King \*Theoderic in 503, \*Praefectus Urbi at \*Rome 506–7. \*Ennodius wrote to him affirming the freedom of the will. SAHK

PLRE II, Constantius 15.

Kennell, *Ennodius*, 170–2.

Gioanni, *Ennode*, I 181, II 72–3.

**Constantius I** (c.250–306) \*Caesar 293–305, \*Augustus 305–6. The family of M. Flavius Constantius came from the area of the Danube \*frontier. He added the name Valerius (the *nomen* of \*Diocletian) to his style presumably on his elevation to imperial rank, but the nickname Chlorus (Green) is not older than the 6th century. Claims (made from 310 onwards) that he was descended from the \*Emperor \*Claudius Gothicus were fictions intended to separate the reputation of his son \*Constantine I from the \*Augustus \*Maximian.

Constantius served in the \*protectores, then as a *tribunus*, as \*Praeses of 'the \*Dalmatias', and subsequently in high office under \*Maximian, the western colleague of Diocletian (*\*Origo Constantini Imperatoris*, 2). He put away his first wife, the future \*Empress \*Helena and mother of the future \*Emperor Constantine I, in order to marry \*Theodora, the daughter or stepdaughter of Maximian. With Theodora he had six children, including Flavius \*Dalmatius (\*consul 333), \*Julius Constantius (consul 335 and father of the future Emperor \*Julian), and \*Constantia, who married \*Licinius in 313.

In 293 Constantius became a Caesar (junior emperor) in the newly formed \*Tetrarchy and resided principally in \*Gaul. His first campaign cleared the

forces of the \*usurper \*Carausius out of north-west Gaul (*PanLat* VIII (V), 6–7), clearing the way for him to retrieve \*Britain from Carausius' successor, the usurper \*Allectus, in 296 (*PanLat* VIII (V), 11–20) and to make the triumphal \*adventus to \*London depicted on the largest medallion of the \*Arras hoard. He subsequently campaigned successfully on the Rhine \*frontier. When Diocletian began the Great \*Persecution of the Christians in 303, Constantius duly enforced the First \*Edict which required the demolition of Christian church buildings (Lactantius, *Mort.* 15, 7; cf. 8, 7), a fact denied by \*Eusebius (*HE* VIII, 13, 13; cf. *VCon* I, 13–21).

On 1 May 305, Diocletian and Maximian abdicated, and their places as Augusti were taken by \*Galerius and Constantius I respectively. Later that year Constantius returned to Britain accompanied by his son Constantine, and they campaigned against the \*Picts (*PanLat* VI [VII], 7–9; *Origo*, 4). Constantius died at \*York on 25 July 306 and his troops promptly acclaimed Constantine as his successor.

SEB; OPN

*PLRE* I, Constantius 12.

Barnes, *NEDC* 35–7, 60–1.

Barnes, *Constantine*, 25–62.

Bardill, *Constantine*.

**Constantius II** (317–61) \*Caesar 324 onwards; \*Augustus 337–61. A son of \*Constantine I and \*Fausta, Constantius was born in 317. He was made Caesar in 324, and succeeded Constantine with his brothers \*Constantine II and \*Constans I in 337. With the deaths of Constantine II (340) and Constans I (350), Constantius emerged as his father's longest-lasting heir. He ruled as sole \*Augustus until his demise in 361, though he successively appointed as Caesars his young kinsmen \*Gallus (351–4) and \*Julian (355–61). Constantius married three times; first, the daughter of Constantine I's half-brother \*Julius Constantius in 335, then \*Eusebia in c.353, and finally Faustina late in his reign. He had no children during his lifetime, but his posthumous daughter Constantia subsequently married the Emperor \*Gratian. He died of a fever near \*Tarsus on 3 November 361.

### Sources

None of the sources for the reign of Constantius II provides a favourable narrative of his reign. Such ecclesiastical contemporaries as \*Athanasius and Lucifer of Cagliari resented his involvement in the \*Arian Controversy, and the church historians of the next century, \*Socrates, \*Sozomen, and \*Theodoret, concurred. The *Church History* of the \*Homoean \*Philostorgius survives only in fragments, mostly preserved by \*Photius. The writings of \*Themistius and the \*letters and orations of

\*Libanius offer copious information, but no narrative, while the two \*panegyrics of his imperial kinsman by Julian veil facts in the verbiage characteristic of the genre.

\*Ammianus Marcellinus, whose history is extant from 354 onwards, ends his account of Constantius' reign with an even-handed character sketch (XXI, 16, 1–19). A coherent critique, however, emerges from his narrative. Constantius' military posture, especially his reaction to the persistent aggression of the Persian King \*Shapur II, was generally defensive, so that he lacked that popularity with the army which was enjoyed by such successful generals as Julian. He was consequently vulnerable to such \*usurpers as \*Magnentius (350–3), \*Vetranio (350), \*Silvanus (355), and Julian—though he died before he actually met Julian in battle. It also meant that he took advice from court \*eunuchs, chiefly \*Eusebius his \*Praepositus Sacri Cubiculi, rather than from intelligent soldiers, such as Ammianus' old chief \*Uriscinus.

### Political and religious affairs

Of Constantine's three sons, it was Constantius who escorted Constantine's body to \*Constantinople and supervised his burial in the Church of the \*Holy Apostles (\*Eusebius, *VCon* IV, 70). He went on to \*Pannonia where he conferred with Constantine II and Constans I, and orders were given for the execution of all members of Constantine's family who might pose any threat. He then proceeded to the East, where he spent the relatively ill-documented years up to 350 countering the Persian threat which had emerged in the final year of Constantine's reign. He was based at \*Antioch, campaigned around \*Singara and \*Nisibis and fortified the hilltop castle of \*Cephas and the \*city of \*Amida.

Early in 350, the \*usurper Magnentius killed Constans I in \*Gaul. Constantius moved west to counter Magnentius and the related, and less threatening, usurpation of Vetranio. He also appointed as Caesar to reside at Antioch the youthful Gallus, who thanks to the family massacre of 337 was one of only two surviving male members of the Constantinian dynasty. He then pursued Magnentius into Gaul where in 353 the usurper committed \*suicide. Meanwhile Gallus was not a success in the East (Ammianus, XIV, 1); he was recalled, tried, and executed in 354. Constantius fell back on his last surviving male relative; in 355 the bookish Julian, who had already been ordained a \*reader in the Church, was obliged to marry, appointed Caesar, and sent, chaperoned by officials loyal to Constantius, to command on the Rhine \*frontier.

Constantius spent most of the rest of his reign on the Danube frontier or in \*Italy, making a ceremonious visit to Rome in 357, colourfully described by Ammianus (XVI, 10); defence of the eastern frontier was left in the

hands of subordinates until 360. He was in the East when he heard that Julian, who had been unexpectedly successful in \*Gaul, had been acclaimed as Augustus by troops at \*Paris and was advancing eastwards over the Alps and through the north \*Balkans. He was on his way west to confront Julian when he died of a fever at Mopsucrenae of \*Cilicia (Ammianus, XXI, 15, 2–3), leaving Julian his sole successor. Constantius was buried at the Church of the \*Holy Apostles at Constantinople, the city where his father had first proclaimed him Caesar and which he did much to consolidate (for instance by completing the first Church of the \*Holy Wisdom, consecrated in 360), even if his own visits were intermittent.

Throughout the reign of Constantius, Christianity was coming to occupy the commanding heights of Roman religious practice; by 361 \*pagan \*temples had been destroyed at places as different as \*Caesarea of \*Cappadocia, Arethusa in \*Syria, and \*Cyzicus. At the same time, \*bishops, travelling, much to the annoyance of Ammianus (XXI, 16, 18) on vehicles of the \*Cursus Publicus, convened at church \*councils to debate the theological problems consequent upon the rehabilitation of \*Arius in the last years of Constantine and the persistent adherence of Athanasius, \*Patriarch of \*Alexandria, to the decisions of the \*Council of \*Nicaea. These matters were not resolved until the Council of \*Constantinople of 381.

#### Coinage and image

Constantius II reformed the \*silver \*coinage, introducing a new lighter denomination, issued a heavily debased billon coinage, and, in the mid-350s, legally demonetized a range of earlier \*copper and billon coinages (*CTh* IX, 23, 1), though large quantities appear to have remained in circulation. Depictions of him followed the model established by his father Constantine I: clean-shaven, heavy-faced, large-eyed, and with his hair curled along his brow. This became so standardized that it is difficult to distinguish between members of the Constantinian dynasty; a colossal \*marble head in the Capitoline Museum in Rome may be either Constantius II or Constans I. The image of Constantius II in the \**Codex-Calendar* of 354 is preserved by a copy of a copy; it shows the emperor seated, wearing a diadem and distributing a \**sparsio* as \*consul, while his fellow-consul, the Caesar Gallus, in his miniature is shown standing. The emperor depicted on the silver \*Kerch Plate is usually identified as Constantius II; the emperor is armed and on horseback being led by a \*Victory and followed by a soldier, an image of divinely sanctioned military success. **constitution** General term used to refer collectively to various types of imperial legislative enactments. In post-classical Roman \*law the phrase *constitutiones principum* (*imperiales, sacrae*) could refer to \**edicta* (edicts), \**decreta* (decrees), \**mandata* (mandates), or *rescripta* (\*rescripts). Modern Romanists distinguish between *constitutiones generales* considered to be binding on everyone and *constitutiones speciales*, which were general in character but limited to particular categories of persons or legal relations. RvdB; CH

A. Berger, *Encyclopedic Dictionary of Roman Law* (TAPS NS 43/2, 1953), 410.

Buckland, *Text-Book of Roman Law*.

**Consul** (Gk. *hypatos*) Although the title is the same, the consulate of Late Antiquity differed from that of the Roman Republic and early Empire. The position conferred no political power, but was the height of \*honour.

The consul was chosen by the \*emperor; \*Ausonius in the speech in which he thanked his pupil \*Gratian for conferring the honour upon him in 379 explains that imperial choice (helped by God) is much more efficient and dignified than the messy Republican system of public election (*Gratiarum Actio*, 9–10).

The names of the two consuls for a year, the Consules Ordinarii, continued to be used to mark the date in official documents. The emperor often held the position of Consul Ordinarius himself and tended to take it during the years of imperial \*anniversaries. It was a particular honour for a citizen to share the consulship with the emperor and also more rarely to be appointed as a single ordinary consul. From 396, one Consul Ordinarius was appointed from the East and the other from the West.

In addition to the Consules Ordinarii, there were often a number of Suffect or replacement consuls of lesser significance appointed during the course of the year, a practice begun in the Early Empire which continued into the 5th century. The principal function of suffect consuls was to hold the games associated with the Parilia, the birthday of Rome, on 21 April in the city itself, a practice dating back to the early 2nd century. By the late 5th century these had become the responsibility of the Consul Ordinarius.

It became a custom for office-holders from the late 4th century onwards to send out \*ivory \*diptychs as presents to those who had some claim on their \*friendship to commemorate the holding of the games associated with their office. In the 4th century consular games were held wherever the \*court happened to be, though during the course of the 5th century they came to be held at Rome; the earliest securely dated consular diptych from the West to survive is from 406. In the East ordinary consuls held games in \*Constantinople. A number of eastern diptychs survive from between 506 and 541, showing the consul wearing his ceremonial \*toga picta or trabea. The last western consul, \*Mavortius, held office in 527. The last non-imperial consul was Basilius in 541, under \*Justinian I. SEB

**consularia** Modern term used to describe annotated consular lists. *Consularia* are marked by the use of \*consuls as the sole basis of chronology; extreme brevity; a neutral and formulaic language; a focus on the deeds of the \*emperor, which arises from the use of imperial proclamations as a major source; and, in Late Antique examples, a general absence of ecclesiastical history. This definition includes a number of extant epigraphic texts from the Early Empire, such as the *Fasti Ostienses*; the *consularia* so named in the entries which follow with *consularia* in their titles; the \**Descriptio Consulum*; and the *consularia* of the \**Chronographiae Scaligeriana* and \**Chronographia Golenischevensis*. **Consularia Italica** The collective name for a \**consularia* tradition whose influences can be traced in over

twenty later sources in \*Latin and \*Greek, in \*Italy, \*Constantinople, and \*Alexandria, from the 5th to the 9th century. The *Consularia Italica* covered the period between 379 and 493, though originally it would seem to have started earlier, and it focused chiefly on events involving the Western \*emperors. The major surviving witnesses are the *Liber Pontificalis Ecclesiae Ravennatis* of \*Agnellus of \*Ravenna, \**Excerpta Sangallensia*, \**Consularia Vindobonensia Priora* and \**Posteriora*, \**Consularia Hafniensia*, the \**Chronicon Theoderici* (i.e. the *Anonymi Valesiani Pars Posterior*), \**Paschale Campanum*, \**Consularia Marsiburgensia*, \**Chronographia Scaligeriana*, and \**Chronographia Golenischevensis*. The original recensions were composed in both \*Rome and Ravenna, though Ravenna seems to have been the home of the main tradition. The *Consularia Italica*, through its many witnesses, provides us with often our only source for the dates of imperial and Italian events of the 5th century. RWB

**Consularia Caesaraugustana** See CHRONICLES, SPANISH.

**Consularia Constantinopolitana** See DESCRIPTIO CONSULUM.

**Consularis** \*Title of \*governors, ranked *clarissimus*, of certain Late Roman \*provinces (37 in the \**Notitia Dignitatum*). Consularis was also an honorific \*title which the \*emperor conferred on individuals by \**adlectio*. \*Zeno, for instance, gave the title Consularis to those who paid 100 lbs (30 kg) of \*gold towards upkeep of the \*Constantinople \*aqueducts (*CJust* XII, 3, 3–4). \*Justinian I recognized the practice in his *Novel*, 70. DSI Jones, *LRE* 106–7, 379, 533.

**Consultatio Veteris Cujusdem Jurisconsulti** (*Consultation of Some Ancient Jurist*) A short anonymous Roman legal work in \*Latin from the later 5th century, which survives only in 16th-century printed editions. It was probably compiled in southern \*Gaul, and appears to be a composite of teaching materials, including *erotapokrisis* (question and answer), dealing

primarily with issues of \*contract law. Of juristic sources, it cites only the *Sententiae* of \*Paul, but quotes imperial constitutions from three law codes: the \**Gregorian Code*, the \**Hermogenianic Code*, and the \**Theodosian Code*. It is thus a significant source for Late Roman imperial constitutions, independent of the codification under \*Justinian I. It attributes to the *Hermogenianic Code* a unique set of constitutions of \*Valentinian I and \*Valens from the 360s, including the latest known private \*rescripts (*Consultatio*, 9, 1–7). SJJC ed. in *FIRA II*, 594–613.

**contorniates** Large, coin-like medallions of \*copper alloy that were manufactured during the 4th and 5th centuries, probably in \*Rome. Their name (from Italian *contorno*) derives from their characteristic grooved edge, which is deeply engraved. The obverse usually features a \*portrait of a 1st- or 2nd-century \*emperor, or other prominent figure, and the reverse a scene of a public event, \*circus games, or chariot-racing. The common \*monogram 'PE(L)' may stand for '*palma et laurus*', leading to the suggestion that they functioned as prizes for \*victory in the games. However, there is no scholarly consensus about the purpose of contorniates, with opinions ranging from game counters to propaganda distributed by the Roman senatorial \*aristocracy.

**contraception** See ABORTION AND CONTRACEPTION.

**contracts** Roman \*law never knew a general theory of contract; the law merely took account of various kinds of contracts, including 'named' contracts ordered according to classical and post-classical juristic classifications. 'Classical' Roman law of contract survived the post-classical period with only a few changes. For example, three new contracts were accepted (long-term \*lease of land, donation, and lease of agricultural land revocable at will). Further, innominate contracts seem to have disappeared in the West but survived in the East. Finally, although unjustified enrichment apparently ceased to exist in the West, it was accepted in the East.

In Justinianic law an obligation was defined as a legal bond between two or more parties binding one or both of them to do or perform something. Obligations could

arise from contract, quasi-contract, delict, or quasi-delict and there were four categories of contracts (*InstJust* 3.14). Although post-classical and Justinianic law inherited basically the classical law of contracts, the compilers restored much of the classical law and some compromises between classical and post-classical law were reached. A few examples will suffice.

In the case of real contracts former characteristics were reintroduced and their classical form was reinstated. Changes to consensual contracts included the following. During the reign of \*Constantine I the contract of sale had come to rely on documentary evidence, \*Justinian I restored the oral contract, and if parties wished to use documents it served as proof of the sale. Furthermore, sale and barter were more strictly distinguished. The introduction of *laesio enormis* added an additional price requirement, that of a just price. The seller's liability under the *actio empti* now included both *dolus* and *culpa*. Further, the seller's warranty against physical defects in the property was extended to all sales. The contract of letting and hiring was restored to its classical form.

In addition, the contract of donation was acknowledged and unjustified enrichment had become substantive law by the time of Justinian. Quasi-contracts were grouped together. The general principle that a bare pact does not give rise to an obligation was still valid in Justinianic times. However, changes were gradually introduced and the introduction of the *actio praescriptis verbis* eventually led to the recognition of a new class of 'contract' based on agreement and part-performance, namely innominate contracts. They were made binding on the principle that performance on one side binds the other. Examples of such contracts were *permutatio*, *aestimatum*, *precario*, and *transactio*. RvdB

**conventus, provincial** The provincial *conventus* (Gk. *koinon*) was integral to provincial \*administration from the Early Roman empire. The leading citizens of \*provinces gathered annually to conduct business and to celebrate the \*imperial cult. The number of *conventus* increased during the Late Empire, corresponding to the growing number of provinces, and continued to foster the imperial cult under the conditions of the Christian Empire. A \*rescript of the \*Caesar \*Constans I (*CIL* XI, 5265 = *ILS* Dessau 705) of 337 indicates that the

Italian province of \*Tuscia et Umbria was to stage games in honour of the imperial household at the cities of \*HisPELLUM and Volsinii in alternate years (*ILS* 705). Membership of the *conventus* was restricted to provincial \**honorati* and the leading \**curiales*. Their main function was to pass resolutions on matters relating to \*law, \*taxation, and justice, which could then be brought by legates to the attention of the \*emperors, whose decisions took the form of rescripts or \*edicts. One imperial ruling of 380 attempted to prevent \*petitions being submitted by individual \*cities and required these to be channelled through the *conventus* (*CTH* XII, 12, 1–16). As in the early Empire, a *conventus* could decree honours for provincial \*governors and other officials, as is attested for the *conventus* in \*Caria at \*Aphrodisias in the 4th and 5th centuries (Roueché, *ALA* inscriptions 16, 36, 63), but could also bring charges against corrupt governors (\*Ammianus, XXVIII, 6, 6–24; XXX, 5, 8–10). A *conventus* was normally referred to by an ethnic collective noun (e.g. *Tusci et Umbri*), so seemed to represent all the people of a province. In practice it comprised local notables meeting annually to conduct a limited range of business and to \*praise or prosecute provincial governors. They appear to have disappeared in the later 5th or 6th century, though in a short-lived reform in 569 \*Justin II gave powers to the provincial *conventus*, in a modified form incorporating \*bishops and large landowners (*NovJustMin* 149). S. Mitchell, 'Ethnicity, Acculturation and Empire in Roman and Late Roman Asia Minor', in S. Mitchell and G. Greatrex, eds., *Ethnicity and Culture in Late Antiquity* (2000), 117–50.

**conversion and Christianization** The rejection of one religion and the embrace of a new one was accompanied by the broader process by which individuals and communities were evangelized and made Christian. Christianization, although far from uniform or inexorable, gradually transformed the social, political, and physical \*landscape of the later Roman Empire.

#### *Conversion of individuals*

Conversion can be understood as a personal, inner decision of an individual to embrace a new religious truth and loyalty. There are many stories of this kind of conversion to Christianity in Late Antiquity, from \*Arnobius' \*dream to \*Augustine's spiritual crisis and epiphany in a \*Milan \*garden. The narration of these events by their protagonists or others are often influenced by earlier literary archetypes, especially S. Paul's Damascene conversion, to which \*Rufinus compared \*Constantine's

Vision of the Cross. It is thus hard to recover the lived experience of conversion which was often more of a gradual process than a dramatic *volte-face*; Augustine's conversion, for example, was the culmination of years of spiritual and philosophical searching. Christian stories also tend to emphasize the operation of an external force, God's grace, in stimulating and effecting conversion, and thus reduce the individual's agency.

Conversions in Late Antiquity were not made only from \*paganism to Christianity. They also encompassed movements to or from Judaism, or from Christianity to paganism, as in the case of the \*Emperor \*Julian. Furthermore, conversion could be made within a religion, as for example with S. \*Antony's embrace of a rigorous kind of \*asceticism. Inner conversion, in terms of assent to Christian doctrine, was not marked by immediate admission into the communion of the Church; catechumens were instructed and prepared for \*baptism over a period of months, and some converts deferred final entry into the Church for years, indeed, in the case of men in public life in the 4th century, often until their deathbeds.

#### *Conversion of communities*

Conversion can also be understood as a social phenomenon. Individuals' religious choices were shaped and informed by their social background and by patterns of communication, and conversion entailed the rejection and adoption of sets of ritual practices and social behaviour which affected practitioners' place in and experience of \*family and community. Within the \*household, the *paterfamilias* had the power to dictate the religious choices of his dependants, both kin and slaves. From outside the household, \*bishops and Christian mentors intervened in the domestic sphere, as with \*Jerome exhorting Roman women to an ascetic lifestyle. Beyond the family, patterns of conversion and resistance can be observed in particular social and political groupings, as in the wholesale (and perhaps exaggeratedly unified) conversion of the \*Goths in 376. Conversions were made in a fairly haphazard and piecemeal fashion during the first century after Constantine I; indeed, there is evidence for the survival of pagan cult well into the 6th century. By the later 5th century, conversions to Christianity within the Empire were less common since increasing numbers of individuals were born into the faith, though remoter areas remained unconverted as late as the mid-6th century, as with the 7,000 country folk baptized by \*John of \*Ephesus in \*Asia Minor in 542. It is extremely difficult to determine what proportion of the inhabitants of the Empire had been converted to Christianity in the periods before and after Constantine; the evidence for changed religious affiliation suggested by \*inscriptions and by personal

names is both skewed and unrepresentative, and we are heavily dependent on the anecdotal and impressionistic evidence of literary texts. Evangelism became in general a more outward-looking activity aimed at peoples beyond the borders of the Roman Empire.

### Christianization

Christianization can refer both to the evangelical mission to convert individuals and groups, and to the transformation of society, politics, and landscape effected by such conversion. The Christianization of the Empire was achieved by varied means, including legislation, persuasion and education, and coercion. From Constantine onwards, Christian emperors used Roman law to ban pagan rituals and close temples; the reiteration of such measures suggests that their effectiveness was not total. Christian bishops, intellectuals, and holy men preached the message of Christianity within churches, in public forums, and through the circulation of written treatises. The use of force or the threat of force to convert is attested by regular pagan complaints about the violence directed against the apparatus of pagan cult: temples, altars, and statues. However, the demise of paganism can be ascribed to decline and abandonment as much as to vicious persecution. The Christianization of politics and society was visible in subtle shifts of power in relationships between emperors and secular aristocracies on the one hand, and bishops and monks on the other. The rise of asceticism changed patterns of social and sexual life within the city, and the growth of monasticism colonized previously marginal areas beyond cities. The landscape of the Empire was itself Christianized with the construction of church buildings, martyr-shrines, and monasteries, and the sacred geography of the landscape was transformed by the practice of pilgrimage to the holy dead, the Holy Land, and living saints. **conversion to Islam** In the centuries following the initial Arab conquests conversion of the subject peoples to Islam progressed only gradually. The rates of and reasons for conversion varied across the Near East, and empirical determinations are difficult since conclusive evidence is lacking.

Early Muslim-era Arabic literature on the Prophet's biography (*Sira*) details conversions of northern and central Arabian tribes to Islam, usually by pledging allegiance to Muhammad himself. The converted tribes constituted the bulk of the armies which carried out the conquests. The conversion of other populations in the Arabian Peninsula, particularly Yemen, is not explained in detail, though Muslim historians portray Arabia as 'converted' upon Muhammad's death. The narratives of conquest thus project a homogeneously Muslim-Arab invasion into lands inhabited by non-Muslim non-Arabs: they leave the status of Christian Arabs such as the Ghassanids and Taghlib somewhat ambiguous, and they pay scant attention to the conversion process of non-Arabs. Narratives such as the *Futūḥ al-Buldān* of al-Baladhuri are more concerned with the circumstances in which particular places came under Muslim control as this had legal implications for their subsequent treatment and taxation.

Large-scale conversion did not occur as an immediate result of conquest. The Qur'an contains verses promoting religious toleration (9: 29; 109), and Qur'an 2: 256's statement that 'there is no compulsion in religion' seems to exemplify Muslim attitudes to the religious communities they conquered: they did not forcibly convert local populations, and in the immediate aftermath of conquest, Muslims represented only a tiny minority in the Near East. Muslims lived predominantly in new towns they constructed for themselves (*amsar*); non-Muslims remained in their pre-conquest towns and countryside.

Some of the pre-Islamic elites may have converted to preserve their status following the conquests

(Wasserstein, 186); elite conversion thus could have proceeded faster than amongst the general population, whom the caliphal administration classified as *\*dhimmīs*, entitling them to religious freedom in return for taxation (*\*jizya*). Islamic law later articulated a comprehensive framework for *dhimmī* rights and obligations, but in the first two centuries of Islam the treatment of *dhimmīs* was varied and reflected local ad hoc arrangements.

Many *dhimmīs* may have first contemplated conversion as a means to avoid *jizya* tax (Dennet). By the *\*caliphate* of *\*Umar b. 'Abd al-'Azīz* (r. 718–20) this may have been occurring at such a rate as to affect taxation revenues, and prompted changes in official taxation policy (Kennedy, 107). The prosperity of Muslim *amsar* towns reshaped the Near East's urban landscape: as Muslims established authority in the conquered lands and developed their *\*administration*, the *amsar* became the principal centres of economic opportunity: they attracted immigration, and the mixing and assimilation of populations within the *amsar* stimulated conversion. Non-Muslims were tolerated in the *amsar*, but by the late 8th century, the population of Baghdad and much of Iraq had a Muslim majority (M. Morony, 199, 431).

Conversion outside the *\*Abbasid \*caliphate's* Iraqi core was slower: Bulliet proposed that eastern Iran only became majority Muslim by the late 9th century and *\*Egypt* retained very sizeable Christian communities into the 14th century (Little, 568–9). With some exceptions, there is limited evidence for mass conversions in *\*Palestine* before the Crusader period (Levy-Rubin, 262, 271). In North Africa, many *\*Berbers* converted to a *\*Kharijite* form of Islam, ironically as a form of resistance to the caliphate (the caliphs adhered to a different Muslim creed) (Savage, 90, 117–18). Sizeable non-Muslim groups remain in the Near East to the present albeit under pressure, but by the 11th century, for different regional and doubtless individual reasons, an increasingly large portion of the Near East had converted to Islam. **copper** *\*Greek χαλκός* and *\*Latin aes* describe both copper and *\*bronze*; *\*Pliny* and others refer often to

*cyprius aes* but Latin *cuprum* is found no earlier than the Tetrarchic *\*Prices Edict* (7, 25; cf. *TLL Supplementum: Nomina Propria*, II, 797 and 799, s.v. *Cypros*). Copper was mined and smelted in the 4th–7th centuries along the Troodos range on *\*Cyprus* and in Wadi Faynan in Jordan; in the early 4th century convicts were sentenced to *\*mining* at *\*Phaeno* (*\*Eusebius*, *HE* VIII, 13, 5; *Eusebius*, *MartPal* 7, 4; 13, 1–4; 6–10; *Collat.* XV, 3, 7). Owners of land with ore deposits could be asked to pay taxes in smelted copper (*CTh* XI, 20, 6). Finds of the 5th century from *\*Trier* suggest copper was traded as ingots. Prices were per pound of copper or copper alloys, and the Tetrarchic Prices Edict notes different types of coppersmiths (7, 24–8; 15, 63–6). Guilds of coppersmiths are documented in the early 4th century on monthly declarations of prices from *\*Oxyrhynchus* in *\*Egypt* (e.g. *Sammelbuch*, 12648). AMH

**Coptic art** See ART AND ARCHITECTURE, EGYPTIAN.

**Coptic language** See EGYPT, LANGUAGES IN.

**Coptic literature** Coptic literature developed and circulated in Egyptian religious circles and *\*monasteries* from the end of the 3rd to the 13th centuries. It is exclusively religious in nature and includes all texts that have come down to us in *\*Coptic*, no matter their original language.

A large part of what has been transmitted in Coptic was actually translated from *\*Greek*, and the originals are not always preserved. Conversely, a large corpus of Coptic literature was rendered into *\*Arabic*, so that many lost or fragmentary Coptic texts are preserved in that language.

The bulk of Coptic literature, preserved in the classical dialect known as Sahidic, which was used approximately from the 4th to the 12th centuries, is extant solely in incomplete manuscripts that survive from abandoned or dismantled monastic *\*libraries*. Mere fragments remain, of which the most renowned are some 10,000 whole and incomplete sheets of parchment from a library (discovered in the 1880s) located at the *\*White Monastery of Atripe* in Upper *\*Egypt*.

Distinguishing between literature translated from Greek and literature originally written in Coptic raises many questions. It is not possible to establish criteria that would allow a watertight distinction. Moreover,

not all translations were made with the same standards or with equal care. Some are quite literal; others, such as \*saints' lives, are far freer. Finally, many works are pseudepigraphic, either falsely attributed to celebrated authors or ascribed to fictitious ones. In any event, it is more useful to consider the different phases of literary production and their relationships to their historical and religious contexts.

### Stages of literary composition

In the first period, the prolific years from the end of the 3rd to the 5th century, biblical texts foundational to Christianity were translated into various dialects, in circumstances largely unknown to us. Dating from the same period are translations of a great number of non-canonical or para-Christian texts, such as \*Gnostic writings (e.g. the renowned collection of \*Nag Hammadi) or \*Manichaean texts (homilies, the *Psalm-Book*, the *Kephalaia*). Likewise, there are translations of great patristic writers, both Egyptian and non-Egyptian, including \*Athanasius of \*Alexandria, \*Basil of Caesarea, \*Gregory of Nyssa, and \*John Chrysostom. The same period saw the composition of works by the founders of Egyptian \*monasticism: \*Pachomius (whose Rule would be translated into \*Latin by \*Jerome) and especially \*Shenoute (345–451), the superior of the Atripe monastery and the exemplary Coptic author, the only one who was certainly not translating from Greek, and in whose works we find the language at its most sophisticated. Of his works, we possess nine volumes of *Canons* on monastic discipline and eight volumes of *Discourses* on Christian morality, of which a large portion remains unpublished. Numerous texts from this period bear traces of the \*Origenist controversy which shows that the crisis was a significant cause of division in Egypt.

After the \*Council of \*Chalcedon of 451 where Christ was defined as having Two Natures, both human and divine, the Church of Egypt, staunchly loyal to a One Nature (\*Miaphysite) Christology, experienced isolation and turned inwards. This is visible in its literature, which came to consist of apologetics and polemic often expressed in the form of lengthy homilies. Defenders of non-Chalcedonian doctrine are described in accounts filled with \*miracles. Examples include the \**History of the Patriarchs of the Coptic Church of Alexandria*; the \*panegyric of \*Macarius, Bishop of Tkôw, by \*Dioscorus of Alexandria (a heterogeneous text whose central theme is the voyage to \*Constantinople undertaken by Macarius and Dioscorus and the former's \*martyrdom at Alexandria for the sake of the anti-Chalcedonian faith); and the numerous *Lives* of monks pursued by Chalcedonian authorities and forced to leave their \*monasteries and establish others in less exposed regions. The works of

\*Severus of Antioch, who had been \*exiled in Egypt, were also popular in 6th-century Egypt because they were written in the same vein. This period also saw the flourishing of \*martyr cult and its associated literature: saints' lives, 'epic' \*martyr passions and miracle collections. These writings, celebrating \*martyrs from the \*persecutions conducted by the pagan authorities in the centuries before AD 313, were occasionally based on ancient materials but were heavily embellished with rhetorical clichés, stereotypes, and fantastic inventions. At the same time numerous homilies were produced in honour of the \*Theotokos (a title accorded to the Virgin \*Mary at the Council of \*Ephesus in 431, at the instigation of the Egyptian Church).

A period of spiritual reconstruction seems to have begun in the late 6th/early 7th century with \*Damianus, Coptic Pope of Alexandria (576–605). It was short in duration, as the \*Arab conquest of 641 brought a stop to literary development in Coptic. In the centuries that follow, one observes most of all the reorganization of texts around liturgical needs. Thus manuscripts from the 9th–12th centuries, particularly those discovered in the \*Fayyum and kept at the Pierpont Morgan Library, are generally heterogeneous compendia or anthologies composed for \*festivals and ceremonies. In a parallel development, part of the corpus of homiletic and hagiographic literature was translated into Bohairic (the language of Lower Egypt and notably of the great monasteries of \*Wadi an-Natrun), and then into Arabic.

**Coptos** (mod. Qift) \*City located on the east bank of the \*Nile 40 km (25 miles) north of \*Luxor, at a point where the river runs closest to the Red Sea and

continuously occupied from prehistoric to modern times. It was the metropolis of the Coptite \*nome and the terminus for routes in the Eastern Desert leading to the Red Sea ports \*Myos Hormos (roughly due east) and (further south) \*Berenice, important especially in the Roman period. Coptos was therefore a vital crossroads in the web of international \*trade. An \*inscription, the so-called Tariff of Coptos (*OGIS* 674), compiled c. AD 90, lists duties for protective escorts on the Eastern Desert routes. Numerous \*ostraca from Coptos mention traffic between Coptos and the Red Sea (O.Bodl.).

\*Jerome's \*Latin translation of \*Eusebius *Chronicle* alleges that Coptos was 'razed to the ground' under the \*Tetrarchy following a revolt (Jerome, *Chron.* 226a Helm); it clearly recovered. A \*cavalry unit and the Legio prima Valentiniana were stationed at Coptos in the early 5th century (\**Notitia Dignitatum*, [or.] XXXI, 26 and 36). On the west side of the city, in an area where numerous inscriptions have been found, a church and \*baptistry, apparently of the 6th century, with considerable \*spolia in its foundations, has been excavated. Pisentius, \*Bishop of Coptos from 598 to 632, was an effective pastor, but took to the hills in face of the \*Persian invasion of 619.

**Corbie** (départ. Somme, France) The Abbey of Corbie was founded by Queen \*Balhild between 657 and 661, as part of the series of interventions in monastic life which scholars commonly dub her *Klosterpolitik*. Its first monks came from \*Luxeuil, and probably followed a mixed rule combining Benedictine and Columbanian monastic practices. Corbie was a royal \*monastery, whose privileges and \*immunities were confirmed by a succession of late \*Merovingian kings, and, more unusually for the period, by Pope Benedict II. It soon developed an important \*library and scriptorium, and remained a major centre of culture and learning until it was sacked by the Vikings in 881.

**Corbridge Lanx** A \*silver tray found (with other silver now lost) by the River Tyne in north-east England in 1734/5, now in the British Museum. It depicts Greek divinities associated with the shrine of \*Delos. The technique suggests a Late Antique date. OPN O. Nicholson, 'The Corbridge Lanx and the Emperor Julian', *Britannia* 26 (1995), 312–15.

**Cordoba** Capital of the \*province of \*Baetica. The massive \*palace complex of Cercadilla was constructed to the north-west of the \*city in the late 3rd century, possibly on the orders of the \*Tetrarch \*Maximian. The urban framework survived after \*Spain fell out of the Empire and the city was thus able to resist absorption by the \*Visigothic kingdom until the later 6th century.

**Corduene (Syr. Qardu)** \*Armenian satrapy situated in the mountainous district south of the Bohtan Su and east of the Tigris and the \*Tur 'Abdin, including the Cudi Dağı. \*Ammianus Marcellinus spied on the approaching Persian \*army in 359 from the mountains of Corduene (XVII, 6, 20). Allied to Rome until 363 as one of the \*Transtigritanae regiones, an Ala Carduenorum remained in the garrison list for the \*province of \*Mesopotamia in the \**Notitia Dignitatum* (or. 36, 34). It had a \*bishop at Fenek and its numerous \*monasteries came to belong to the \*Church of the East.

JC+

Sinclair, *Eastern Turkey*, III, 162, 379.

**Corinth** Strategically located \*city protected by the massif of Acrocorinth close to the isthmus that connected the Peloponnese to mainland \*Greece, metropolis of the \*province of \*Achaia. Its two ports, \*Kenchriae on the Saronic Gulf and Lechaion on the Corinthian Gulf, positioned Corinth uniquely to exploit \*trade passing from west and east along the shortest practicable sea routes. At the height of Corinth's Late Roman prosperity the largest \*basilica in Greece was at the Lechaion, and excavations at Kenchriae have revealed a maritime settlement of considerable wealth

S. Paul and Clement of \*Rome both wrote to the Church of Corinth and Dionysius, \*Bishop of Corinth in the late 2nd century, wrote to the Churches of Rome (\*Eusebius, *HE* II, 25, 8), Sparta, \*Athens, \*Nicomedia of \*Bithynia, \*Gortyna and Knossos in \*Crete, and Amastris of \*Pontus (IV, 23). The *Syriac Martyrology* of 411 lists S. Leonides and eight companions as \*martyrs at Corinth; later accounts of the martyrdoms of Leonides and seven virgins are legendary, as is the passion of S. Quadratus or Codratus (*BHG* 358). In the early 5th century disagreement concerning the appointment of Perigenes as Archbishop of Corinth led to disputes between \*Rome and \*Constantinople over ecclesiastical authority in Achaia.

The city was damaged by \*earthquakes in 365 and 375, and then burnt by the \*Goths in 395/396. The propylaea and \*shops west of the \*Forum continued to operate but its central shops were replaced by a long staircase. The new city wall of the early 5th century enclosed only c.1.5 square km (c.370 acres)—a sign of further decline. During the 5th and 6th centuries Christian basilicas with associated cemeteries were constructed outside the new wall, but within the former city boundary. A devastating earthquake with an epicentre close to the city, closely followed by the Justinianic \*Plague of 542, reduced the population considerably. A series of earthquakes in the general area of central Greece in 551/2 followed. After these, civic functions at Corinth ceased. While the activities of \*Slavs later in the 6th and through the 7th centuries resulted in the resettlement of Corinthian citizens on the island of Aegina, material evidence shows that parts of the city and Acrocorinth continued to be used well into the 7th century. Corinth was probably the capital of the \*Theme of \*Hellas from the late 7th century.

**Corippus** (fl. c.550–65) Latin poet. Nothing is known of the life of Flavius Cresconius Corippus

beyond the internal evidence of his work, in which he presents himself as having come to \*Constantinople from \*Africa and as holding an unidentified government office when of advanced years and in difficult circumstances. \*Praise of the \*Quaestor Sacri Palatii and the \*Magister Officiorum \*Anastasius and a request for his support suggest that Corippus may have been employed in the imperial bureaucracy. The more substantial of his two surviving works is the *Iohannis*, an eight-book epic on the successful suppression of the \*Moorish revolt by \*Justinian I's general \*John Troglita in \*Africa (546–8). In addition to preserving valuable historical, cultural, and topographical information about 6th-century Africa and the \*Berber people, it is a rare survival of a type of panegyric epic on contemporary or recent wars which, although of great importance throughout Roman history as a way to \*praise generals and emperors, is attested only fragmentarily from the Republic and Early Empire. The other, *In Laudem Iustini Augusti Minoris*, in four books, recounts the death of Justinian I and the \*accession of his successor, \*Justin II. It serves as an important witness to the developing ideology of the \*emperor as the chosen agent of God, as well as to the forms and symbolism of court \*ceremony. Vivid but static descriptions of the imperial couple and their courtiers may reflect the conventions of contemporary monumental art. Corippus' subject matter, along with his very correct, highly classicizing use of language and \*metre, allow him to stand comparison with \*Claudian, to whose works, along with those of \*Vergil and Lucan, he is indebted.

**corn** See GRAIN.

**coronation** See ACCESSION.

**Cornelius Labeo** (fl. late 3rd cent.?) Antiquarian writer on Roman religion, in the tradition of Varro and Nigidius Figulus. No works survive complete. The extant fragments suggest use of \*Numenius and perhaps \*Porphyry; Labeo's own works seem to have been known to \*Arnobius and \*Lactantius, though neither names him. His *Fasti* dealt with the Roman \*calendar and gave etymologies and syncretistic identifications for various gods. The work was a source for \*Macrobius (*Saturnalia*, I, 12–16) and \*John Lydus (*De Mensibus*), who both cite Labeo by name. Other works dealt with Etruscan \*divination in fifteen books (\*Fulgentius, *Expositio Sermonum Antiquorum*, 4), and with a henotheistic \*oracle of Apollo of \*Claros (Macrobius, *Saturnalia*, I, 18, 21). A work *De Diis Animalibus* (Servius, *Commentary on the Aeneid*, III, 168) identified certain gods and demigods with human souls who had attained immortality through religious rites. Labeo is among the \*pagan authorities cited in \*Augustine's *City of God*; those references credit him with a developed theory of \*demons typical of \*Middle Platonism and incorporating dualistic elements. That he influenced other late Latin writers (e.g. \*Martianus Capella) is possible but uncertain. GH P. Mastandrea, *Un neoplatonico latino: Cornelio Labeone* (1979), with fragments on 223–46.

**Cornicularius** A senior officer, often the most senior by internal promotion, in an \**officium*, whether of a \*Praefectus, \*Vicarius, or provincial \*governor. \*John Lydus, himself a former Cornicularius, gave an account of the office (*Mag.* III, 22–30). AGS Jones, *LRE* 587–93.

Kelly, *Ruling the Later Roman Empire*, 18–19 etc.

B. Palme, 'Die Officia der Statthalter in der Spätantike. Forschungsstand und Perspektiven', *AntTard* 7 (1999), 85–133, esp. 103–10.

**Corrector** \*Title of \*governors, ranked *clarissimus*, of certain Roman provinces (five in the \**Notitia Dignitatum* of the early 5th century) The title had been used earlier in the Roman Empire for governors with extraordinary powers, e.g. over other governors or free \*cities. DSI

**Corsica** Island \*province separated from \*Sardinia by the time of the \*Verona List and \**Notitia Dignitatum*, where it is said to be governed by a \*Praeses under the \*Vicarius Urbis Romae. Aleria was the provincial capital. It was occupied (with Sardinia) by the \*Vandal \*Geiseric in 455 after the assassination of \*Valentinian III, used as a place of \*exile for recalcitrant Nicene clergy under his son \*Huneric, but reclaimed by \*Belisarius in 534 and administered as part of \*Justinian I's African territories till the \*Lombards took it in the 8th century. D. Ramos-Lissó, 'Gli interventi di Gregorio Magno in Corsica: aspetti religiosi, socio-economici e politici', in *Gregorio Magno e il suo tempo*, 2 vols. (Institutum Patristicum Augustinianum, 1991), vol. 1, 103–8.

**Corunna (La Coruña; Roman Brigantium)** Port in \*Gallaecia, production centre for \*garum; also the site of a Roman \*lighthouse, mentioned by \*Orosius (1, 2, 71), 35 m (115 feet) high and over 10 m (33 feet) wide, built by C. Levius Lupis, probably under Trajan, depicted on the Peutinger \*Map, and still in operation. GDB.

**Corycus** (Gk. Korykos, mod. Kizkalesi, Turkey) \*City with a \*harbour in \*Cilicia, on the coastal section of the \*Pilgrims' Road north-east of \*Seleucia ad Calycadnum. \*Shapur I claimed to have captured Corycus in 260. There was a \*bishop by 381. \*Egeria passed through (23, 1). A \*martyrium commemorated S. Charitine, a local \*martyr of whose history nothing is known (*MAMA* III, 580, 638, 488; *BHG* 300; *AnBoll* 72[1954] 5–14). \*Justinian I restored a \*bath and two poor houses, one dedicated to S. Conon (\*Procopius, *Aed.* V, 9, 34; cf. *MAMA* III, 783–5).

The city's strategic position sustained its economy and inns. Commodities traded included \*wine, \*olive oil, and \*textiles. Almost 400 \*epitaphs record the varied occupations of the inhabitants, clerics and \*bankers, \*merchants and dockers, often organized into voluntary associations (Gk. *systemata*). There was a small \*Jewish population. \*Inscriptions (*MAMA* III, 200–788) suggest continued prosperity into the 5th and 6th centuries. It belonged to the \*Cibyrrhaeotic \*Theme by 698.

**Cos** Aegean island 5.5 km (3.5 miles) off the coast of \*Anatolia at the mouth of the Ceramicus gulf. The \*city of Cos was the second city of the \*province of \*Insulae, which under \*Justinian I formed part of the \*Quaestura Exercitus.

Excavations have revealed \*villas of the 3rd and 4th centuries with \*mosaics. The city's classical stoa,

renovated in the 3rd century, became the site of a 5th-century \*basilica which collapsed perhaps in the \*earthquake of 554. Another 5th-century basilica near Mastichari preserves mosaic floors and a semicircular \*apse, with a \*baptistery annexe. A 5th–6th-century baptistery dedicated to S. John the Baptist is preserved intact, one of seven baptisteries on the island.

A small structure at the former sanctuary of Apollo at Halasarna may have been used for pagan \*sacrifice in the 5th century. Excavations there have also revealed 5,000 \*amphorae of the late 6th/early 7th centuries, many of them stamped and locally made. PA; OPN

**Cosa** Roman *colonia* on the coast of Tuscany, founded in 273 BC and refounded in 197 BC. Cosa's history was episodic. Although there was new building under Caracalla, \*Rutilius Namatianus noted it as deserted in 416 (I, 285–90). Large-scale excavations by the American Academy at Rome noted some traces of occupation in the 6th–7th centuries including a church within the \*basilica and a \*fortified farm constructed on the Arx (upper town). WB

E. Fentress et al., *Cosa V: An Intermittent Town, Excavations 1991–1997* (2004).

**Cosmas and Damian, Ss.** Christians venerated as \*martyrs and as medics who took no fees (hence the soubriquet *Anargyrioi*, Moneyless), responsible for numerous miraculous healings from the 5th century onwards. The origins of the cult are obscure; there are numerous (fictional) \*Passions and Lives (BHG 372–9, BHL 1967–76) and \*panegyrics (BHG 380–4), as well as several \*miracle collections (BHG 385–92, BHL 1976, 1978–9).

There was a shrine to Ss. Cosmas and Damian at \*Cyrrhus (ACO IV/1, 134), where the pilgrim-guide of \*Theodosius says they were martyred and buried (32; cf. \*John Malalas, XII, 36). Other traditions locate their martyrdom at the medical establishment of \*Aegae in \*Cilicia (BHG 378–9; BHL 1967–74).

Their church in the Roman Forum dates from 527 (\**Liber Pontificalis*, 56, 2; cf. 53, 9). By 518 there was an important shrine and \*monastery at \*Constantinople near \*Blachernae, rebuilt by \*Justinian I (\*Procopius, *Aed.* I, 6, 5–8), pillaged in 623 and burnt in 626 by the \*Avars (\**Chronicon Paschale*), but rebuilt by 711 (\*Nicephorus, *Breviarium*, 48, 4 de Boor).

S. \*Theodore of \*Sykeon (39) was cured in a \*dream by Ss. Cosmas and Damian, who were recognizable from their \*icons. They were venerated at \*Oxyrhynchus in

\*Egypt (P.Oxy. XI, 1357 of AD 535/6) and at \*Tours in \*Gaul (\*Gregory of Tours, *HF* X, 31, cf. *Glory of the Martyrs*, 97). OPN

**Cosmas Indicopleustes** Sixth-century \*merchant, cosmographer, and author of the *Christian Topography*, c.547. Our only information concerning him derives from the *Christian Topography* itself, which survives in three illustrated manuscripts from the 9th and 11th centuries. These manuscripts share not only text, but dozens of carefully labelled illustrations, suggesting that they were copied from a 6th-century text illustrated by the author or by someone under his supervision, thereby creating a work of unusual interdependence between text and illustration. The name Cosmas Indicopleustes ('Cosmas the India-Traveller') is a later ascription found in only one of the 11th-century manuscripts (Florence, Laurentianus Pluteus 9.28) since the author only refers to himself as 'a Christian'.

From references within his work, it appears that Cosmas was a native of \*Alexandria, and was heavily influenced by the teachings of Mar \*Aba I, \*Catholicus of the \*Church of the East (540–52). He was acquainted with a wide range of Classical and Christian writers, though his convoluted style confirms his own admission that he was 'without any knowledge of the \*rhetorical arts' (*Top. Chr.* 2. 1). Cosmas claims to have sailed in 'the three gulfs: the Roman (the Mediterranean), the Arabian (the Red Sea), and the Persian' (*Top. Chr.* 2. 29). While in the \*Aksumite port of \*Adulis c.524, he transcribed, at the request of the Aksumite King \*Kaleb I (Ella Asbeha), the text of two \*inscriptions, shortly before Kaleb's invasion of \*Himyar in 525. Although Cosmas credits some of his geographical knowledge to other sailors, he seems to have journeyed to the island of Socotra, the western coast of \*India, and perhaps to Sri Lanka (Ceylon). He regards the \*Persian Empire with slightly less esteem than he does the Roman Empire and displays a remarkably cosmopolitan outlook.

Cosmas composed the *Christian Topography* to counter the cosmological views of \*John Philoponus and to

promote an ingenious biblical world-view in which the cosmos is created after the pattern of Moses' tabernacle, i.e. a vaulted rectangle that is twice as long as it is wide. In support of this cosmology, he provides dimensions of the *oikoumenē* from \*China in the east to Cádiz in the west, and from the Aksumite kingdom in the south to the land of the Hyperboreans in the north. He is especially conversant with the pivotal role played by Sri Lanka and the Malabar coast in maritime \*trade between China and the West, though he acknowledges that the overland \*Silk Road is a more direct route. In response to criticisms of his work's first edition, Cosmas provided an expanded edition in ten books. A possible third posthumous edition in twelve books included extracts from two other works on \*astronomy and \*geography. A separate commentary on the Song of Songs is no longer extant. **cosmetics** Despite Christian warnings against the moral dangers of paying inordinate attention to one's external appearance, Late Antique men and women, just like their Roman forebears, continued to employ cosmetics to beautify themselves and to hide the outward signs of advancing age. Written sources record the use of powders, ointments, perfumes, and potions based on animal, plant, and mineral substances for the care of the \*hair and skin, hair-dyeing, depilation, and, not least, for make-up. Women, in particular, would use chalk and lead white pigment to whiten their faces and necks, and ashes or galena (a mineral form of lead) to highlight their eyes and eyebrows in black, as well as various mineral or plant products to brighten their lips and cheeks with touches of red.

Both men and women also paid particular attention to the styling of their hair. The dominant fashion for men's hair in the Later Roman Empire was to have it brushed from the crown of the head outwards, forming a fringe or tight curls over the forehead. As for facial hair, while some men opted for a clean-shaven face, others preferred the stubble or even a full beard.

Female hairstyles involved the gathering up of the hair often in elaborately arranged plaits, which were held in place with hairpins or hairnets. Christian preachers such as \*John Chrysostom (*Homily*, XXVI,

216–18 = PG 61, 211–24) endorsed the covering of women's heads with \*veils. Items employed in female coiffure have survived in the archaeological record, in addition to a variety of implements associated with personal adornment, such as \*mirrors, \*combs, applicators, perfume bottles, and small jars, as well as ornate caskets in which these were kept.

**cosmology** The study of the nature, structure, origin, and causes of the cosmos (i.e. universal 'order') or universe. It covers cosmogony, myths describing the origin of the cosmos; philosophical cosmology, some part of physics and metaphysics; scientific cosmology, which includes \*astronomy, and is part of applied \*mathematics; and cosmography, descriptions, often encyclopedic, of the regions of the cosmos. The dominant cosmological view in Late Antiquity is that of a unique, finite, animated, and geocentric cosmos, with an immobile spherical earth surrounded by seven planetary spheres moving in uniform orbs.

MM

J. D. North, *Cosmos: An Illustrated History of Astronomy and Cosmology* (2008).

**cosmology, Islamic** God created the cosmos from primal waters in six (or, alternatively, two) days and then mounted the throne (now elevated to the seventh heaven with his footstool encompassing the heavens and earth). From there, God commanded a fixed course for the seven heavens, with the constellations and planets in the lowest of them. The heavens include paths and meteors to prevent \*demons from access to scriptural recitation. Having fixed the earth's foundations, God rolled it out (with the sky as its roof or canopy) for humans to inhabit, providing them with rain and pasturage and the alternation of night and day.

PH

A. Neuwirth, 'Cosmology', in J. Dammen McAuliffe, ed., *Encyclopaedia of the Qur'an* (2001), vol. 1, 440–58.

**cosmology, Jewish** Derived from interpretations of the biblical view of the Creation (especially Genesis 1), while also influenced by Hellenistic and Roman cosmological views. The development of

biblical ideas is already seen in the Hellenistic period in the Dead Sea Scrolls, where the world consists of light and dark spirits either defined as a dualism (1QS III: 13–IV: 26) in the world (perhaps under Iranian influence) or as components making up humans, dependent upon their time of birth (4Q186 [4QHoruscope]).

The rabbis derived the essential elements of Greek cosmology from the references to waters and stars in the Genesis creation account. In one interpretation the etymology of the word 'heavens' was said to be a combination of the words for fire and water, while in another only water (b. Hag. 12a). The firmament, of the same thickness as the earth (Genesis Rabba 4: 5), may have existed in multiples (b. Hag. 12b), with the Sun and Moon in the second firmament (Genesis Rabba 38: 6).

While the rabbis officially distanced themselves from the belief in the \*Zodiac (b. Shabb 156a: 'Israel is immune from planetary influence'), Palestinian \*synagogues were constructed between the 4th and 6th centuries containing \*mosaics of a Zodiac circular design. The interpretation of these designs is disputed, and they could have been reinterpreted in Jewish terms, as in the 9th-century collection *Pesiqta Rabbati* (27–8) where the names of the signs are related to events in Jewish history. Jews also held to a belief in the world to come (b. Sanhedrin 99a) and that a new age would come, either as a messianic era as a part of world history or at a time when the present world will fail, and sea monsters will return, perhaps alluding to the break-up of the Roman Empire (b. Sanhedrin 97a–b).

JKA

**cosmology, Roman and post-Roman** The main topics of cosmological study in Late Antiquity were the lifespan of the cosmos; the number of creators; their nature (good or evil); the stages of creation; whether there will be another (identical or different) cosmos after this one; Space, Time, and Matter; heavenly phenomena; whether Matter, heaven, and souls are created and out of what; how humans relate to (the causes of) the universe. The different cosmologies are eclectic and syncretic and based on Aristotelian, Platonic, Hellenistic, and Christian sources. Pagans denied the possibility of creation of the cosmos out of nothing, while for Christians such *creatio ex nihilo* was a necessary confirmation of divine omnipotence. Greek cosmology in this period traditionally has a more theoretical approach, and Roman cosmology a more practical one.

### *Philosophical cosmology*

Late Antique philosophical cosmology combined physical, metaphysical, and methodological considerations.

Metaphysics studied transcendent causes of the cosmos. The main causal factors distinguished were 'maker', 'design' (Forms), and matter. Physics investigated such properties of the cosmos as elements, motion, time, and space. \*Philosophers in Late Antiquity had limited methods for studying the cosmos: some parts could be studied empirically, but few or no empirical data were available concerning the distant and tiny parts, or the past. Philosophers therefore used (mathematical) speculation, and authoritative texts such as myths.

The lifespan of the cosmos was vehemently discussed. Plato's creation story told in the *Timaeus* apparently describes a cosmos with a temporal beginning and possibly an end. Aristotle criticized it, and argued for an eternal world. \*Neoplatonists tried to harmonize these views. The Greek pagan philosopher \*Proclus, like \*Calcidius, the \*Latin commentator on the *Timaeus*, suggested that the cosmos is both eternal and generated: without beginning or end, but depending on a transcendent cause for its eternal existence. The Christian \*John Philoponus systematically refuted Proclus' arguments and defended creation in time. One of the last pagan philosophers, \*Simplicius, sided with Proclus in an invective against Philoponus and Christians in general.

Zeno's paradoxes of time and space elicited several Late Antique theories, of Time, e.g. of static and dynamic Time, or of parts of Time as mental states; of Space as a (hypothetically empty) container, relative position, or even as an immaterial body of light. Matter was hypothetically analysed into multiple levels, from pure extension without qualities, to the classical four elements. *Aether*, Aristotle's fifth element, no longer explained the visibility and eternal circular motion of the heavenly bodies. Instead, philosophers assumed that heavenly bodies consist of the 'summits' of the four elements, or thought that each heavenly body moves eternally due to its own soul or angel, or due to an *impetus* (thrust) given by God upon creation (Philoponus). The latter is the origin of impetus theory and, in part, of the mechanistic world view.

### *Cosmogonic myths*

Cosmogonic narratives developed in this period in reaction to \*gnostic accounts of the 2nd–5th centuries. These Platonizing Christians tried to 'correct' the Book of Genesis with myths describing a lower, ignorant divine soul, which created a flawed cosmos in pre-existent matter, and imprisoned human souls in bodies.

The pagan Platonist \*Plotinus (*Enneads*, II, 9) objected to their contention that the cosmos is the product of a lower world soul, nature, forming matter. Since form is a sign of knowledge, this lower soul cannot be ignorant nor its creation flawed.

Christian cosmogonic narratives of the Six Days of Creation (the \**hexaemeron*), are interpretations of

Genesis 1. Against the gnostics, Christians defended a cosmogony with one good, all-knowing God creating the entire cosmos (or series of cosmoses), including \*angels and matter, out of nothing.

*Hexaemera* such as those of \*Basil and \*Ambrose also harmonized traditional physics, Christian orthodoxy, and scripture explaining, for instance, why Genesis describes six days of creation, even though it would be possible for God's omnipotence to allow him to create everything at once. Some church fathers adopted allegorical readings of the \*Bible, others maintained a literal reading, referring to divine omnipotence to explain away discrepancies, and others, such as \*Augustine, used both methods to interpret the biblical accounts of creation.

### Scientific cosmology

\*Astronomy was the main constituent of ancient scientific cosmology. Astronomers used observation, speculation, and \*mathematics to understand such phenomena as planetary motions, \*eclipses, and lunar phases. A central problem was to reconcile the divinity, i.e. perfection, of the planets with observation of their non-uniform, i.e. non-perfect, motions. Late Antiquity altogether rejected the Hellenistic solution of a heliocentric universe. \*Martianus Capella, writing in Latin, elaborated another influential solution, namely \*Ptolemy's 'epicycles' and 'eccentrics', i.e. combinations of different uniform motions. Greek Neoplatonists, however, criticized such solutions as merely heuristic tools, not really explaining the heavenly phenomena. \*Isidore of Seville denied that planets move in uniform motion at all. Post-Roman cosmology (e.g. \*Bede) consisted mainly of practical mathematical astronomy and popularized, encyclopedic cosmography: influential geographical descriptions of the Earth, chronologies of the cosmos, and solutions to problems concerning the calendar, the changing daylight hours through the year, and the different lengths of the seasons.

\*Astrology, the study of the influence of the constellations on human life, remained part of astronomy, but the Christians such as Augustine and Isidore rejected it as undermining divine power and human responsibility.

**cosmology, Syriac** \*Translations from \*Greek formed the nucleus of \*Syriac cosmological interest,

but some local Mesopotamian tradition of cosmological interest may have also played a part. The 7th-century author \*Severus Sebokht, a chief source for this subject, traces Syriac science back to the Babylonians, whom he identifies as Syrians themselves, but the infusion of Greek literary culture, especially from the beginning of the 5th century (later in \*Persian-ruled regions), fuelled this occupation with the natural world and explaining it.

Two genres are the primary witnesses to Syriac cosmology: straightforward scientific texts and \*hexaemeral literature, which gave commentators, most notably \*Jacob of \*Edessa (d. 708), opportunity to display their cosmological knowledge. There is evidence of cosmological doctrine in references to \*Bardaisan, including a fragment on 'The Names of the Zodiac' according to his school. The Ps.-Aristotelian *De Mundo*, which contains a wealth of basic cosmological instruction (planetary and atmospheric), in the context of a general philosophical outline, was translated by \*Sergius of \*Resaina (d. 536), as was Alexander of \*Aphrodisias' *On the Principles of the Universe*. In another work, Sergius, in common with Syriac thought generally, marks a distinction between \*astronomy and \*astrology. Severus Sebokht wrote *On the Constellations* (including reference to Aratus' *Phainomena*), a *Description of the Astrolabe*, and three shorter relevant fragments. Finally, \*George, Bishop of the Arab Tribes (d. 724/5), completed Jacob's *Hexaemeron* but also composed two astronomical \*letters, one of which has been identified as an adaptation of part of Paul of \*Alexandria's *Eisagogeka*. Cosmological interest, both in translated and original works, would continue at least to the 13th century.

**cosmology, Zoroastrian** According to \*Zoroastrian scriptures the world is a battlefield between two antagonist cosmic principles, *aša-* 'order, truth' and *druj-* 'disorder, lie'. The earliest \*Avestan sources do not present the reasons behind the origin of the world in a systematic form. Ahura Mazdā (Pahlavi \*Ohrmazd) was the creator-organizer of the cosmos (but there is no reference to a creation *ex nihilo*, a doctrine not known in Iran), while two twins, denominated *Mainyus* ('mental forces'), one incremental and positive (*Spenta Mainyus*), the other hostile (*Anra Mainyus*, \*Ahriman), made their antagonist choices respectively for *aša-* and *druj-*. These primordial acts produced 'life' and the 'impossibility of life'. According to Pahlavi sources, Ohrmazd, thanks to his innate omniscience, perceived the existence of his antagonist Ahriman in a far region of the universe. Thus, when he planned his creation, he

imagined a space-temporal trap where the obscure antagonist would be blocked, together with his destructive forces. For this reason Ohrmazd interrupted infinite time and created space and limited time. The fight between the two cosmic forces will last 12,000 years, divided in two sub-periods of 6,000 years each. Ohrmazd created the world first in a 'mental' (*mēnōg*) state, and after in a 'living' (*gētīg*) one. These two dimensions are both positive; in contrast, Ahriman and the \*demons, who are ontological negations of life, cannot be creative in the proper sense and are considered as not actually 'living' (*gētīg*). With the extra-cosmic irruption of Ahriman in the good creation, the 'living' world was put in motion so that the second cycle of 6,000 years might start, with the fight between the forces of light and darkness. The end of this war will be announced by the birth of the third son of Zoroaster, who will resurrect all the dead. With the following descent on the earth (and in the historical time) of Ohrmazd himself, Ahriman will be defeated forever. Then, limited time will be restored and the world will be purified; all human beings will rejoice in the light of Ohrmazd's paradise.

R. C. Zaehner, *Zurvan, a Zoroastrian Dilemma* (1972),

**cosmology in art** Roman artists represented the cosmos (Gk. world) as a group of allegorical personifications of the earth and the heavens, as in the 2nd- or 3rd-century AD Cosmological Mosaic from \*Mérida in \*Spain. Such schemes continued in use through the 6th century, as the \*rhetorician \*John of \*Gaza describes a similar painting in the vault of the winter bathhouse at either Gaza or \*Antioch. There was equally cosmological and potentially astrological significance to the depiction of the \*Seasons on \*sarcophagi and of the \*Zodiac on \*synagogue pavements.

Much as \*Basil appropriated and adapted ancient cosmological science in his *Hexaemeron*, so Christian art assimilated and transformed ancient cosmological imagery, depicting the earth as a lush landscape surrounded by Ocean, occasionally including the rivers of

Paradise. Some representations include personifications, as in the floor mosaics of the late 5th-century \*Basilica of Thyrso at Tegea in \*Greece, while others literally depict the plants and animals of earth surrounded by water, as in the mosaics of the Church of S. \*Demetrius at \*Nicomolis of \*Epirus (c.525–50). These pavements share similarities with the illustrations of the *Christian Topography* of \*Cosmas Indicopleustes, a mid-6th-century account of the author's journey to \*India and Ceylon (Sri Lanka), in which the earth is envisioned variously as a rectangle surrounded by Ocean and as a conical mountain within the Tabernacle of Heaven.

couch, dining

**couch, dining** Romans reclined on couches to eat. The *\*stibadium* was the principal dining couch used after the 3rd century, replacing the rectilinear *\*triclinium*. Large *\*apses* in *\*houses* provided a suitable space for the large *stibadium*, though rectilinear rooms could be adapted to accommodate the semicircular couch, as at Faragola in *\*Italy*. *Stibadia* could be permanent fixtures or movable furniture. *\*Mosaics* provide guides for placing *\*furniture* segments as at the House of the Falconer in *\*Argos*. Diners reclined with their chests and arms supported by bolsters as shown in the Last Supper illustration of the *\*Rossano Gospels*, and described by *\*Sidonius Apollinaris* (*ep.* 1, 11). *\*Monastery* refectories used benches for seated dining (*VNicSion*, 25). Western barbarians are reported to have sat on benches at banquets (*\*Gregory of Tours, History of the Franks*, 10, 27). NFH

**councils of the Church** From the 2nd century a regular feature of church life. In Late Antiquity they were primarily episcopal councils, of *\*bishops* from a particular *\*province*, or group of provinces, or from the whole Church ('*oecumenical councils*'), though in practice this meant overwhelmingly from the eastern provinces of the Roman Empire.

The Council of *\*Nicaea* (325) ordered that the bishops of each province should meet together twice a year. Councils of bishops from several provinces were occasioned by special needs, and the decrees of some of these councils, such as those of the Council of *\*Laodicea*, were accepted as binding throughout the Church. Distinct were the '*oecumenical*' councils—*Nicaea I*, *\*Constantinople I* (381), *\*Ephesus I* (431), *\*Chalcedon* (451), *Constantinople II* (553), *Constantinople III* (680–1), *Nicaea II* (787), and also (though their decrees were later rescinded) the 'Robber Council' (Latrocinium) of *Ephesus II* (449), and those of *Constantinople* (662), and *\*Hiera-Constantinople* (754). These councils were attended by bishops from all parts of the Eastern Church under Roman rule. They were summoned by *\*emperors*, and their decrees were given force by imperial *\*edicts*. It was on this that depended the universality of their authority rather than their representativeness, for they were attended by very few Western bishops, apart from the papal legates who had an honoured place at most of them.

Local councils were chaired by the local primate or *\*metropolitan*. *Œcumenical* councils were most often chaired jointly by the senior bishops present, meaning from the mid-6th century the *\*patriarchs* or their

representatives. At *Chalcedon*, however, most of the sessions were chaired by high-ranking government officials, while at *Constantinople III* most of the sessions were chaired by the Emperor *\*Constantine IV* in person.

There was no set procedure, but regular features of conciliar sessions were the introduction of items of business by the chairmen, the reading of relevant documents, decisions by the senior chairman, and the approval of these decisions by the bishops present, whether through an *interrogatio*, when either all or some of the bishops spoke in turn, or by *\*acclamation*. The bishops had to confirm the chairman's decisions, but he would be careful to ascertain the mind of the bishops before propounding a decree. The amount of free decision varied considerably, and at some councils the whole sequence of discussion and decisions was prepared in advance.

From *Chalcedon* onwards, official proceedings or 'acts' of the *oecumenical* councils were published by the government. Those of *Chalcedon* and *Constantinople III* are frank about the degree of dissent within the council; in other acts, however, such voices are muted or wholly absent. But all these documents (and likewise those of *Ephesus I*, which were published by interested parties, not the government) must be read as propaganda, and not as a complete and impartial factual record. **councils of the Church, Africa** There is evidence from *\*Africa* for councils of *\*bishops* at a significantly earlier date than from other western provinces. The first documented African council (*\*Carthage*, c.220–30) ruled that heretical *\*baptism* was devoid of the Holy Spirit and therefore invalid (*\*Cyprian*, *ep.* 71, 4, 1). Around 236, a council condemned the *\*Bishop* of *\*Lambaesis*, an important military headquarters (*Cyprian*, *ep.* 59, 10, 1). Expert use of Roman senatorial procedure by *Cyprian's* councils (in the 250s) may signify that regular meetings were held from the early 3rd century onwards, with intermittent *\*persecution* and insurrections causing disruptions.

*Cyprian*, *Bishop of Carthage* (248–58), summoned seven councils in the aftermath of the persecution under *\*Decius* (250–1). The first four dealt with those who had lapsed in the persecution; the other three upheld the practice of rebaptizing those who had been baptized by heretics. *Cyprian's* adamant stance on rebaptism temporarily soured relations with the see of *\*Rome* (*ep.* 73).

The \*Donatist movement arose from a provincial council (305) at \*Cirta of \*Numidia. A large conclave of 270 Donatist bishops mustered in Carthage in c.336 (\*Augustine, *ep.* 93, 43). The Catholic (Caecilianist) Council of Carthage (c.348) celebrated (temporary) reunion with the Donatists (CCSL 149, 3–10). Around 385, a Donatist council excommunicated the theologian \*Tyconius whose brilliant writings would affect Augustine deeply. By the late 4th century, Donatism dominated North Africa. The Catholic Council of Carthage (390) attempted reform but was hampered by lacklustre clergy.

New leadership (391–2) ushered in unforeseen changes. Schism, provoked partially by Primian, the new Donatist primate, seriously eroded Donatist unity (Council of Cebarussus, 393; Council of Bagai, 394). \*Aurelius, the new Catholic primate, and Augustine inaugurated annual councils to rejuvenate African Catholicism, repress \*paganism, and secure reunion with Donatists. Imperial support ensured Catholic victory. Catholic councils (416 and 418) repudiated \*Pelagianism. The scandalous case of Apiarius (Catholic councils of 419 and 424) frayed Africa's cordial relationship with Rome.

Under \*Vandal rule (430–533), the king, a \*Homoean (\*Arian'), closely supervised conclaves (484, 523, 525). Councils were held in Africa (533–698) during the \*Byzantine invasions and occupation (536, 554, and 646); these were primarily concerned with eastern doctrinal debates. Medieval \*canon law collections preserve much of the African councils' heritage. JEM

**councils of the Church, Armenia** The Armenian Apostolic Church accepts the first three Œcumenical

\*Councils of the Church held at \*Nicaea in 325, at \*Constantinople I in 381, and at \*Ephesus in 431 but rejects that held at \*Chalcedon in 451.

At Ashtishat (Aštišat) in 354, the \*Catholicus \*Nerses the Great (353–73) adopted the Apostolic canons, and established charitable institutions for the sick and the destitute. The Council of Shahapivan of 444 regulated the succession to the Catholicosate. In 449–50 the demand of the \*Sasanian Shahanshah \*Yazdegerd II that the Armenians adopt \*Zoroastrianism was rejected at Artashat (Artašat).

The Council held in \*Valarshapat (Vagharšapat) in 491 considered the Nature of Christ and adopted the \**Henoticon* of the \*Emperor \*Zeno. The first two Councils of \*Dvin (505–6 and 555) addressed the Dyophysite Christology of the \*Church of the East and its tendency to separate the Godhead and the Manhood in Christ. The subsequent rejection of the *Henoticon* by the Church in \*Constantinople in 518, however, meant that a *de facto* schism had arisen between the Church within the Eastern Roman Empire, which adhered to the doctrines adopted at the Council of Chalcedon, and the Armenian Church. The Emperor \*Maurice proceeded to establish a second, Chalcedonian Catholicosate in Armenia (591–610); this led to a schism within the Armenian Church, which was mended only at the next Council of Dvin (607), which explicitly condemned Chalcedon. The Council of \*Theodosiopolis (Arm. Karin, mod Erzerum) in 632–3 under the Catholicos Ezr proclaimed a Church Union with Constantinople. This was opposed by Yovhannēs (John) Mayragomets'i, a follower of the doctrines of \*Julian of Halicarnassus, as was a subsequent demand for union by the Council of Dvin of 648. A council held at Dvin in 645 strengthened church discipline. A council in \*Partav (Part'aw) in Caucasian \*Albania (Aṭuank') c.703 condemned the Georgian Church's adherence to the doctrines of the Council of Chalcedon. Yovhannes (John) Odznets'i (Öjnc'i) convened a council in Dvin in 719 which unified liturgical practice, codified \*canon law in the \**Kanonagirk'*, and rejected Paulicianism. At the Council of Manazkert (726) Aphthardocetism was rejected, relations with the \*Syriac Orthodox Church renewed and a moderate form of \*Miaphysitism established. TMvL

**councils of the Church, Gallic** Over 100 ecclesiastical councils—interprovincial, provincial, and diocesan—were assembled in Gaul between the 4th and 8th centuries. Councils offered the Gallic episcopate an institutional means of conducting legislative, judicial, and administrative business. In cases where a council was convoked on imperial or royal authority, the meeting also could facilitate the harmonization of secular and ecclesiastical agendas.

The first known Gallic council assembled in 314, when Constantine I ordered the convocation of the Council of Arles to address the Donatist schism. Between 314 and the Frankish defeat of the Visigoths in 507, at least 30 more councils gathered in Gaul. The bishops of Arles were especially active proponents of conciliarism during the 5th and early 6th centuries, utilizing synods as a means of asserting their regional authority. Caesarius, Bishop of Arles (502–42), in particular, helped to ensure the continued relevance of councils in sub-Roman Gaul. As a subject of the Visigothic kingdom, Caesarius presided over the Council of Agde (506), whose legislative programme and royal convocation both offered important precedents for subsequent Frankish councils. After a lull in conciliar activity prompted by regional political instability, Caesarius convoked several provincial councils in Ostrogothic-ruled Provence in the 520s and 530s, including those at Arles (524), Vaison (529), and Orange (529), the last of which maintained the primacy of the Grace of God in Man's Salvation, while denying the radical implications of Augustinian predestination. In the neighbouring Burgundian kingdom, Avitus, Bishop of Vienne (c.494/6–c.518), and Viventius, Bishop of Lyons (bp. c.513–24), presided over several important interprovincial councils in the early 6th century, including that at Epaone (517).

The Council of Orléans (511), convoked by Clovis I, was the first council to assemble in Frankish Gaul. The location of Orléans along the frontier of the former Visigothic Kingdom facilitated the unification of northern and southern provinces of the Gallic Church under Frankish rule. During the first half of the 6th century, four additional interprovincial councils assembled in Orléans, in 533, 538, 541, and 549 respectively. The descendants of Clovis were responsible for the convocation of all, or most of, these meetings. While royal convocation became customary, although not an absolute rule, for large interprovincial councils in the Frankish kingdom, the canonical expectation that metropolitan bishops would convoke provincial synods

annually was maintained. However, since provincial councils less frequently produced original legislation, their decisions are transmitted only sporadically in the documentary record, as are those of diocesan synods. While provincial and diocesan borders determined the attendance of these smaller meetings, the composition of interprovincial councils was also influenced by political divisions, and their size could vary considerably.

In all, at least 80 councils were convoked in Gaul between 511 and 768, the year of Charlemagne's coronation as King of the Franks. Although Frankish ecclesiastical and secular authorities distinguished explicitly between conciliar canons and royal legislation (*leges*), both parties acknowledged the legal force of conciliar pronouncements. Bishops frequently demanded that secular officials enforce conciliar legislation, and Merovingian kings sometimes adopted conciliar rulings (with modification) into their own legislation. Additionally, the Council of Paris (614) established a precedent for episcopal councils gathering in conjunction with assemblies of secular magnates. While councils continued to assemble with relative frequency throughout the 7th century, we know of no such meetings between 696 and 742. It is not clear whether this lacuna reflects a lull in conciliar activity or deficiencies in the documentary record. Beginning with the Council of Germania (742), the Pippinid Mayors of the Palace appropriated from the Merovingians responsibility for conciliar convocation in the Frankish kingdom, typically scheduling councils in conjunction with aristocratic assemblies and promulgating conciliar legislation through their own capitularies.

**councils of the Church, Persian Empire** Good information about councils of Christian bishops in the Persian Empire comes chiefly from the acts preserved in part 2 of the *Synodicon Orientale*. This text records the following thirteen councils, named after their convenors (usually the Catholicus, the Bishop of Seleucia-Ctesiphon).

1. Isaac (410). The synod took place at a moment under Shah Yazdegerd I when persecution had ceased. It was attended by 38 named bishops and published 21 canons laying out the structure of the Church of the East. The canons followed the guidance of a letter from western (i.e. East Roman) bishops delivered by an emissary and co-convenor of the synod Marutha, Bishop of Martyropolis (Mayperqat).

Most of them align the Church of the East with East Roman practice, e.g. in the observance of the great \*festivals and adherence to the Council of \*Nicaea. Canon 12 established the supremacy of the Bishop of Seleucia-Ctesiphon. Other canons dealt with issues of behaviour by \*priests and bishops, many of which were revisited by later councils.

2. Yahbalaha (420). This synod again had a co-convenor from the East Roman Empire, Acacius of \*Amida, and it chiefly confirmed the acts of a series of earlier East Roman councils.

3. Dadisho<sup>c</sup> (424). The acts confirmed Dadisho<sup>c</sup> in office against the movement of a group of rebel bishops. Recalling the part played by East Roman bishops in earlier schisms, the bishops declared that in future there would be no appeal to them against the Catholicus.

3. \*Barsauma of \*Nisibis (484). Bishop Barsauma convened a synod at Bet Lapat (\*Gondeshapur, \*Khu-zestan) in opposition to the autocratic behaviour of the Catholicus Babowai. The bishops allowed a metropolitan to be consecrated by his suffragans without the participation of the catholicus. When a new Catholicus Acacius took office, Barsauma submitted to him and withdrew the canons (which are only partly preserved) of this council.

4. Acacius (486). This important synod published three canons. Canon 1 enshrined, for the first time in the Church of the East, a Christological formula of two Natures in Christ united in one *parsopa* (\*Syriac for \*Greek *prosopon*). Canons 2 and 3 were aimed at monks said to be disturbing church life in parishes and at those who preached \*asceticism and denigrated \*marriage. Anyone wishing to be celibate was instructed to live apart in a \*monastery. The \*marriage of bishops, priests, and \*deacons in particular was upheld. (Perhaps these rules had in mind itinerant monks who were obedient to a different, Henophysite, hierarchy; or perhaps they were a measure of accommodation to \*Zoroastrian sensibilities.)

5. Babai (497). The bishops reaffirmed the permission of marriage for men of all ecclesiastical ranks from patriarch to the lowest. They enacted sanctions against the rebellious bishops of Bet Lapat and \*Rev-Ardashir (Rishahr).

6. \*Aba I (544). This synod was not a single assembly: the *Synodicon* records letters signed by the Catholicus and different groups of bishops who attended his visitations to provinces. The \*letters mostly deal with problems left over from a long (524–37) schism in the catholicosate, for example that two bishops could be operating in the same \*diocese, and with lapses in marriage discipline.

7. Joseph (554). The synod addressed a situation in which the ancient canons had become 'decrepit, worn out, and forgotten in the memory of many'. The 23

canons do not contain explicit criticism of the later-deposed patriarch, but canon 7 prohibits the Catholicus from acting without the consultation of other bishops. Among other canons dealing with abuses are canon 10 prohibiting clergy from marrying pagan wives, and canon 11 aimed at keeping church property from falling into pagan hands. Canon 20 reverses the anti-monastic measures of 486 and encourages the building of monasteries in \*cities.

8. Ezekiel (576). This published 39 canons. Canon 1 excommunicates immoral clergy and laity whom it calls '\*Messalians'. Other canons deal with church property, including canon 35 which rules that monasteries must be properly endowed at their foundation.

9. \*Isho'yahb I (585). This synod published 31 lengthy canons. Canon 1 is a definition of faith and Dyophysite Christology. Canon 2 states that it is unlawful for anyone of any rank (\*Henana is doubtless meant) to discredit \*Theodore of \*Mopsuestia or to reject his writings. Some other canons show the involvement of the Church in legal matters such as a \*widow's right to keep her \*dowry (canon 23).

10. \*Sabrisho<sup>c</sup> (596). The bishops published a chiefly theological document again condemning anyone not accepting the authority of Theodore, in particular those who maintained that Adam was created immortal and became mortal when he sinned.

11. Gregory I (605). This reaffirmed a Christology of two Natures and one *parsopa*, and the defence of Theodore (appealing to the synod of 484 on this point). The *Synodicon* also records at this place a council of bishops convened in 612 (during an interregnum in the catholicosate following Gregory's death) partly to formulate a Christological reply to the Henophysites ('Severians'). The bishops made official the formula that Christ's two Natures were preserved in two *qnome* (Syriac *qnoma* being the usual translation of Greek *hypostasis*) and they rejected the title Mother of God (\*Theotokos) for the Virgin \*Mary. These statements mark the end-term of Christological development (infelicitously described as 'Nestorianization') of the Church of the East.

12. George (676). The synod published 19 canons mostly concerned with the regulation of clergy, marriage, burial, care of orphans, etc.

13. Henanisho<sup>c</sup> II (775). The synod confirmed his problematic election and the role of the Metropolitan of Kashkar as the second-ranking bishop and convenor of the synod in the absence of the catholicus. JFC

See the bibliography at *SYNODICON ORIENTALE*.

L. van Rompay in *GEDSH* under the names of the catholici.

**councils of the Church, Spain** The \*Visigothic period is known for royal–ecclesiastical collaboration expressed in a series of church councils. The conciliar

traditions of \*Spain began earlier with the Council of \*Elvira (300/6). The councils of Saragossa I (380) and \*Toledo I (400) dealt with \*Priscillianism, and records survive for six provincial councils between 516 and 546: those of \*Tarragona (516), Gerunda (517), Toledo II (531), \*Barcelona (540), Lérida (546), and Valencia (546).

The association of church councils with kings emerged in \*Gallaecia when a newly converted king of the \*Suebes convoked those of \*Braga I (561), and Braga II (572). \*Martin, \*Bishop of Braga, originally from \*Pannonia, apparently brought with him Eastern conciliar traditions; he appended 84 Eastern canons in a simplified form to the records of Braga II.

The royal–ecclesiastical connection and emulation of Eastern practice permeate the records of the first Visigothic 'general' council (i.e. a council of all the kingdom's bishops), Toledo III (589); this ratified the king's conversion from \*Homoean (\*Arian') Christianity to Catholicism, and prescribed yearly provincial councils where bishops were to consult with and oversee royal functionaries. The Spanish episcopate apparently did not fulfil this mandate. Records of only eight provincial councils between 589 and 633 survive, in \*Narbonne (589), \*Seville I (590), Saragossa II (592), Toledo (597), Huesca (598), and Barcelona II (599), Gundemar's Council (610), and Seville II (619); they contain little evidence of the collaboration envisaged. The records of a ninth provincial council, Seville III (c.624), do not survive.

Historians have credited Toledo IV (633) with institutionalizing the Spanish general council. Under the leadership of \*Isidore of Seville, this council promulgated an elaborate conciliar programme for kingdom-wide unity, again calling for yearly provincial councils, and providing a detailed formula for holding them, later codified as the Visigothic *Ordo de Celebrado Concilio*. Toledo IV's 75 canons included measures for clerical discipline, a political loyalty oath, and election procedures for new kings. Toledo IV also issued anti-Jewish canons, furthering another hallmark of Visigothic Christian governance. After the council, editors in Seville codified previous canons in the \**Collectio Hispana*, which became authoritative for future Iberian councils.

Between 636 and 694, at least ten more general councils met: Toledo V (636), Toledo VI (638), Toledo VII (646), Toledo VIII (653), Toledo X (656), Toledo XII (681), Toledo XIII (683), Toledo XV (688), Toledo XVI (693), and Toledo XVII (694), and possibly Saragossa III (691). These councils incorporated ritual elements expressing royal–ecclesiastical collaboration, including three days of religious observance attended by the king and palatine officials, a written royal address, and a royal edict confirming the council. Toledo VIII and XII ratified versions of the \**Book of Judges* (*Leges Visigothorum*). Despite this, Toledo IV's

plan for annual councils was not realized. The records of four extant provincial councils, Toledo IX (656), \*Mérida (666), Braga III (675), and Toledo XIV (684), indicate continuing clerical indiscipline and episcopal abuses. Kings convoked many of the general councils to deal with political instability. While conciliar claims for unity continued, penalties for dissent harshened, culminating at Toledo XVII which ordered the enslavement of all baptized \*Jews as punishment for treason. A final general council, Toledo XVIII, may have been held in 703. RLS

**count** See COMES, ROMAN AND COMES, POST-ROMAN.

**counterfeit coinage** The private minting of coins, profitable because it led to the forgery being accorded more value than was appropriate to it, and because the forgery might be made of less pure metal. Dies used by counterfeiters and counterfeited coins (e.g. bronze coins with gilded surfaces) have both been found archaeologically. All official \*coinage was minted by striking, but many recovered coins can be seen to have been produced by casting (*fusio*) and by moulds. This raises the question whether all such coins were counterfeit or if indeed this form of coin production was tolerated in situations of scarcity of currency. A law of AD 326 (*CTh* IX, 21, 3) condemns only 'falsa fusio', so apparently not every form of it, while a law of 371 (*CTh* XI, 21, 1) seems to forbid this practice completely. Counterfeiting was strictly forbidden and its punishment regulated in Late Roman \*law, which appears to have dealt with it more intensely than previous legislation. The *Sententiae* of \*Paul (V, 25, 1; V, 25, 5) associate this crime with the general offence of *falsum* (\*forgery). Two titles of the \**Theodosian Code* (IX, 21 and IX, 22) are entirely dedicated to this problem. A law of 319 (*CTh* IX, 21, 1)

imposes the death penalty on the counterfeiters of \*gold coinage (as also IX, 21, 5 and IX, 22, 1); and a law of 321 (*CTh* IX, 21, 2) deals with false coins in all metals, fixing rewards for denouncing forgers and punishments for the owners of the places where false coins were minted. From 389 this crime was also associated with \*treason (*maiestas*), since it implied tampering with the imperial portrait (*CTh* IX, 21, 9). A law of 393 (*CTh* XI, 21, 10) forbids private minting of divisional coins.

No fresh evidence is provided by *CJust* IX, 24, which systematizes the laws recorded in the *Theodosian Code*. A change was introduced in the 7th century AD, both in the Eastern Roman Empire and in the kingdoms of the \*Visigoths and the \*Lombards. From the time of the \**Ecloga* of Leo III onwards, the punishment for counterfeiting was the amputation of a hand (*Basilica of Leo VI*, 60, 60, 1; \**Book of the Judges*, VII, 6, 2; \**Edict of Rothari*, 242). **counterfeiting** See FORGERY.

**court, Persian royal** Like \*Sasanian \*administration in general, the Persian royal court evolved from \*Ardashir I's pre-imperial provincial court and adopted many structural and compositional aspects of the Arsacid court that it subsumed. The composition of the Sasanian court changed over the course of the Empire as the Kings of Kings consolidated central power at the expense of provincial kings.

\*Shapur I's Ka'ba-ye Zardosht \*inscription (*ŠKZ*, \**Res Gestae Divi Saporis*) and \*Narseh's \*Paikuli inscription provide detailed lists of the members and offices of the early Sasanian court. The Sasanian King of Kings (*šāhān šāh*) and his family were at the centre of the court hierarchy. Provincial kings (*šahrdārān*), princes of the

Sasanian clan not directly related to the king (*wispuh-ragān*), and the great Parthian and Persian families (*wuzurgān*) occupied the next tier, followed by the nobles (*āzādān*) and tribal chiefs (*kadag-xwadāyān*). Not all members of the \*aristocracy nor even all members of the king's family were permanent members of the court. In the early Sasanian period, the provincial kings regularly visited the King of Kings wherever he held court, though they were permanent members only if they held high office. Shapur I's inscription indicates that a large body of personnel served the King of Kings and court, and lists such officials as the Master of Ceremonies, Master of the Hunt, and Wine Steward. Courts of provincial kings increasingly emulated the court of the King of Kings, especially as all provincial kings were eventually replaced with members of the Sasanian family.

The late Sasanian Empire developed a larger, more complex court as it centralized its imperial bureaucracy and replaced the provincial kings with officials who were not in a position to make a claim to the throne. The office of Wuzurg-Framadār, or Vizier, became prominent over the course of the late Empire as reflected in the semi-fictional personage of \*Bozorg-mihr, who was understood in accounts dating from after the \*Arab conquest to have served under \*Khosrow I. Under strong kings such as \*Khosrow I or \*Khosrow II, members of the king's court could be invested with true power at the expense of the privileges of the aristocracy; under weak kings its members could be reduced to mere courtiers in the strict sense of the word.

Several texts drawn from the Middle Persian 'Book of Lords' (*\*Xwadāy nāmāg*), such as the *History of Ardashir Son of Pāpag* (*\*Kārnāmāg ī Ardashir ī Pābagān*), the post-conquest history of \*Tabarī, the *Tansarnāma*, and Ferdowsi's (Firdausi) epic poem the *Šāhnāma* (*Shahnameh*), provide a view of an idealized late Sasanian court. These texts, combined with visual representations in \*rock reliefs and on \*silver vessels, paint a picture of elaborate court protocol. Much as occurred in the Late Roman \*court, complex court ceremonies grew up around the Persian King of Kings, who appeared in them wearing elaborate \*crowns and rich costumes. In addition to audiences and diplomatic ceremonies, activities such as \*hunting, \*polo, and feasting proceeded according to an elaborate ritual. The audience hall of the Persian King of Kings was a highly charged and symbolic ritual space that represented the King of Kings' idealized place in the empire, world, and cosmos. Rank determined a courtier's or visitor's proximity to the king and their place in audiences or at banquets, and even the Roman and Chinese emperors were assigned symbolic places below that of the Sasanian King. MPC Canepa, *Two Eyes*.

**court, Roman imperial** The character of the later Roman imperial court developed alongside the changing nature of the emperor himself. From the early 3rd century onwards Rome was no longer the residence of the emperor in the West, but became a place for occasional state visits; the exceptions to this being Gallienus (260–8) who allowed the outlying parts of the Empire to be ruled by others, and the usurper Maxentius (306–12), who was surrounded by competitors and had no choice. Otherwise Roman rulers of the 3rd and 4th centuries were constantly on the move and were frequently to be found within reach of the eastern, Danube, or Rhine frontiers, even occasionally at York. Thus in the later Roman Empire there developed a travelling court,

Under Diocletian and the Tetrarchy, the mobile emperors provided themselves with fixed facilities in the place they were most likely to pass through, in particular Trier, Milan, Sirmium, Serdica, Thessalonica, Nicomedia, and Antioch on the Orontes. This process culminated in Constantine's foundation of Constantinople. Julian was the first emperor to have been born in Constantinople. After the death of Theodosius I in 395 his son Arcadius (d. 408) and then his grandson Theodosius II (d. 451) established themselves as sedentary civic emperors, heightening the centrality of Constantinople. Honorius, brother of Arcadius, moved the western court in 402 to Ravenna, which, apart from the years which Valentinian III spent in Rome 445–7 and 450–5, remained the centre of power in Italy under successively the Western emperors, the Ostrogoths, and the eastern Roman exarchs until the abolition of the exarchate in 751. Emperors did not become mobile again until Heraclius, and Constans II in 663 was the last Roman emperor to visit the city of Rome.

A courtier of Diocletian complained that the number of those working in the imperial administration increased greatly under the Tetrarchy (Lactantius, *Mort.* 7, 3–4). Emperors were on the move mostly from military necessity, but there were significant disadvantages in taking large numbers of palatini with them. John Lydus records that the government archives stored at Constantinople—apparently in waterproof rooms under the seating of the circus—went back to the reign of Valens (*Mag.* 3.19). The growing complexity of the work it did favoured a stationary court.

Complexity and eventual stability contributed to the increasing formality of court procedure. It became customary for those wishing for an audience with the

emperor to pay a fee to the chartularii of the Cubiculum (*NovJust* 8); Synesius tried to approach Arcadius to request a tax rebate for the cities of Libya Pentapolis and wrote his *De Regno* to complain how inaccessible the emperor was. Some sources (Ammianus Marcellinus, XV, 5, 18; Eutropius, IX, 27; cf. Aurelius Victor, *Caesars*, 39, 2–4) attribute to Diocletian the introduction of adoratio (Gk. *proskynesis*), the practice of kissing the emperor's purple robe, though the practice had clear roots in the Roman past. Ceremonies such as adventus appear to have become more elaborate; imperial vesture became more bejewelled. The grandeur of imperial ceremony is reflected in the magnificence of the language in the panegyrics praising the achievements of the emperors, from the time of the *Panegyrici Latini* in honour of the Tetrarchy through to Corippus' poems about Justin II in the 6th century.

Such formality did not necessarily make emperors more remote. It honoured the office as much as the individual who held it. Furthermore, ceremony displayed the emperor to his people and enacted their consent to being governed by him. This is apparent in adventus, where an emperor is welcomed to a city. After the emperor became a permanent resident of Constantinople, it came to articulate a specific relationship between the ruler and those with whom he shared the imperial city. This relationship was visible in processions through the streets, whether to celebrate victories or to install the relics of saints in suburban shrines. It was enacted above all in the circus where the emperor appeared before his people in the imperial box to watch the chariot racing and the dancers. And as the *Acta per Calapodium* demonstrate, the dialogue between the factions and the emperor's Mandator (herald) which accompanied these appearances could involve political controversy as well as acclamation and praise. **courts, Arabian and Muslim** The southern Arabian kingdom of Himyar (fl. c.270–c.550) was

the principal royal power on the \*Arabian Peninsula in Late Antiquity. Elsewhere, groups that had developed mutually beneficial relationships with Himyar and the Roman and \*Persian empires led tribal federations; the court of the \*Nasrid kings (*fl.* c.300–c.600), at al-\*Hira in Iraq, is particularly celebrated in the later Arabic tradition.

The absence of \*crowns from Muslim ceremonial may reflect a hostility to kingship as such in early \*Islam. Nonetheless, both \*Muhammad and then the first caliphs held court in \*Medina, in west Arabia (622–56). Following the First \*Arab Civil War of 656–61 (\**fitna*), \*Damascus became a new imperial centre, under the \*Umayyad dynasty (661–750).

The Umayyad period saw the development of monumental \*palace and \*mosque architecture. The peripatetic nature of Umayyad rule within \*Syria also led to the development of other residences in the province. These locations were the setting for the public performance of monarchy.

\*Poetry had a pre-eminent place in pre-Islamic Arabian court culture, and this was perpetuated in Islam. Notable composers of \*panegyrics in the early period include \*Hassan b. Thabit (d. c.659), al-\*Akhtal (d. before 710?), \*Jarir (d. 728–9 or later), and al-\*Farazdaq (d. c.728 or c.730).

**courts, post-Roman royal** Shortly after they had established their kingdoms on Roman soil, the barbarian leaders, following Late Roman practice, chose a \*city or a series of cities where they were pleased to reside with their retinue. The \*Vandals chose \*Carthage; \*Theoderic opted for \*Ravenna, the residence of the Western Roman imperial \*court from 402; the \*Visigothic kings settled first in \*Toulouse, and after 507 in \*Toledo; the \*Burgundians favoured Geneva; and the \*Merovingians ruled from \*Paris, \*Soissons, \*Reims, and \*Orléans. These newly established *sedes regiae* were much more than royal residential towns. They gradually became administrative centres, from where the kingdoms were ruled, and where aristocrats gathered in order to serve the king, or in hope of honours and promotion. Hence the barbarian royal courts that evolved at the time encompassed both the ruler's military retinue and the kingdom's highest bureaucrats and ecclesiastics.

Courts were places where Roman and barbarian \*aristocracies could meet, and where different traditions were allowed to interact freely. Consequently, the

barbarian courts also became important cultural centres. The barbarian kings who took over the rule of the western provinces of the Roman Empire understood the \*patronage of culture as part of their duties as rulers, and hence sponsored scholarship and patronized learning and letters just as their Roman predecessors had done. In that respect they all followed a well-established tradition, and their courts preserved a certain degree of continuity in sponsoring and encouraging intellectual, artistic, and literary creativity. The Vandal kings, for example, are known to have sponsored the work of poets and scholars such as \*Dracontius (though he did spend time in \*prison for writing the wrong sort of \*panegyric), and under their watchful eye public theological debates took place. The munificence offered by Theoderic the Ostrogoth inaugurated the revival of Gothic literature in the Ostrogothic kingdom, as well as the recovery of \*Homoean ('Arian') scholarship. Similarly, the early Merovingians sponsored the poet \*Venantius Fortunatus. In \*Spain, the so-called Isidorian renaissance, which was centred around the intellectual work of \*Isidore of \*Seville, was not unassociated with the patronage offered by the Visigothic royal court of Toledo. King \*Oswald founded \*Lindisfarne, where the \*Lindisfarne Gospels were written. The cultural activity that took place under the auspices of the barbarian royal courts was the firm basis on which the grand Carolingian renaissance of the 8th and 9th centuries was built.

**courts of law, Jewish** Palestinian rabbinic sources mention two types of courts (*batei din*): those associated with particular \*rabbis and patriarchs, and local law courts in larger towns and \*cities. They may have differed but also overlapped with regard to their set-up, officials, functions, and authority. In Roman times \*Jews were not allowed to deal with capital cases but with more or less minor civil law issues only. As far as civil law was concerned, various legal systems and forms of adjudication existed side by side in Roman \*Palestine. Litigants could approach individual rabbinic arbitrators or the patriarch to have their disputes settled, they could bring their case before a local Jewish court, or they could submit their issues to the provincial \*governor himself. Rabbinic arbitrators seem to have dealt with minor issues concerning the family, property, \*contracts, and

damages. Depending on the issue, a rabbi could set up a 'court' in which another rabbi and witnesses participated. The decisions of these courts were binding only if both parties involved accepted them. Litigants had the option to also consult other rabbis. The \*partriarch's court may have been considered more authoritative. Judges of local courts were not necessarily rabbis and could apply Jewish, Hellenistic, or Roman law. CH

C. Hezser, ed., *Rabbinic Law in its Roman and Near Eastern Context* (2003).

**courts of law, Roman** Types of law courts changed over the long history of the Roman state. The *Quaestiones Perpetuae* of the Republican period, which decided the outcomes of cases by juries, alongside the Praetors' two-stage 'formulary procedure' at \*Rome, were eventually replaced by *cognitio* procedure (sometimes referred to as *Cognitio extra Ordinem* or *Extraordinaria*), where a single judge [*iudex*] would be delegated a case by a higher official or, later, the \*emperor.

As Rome acquired \*provinces during the Republic and early Empire, the \*Senate sent out \*governors whose remit included the position of chief judge, although provincial citizens could appeal their decisions (see Acts of the Apostles 25: 9–12). By subdividing provinces, \*Diocletian (r. 284–305) created more governors and thus better access to provincial judges. By creating an administrative hierarchy, he created a natural appeal system.

\*Constantine I (r. 306–37) modified Diocletian's reforms. He probably gave judicial power to the \*Defensor Civitatis (or 'defender of the municipality') c.326 for minor cases. Around the same time he also gave legal sanction to the mediation decisions which \*bishops had been making in their *episcopalis audientia* (\*bishop's court) since at least the 270s (\*Eusebius, *HE* VII, 30, 7). The judicial powers of the Defensor and the bishop were the subject of further legislation in the 4th and 5th centuries (e.g. *CTh* I, 29 and *CJust* I, 55; \*Sirmondian Constitution, 1 and *CTh* I, 27). Soldiers and clergy had their own court systems [*privilegium fori*].

\*Justinian I (r. 527–65) elevated the status of provincial governors and thereby created a new class of judges [*iudices spectabiles*] who had the power of final judgement on most cases. He also produced legislation on the Defensor (*NovJust* 15) and *episcopalis audientia* (*NovJust* 123) as sources of accessible justice. RMF

## Covenant, Sons and Daughters of the (Bnay and Bnat Qyama)

In \*Syriac Christianity (both eastern and western), a consecrated office emerging apparently in the late 3rd century. These men and women took vows of poverty and chastity, served their \*bishop, and lived with one another or with their \*families. \*Aphrahat the Persian sage devoted his *Demonstration* 6 to admonishing Covenanters to maintain their vows of chastity.

Both the *Martyr Passion of Habib* (4th cent.) and the *Passions of the Persian \*Martyrs* (5th cent.) note that Sons and Daughters of the Covenant were singled out with clergy during persecutions of \*Christians, indicating their visibility as public figures. \*Canons from the 5th and 6th centuries differentiate Sons and Daughters of the Covenant from \*deacons, the clergy, or monastics, and place limitations on their professional and financial activities. Along with occasional references in \*saints' lives and \*chronicles, these canons indicate liturgical singing and ministry in the context of civic life as the primary duties for Covenanters.

Scriptural readings for a service of consecration appear in the earliest extant Syriac \*Bible lectionary (Brit. Mus. Add. 14528, 184r–185r; late 5th cent.). Historical references disappear by the 10th century.

## Crecchio

\*Settlement on the Adriatic coast of \*Italy in the region of Abruzzo in the province of Chieti. Excavation in the surrounding territory has revealed evidence for the manufacture of a distinct class of \*pottery, painted on the upper bodies and rims, dated between the last decades of the 6th century and the first half of the 7th century AD. Copying a well-known style from \*Egypt, the local ceramics from Crecchio attest to a level of economic and cultural exchange among \*cities ruled by the Eastern Roman Empire, a point confirmed by the presence of ceramics imported from \*Africa, also found in contexts at Crecchio and throughout Abruzzo. DRB

- A. R. Staffa and W. Pellegrini, eds., *Dall'Egitto copto all'Abruzzo bizantino: i Bizantini in Abruzzo (sec. VI–VII)* (1993).  
 A. R. Staffa, 'Le campagne abruzzesi fra tarda antichità ed altomedioevo (sec. IV–XII)', *ArchMed* 27 (2000), 47–99.

**credit** Credit was fundamental to the workings of the urban and agrarian economies of Late Antiquity, with \*merchants and peasant producers often dependent on loans from \*bankers and wealthier people to invest in their businesses or plots of land, pay taxes, or escape difficult circumstances. Roman \*emperors went to considerable lengths to regulate the interest rates at which \*money in particular could be lent by, and to, different strata of society, and evidently did so with moral considerations in mind. So, for example, \*Justinian's *Code* (*CJ* IV, 32, 26) declared that \**illustres* and those of higher social rank were allowed to charge interest of only 4% per annum, \*shop managers and other businessmen were limited to charging 8%, and maritime loans were capped at 12%. The \*law stipulated that all other people were able to charge up to 6%. Another important law of \*Justinian I (*NovJust* 121) limited the global payment of interest due on a \*debt to double the amount initially advanced. Such attempts to limit the market in credit, however, could readily be circumvented by means of ruses such as the so-called 'ante-chretic loan' recorded in the \*papyri found in \*Egypt, whereby loans to farmers and peasants advanced by landowners took the outward form of a purchase in advance of delivery of goods. The provision of credit by aristocrats was often represented in terms of good \*patronage so as to render it more socially acceptable. PS

P. Sarris, 'The Early Byzantine Economy in Context', *EME* 19 (2011), 256–84.

**creeds** Summaries of the articles of Christian belief. While the New Testament does not provide a fixed formula for expressing the contents of Christian belief, it does contain creedal elements that confess belief in the lordship of Christ, as well as binitarian formulae that speak of Jesus's relation to the Father, and trinitarian formulae that refer to Christ, the Father, and the Spirit. In the first three centuries AD, the rite of \*baptism included a series of interrogations and responses relating to central elements of Christian faith and typically associating a threefold immersion with the confession of Father, Son, and Holy Spirit. The second stage of this confession, that concerned with the Son, came to be expanded by a proclamation of key moments of the Christological narrative, notably Christ's Incarnation, Crucifixion, Death, and Resurrection, while other beliefs, such as the sanctity of the Church, were sometimes appended to the third stage, that concerned with the Spirit.

Beginning in the 3rd century, these baptismal interrogations became the basis for declaratory creeds, whose transmission by the bishop (*traditio*) and proclamation by the candidates for baptism, the catechumens (*redditio*), became ritualized as preparatory to baptism. A highly influential exemplar of an early declaratory creed is the Old Roman Creed, the ancestor of the Apostles' Creed.

In the 4th century, creeds sanctioned by ecclesiastical \*councils became one of the principal instruments for discerning and asserting boundaries between orthodoxy and \*heresy. The Council of \*Nicaea of 325 adjudicated the controversy between Alexander, \*Patriarch of \*Alexandria, and \*Arius by issuing a creed that declared the Son to be 'of one substance (*homoousios*)' with the Father. Reaction against this teaching led to a plethora of rival councils during the 4th century which issued their own alternative creeds. The Council of \*Constantinople of 381 accepted the Nicene creed enlarging slightly the sections concerned with Christ and the Spirit. This creed came to be that universally used in both Eastern and Western \*Eucharistic \*liturgies.

The Christological controversies of the 5th century led to the formulation of more conciliar creeds, most notably the declaration of the Council of \*Chalcedon that the 'one person' of Christ the Incarnate Word is of two integral natures of divinity and humanity in distinction from the \*Miaphysite conviction that he is of one nature. **cremation** See DEAD, DISPOSAL OF.

**Cremna** A remote \*city in the upper Kestros Valley of southern \*Pisidia, occupied in AD 278 by the \*Isaurian brigand Lydius and besieged by the \*Emperor \*Probus (\*Zosimus, I, 69–70). The Roman \*siege mound and blockading wall survive, as does the headquarters building of the besieging force, with a Latin \*inscription erected in Probus' honour. Eight churches of the late 4th and 5th centuries AD have been identified, including

## Crete

a converted Hadrianic \*basilica. The site was abandoned in the early 6th century. PJT

S. Mitchell, *Cremna in Pisidia: An Ancient City in Peace and War* (1995).

TIB 8, *Lykien und Pamphylien*, 662–6.

**Crete** Large island in the eastern Mediterranean. The \*province of Creta (with its capital at \*Gortyn) was separated from the previous Creta et Cyrene sometime between 293 and 305. A \*Praeses is first attested in 293/305 and the \*Verona List places it in the \*Dioecesis \*Moesiae. A \*Consularis is attested in 372/6 and the \**Notitia Dignitatum* lists Creta as governed by a Consularis (I, 75) in the Dioecesis \*Macedoniae and so under the \*Praefectus Praetorio per Illyricum (*or.* III, 10).

S. Paul left his companion Titus in Crete as its first \*bishop (Titus 1: 4–5) and \*Eusebius records a bishop of the name of Philip in the late 2nd century (*HE* IV, 25). In the 5th century the bishops of Crete assured the \*Emperor \*Leo I that ten local \*martyrs protected the province. The Church of S. Titus in \*Gortyn, a domed three-aisled \*basilica, probably dates to the 6th/7th century. Three basilicas outside ancient Knossos near modern Heraklion date from the 5th and 6th centuries.

A broad variety of small industries was carried on in Late Roman Crete. These included \*fish-farming, \*copper-mining, and making \*purple dye from \*murex, as well as the production of \*grain and \*wine and \*olive oil—Cretan wine had been famous since Roman times. The presence of significant quantities of imported \*pottery on rural sites also suggests that the island profited from being an entrepôt.

Crete suffered from \*tsunamis and \*earthquakes in 365, 618/21, 666/70, and 718. In the 7th century the island became vulnerable to seaborne attack. In 623 \*Slavs invaded, and the island found itself on the front line during \*Heraclius' \*naval warfare with the \*Arabs. In 651 the fleet of the \*Caliph \*Mu'awiya's raided Crete, though the Romans eventually managed to retain the island. The \*Arab conquest was completed in 826. ABA

**Crimea** A large peninsula situated between the Black Sea and the Sea of Azov in modern Ukraine. During the Roman period, the southern and eastern portions formed part of the client Bosporan kingdom

with its capital at Panticapaeum (\*Kerch) while various Scythian and \*Sarmatian tribes were settled in the north and in the interior of the peninsula. The geographical position is described in \*Jordanes, *Getica* (30–6).

By the middle of the 3rd century, \*Goths had migrated to the western shores of the Black Sea and into the Tauric \*Chersonese. The Goths overtook the local tribes, forcing some of them to migrate to the \*Balkans. Nonetheless, the Bosporan kingdom seems to have survived into the early 5th century, but Hunnic/Bulgar tribes subsequently occupied the area. In c.530, the Roman \*Emperor \*Justinian I (r. 527–65) established control and fortified important towns like \*Cherson, (\*Procopius, *Aed.* III, 7, 10–17). Some Roman accounts assert that the Roman presence was quite imposing, thus compelling many of the local Crimean Goths to become Roman \**foederati* and to join the imperial troops.

The expansion of the western \*Türks destabilized Roman authority in the region, and in c.580 Panticapaeum fell to Turxanthus' Turkic soldiers (\*Menander Protector, *Excerpta de Legationibus*, 1, 14). The late 6th and 7th centuries saw local urban decline, though some towns kept their Roman structure and affiliation. Cherson, for example, served as a place of \*exile for Pope \*Martin I of \*Rome (649–53), exiled there in 655. The deposed Roman Emperor \*Justinian II (r. 685–95 and 705–11) was also exiled to Cherson from 695 to 705. In the late 7th century, the region gradually passed under \*Khazar overlordship, with a Khazar official called *tudun* who was centred in Cherson. The area's connections with the Romans were not completely terminated, however, and Cherson in particular served as the launching place for Justinian II's escape from exile in 705 and later for a revolt against his authority in 711. In c.832, effective Roman authority over the southern coastal areas of the Crimea was restored, and Cherson became the centre of the Roman \*Theme Klimata, made official in the reign of Theophilus (821–42).

In this period, Cherson was used as a base for diplomatic contact with neighbouring peoples like the Pechenegs and, more distantly, the Khazars and the Rus'. In c.850, we also find the first reference to a Crimean Gothic language. It is first mentioned in the hagiography of S. Constantine Cyril (*Life of S. Constantine* 227) who is best known as an apostle to the Slavs and is associated with the invention of the Slavic script. In the middle of the 9th century, S. Cyril visited Crimea to preach to the Khazars. Although still debated, most scholars believe that Crimean Gothic, though a \*Germanic language, did not descend from \*Ulfilas' biblical Gothic, and references to Crimean Gothic survive up to the 16th century. **Crisis, Third Century** Term applied to the period between the death of Severus Alexander in 235 and the \*accession of \*Diocletian in 284, often depicted as an age of darkness and catastrophe for the Roman Empire. More than 50 short-lived \*emperors and \*usurpers competed for imperial power, few of whom died of natural causes. New and formidable enemies assaulted the Roman \*frontiers, from the \*Franks on the Rhine \*frontier and the \*Goths across the Danube and Black Sea to a freshly aggressive \*Persian Empire, ruled by the new \*Sasanian dynasty, in the east. The external threats combined with instability in the imperial \*administration both caused by and increasing social and economic dislocation, reflected in provincial unrest and the dramatic debasement of Roman \*coinage.

After a decade of turmoil following the end of the Severan dynasty in 235, the darkest times for the Empire came in the 250s and 260s. In 251 the Goths killed \*Decius, the first emperor ever to fall in battle with a foreign enemy, while in 260 the Sasanian \*Shapur I captured \*Valerian and took him back to Persia in triumph. Under Valerian's son \*Gallienus (253–68) the Empire reached its weakest point as large territories broke away from imperial control. The independent kingdom of \*Palmyra expanded across \*Syria, \*Anatolia, and \*Egypt under \*Odaenathus and his queen and successor \*Zenobia, while in the west the \*Gallic Empire of \*Postumus ruled \*Britain, \*Gaul, and \*Spain. 'The whole period was one uninterrupted series of confusion and calamity' (Edward Gibbon, *Decline and Fall*, ch. X).

In recent years modern scholarship has revised this picture of universal disaster. The limitations of our literary sources for the 3rd century are recognized, particularly the problems posed by the chronically unreliable \**Historia Augusta*. In addition, archaeology has transformed our knowledge of social and economic conditions in the Empire. Not all regions suffered; \*Britain and North \*Africa reached unprecedented heights of prosperity, and even in more threatened \*provinces trade and urban life survived. \*Porphyry's *Life* of \*Plotinus (205–70) portrays the traditional life of an urban \*philosopher. What has been characterized as an age of anxiety has been seen to have inspired new spiritual ideas, with the emergence of \*Neoplatonism and the spread of Christianity despite centrally organized \*persecution under Decius and Valerian. The reigns of Gallienus and \*Aurelian (270–5) brought military, social, and economic reform and paved the way for the Empire's recovery.

Revisionist arguments should not be taken too far. For the short-reigning emperors and the populations on the threatened frontiers, the middle years of the 3rd

century were indeed a time of crisis. But there were shafts of light amidst the gloom, and from the years of chaos emerged Diocletian, \*Constantine I, and the transformation of the Later Roman Empire. DMG CAH 12 (2005).

Saxer, *Morts, martyrs, reliques*, 320.

**Crispus** (c.300–326) Flavius Julius Crispus, son of \*Constantine I from his \*marriage to \*Minervina, was a \*Caesar 317–26, having had as his \*rhetoric tutor the Christian \*Lactantius. He and his half-brother \*Constantine II were made Caesar at \*Serdica on 1 March 317. He resided at \*Trier from 318 to 323, where \*Junius Bassus was probably his \*Praefectus Praetorio, and won victories over the \*Franks, probably in 319, which a \*panegyric by \*Nazarius celebrated (*PanLat* IV (X), 17, 1–2 and 36, 3–37, 4). His wife Helena had a child in 322. His naval victory at the Dardanelles in 324 was essential to Constantine's defeat of the \*Emperor \*Licinius. In 326, Constantine tried him and had him executed at Pola of \*Venetia et Histria (Aurelius \*Victor 41, 11; cf. \*Ammianus, XIV, 11, 20); the circumstances are obscure. Crispus has been identified as the boy shown on the Great Cameo of Constantine and \*Fausta now in Leiden, formerly in Utrecht, though other scholars have favoured \*Constantius II. OPN PLRE I, Crispus 4.

NEDC 44, 83.

Barnes, *Constantine*, 104, 145–8.

**Croats** A tribe whose actual origin is unclear, but which is traditionally believed to have migrated from Central Europe to the \*Balkans in the 7th century. ABA

**Cross, Relic of the True** Stories and beliefs about the Cross on which Jesus was crucified developed vigorously from the 4th century onwards. \*Eusebius' *Life of Constantine* describes \*Constantine I's foundation of the Church of the Holy Sepulchre at \*Jerusalem (*VCon* III, 25–40), but makes no mention of the True Cross.

\*Cyril, \*Patriarch of \*Jerusalem, states that the Cross of Christ was discovered during the reign of \*Constantine (*Ep. ad Constantium*, 3). Cyril's *Catechetical Orations* indicate that Cross relics were present and venerated in Jerusalem and elsewhere at least by c.350. The pilgrim \*Egeria describes the veneration of the Cross on Good Friday in the Church of the Holy Sepulchre in Jerusalem (37, 1–3); the Cross was also venerated at the festival of the Encaenia in September.

In the second half of the 4th century the relics of the Cross in Jerusalem inspired stories about its discovery. This was attributed to Constantine's mother \*Helena, who had visited Jerusalem in the mid-320s; the first surviving text to mention it is \*Ambrose's \*funeral oration for the Emperor \*Theodosius I (39–47). By the early 5th century three versions of the legend existed: (1) the Helena legend, known in \*Greek and \*Latin; (2) the Protonike legend in \*Syriac and part of the \*Edessan Teaching of \*Addai; (3) the Judas Kyriakos legend in Greek, Latin, and Syriac and later on in many vernacular languages. The third of these became the best known and was popular in the Middle Ages. A fourth version is preserved in the so-called Six Books narratives of legends of the Virgin \*Mary's Dormition and Assumption.

In 614 during the \*Persian invasion the Jerusalem Cross relics were captured and carried off to Persian \*Mesopotamia, but they were restored to Jerusalem by the Emperor \*Heraclius in 628. In 635 they were transferred to \*Constantinople. By this time also the city of \*Rome possessed several Cross relics, e.g. in the Church of \*S. Croce in Gerusalemme.

**crosses and votive stelae, Georgian** S. \*Nino is said to have erected a wooden \*cross above \*Mtskheta, and King \*Mirian did likewise at Tkhoti, Bodbe, and \*Ujarma; the surviving crosses are all fragmentary.

Stelae were made of limestone slabs surmounted by a cross. Nearly all come from \*Iberia. They may include figural compositions from the Old and New Testaments, images of saints and clerics, or \*donor portraits. In Samtskhe-Javakheti, stelae were mostly decorated with \*foliage and geometric ornament. They ceased to be made after the 8th century.

**cross in art** The sign of the Cross had the power to dispel \*demons (\*Lactantius, *Mort.* 10; *Inst.* IV, 27). Crosses were commonly represented on such personal items as \*lamps, \*pottery, \*amulets, \*seals, \*jewellery, and clothing to invoke protection against evil and to attract good fortune. \*Sarcophagi, wall paintings, and \*gold glass embedded in \*tombs displayed crosses in hope of the resurrection. The Church utilized it in every aspect of worship: in processional crosses, church \*furniture, \*reliquaries, and architectural \*sculpture. Imperial commissions adopted the symbol for statements of \*patronage or power, as in the \*gold and jewelled cross erected on Golgotha or embossed on imperial coinage. The cross also represented Christ in his Divine Nature as in the Transfiguration mosaic in S. Apollinare in Classe near \*Ravenna. For Christians facing east to pray, crosses in church \*apses recalled the Sign of the Son of Man coming in the heavens in the Last Times. Christianity's most powerful symbol, it was invoked for protection and as a symbol of Christian \*victory.

**crown, Roman and post-Roman** Throughout antiquity, wreaths or crowns (usually of flowers and foliage) were awarded to mark the glory of individuals—military, civilian, religious, or sporting. Christians,

notably Tertullian (*De Corona*), criticized crowns for their associations with \*paganism, but to little effect. In Christian iconography, \*martyrs' crowns were the reward of their witness.

Crowns became integral to imperial insignia, whether as laurel wreaths (as worn by a Roman *triumphator*), or as the radiate crowns, reminiscent of the \*Sun, which 3rd-century \*emperors were shown wearing on the coins scholars call \**antoniniani* or radiates. The radiate crown disappeared early in the Christian Empire. Laurel wreaths became mainly the crown of \*Caesars after \*Constantine I adopted the diadem (plain, rosette, or pearl), originally a symbol of Hellenistic kingship. In the Eastern Empire and the post-Roman West, crowns became increasingly elaborate, being made from beaten \*gold, studded with precious \*stones, and occasionally incorporating \*relics. The Iron Crown of Lombardy (8th/9th century) is probably the oldest surviving royal crown.

Coronation ceremonies associated with \*accession are attested from the 4th century AD onwards and involved the \*army, the \*Senate and, particularly after the eastern court came to rest at \*Constantinople under \*Arcadius, the urban population. In royal imagery (especially on \*coinage and medallions), the monarch is usually crowned by \*Victory, by his protective deity, or later by the \*Dexter Dei, the Right Hand of God.

The 7th-century \*Visigothic crowns from the Treasury of Guarrazar in \*Spain (including that of \*Recceswinth) were \*votive offerings and were never meant to be worn.

**crowns, Persian** \*Crowns of the \*Sasanian dynasty introduced a new and influential form of royal head-covering. Documented in the \*coinage, almost every Sasanian King of Kings wore an individualized crown, replacing it with a new one if defeated or overthrown, though some kings wore crowns similar to those of their

predecessors as a statement of continuity. Sasanian crowns grew from provincial Persian traditions as witnessed by the Persepolis \**graffiti*. All Sasanian crowns integrated a diadem (MP *dēhēm*) tied around the ruler's brow, the primary symbol of sovereignty as portrayed across various media. This is reflected in investiture scenes in \*rock reliefs, in \*Narseh's \*Paikuli inscription (NPi A8, 02–A15, 02), and even in \*Manichaean literature. Other elements might include celestial bodies or symbols of the heavenly luminaries and of \**xwarrah*, including stars, sun discs, lunar crescents, or wings. Early Sasanian crowns incorporated a globe, originally a topknot of hair covered with \*silk, simplified in the later years of Sasanian rule to a finial with a solar disc or star. The coinage and \*silver vessels alike document the huge suspended crowns worn in court ceremonies. Kings wore smaller variants while not in audience and on campaign had distinctive helmets.

**Crypta Balbi** A colonnaded courtyard adjacent to the Theatre of Balbus (13 BC) in the Campus Martius, \*Rome, containing a semicircular \*exedra on the east façade. Excavations in the area have provided important information about the economy of Late Antique Rome. After housing a workshop for the production of \*glass, the site was partially abandoned during the 5th and 6th centuries: \*roads were built over the \*colonnade and \*tombs occupied the exedra. However, 7th-century layers show the importance of Rome as a producer and distributor of manufactured goods. These deposits contain numerous North \*African and Byzantine \*amphorae, as well as various luxury materials and tools belonging to a nearby workshop, probably owned by the \*monastery of S. Lorenzo in Pallacinis. During the 8th century a lime oven stood here, probably to support the construction of nearby \*monasteries and churches.

M. S. Arena et al., *Roma: dall'antichità al Medioevo: archeologia e storia nel Museo nazionale romano Crypta Balbi*, 2 vols. (2001–4).

Richardson, *Topographical Dictionary*, 101.

**crystal** (MP *bēlur* or *ābgēnag*) Quartzite rock crystal was mined in the Iranian world and exported both to the Mediterranean basin and \*China, either raw or worked into luxury objects. Crystal appears in objects of \*Sasanian manufacture given as gifts or integrated

into different objects in the Middle Ages. Common crystal objects include \*seals, drinking cups, and decorative plaques. The vessel known as the Cup of Solomon or Cup of \*Khosrow, now in the Bibliothèque nationale de France (inv. 379), contains a central crystal medallion engraved with an image of a Sasanian king. A crystal cup survives in the Louvre (inv. Sb3797). The votive crown of the Visigothic King \*Reccesuinth of c.672, found in the Treasure of Guarrazar and now in Madrid, features a Sasanian rock crystal finial. Records abound of luxury objects such as crystal drinking cups sent as gifts from \*Sogdian \*Samarkand to Tang China. MPC

F. Demange, *Les Perses sassanides: fastes d'un empire oublié*, 224–642 (2006).  
Schafer, *Golden Peaches*, 227–8.

**Ctesibius in Late Antiquity** Hellenistic scientist of the mid-3rd century BC, known to \*Philo of Byzantium (*Belopoeica*, 67) and \*Vitruvius (*De architectura*, IX, 8, 2). Ctesibius' mechanical and scientific observations underlay the development of the catapult, force pump, and \*water-clock. MLR

A. G. Drachmann, *Ktesibios, Philon and Heron: A Study in Ancient Pneumatics* (1948).

**Ctesiphon** First attested in the Seleucid period (Polybius, *Histories*, 5, 45) when it was described as a large village (Strabo, *Geography*, VI, 30, 122), Ctesiphon is located c.35 km (22 miles) south of Baghdad on both sides of the present-day course of the Tigris. As part of the conurbation of Veh-Ardashir and Aspanbar, Ctesiphon along with the other settlements was referred to as \*Mahoze in Aramaic and \*Syriac and later in \*Arabic as al-\*Mada'in, meaning the Cities.

Founded as a fortress during the Arsacid siege of Seleucia, in the Parthian period Ctesiphon grew into the imperial capital and it was there, after his defeat of Artabanus IV, that \*Ardashir I was crowned as the first Shahanshah of the \*Sasanian dynasty. Thereafter it remained the Sasanian winter capital until the \*Arab conquest and was the location of the fortified White Palace, which was located near the pontoon bridge across the Tigris.

Both the Jewish and the Christian populations of Ctesiphon were important. The Jewish \*exilarch represented Jewish interests at the Sasanian \*court and can therefore be assumed to have been frequently at Ctesiphon; but while there were certainly \*Jews living in Ctesiphon, the main centre of Jewish life was in \*Kokhe (Veh-Ardashir), on the opposite side of the Tigris. By the Sasanian period, however, the entire area of Seleucia, Kokhe, Vologesias (to the south), and Ctesiphon, with its suburban extensions in Aspanbar

and \*Weh-Antiog-Husraw (Rumagan), though divided by the Tigris (which shifted its bed in this area between the Parthian period and the 3rd–4th centuries), must be considered a vast megalopolis. It is better to view its different constituents as suburbs or quarters of this vast urban centre than as individual cities. This is particularly important since \*Talmudic sources regularly refer to Mahoze or Be Ardashir, while \*Syriac sources speak of Seleucia (Seloq), Ctesiphon, and Kokhe. The site of ancient Ctesiphon, now known as Madina al-'Atiq, remains largely unexcavated.

**cubicularii** Chamberlains of the \*Cubiculum in the Roman imperial household, usually \*eunuchs headed by the \*Praepositus Sacri Cubiculi, an extremely powerful political figure (e.g. \*Eusebius under \*Constantius II, \*Eutropius under \*Arcadius). Their collective influence exercised through their physical proximity to the \*emperor often made them unpopular (e.g. \*Ammianus, XVI, 6, 3; cf. \*Lactantius, *Mort.* 30, 3–5). Those who rose to the peak of their profession retired as \*senators. At the time of the \*accession of \*Justin I, the *cubicularii* were able to block the appointment of a candidate they did not care for by refusing to release the imperial robes.

It had been illegal to castrate men on Roman soil since at least Hadrian (*Digest*, XLVIII, 8, 4, 2; cf. *NovJust* 142 of 558). *Cubicularii* were often foreign, and frequently slaves by origin. \*Procopius claimed that they often came from \*Abasgia (*Gothic*, VIII, 3, 17). If they were slaves, they were freed on entering imperial service (*CJust* XII, 5, 4 of 473). SFT

Jones, *LRE* 566–70.

**cubiculum** Room in a Roman \*house, serving a range of functions, for instance as exclusive reception

hall or quiet corner for private business. Its most obvious use was as a bedroom (\*Sidonius, *epp.* II, 1, 3 and V, 7, 4). *Cubicula* are difficult, if not impossible, to identify archaeologically, due to their multiple functions. DRB

A. Riggsby, "Public" and "Private" in Roman Culture: The Case of the *Cubiculum*', *JRA* 10 (1997), 36–55.

K. Sessa, 'Christianity and the *Cubiculum*: Spiritual Politics and Domestic Space in Late Antique Rome', *J ECS* 15/2 (2007), 171–204.

**Cubiculum** The Sacrum Cubiculum, the Imperial Bedchamber commanded by the \*Praepositus Sacri Cubiculi, was the department of the central civil \*administration of the later Roman Empire closest to the \*emperor himself. According to the \**Notitia Dignitatum*, the Praepositus Sacri Cubiculi, who was in charge of the Cubiculum, ranked immediately after the \*Praefectus Praetorio, the \*Praefectus Urbi, and the most senior \*Magistri Militum (*occ.* I, 8; *or.* I, 9).

The \**cubicularii* (chamberlains) who staffed the Cubiculum were generally \*eunuchs. Contemporaries and modern commentators often associate this development in the emperor's domestic arrangements with the \*Emperor \*Diocletian, who is alleged to have introduced Persian practices, but the change seems rather to have occurred gradually. The first *cubicularius* known by name is the Praepositus Festus, whose estate at Praeneste was presented by \*Constantine I to the Roman Church (\**Liber Pontificalis*, 34, 14). The \*empress often had a separate Cubiculum, staffed by women as well as eunuchs.

Unfortunately, detailed accounts of the Cubiculum in the *Notitia Dignitatum* are missing for both East and West (*occ.* XIV; *or.* X), with the exception of the details of the establishment under the \*Castrensis or steward, so that knowledge of the organization and running of the Cubiculum depends largely on less systematic evidence, such as laws (especially *CJust* XII, 5), \*inscriptions, and incidental historical references. The Praepositus Sacri Cubiculi was directly appointed by the emperor and might serve for many years, as did \*Eusebius throughout the reign of \*Constantius II. The \*Spatharius, the principal bodyguard, and the \*Sacellarius, the keeper of the privy purse, were also appointed at the emperor's pleasure; \*Chrysaphius held office as Spatharius under Theodosius II for seven years, and \*Narses, a leading general, was Sacellarius for extended periods under \*Justinian I. Other eunuchs rose through the ranks to such offices as \*Comes Sacrae Vestis (keeper of the wardrobe), \*Comes Domorum, and Castrensis, and held their appointments for limited terms. The Cubiculum was financed by the income of specific \*estates, called the \*Domus Divina. Those in the West were in \*Africa and were administered by an official

answering to the \*Comes Rei Privatae (*Notitia Dignitatum occ.* XII, 16). Those in the East were in \*Cappadocia, and were originally administered through the \*Res Privata, but control was transferred sometime between 390 and 414 to the Praepositus Sacri Cubiculi (*Notitia Dignitatum or.* X and XIV).

The physical proximity of *cubicularii* to the person of the emperor encouraged him to have confidence in them and so endowed the staff of the Cubiculum with considerable power. \*Ammianus complained that while carrying out personal services they insinuated through secret whispers food for false accusations (XIV, 11, 3). They were employed on important missions by emperors; at a turning point in the \*Arian controversy, Constantius II sent the Praepositus Eusebius to Rome to induce the \*Bishop \*Liberius (with a substantial donation to S. Peter) to subscribe to the decisions of the Council of \*Sirmium (\*Athanasius, *Historia Arianorum*, 35–8). The Praepositus \*Eutropius in 397/8 even led an army which drove back a \*Hun invasion of \*Phrygia and Cappadocia (\*Claudian, *In Eutropium*, I, 234–86), and in 399 was the only eunuch ever to be made \*consul, to the disgust of the poet Claudian.

They were also able to exact fees from those having business with the emperor, and even when in 535 Justinian I attempted to abolish such payments (\**suffragia*) he specifically permitted the \**chartularii* of the Cubiculum to continue to receive what had become customary (*NovJust* 8). There were enormous opportunities for enrichment, for instance by submitting \*petitions to the emperor to be granted confiscated \*estates. \*Lausus, Praepositus early in the reign of Theodosius II, had his own palace, with a large collection of classical statuary, a short walk from the \*Great Palace. \*Urbicius, Praepositus under seven emperors, visited \*Edessa after \*Qobad I's invasion of the early 6th century and gave a \*gold \**tremissis* to every woman in the \*city, a \*silver *miliaresion* (Syr. *zuzeh*) to every child, and ten pounds of gold to the bishop to build a church.

Power and wealth added to the revulsion which others within and outside the imperial service felt for the eunuch chamberlains. The first court eunuch mentioned in a Late Roman source, the substitute murdered by \*Maximian in 310 under the misapprehension that he was killing Constantine, is dismissed by \*Lactantius unnamed as 'a certain vile eunuch' (*Mort.* 30, 1–5). Ammianus said that 'if Numa Pompilius or Socrates should say good things about a eunuch, and add to his words a solemn oath, he would be accused of having parted from the truth' (XVI, 7, 4). **Cuicul** (mod. Djemila) *Colonia* in western \*Numidia, 83 km (51 miles) west of \*Cirta. boasting grand \*houses with elaborate \*mosaics. In 364/7, when Publius Caecina Albinus was \*governor, a civil \*basilica replaced the Temple of Frugifer in the Severan \*forum (*AE* 1946, 107). Under his successor, Ulpus Egnatius Faventinus, a \*statue of Victory was placed in the basilica (*AE* 1946, 108). The theatre may have been restored in 367/75 (*CIL* 8.20157). On the city's south side, a Christian complex centred on a double basilica largely constructed in the late 4th to early 5th centuries. The northern basilica boasted mosaic floors given by \**honorati* and local notables, including a \*priest of the provincial \*imperial cult. The city is last heard of in 553 when its bishop attended the \*Council of \*Constantinople. GMS

**Culcianus (Clodius Culcianus)** \*Praefectus Augustalis (301–7), and persecutor of 'myriads of Christians in \*Egypt' (\*Eusebius, *HE* IX, 11, 4) including \*Phileas of Thmuis. He held numerous offices under \*Maximinus Daza, was executed after \*Licinius' victory in 313, and features in many \*Greek and \*Coptic \*martyr legends (e.g. Apaïoule and Pteleme, Apa Epima, Isaac of Tiphre). **Cumae** Coastal town north-west of \*Naples, which had declined as a port prior to Late Antiquity, but whose acropolis retained strategic importance as a coastal fortress for \*Campania. During the \*Byzantine invasion of \*Italy \*Belisarius placed a garrison here after capturing Naples in 536, and the fortress at Cumae sheltered the wives of \*senators and a cache of money. It returned to Gothic control and was then besieged by

\*Narses; this drew the Gothic general \*Teias into open conflict at Mons Lactarius, the battle which brought the Gothic War to a close (\*Procopius, *Gothic*, VIII, 35, 38). Procopius records that the inhabitants still pointed out the cave where the Cumaean \*Sibyl gave her \*oracles (*Gothic*, V, 14, 3). Archaeology indicates active religious and military use of the fortress and lower town as late as the 8th century. MSB

P. Arthur, *Naples: From Roman Town to City-State* (2002).

**Cunincpert (Cuninpert)** \*Lombard king (688–700). Associated with his father \*Perctarit from 680, Cunincpert was supplanted by Alahis (688–9) whom he defeated at the Battle of Coronate. He presided over the Synod of \*Pavia that marked the end of the \*Three Chapters Schism in north \*Italy in 698 which was celebrated in the \**Carmen de Synodo Ticenensi*. CTH *PBE*, Cunincpert 1.

*DizBiogItal* 31 (1985), 386.

**Cura Epistularum** Senior official on the staff of the \*Praefectus Praetorio responsible for correspondence on fiscal matters with \*governors and Vicarii (\**Notitia Dignitatum* 2, 67; 3, 28 [or.]). A Cura Epistularum was allocated to each \**dioecesis*. From the late 5th century, these duties were largely transferred to the \**scrinarii*. CMK

Stein, *Officium*, 67–70.

**Cura Palatii** See CUROPALATES (CURA PALATII).

**curator** Trustee for carrying out private or public duties. In Late Antiquity, four private *curatores* should be mentioned: the *curator minorum*, a kind of guardian given to adult boys (when 14 years old) and girls (12), who had not yet reached 25 years. The minor needed his consent to conduct transactions. Second, the *curator furiosi*, who represented mentally ill people. Third, the *curator prodigi*, assigned to spendthrifts. And fourth, the *curator bonorum*, the trustee in cases of bankruptcy.

Public curators were widely installed in high and lower positions in \*Rome and other \*cities, in the cooperatives, and in the \*army. The most important were in Rome, where there were six in Late Antiquity: the *curator* (or \**consularis*) *operum publicorum* and *maximorum*, responsible for public buildings, with later a special *curator* for the largest buildings; the *curator* (or *consularis* or \**comes*) *alvei Tiberis et cloacarum sacrae urbis* for drains and the bed of the Tiber; the *curator* (later *consularis*) *aquarum et Miniciae* for the \*aqueducts and \*grain-stores; the *curator statuarum* for the \*statues of Rome; the *curator horreorum Galbanorum* for the store-houses of pork, oil, and \*wine, and finally, 14, later 29 *curatores regionum*, apparently of senatorial standing, two for each of the \**regiones* of Rome, and three for

the 14th, kept the peace in their respective regions, where they were proxies of the \*Praefectus Urbi. All these disappeared during the 6th century. In \*Constantinople, there were thirteen *curatores regionum*.

Starting with \*Justinian I, there were also *curatores (dominicae or divinae) domus*, financial administrators of individual imperial \*estates, directly responsible to the \*emperor. DL

Jones, *LRE* 426, 691, 694.

M. Kaser, *Das römische Zivilprozessrecht* (2nd edn. K. Hackl, 1996), 627f.

**Curator Rei Publicae (Curator Civitatis)** Annual civic office, in origin an external imperial appointment, but by the 4th century, *curatores* (at least in \*African \*cities) had normally served as Duumvir (the senior civic magistracy). The Curator was a city's chief representative, supervising building projects and keeping the peace. During the Great \*Persecution, *curatores* were active in arraigning Christians. In the East, the office of Curator (Gk. *Logistes*) carried less prestige (*CTh* VIII, 12, 8). By the 6th century, postholders (now styled Pater Civitatis) were chosen by the \*bishop, leading citizens, and principal landowners (*NovJust* 128, 16). CMK

Jones, *LRE* 726, 758–9.

**curia and curialis** See CITY COUNCILS AND COUNCILLORS.

**curiosi (curagendarii)** Officials drawn from junior-ranking \**agentes in rebus* and sent to the \*provinces to police the use of the imperial transport and communications system (\*Cursus Publicus). The inspectorate was headed by the *Curiosus Cursus Publici Praesentalis*, subordinate to the \*Magister Officiorum. *Curiosi litorum*, stationed at ports, monitored maritime traffic. CMK

Clauss, *Magister Officiorum*, 45–8.

**Curiosum Urbis Romae Regionum XIV** One of the Regionary Catalogues of \*Rome and an essential source for the history of the urban fabric of Rome. It has customarily been dated c.334–57, because it includes the equestrian \*statue of \*Constantine I, but not the \*obelisk erected by \*Constantius II. LHCG ed. Jordan, *Topographie*, 2/2, 539–74.

**Curopolates (Cura Palatii)** Prestigious military post with the standing of \*tribunus, ranked alongside the \*Tribunus Stabuli (supervising the imperial stables) and *tribuni* of the palace guard, the \*Scholae Palatinae (*CTh* VI, 13, 1). \*Justin II was Curopolates at his accession in 565. Thereafter this was an honorary \*title conferred on the imperial family and foreign (e.g. \*Armenian) royalty. It should not be confused with (1) the *curae palatinorum*, palace functionaries (not necessarily \*eunuchs) under the \*Castrensium (*Not. Dig.* 17, 5 [or.]); or (2) the *Cura Palatii* in the 6th-century West, responsible for the maintenance and repair of royal \*palaces (\*Cassiodorus, *Variae*, 7, 5). CMK

Jones, *LRE* 372.

**curses and curse-tablets** Loosely formulaic performative utterances that aim to reassert social parity ('justice') after the speaker has suffered a perceived wrong. With the spread of literacy, such utterances took a material form (Gk. *katadesmos*; Lat. *defixio*), addressed to named local deities, written on lead-sheet, and deposited in a shrine, grave, or well. In the Classical period, these are mainly occasioned by imminent lawsuits. Into the Roman period, such texts were mainly written by the principal person involved, implying a widespread awareness of the appropriate form. During the Principate, three new types appear alongside these: (1) Graeco-Egyptian temple-practice developed a superior, learned mode, disseminated by itinerant practitioners and written models, expanding the concept to gain customers, esp. aggressive \*magic associated with love and with the circus/arena; (2) an originally eastern Mediterranean formalized appeal to a named deity to right a claimed wrong ('prayer for justice') was adapted to the model of the *defixio*; (3) a related form aiming to persuade a deity to restore stolen property. All three types continue into the Christian Empire. RLG

**cursores** Messengers forming part of the *\*officium* of a provincial *\*governor* or *\*Praefectus Praetorio* and of the central *\*administration* under the *\*Magister Officiorum*. In 534, a Schola Cursorum of 30 men served under the *Praefectus Praetorio Africae* (*CJust* I, 27, 1, 31). AKo

Jones, *LRE* 582, 590, 593.

A. Kolb, *Transport und Nachrichtentransfer im Römischen Reich* (2000), 278–80.

**cursus** See PROSE RHYTHM, LATIN.

**Cursus Publicus** State transport system, instituted by Augustus (Suetonius, *Augustus*, 49,3–50), initially as a courier service, then as a transport network, financed by compulsory *\*services*, using wagons and *\*pack-animals* provided at intervals along main *\*roads*, (*viae publicae*). These stretched about 100,000 km (over 60,000 miles) and included stations for lodging and food (*mansiones*) and the change of transport facilities (*mutationes*) at average intervals of 12 and 25 miles (listed in detail on the roads he traversed by the *\*Bordeaux Pilgrim* of 333).

The Cursus Publicus did not provide regular conveyance nor was it for use by private individuals. It supplied transport for messengers, officials, soldiers, and others assigned to travel or convey goods and possessing a warrant (*evectio, tractoria*) issued by the *\*emperor*, the *\*Magister Officiorum*, or a *\*Praefectus Praetorio*.

Separate branches of the Cursus Publicus provided rapid transport (*cursus velox*) using mules and horses, and slow transport for goods (*cursus clabularius*). In some regions it employed water transport (e.g. on the *\*Nile* or using the imperial Adriatic *\*fleet*).

Although the *\*curiosi* (*CTh* VI, 29) controlled use of the system emperors were unable to prevent its frequent misuse (*CTh* VIII, 5) and, as *\*Ammianus* complained (*XXI*, 16, 18), extended the circle of users by bestowing privileges on *\*bishops* and others. *\*Procopius* (*Anecdota*, 30) complains that *\*Justinian* I cut the system, except on the road across *\*Anatolia* to the eastern *\*frontier* (the *\*Pilgrims' Road*). AKo

A. Kolb, *Transport und Nachrichtentransfer im Römischen Reich* (2000), 278–80.

**curtain** Curtains (*vela*) of *\*dyed* wool or sometimes linen decorated with bright scattered motifs in tapestry weave (as surviving examples show) served in pairs as space dividers, suspended between columns or over doors and doorways in public buildings, especially churches. They were suspended from horizontal rods or pegs, and could be artfully knotted back (as in the Palatium *\*mosaic* at S. Apollinare Nuovo in *\*Ravenna*). Closely related in function were wall hangings (also called *vela*) with overall decoration in figured wool

tapestry weave or looped pile, or resist-dyed: they covered complete wall surfaces, sometimes on a monumental scale. In a *\*court* of law, particularly at the entrance to its *\*secretarium*, and in imperial audience halls, *vela* ensured privacy and restricted access (*CTh* I, 16, 7; *\*Lucifer* of Cagliari, *Moriendum Esse pro Deo Filio*, 1). They also secured privacy for religious consultations and for the *\*exedras* in *\*fora* where *\*rhetoricians* and *\*grammatici* taught (*\*Augustine Conf.* I, 13, 22; sermon 178, 8). In art deceased figures might be shown with a curtain behind them. JPW

A. De Moor and C. Fluck, eds., *Clothing the House: Furnishing Textiles of the 1st Millennium AD from Egypt and Neighbouring Countries* (2009).

**customs dues** Taxes on the movement of goods levied in various contexts. A rate of 12.5% was charged at imperial *\*frontiers*, while lower charges for transit between *\*provinces* appear to have persisted, as also *\*tolls* on goods entering and leaving *\*cities* (including *\*harbours*) (e.g. *SEG* 37.1257 [*\*Anazarbus*]). Exemptions were received in certain situations (e.g. peasants delivering and *\*navicularii* transporting the *\*annona*). These taxes were collected by officials under the *\*Comes Sacrarum Largitionum* until the late 5th century, when their administration passed to the *\*Praefectus Praetorio*. *\*Procopius* (*Anecdota*, 25) complains that *\*Justinian* I increased dues at *\*Abydos* and *\*Hieron*. ADL

Delmaire, *Largesses*, 274–312.

**Cuthbert of Lindisfarne, S.** (c.635–687) *\*Bishop* of *\*Lindisfarne*. Little is known of Cuthbert's family and early life. He may have been from near Melrose, in southern Scotland, where he entered a *\*monastery* in 651. He later went with his abbot, Eata, to a new foundation at *\*Ripon*; they returned to Melrose when King Alchfrith expelled the community for following the Irish method of dating *\*Easter*; at the Synod of *\*Whitby* in 664 he accepted the Roman method. Cuthbert became prior at Melrose (c.664), and was later prior at Lindisfarne before establishing a hermitage on the Inner Farne Islands. He was consecrated Bishop of Lindisfarne in 685, and *\*Bede* records that he was assiduous in his pastoral duties. Cuthbert died on 20 March 687 on Inner Farne. He was acclaimed as a saint almost immediately after his death. His body was buried on Lindisfarne and moved to a shrine in 698. An anonymous *Life* (*BHL* 2019) in four books was written at Lindisfarne soon afterwards, as were the *\*Lindisfarne Gospels*. Bede wrote *Lives* of Cuthbert in verse and prose between 705 and 731 (*BHL* 2020 and 2021). S. Cuthbert's *\*relics* are now in Durham Cathedral and the original coffin in its Treasury. HFF

*ODNB s.n.* Cuthbert (Rollason and Dobson).

**Cynegius** Maternus, \*Praefectus Praetorio Orientis (384–8) and \*consul (388). Possibly from \*Spain, Cynegius was a loyal supporter of \*Theodosius I and a zealous Christian. As Praefectus, Cynegius inspired many anti-\*pagan and anti-\*Jewish laws, prevented \*sacrifices, and closed several pagan \*temples. He also may have been responsible for destroying temples at \*Edessa and \*Apamea (\*Zosimus, IV, 37, 3). This policy attracted the animosity of \*Libanius, who accused him of exceeding his powers (*Oration* 49, 3) and possibly blamed him and his wife Acanthia of being under the influence of monks (Libanius, *Oration* 30 *For the Temples*, 46). Cynegius died in 388 and was buried at the Church of the \*Holy Apostles in \*Constantinople (Zosimus, IV, 45), but his wife later translated his body to \*Spain (*Chron. Min.* I, 244–5). DN PLRE 1, Cynegius 3.

**Cyprian of Carthage** \*Bishop of \*Carthage and \*martyr (d. 258). Thascius Caecilianus Cyprianus was born into a well-to-do \*pagan family at \*Carthage, and became a teacher of \*rhetoric and an advocate. He was converted to Christianity in c.246 under the influence of the presbyter Caecilian, and was reported to have given away all his property (Cyprian, *Ad Donatum*, 4; \*Jerome, *Vir. Ill.* 67, Pontius, *VCypriani*, 2–4). Shortly afterwards, bypassing the intermediate grades of clergy, he was elected Bishop of Carthage in the face of some opposition (*VCypriani*, 5). During the first wave of \*persecution by \*Decius (249–51), which turned on the universal command to \*sacrifice, Cyprian and many others went into hiding.

After the persecution ended, the problem of how to deal with those who had 'lapsed' (by sacrifice, burning \*incense, or bribing a magistrate to issue a \*libellus, a certificate of sacrifice) divided the Churches of \*Africa and \*Rome. Cyprian opposed the swift reconciliation of the lapsed advocated by others at Carthage, justified by the intercession of martyrs and confessors. Eventually, endorsing Cyprian, \*councils at Carthage in 251 and 252 ruled that the lapsed could be readmitted only after a period of \*penance. The controversy took another turn in the 250s when Cyprian demanded the rebaptism of

schismatics, arguing that sacraments administered by those outside the Church were not valid. This brought Cyprian into conflict with Stephen, Bishop of \*Rome, and the two corresponded heatedly about the issue (Cyprian, *epp.* 67–75).

After persecution resumed in 257 under \*Valerian and \*Gallienus, Cyprian was summoned to the \*court of the \*Proconsul of Africa and exiled. Recalled to Carthage for a further trial in 258, he was sentenced to death for refusing to sacrifice to the gods, and on 14 September 258 was beheaded before a crowd of supporters (*VCypriani*, 15–18 and *Acta Proconsularia Cypriani*).

Cyprian produced a dozen rhetorically sophisticated and biblically inflected treatises on contemporary concerns of Christian life and practice such as virginity and \*almsgiving, and on controversies over church discipline (*De Lapsis* and *De Unitate*). A large body of \*letters also survives, written to various lay and clerical correspondents; they reveal him administering his church *in absentia*, and offering advice on a range of practical, theological, and disciplinary matters.

A panegyric biography by the \*deacon Pontius (*BHL* 2041) probably dates from the year after Cyprian's death. The bishop's witness as a martyr set a lasting example for African Christians. \*Donatists emulated him; \*Augustine preached frequently at his shrine in Carthage. His broader reputation inspired a poem by \*Prudentius (*Peristephanon*, 13) and fed the legend of a homonymous magician known as Cyprian of \*Antioch (*BHG* 452–61), praised by \*Gregory of \*Nazianzus (*Oration*, 24).

**Cypriot Red Slip Ware** Wheelmade tableware with a reddish-purple fine fabric, probably intended as a revival of the earlier Cypriot \*Sigillata. A thin slip (or gloss) with a metallic appearance similar to \*Phocean Red Slip Ware (PRS) was applied over the entire vessel or only over the interior and rim. Typical shapes are shallow dishes, bowls, or basins with flat bases or low feet. Decorative techniques include rouletting, incised zigzag strips, and stamped motifs (\*crosses, floral/geometric designs), matching contemporary \*silver vessels. The ware is dated from the late 4th to late 7th (possibly 8th) centuries. Its Cypriot provenance is still unproven (no kilns have been found yet on the island of \*Cyprus), but kilns and wasters have been found in \*Pisidia on the south coast of Turkey. JV

**Cyprus** Strategically placed Mediterranean island rich in \*agriculture, \*trade links with \*Egypt and \*Levant, and mineral resources, especially \*copper (though not \*marble). Coastal \*cities supported flourishing urban culture, despite severe \*earthquakes in the mid-4th century.

Cyprus is listed as a single \*province governed by a \*Consularis, as part of the \*Dioecesis of \*Oriens, in the \*Verona List and \*Notitia Dignitatum. The Roman administration based at \*Paphos was transferred by \*Constantius II to \*Salamis, restored and renamed Constantia. In 536 \*Justinian I transferred it, with five other provinces, to the newly-created \*Quaestura Exercitus. The island became strategically important in the early 7th century; it issued \*copper \*coinage during \*Heraclius' revolt in 610 and took in refugees fleeing from \*Persian invasions. Decisive \*Arab raids began with \*Mu'awiya in 649; many cities, such as \*Kourion, were abandoned or relocated. In 688 by treaty with the \*Caliph \*Abd al-Malik, Cyprus, with \*Armenia and \*Iberia, became a condominium, paying taxes both to \*Constantinople and the Caliphate; this arrangement lasted, with brief interruption, until the Byzantine reconquest of 965.

An emergency mint operated sporadically in Cyprus during the 7th century, including during the revolt of Heraclius (608–10), and 626–9. \*Constantine IV reissued copper coinage from the island, mainly of \*Constans II, by applying a \*monogram countermark. Various (often blundered) \*mint marks were used.

Despite tradition that the island was evangelized by S. Paul and the Cypriot-born S. Barnabas (Acts 4: 36; 13: 6), nothing is known of the spread of Christianity before 325, when three \*bishops, including S. \*Spyridon, attended the \*Council of \*Nicaea. This number increased to twelve by the Council of \*Serdica in 343. Most influential was Egyptian-trained \*Epiphanius, Bishop of Salamis–Constantia (367–402/3), author, traveller, anti-\*Origenist campaigner, and friend and counsellor to the \*Emperor \*Theodosius I. The \*basilica named after him at Salamis was the largest building on the island. Cyprus came under the authority of the \*Patriarch of \*Antioch, but won a degree of independence at the Council of \*Ephesus in 431, which was confirmed by the \*Emperor \*Zeno in 488 after the timely discovery by Archbishop \*Anthemius of the \*relics of S. Barnabas, making it the first Christian church to be granted autocephaly. A synod was held in Cyprus, probably in 634, as part of \*Heraclius' attempts to impose Monotheletism. The \*saints' lives by \*Leontius of Neapolis portray a lively literary culture right up to the \*Arab raids.

Wealthy private \*houses with extensive \*mosaic floors excavated at \*Paphos and \*Kourion and some \*pagan sanctuaries, such as that of Aphrodite at Palai-paphos, continued in use into the 4th century, but the principal material evidence for Cyprus' Late Antique prosperity lies in its 70 known Christian basilicas.

**Cyprus, churches of** The first wave of church building in \*Cyprus after \*Constantine I is obscure. No archaeological evidence supports the legend that \*Stavrouvouni was founded in the 4th century, but earlier structures have been identified beneath several 5th-century \*basilicas (Tamassos, associated with the 1st-century \*Bishop Herclidius, \*Soloï, \*Kourion, \*Lefkosha).

A total of 70 basilicas are known from Late Antiquity, both large ecclesiastical complexes (by 400 Cyprus had fifteen bishops) and single churches. By the end of the 4th century massive churches had been built at \*Paphos (Chrysopolitissa, 50 × 38 m (165 × 125 feet)) and \*Salamis (S. Epiphanius, 58 × 42 m (191 × 138 feet)) both with seven aisles, latter with additional corridors, perhaps for catechumens. The episcopal basilica was built at \*Kourion in the early 5th century, with a single polygonal \*apse flanked by \*diaconicon and \*prothesis, aisles for catechumens, \*baptistry, and bishop's

palace. The Church of Cyprus was initially under the \*Patriarch of \*Antioch; \*Syrian architectural influences include inscribed east ends (S. Epiphanius; Lambousa), transverse passages linking apses at the east end (S. Epiphanius, Ayios Philon at Karpas, Lambousa, Aphendrika), and flanking diaconicon and prothesis (Kourion).

The Church of Cyprus's assertion of autocephaly in the late 5th century gave rise to another wave of church building, especially at Salamis (Campanopetra; S. \*Barnabas). Separate areas for catechumens were no longer so necessary, so these were much reduced in size (Ayia Trias at Karpas). Many churches were reconstructed in the 6th century, with reduction to three aisles (Chrysopolitissa, S. Epiphanius) and the addition of \*synthrona (S. Epiphanius, Campanopetra, Kourion), but there was limited new building under \*Justinian I. Three basilicas erected at Peyia, Cape Drepanon between the mid-6th and early 7th century, followed layouts standard at \*Constantinople but with wooden roofs rather than vaults and \*domes.

Cyprus gained strategic importance in the early 7th century accompanied by a late flourishing of church building. Two basilicas at \*Katalymmata ton Plakoton on Akrotiri, near Amathus, with unusual processional arrangement in the transepts at its west end, may be associated with S. \*John the Almsgiver, Patriarch of \*Alexandria, who returned to his native Cyprus c.617–20.

Seven baptisteries are known. One is circular (Peyia), the rest cruciform. Four are processional with walk-in fonts (S. Epiphanius, Kourion, Ayios Philon, Ayias Trias), similar to those at \*Qalat Seman and \*Gerasa.

No local source of \*marble exists on Cyprus. Columns and \*capitals were first made of local stone (S. Epiphanius; \*Soloi, Tremithus, Ayias Trias; \*Lythrangomi). By the late 5th century, marble was imported, first from \*Anatolia (columns at Ayios Philon) and later from Constantinople (Campanopetra). By the 6th century, all churches were equipped with a full range of architectural marbles from \*Proconnesus. Liturgical furnishings were also originally of local stone (chancel \*screens at Marathovouno, Tamassus, Ayias Trias), but later of imported marble (ambo at Peyia; chancel screen at Katalymmata ton Plakoton). Carved marble table-tops were also imported. One high-relief decorative panel survives in the Archbishop's Palace, Nicosia. Walls were revetted in locally carved \*champlevé (Kourion), moulded \*stucco (Amathus, \*Kiti, Marathovouno), and \*opus sectile (fragments of figural decoration at Peyia, Katalymmata ton Plakoton).

Floors survive in paved marble, opus sectile, and \*mosaic, mostly in geometric patterns, two surviving figural mosaic panels at Chrysopolitissa (Psalm 42; John 15: 1) and a possible Peaceable Kingdom at

Peyia Basilica A (boar, \*lion, bull). Important examples of wall mosaic include apses at \*Kiti, Lythrangomi, and Livadia (destroyed) and also Kourion.

Some churches went out of use soon after the mid-7th century \*Arab invasions (Kourion), but several underwent subsequent reconstruction (Soloi, Lythrangomi), some with new masonry vaults (Aphendrika, Sykha).

**Cyprus Treasures** Also known as the Lambousa Treasures, these two hoards, dating from the 6th–7th centuries, were both found near the Archeiropoietos \*monastery near Karavás in northern \*Cyprus. The first treasure, unearthed in 1897, consisted of 45 pieces of \*silver—mostly spoons engraved with wild or mythical beasts as well as a censer with Christian imagery, several plates, and a bowl. Most but not all of this treasure entered the British Museum two years later. The second Cyprus Treasure, considered one of the richest of all Byzantine silver hoards by virtue of its set of nine elegantly wrought plates depicting scenes from the early life of the biblical King David and its significant cache of \*gold \*jewellery, was discovered in 1902. J. P. Morgan purchased most of these items in 1906, and they now belong to the Metropolitan Museum (New York). Several works of lesser value, including some bronze \*lamps, some spoons, a pitcher, and three small plates from the David set, remained in Cyprus (Archaeological Museum, Nicosia), while a handful of stray pieces from the two Treasures made their way to Baltimore, Washington, DC, Berlin, and other cities. It is possible that all of the items associated with the two hoards ultimately belonged to a single treasure. They were probably hidden in the mid-600s, when the area was devastated by \*Arab raids.

Unlike most of the contemporaneous hoards that survive from the eastern Mediterranean, the Cyprus treasures are composed primarily of objects for secular use. There are no dedicatory inscriptions to point toward the original owners, but the quality and value of the pieces suggest a family of considerable means, one well positioned to benefit from imperial largesse. Indeed, a magnificent gold \*belt among the treasure's jewellery includes no fewer than four 8-\**solidus* medallions depicting the \*Emperor \*Maurice (582–602), which were issued as \**largitio* for his \*consulship in 583. Many scholars have suggested that the plates were gifts from the Emperor \*Heraclius. His \*silver stamps appear on the back, and the sustained narrative devoted to the preparation and reward of military

conquest, which culminates in David's defeat of Goliath on the largest plate, is often understood as a reference to that emperor's military victories, particularly over the Persians. The plates are striking in that a figure from the \*Bible is presented as a classical hero: the \*dress, poses, compositions, and themes all look to Graeco-Roman tradition. They attest to the way in which imperial, classical, and biblical elements easily meshed in the decorative arts of the Eastern Roman Empire in the 7th century. MH

**Cyrenaica** \*Province, in modern north-east Libya, governed from \*Cyrene by a \*Praeses. Cyrenaica was separated from \*Crete in the provincial reorganization under the \*Tetrarchy, renamed \*Libya Superior (later Libya Pentapolis), and placed in the \*Dioecesis of \*Oriens (later \*Aegyptus). \*Justinian I retained the name and placed it in the Dioecesis of Aegyptus.

**Cyrene** (mod. Shahat, NE Libya) Greek \*city in the \*Verona List \*province of \*Libya Superior in the \*Dioecesis of \*Oriens (\*Aegyptus by the time of the \*Notitia Dignitatum). Cyrene was founded in 630 BC, and gave the name of \*Cyrenaica to the territory surrounding it. It was renowned for exporting the medicinal herb silphium and, with its port \*Apollonia, was the most important city of the Pentapolis in Roman times. Cyrene suffered during the 262 \*earthquake (which severely damaged the large extramural \*Temple of Demeter and Persephone), although the \*Emperor \*Claudius Gothicus partly restored the city. When, under the \*Tetrarchy, the Roman \*province of Creta et Cyrenaica was split, Apollonia, not Cyrene itself, became the capital of \*Libya Pentapolis. \*Ammianus states that in his time the city was deserted (XXII, 16, 4). Its buildings, including a large urban \*villa with Christian \*mosaics, were certainly damaged by the earthquake of 365 which Ammianus describes (XXVI, 10, 15–19). It was at this point that the

sanctuary of Demeter and Persephone was definitively abandoned. Some of its \*portrait \*sculptures were deliberately damaged. \*Synesius of Cyrene in his \*letters describes Cyrenaic country life as a pastoral idyll, but in his discourse *De Regno* composed in the course of an embassy, which sought tax remissions for the city, he portrays Cyrene as deserted following nomadic incursions. Cyrenaica was taken without a fight by Muslim forces in 642–3, following the \*Arab conquest of \*Egypt. KS

**Cyrillona (Qurillona)** (fl. late 4th cent.) Early \*Syriac poet; several of his poems survive in ms. London BL Add. 14591. He was probably a member of the clergy in Roman \*Mesopotamia or \*Syria; one poem (*Scourges*) laments the \*Huns' invasion of that region in 395. Cyrillona's surviving works include three narrative poems on the Last Supper, composed for Holy Week, a rogation \*sermon addressing various scourges his people had suffered, and a short didactic poem on repentance. **Cyril of Alexandria** \*Patriarch of \*Alexandria (r. 412–44), one of the most powerful churchmen of his age, and a sublime theologian known especially for his exposition of Christology. His reputation among later writers was such that \*Anastasius of \*Sinai (7th century) referred to him as 'the seal of the Fathers' and 'the talisman of the choir of the Fathers' (*Viae Dux*, 7, 8: CCSG 8).

He was the nephew of the Patriarch \*Theophilus (r. 385–412) and spent his early years at a monastic community in \*Nitria studying the \*Bible. Theophilus appointed him as a \*reader and employed him as his personal attendant (*HistCoptPatr* 1, 11). Upon the

death of Theophilus, Cyril became Patriarch over the objections of some factions within the Alexandrian Church. Within the space of four years, he consolidated his authority in Alexandria by successfully out-manoeuvring and defeating his perceived opponents: the \*Novatianists, the Alexandrian \*Jewish community, the \*Praefectus Augustalis Orestes, the \*Neoplatonist \*philosopher and \*mathematician \*Hypatia, and a faction within the civic \*aristocracy (*HistCoptPatr* 1, 12).

Once he had secured the unity of the Alexandrian Church, Cyril took up his uncle's feud with the growing ascendancy of the Church of \*Constantinople. He had attended the Synod of the \*Oak (403) with Theophilus and witnessed the deposition of \*John Chrysostom. In 428, Cyril came into conflict with the newly consecrated Patriarch of Constantinople, \*Nestorius, who had taken a public stand against the popular appellation of the Virgin \*Mary as \*Theotokos, i.e. 'the God-bearer'. Cyril saw in Nestorius' objection to this devotional term a deeper reservation about the full unity of Christ's humanity and divinity. This led to an escalating pamphlet war between the two patriarchs, during which Cyril secured the support of Pope Celestine and influential churchmen throughout the East. Eventually, the \*Emperor \*Theodosius II convoked a general \*council of the Church to resolve the issue, and \*bishops duly gathered at \*Ephesus in June 431. Cyril secured the deposition and \*exile of Nestorius, and initially faced the opposition of John, Patriarch of \*Antioch, and the fickle support of Theodosius II. By 433, Cyril had reconciled with John of Antioch, and he spent his remaining years secure in the acclaim of his Alexandrian Church.

In the course of his ongoing conflict with Nestorius, Cyril refined his own Christological views in a vast corpus of writings. He believed that Christology should be grounded in the Trinitarian dogma affirmed at the Councils of \*Nicaea (325) and of \*Constantinople (381). For Cyril, it was insufficient to view the divine Logos as merely indwelling within Jesus. In an Alexandrian theological tradition extending back to \*Athanasius, Cyril regarded the union of the divine and human in Christ as the archetype of transformative salvation (*theosis*) and the foundation of all sacramental theology. Cyril insisted on the full union (*henosis*) of the divine and human in Christ, that is, 'one nature of the divine Word enfleshed'. However, a certain ambiguity in Cyril's use of 'nature' (*physis*), incorporating both 'person' and 'nature', had the result that both parties in the ensuing controversy associated with the Council of \*Chalcedon claimed to uphold the true legacy of Cyril's orthodoxy. N. Russell, *Cyril of Alexandria* (2000).

S. Wessel, *Cyril of Alexandria and the Nestorian Controversy: The Making of a Saint and of a Heretic* (2004).

**Cyril of Jerusalem** (b. c.315, at \*Jerusalem to 387) \*Patriarch of Jerusalem from c.350. Cyril probably became a \*deacon at Jerusalem in the first half of the 330s, and a \*priest c.343. Hardly anything is known about his background, but he was a man of eloquence and learning (\*Sozomen, III, 14, 41–2).

Like his predecessor Macarius, Cyril emphasized Jerusalem's biblical past and its holy sites and objects, such as \*relics of the True \*Cross, as tangible elements from that past. Because of this history and the presence in the \*Holy Land of sacred sites as concrete reminders of Christ's life and passion, Jerusalem deserved in Cyril's view to be recognized as an apostolic see and, instead of \*Caesarea, as the principal bishopric in \*Palestine. His active promotion of Jerusalem brought him into conflict with his \*metropolitan superior in Caesarea. Tensions between the two sees were exacerbated by doctrinal disagreement. In general \*bishops of Jerusalem kept close to the \*Nicene \*Creed, whereas the bishops of Caesarea did not. For doctrinal reasons, Cyril was exiled three times: in 357–9, 360–1/2, and 366/7–79. At the \*Council of \*Constantinople (381), which reconfirmed the Nicene formulation of the faith, he was a leader of the successful Homoousian party.

Cyril also contributed to the development of Jerusalem as a place of \*pilgrimage. He was probably responsible for instituting \*stational \*liturgy, with \*processions moving through the \*streets between the increasing number of holy sites, and the institution of such religious \*festivals as the *anamnesis* of Christ's Passion and Resurrection in the week preceding \*Easter and the Encaenia, the anniversary of the consecration of the Holy Sepulchre (cf. \*Egeria, 30–8 and 48–9).

## Cyril of Scythopolis

Several of Cyril's works have survived, both in his native \*Greek, and in \*Syriac, \*Armenian, and \*Coptic \*translations: a *Letter to Constantius* from 351 describes the appearance of a luminous cross in the sky above Jerusalem. His *Catechetical Lectures* were delivered to those being prepared for \*baptism during Lent, probably shortly after he had become bishop. Cyril's authorship of the *Mystagogical Catecheses* delivered to the newly baptized, and of a *Sermon on the Paralytic*, has been doubted, but these are probably authentic. A \*letter in Syriac about the restoration of the Jewish Temple in 363 is also attributed to Cyril. The legend about \*Helena's discovery of the Cross probably originated in Jerusalem during Cyril's episcopate. HJWD CPG 3585–618:

**Cyril of Scythopolis** (c.525–after 557) Monk in the \*Judean Wilderness, first (544–55) in the \**coenobium* of S. \*Euthymius, then in the \*lavras of S. \*Sabas, who had chosen him as a disciple when still a child. His mentors were John the Hesychast, a recluse in Mar Saba, and Cyriac, a hermit near Suca (Old Lavra of Chariton), both supporters of the Christology defined at the \*Council of \*Chalcedon and opponents of the \*Origenism then prevailing in \*monasteries in \*Palestine. Through them and other elders Cyril became acquainted with the religious history of Palestine between c.420 and his own days, for which he is our main source. In 555 the Origenist monks were expelled from the New Lavra, and Cyril was sent with other monks to occupy it; later he moved to Mar Saba. Here he wrote the biographies of the most prominent figures of Judean Desert monasticism: Euthymius

(BHG 648), Sabas (BHG 1608), John the Hesychast (BHG 897), Cyriac (BHG 463), Theodosius the Coenobiarch (BHG 1777), Theognius (BHG 1787), and Abramius (BHG 12). The *Lives* of Theodosius and Theognius are short, as extensive biographies had already been written by Theodore of \*Petra (BHG 1776) and Paul of Elusa (BHG 1786). A short account of \*Gerasimus, father of monasticism on the Jordan, is inserted in the *Life* of Euthymius. Notably, all these influential monks were foreigners, born and/or educated in Asia Minor (except Cyriac, from \*Corinth), mostly in \*Cappadocia and \*Armenia. LDS

**Cyrrhus** \*City in \*Syria \*Euphratensis. During the Principate, Cyrrhus had been the principal city of the \*province (called 'Cyrrhastica'), but in the 4th century it lost this function to \*Hierapolis, the new provincial capital. \*Theodoret (bp. Cyrrhus 423–after 460) described it as 'deserted, with few inhabitants, and these poor' (*ep.* 32). He himself gave numerous buildings out of church funds, including an \*aqueduct and two great \*bridges (*ep.* 81). However, the city already possessed its greatest treasure, the \*relics of the medical \*martyrs Ss. Cosmas and Damian, and in the next century the \*Emperor \*Justinian I attributed his cure from a dangerous illness to their intercession (\*Procopius, *Aed.* I, 6, 5). Procopius (II, 11) makes it plain that the city had again become ruinous. This Justinian reversed (*IGLS* 145–7). He gave the city metropolitan status, and provided massive \*fortifications; he also provided, or restored, many public buildings and amenities. In honour of Ss. Cosmas and Damian he renamed the city Hagiopolis, though the name did not take on. It was now a major \*pilgrimage destination, and flourished until captured by the \*Arabs in 637. Thereafter it housed a Syriac Orthodox metropolitan till the beginning of the 11th century, when it again became a ruin. Remains of the \*city walls, the imposing citadel, a theatre and other public buildings, and Theodoret's two bridges are still to be seen. RMP

**Cyrus al-Muqawqis** (d. 21 March 642) \*Patriarch of \*Alexandria during the initial years of the \*Arab conquest of \*Egypt.

The \*Emperor \*Heraclius sent Cyrus to \*Alexandria in 631. At first appointed \*bishop and prefect, possibly also \*Praefectus Augustalis, he soon (633?) became Patriarch of Alexandria, which he remained with some interruptions until his death in 642. The \*Arabic sources refer to Cyrus as al-Muqawqis, a name derived through \*Coptic from \*Greek *kaukasios* referring to his background as Bishop of \*Phasis (\*Lazica) in the Caucasus. Arabic sources describe al-Muqawqis as receiving two Arab delegations in Egypt in 627 and 628, before the Arab conquest. In reply to \*Muhammad's \*letter of 628 inviting him to join \*Islam, al-Muqawqis sent a refusal accompanied by many gifts including two concubines, Māriya and Shirīn. The former bore Muhammad a son called Ibrāhīm who died in infancy. The term al-Muqawqis is also used in reference to other people, including the \*Miaphysite Patriarch \*Benjamin I (in office), and was generally considered an Egyptian regal title.

In an attempt to return the Miaphysites of Egypt to orthodoxy, Cyrus supported Heraclius' compromise theologies of \*Monotheletism and Monoenergism which assign Christ two natures but one will or activity respectively. His agreement concerning Monoenergism with the Theodosians of Alexandria in 633 recorded in the 'Nine Chapters' (CPG 7613) might be considered successful. Coptic sources, however, remember Cyrus as a cruel persecutor who forced the Coptic Patriarch \*Benjamin to seek refuge in the \*monasteries of the \*Wadī an-Natrūn. The only other writings known by Cyrus are three letters to Sergius, Patriarch of \*Constantinople (CPG 7610–12).

Cyrus' position as the supreme political, military, and financial leader responsible for Egypt in the name of the Roman authorities emerges clearly in his dealings with the Arabs. In 636 he concluded a truce with the Arabs: they would refrain from attacking Egypt in exchange for payments for which Cyrus had to raise extra taxes. \*Heraclius disagreed with this arrangement, and dismissed Cyrus, but the patriarch seems to have been back in his post in 638. Cyrus negotiated the surrender of \*Babylon in 640/1, as recounted in the *Chronicle* of \*John of \*Nikiu. After having been recalled briefly to \*Constantinople, he returned in 641 to negotiate the Arab takeover of Alexandria. The Egyptians had to pay a \*tribute, and Roman troops had to leave the city a year later. Cyrus died shortly afterwards on 21 March 642, in Alexandria. PMS

**Cyrus and John, Ss.** Christians venerated as \*miracle workers, and \*martyrs of the Great \*Persecution. Their lives are obscure; Cyrus is said to have been a physician and John a high-ranking soldier. Their bodies were kept in \*Alexandria until \*Cyril, \*Patriarch of Alexandria (r. 412–44), moved them to \*Menouthis to supplant a \*pagan healing cult at a nearby \*temple of \*Isis. The modern place name \*Aboukir derives from 'Abba' (father) and 'Cyrus'. The principal sources for their lives, deaths, and miracles are works by \*Sophronius of \*Jerusalem, who was cured at the shrine (Miracle 70). Their \*relics were later translated to \*Rome.

**Cyrus of Edessa** (fl. mid-6th cent.) Cyrus (Qiyore) of Edessa was a theologian and teacher active in the schools of \*Nisibis and \*Seleucia-Ctesiphon. After studying with the future \*Catholicus Mar \*Aba (d. 552), Cyrus became director of the school in Seleucia-Ctesiphon. He is said to have founded a \*monastery in al-\*Hira. Cyrus composed six *Explanations* of dominical \*festivals, thus completing the cycle begun by \*Thomas of \*Edessa. Cyrus' theology is influenced by \*Theodore of \*Mopsuestia. UP

**Cyrus of Panopolis** (fl. 430s–450s) Flavius Taurus Seleucus Cyrus Hierax was \*Praefectus Urbi at Constantinople in 439, and simultaneously \*Praefectus

## Cyzicus

Praetorio of the East for about two years. He was made \**patricius* and was \*consul in 441. Such high office flowed from his personal literary talents and the \*patronage of the \*Empress \*Eudocia. On losing the trust of her husband, the \*Emperor \*Theodosius II, in the early 440s Cyrus was exiled as Bishop of \*Cotiaeum in \*Phrygia where he composed a life of S. \*Menas. After Theodosius' death in 450 he returned to live peacefully at Constantinople, dying in the reign of \*Leo I. Cyrus was the author of \*epics, an \*epigram for the column of S. \*Daniel the Stylite, and others in the \**Greek Anthology*, and imperial \*panegyrics including one delivered before the marriage of \*Eudoxia and \*Valentinian III in 437. He was celebrated at Constantinople for building the city's sea walls, and as the instigator of street lighting and other renovations including a new church of the Virgin \*Mary in 439. A native of \*Egypt, he was the first to replace \*Latin with \*Greek as the language of public administration in the East.

**Cyzicus** (near mod. Erdek) Ancient \*city located on the southern shore of the Sea of \*Marmara, close to the

island of \*Proconnesus. With the reorganization of the \*province of \*Asia in 297, Cyzicus became the capital of the new province of \*Hellespontus, with, later, a \*metropolitan bishopric continuing into the Byzantine period. Cyzicus was captured by the \*usurper \*Procopius in 365. An ancient \*temple was turned into a church of the \*Theotokos during the reign of \*Leo I (\**Theosophy of Tübingen* 53) or \*Zeno (\*John Malalas, IV, 12; \*John of \*Antioch, fr. 15). Half the city was destroyed in an \*earthquake in 539. Cyzicus was formerly an island, but a silted causeway formed in the Middle Ages. The \*Arabs wintered there during the first Arab siege of \*Constantinople of 674–8 (\**Theophanes*, AM 6165).

The mint of Cyzicus (\*mint mark SMK up to \*Theodosius II, CVZ/KVZ thereafter) was opened by \*Gallienus and minted sporadically through the 4th century. Moneyers are referred to by \*Sozomen (V, 15) in the 5th century as a major group within the city and from the reign of \*Anastasius I to its cessation in 629 it was an important producer of copper \*coinage. # D

**Daciae** \**Dioecesis* created in the first half of the 4th century when the Dioecesis \*Moesiae of the \*Verona List was divided into the Dioecesis Daciae (to the north) and the Dioecesis \*Macedoniae (to the south). According to the \**Notitia Dignitatum*, the Dioecesis Daciae comprised the \*frontier \*provinces of \*Moesia Superior Prima and \*Dacia Ripensis, and, to the south of them, \*Dacia Mediterranea, \*Dardania, and \*Praevalitana and part of \*Macedonia Salutaris. The \*Praefectus Praetorio of \*Illyricum resided in and administered the *dioecesis* himself (*Not. Dig.* [or.] I, 77 and 121–5; III, 1–4 and 14–19). By the 9th century, \*Bulgars and \*Slavs had come to control Dacia.

ABA

Jones, *LRE* 370 and 373.

*Barrington Atlas*, map 101.

**Dacia Ripensis and Dacia Mediterranea** Roman \*provinces in the north \*Balkans from the 4th century onwards.

The territory north of the Danube in modern Romania which formed the Roman province of Dacia in the High Empire had been conquered by Trajan in AD 106. It was abandoned by \*Aurelian (270–5), who accommodated refugees, including the mother of the future \*Emperor Galerius (\*Lactantius, *Mort.* 9, 2), in new provinces called the Two Dacias south of the Danube. The \*Verona List places the Dacias (in the plural) in the \*Dioecesis \*Moesiae. They are referred to as Dacia and Dacia Ripensis in 343/4 and a \*Praeses Daciae is attested in 321. The name of Dacia Mediterranea first occurs on an \*inscription of the reign of \*Valentinian I.

Dacia Mediterranea appears in the \**Notitia Dignitatum* governed by a \*Consularis and Dacia Ripensis governed by a Praeses (*or.* I, 77 and 121); both provinces were in the Dioecesis \*Daciae under the \*Praefectus Praetorio of \*Illyricum (*or.* III, 15–16). Dacia Ripensis was immediately south of the Middle Danube, with \*Moesia Superior Margensis (Prima) upstream and Moesia Inferior (Secunda) downstream; \*Hierocles lists \*Ratiaria as its principal \*city (655, 2).

Dacia Mediterranea lay immediately to the south of Dacia Ripensis; Hierocles gives its principal city as \*Serdica (654, 3).

**Dadishōʿ Qatrāyā** Late 7th-century \*Syriac monastic writer in the \*Church of the East, originally from Bet Qatraye (mod. Qatar) All his writings centre upon the contemplative practice of *shelya* (stillness). A *Treatise on Solitude* describes an advanced regimen of seclusion and \*prayer for a solitary monk. In the *Letter to Mar Abkosh on Hesychia* (*On Stillness*) Dadishōʿ responds to a friend regarding distractions in the practice of stillness. The *Commentary on Abba Isaiah* follows the monastic advice of a 5th-century Egyptian or Palestinian author, focusing on revival of the practice of *shelya* (the condition of the soul needed to meet God). The *Commentary on the Paradise of the Fathers* is a series of questions and answers between monks and an elder, discussing spiritual issues raised by a collection of sayings of the \*Desert fathers, the \**Apophthegmata Patrum*.

**Dagobert I** \*Frankish King (623–39) who was the son of \*Chlothar II and either Berthetrude or Halde-trude. He was appointed king in \*Austrasia, excluding the lands west of the Ardennes and the Vosges in 623, and married Gomatrude, the sister of Chlothar's queen. After a dispute with his father, the western territories were restored to the Austrasian kingdom in 626. Upon Chlothar's death, Dagobert became sole ruler of the \*Merovingian kingdoms, divorced Gomatrude, and married Nantechild in 629, with whom he had a son, \*Clovis II; he also had an older son, \*Sigibert III, with a concubine, Ragnetruide. He installed his brother \*Charibert II as king in \*Aquitaine in 629, but was possibly responsible for his assassination in 632. That same year, he made the infant Sigibert king over Austrasia, retaining \*Neustria-\*Burgundy for himself. In the 630s, Dagobert organized successful campaigns against the \*Gascons and Bretons, but achieved mixed results on the eastern frontier against \*Samo, King of the \*Slavic Wends. He also entered into diplomatic relations with the \*Emperor \*Heraclius, and intervened in support of \*Sisenand in Visigothic \*Spain.

Dagobert's kingdom was centred on his royal \*court in the \*Paris region, where nobles were groomed for secular and episcopal appointments. The structure and activity of Dagobert's court are visible in the *Lives* of \*bishops, especially \*Audoenus of \*Rouen, \*Eligius of Noyon, and \*Desiderius of Cahors, as well as in the latter's \*letters. These, and other writings, point to political developments which would become emblematic of the later Merovingian period: the reliance on ecclesiastics at the royal courts, the emergence of the \*Mayors of the Palace, and royal enthusiasm for monastic foundations. Dagobert augmented monastic endowments at

Solignac, Elnon, and Rebais; the latter's foundation document of 635 is the oldest extant Merovingian royal \*charter. He was especially devoted to S. Denis, who was promoted to royal patron and whose church Dagobert transformed into a richly endowed \*monastery dedicated to the royal cult. He was buried there when he died of dysentery in 639. He was succeeded in Neustria-Burgundy by his second son, \*Clovis II. HJH

**Dagobert II** \*Frankish King of \*Austrasia (c.676–c.679) He was the infant son of \*Sigibert III, exiled to \*Ireland by \*Grimoald in 657 after his father's death. He became king on his eventual return, but was murdered in obscure circumstances, and later venerated as a \*martyr. PJJ

*LexMA* 3, 430 (U. Nonn).

P. Fouracre, 'Forgetting and Remembering Dagobert II: The English Connection', in P. Fouracre and D. Ganz, eds., *Frankland: The Franks and the World of the Early Middle Ages* (2008), 70–89.

**Dagobert III** (c.698–715) \*Frankish King from 711. Dagobert was still a minor when he succeeded his father \*Childebert III as king of the whole Frankish realm. Real power was exercised by \*Pippin II, and latterly his widow \*Plectrude. The \*Neustrians rebelled and elevated \*Chilperic II on his death. EJ

*LexMA* 3, 430 'Dagobert III' (H. Ebling).

**Dağ Pazarı** Archaeological site (formerly Kestel) in \*Isauria (Rough \*Cilicia), about 34 km (21 miles) north of modern Mut overlooking the main \*road from \*Iconium to \*Seleucia ad Calycadnum. It is a natural fortress 1,400 m (4,600 feet) above sea level and descends steeply on three sides as well as being defended by a \*city wall 5 m (16 feet) high. An \*inscription found in the region in 1961 has suggested the settlement be identified as ancient Coropissus, a city which minted \*coinage into the 3rd century, of which many examples survive.

The \*Bishop of Coropissus attended the \*Council of \*Nicaea. There survive at Dağ Pazarı remains of a cathedral with a \*baptistery, a funerary church *extra muros*, a church with an ambulatory; a fourth church may be part of a \*monastery. Gough remarks that the floor plan of the church with an ambulatory resembles that of the churches of Meryemlik (Seleucia ad Calycadnum) and \*Alahan, and, in linking them to the \*Emperor \*Zeno, he argues that the ambulatory church at Dağ Pazarı was also an imperial commission. **Dahlaq Islands** Red Sea archipelago off the coast of Eritrea. They were a major source of obsidian in early and, perhaps, \*Aksumite times but further research is needed to clarify the significance of other sources in the region. Numerous graves and \*cisterns indicate the presence of a large population, but datable features are restricted to \*Arabic \*inscriptions of the 10th–15th centuries, during which period the islands served as a bridgehead for \*Arab penetration into the Horn of Africa. Although architectural fragments have been inconclusively claimed as Aksumite, little firm evidence is yet available for substantial pre-10th-century occupation.

**Damascius** (c.460–after 538) \*Rhetorician, \*philosopher, and biographer of the philosopher \*Isidore. Damascius studied in his native \*Damascus and in \*Alexandria before beginning a career as a rhetorician in Alexandria around 480. He served in this capacity for nine years (\*Photius, *Bibliotheca*, 181) before fleeing to \*Athens with the philosopher Isidore. He was converted to philosophy en route and subsequently became a vocal critic of rhetoric and rhetoricians. In Athens, he studied philosophy under \*Marinus, \*Isidore, and Zenodotus (the successor of Marinus as \*Diadochus of the Academy of Athens), remaining affiliated with the Athenian \*school even after Isidore's departure. He ultimately became Diadochus himself, probably in the early 510s, and remained so until the school's closure under the \*Emperor \*Justinian I in 529. In 531, following a second round of Justinianic anti-\*pagan legislation, Damascius travelled to the \*Persian Empire along with a group of six colleagues in hopes of finding a more hospitable environment at the \*court of \*Khosrow I. According to \*Agathias (*Histories*, II, 30, 3–4), Damascius and his colleagues were disappointed with what they found in Persia and returned to the Roman Empire after securing protection from persecution as part of the \*Everlasting Peace of 532. In 538 Damascius composed an \*epigram for a slave girl in \*Emesa (*AnthGraec* VII, 553) and died presumably not long afterwards.

Damascius wrote a *Life* of his teacher Isidore (also called the *Philosophical History* by the \*Suda), a work in which Damascius defines the character and behaviour of Isidore by comparing him to many of the leading pagan intellectuals active in the later 5th and early 6th centuries. Perhaps two-fifths of the work survives, primarily in an epitome by \*Photius (181) and fragments preserved in the *Suda*. Damascius also wrote commentaries on Plato's *Parmenides*, *Timaeus*, *Phaedo*, *First Alcibiades*, and *Philebus*, a commentary on the \*Chaldean Oracles, and an extant treatise *On First Principles*. Contemporaries mention works on \*astronomy (\*John Philoponus, *Commentaria in Aristotelis Meteorologica* [CAG 14, 1] 86b, 104b) and one entitled *περὶ ἀριθμοῦ καὶ τόπου καὶ χρόνου* (\*Simplicius, *Commentaria in Aristotelis Physica* [CAG 9–10] 625, 644, 774, 800). Photius (*Bibl.* 130) also describes a four-book *Paradoxa* written by Damascius that is otherwise completely lost.

**Damascus** \*City, first mentioned in the 2nd millennium BC, at the heart of a large oasis where Abarna and Pharpar, the rivers of Damascus (2 Kings 5:12), debouch from the mountains of the Anti-Lebanon on their way east into the Syrian Desert. It was famous for its fertility and its \*farming. A 4th-century geographer appreciated its plums, its small dates and pistachios, and its beautiful women (\**Expositio Totius Mundi et Gentium*, 30–1) and a \*letter which survives among those of the \*Emperor \*Julian praises figs and especially those of Damascus, a city which in very truth belongs to Zeus, 'the eye of the whole East', wonderful for its rivers, climate, and fertility (ep. 80 Wright = 180 Bidez-Cumont).

Damascus became a *colonia* in the early 3rd century and, by the time of the \**Notitia Dignitatum*, was the principal \*city of the \*province of \*Phoenice Libani, also called Phoenice Secunda. The grid pattern of the Roman \*city is discernible in the layout of the modern city: the Souq Midhat Pasha (the Street called Straight of Acts 9:11) follows the line of the Decumanus, crossed by the Cardo, at whose northern end was the Temenos of the \*Temple of Zeus/Jupiter Haddad, transformed under \*Theodosius I into a church (\*John Malalas, XIII, 37, 344) dedicated to S. John the Baptist, one of whose heads was venerated there, and then, under the \*Caliph al-\*Walid I (705–15), partly demolished and appropriated for the Great Mosque of \*Damascus. The Gallic \*Bishop Arculf visited the church in the 670s when the takeover was only partial (\*Adamnan, *De Locis Sanctis*, III, 28).

Numerous other churches and religious houses were built in the course of Late Antiquity, both in the city and in its surroundings. \*Justinian I founded a \*monastery named after S. Leontius of \*Tripolis (\*Procopius, *Aed.* V, 9, 26), \*miracles occurred at a Church of S. Thomas, and there was a Church of S. \*Sergius called 'of Maxillatos'. The \*Piacenza Pilgrim visited a monastery at the second milestone which marked the site of the conversion of S. Paul (46), and there was a \*basilica at the \*village of Mariamme commemorating S. Gelasinus, a local man and \*actor, purportedly martyred at \*Heliopolis-Ba'albek (John Malalas, XII, 50, 314–15; \**Chronicon Paschale* ad ann. AD 297; \*John of \*Nikiu, 77). In 635 the Muslim conquerors permitted the local population to retain fifteen of their churches.

Damascus was an important point of contact between the peoples of the Desert and the Sown. The \*Tetrarchic Land Surveyors were active in the \*villages of the oasis (Millar, *RNE* 539–40). It was also the central point on the \*Strata Diocletiana, the line of Roman forts which ran south along the route at the edge of the Syrian Desert from \*Sura on the \*Euphrates \*frontier, through \*Palmyra, and on down to \*Aila at the head of the Gulf of Aqaba (Millar, *RNE* 183–4). There was probably a Roman camp in the north-west corner of the city walls of Damascus on the site of the later citadel, and the \*Dux Phoenicis commanded numerous \*cavalry units spread across the surrounding territory (\**Notitia Dignitatum* or. XXXII). During the final phases of the Great \*Persecution in 311/13 the Dux at Damascus rounded up a bevy of prostitutes and obliged them to calumniate the local Christian community (\*Eusebius, *HE* IX, 5, 2). There were also \**fabricae* for \*arms and armour (\**Notitia Dignitatum* or. XI, 20), 'bearing in mind the incursions of the \*Saracens' (John Malalas, XII, 38, 307–8).

Relations with the local \*Arab tribes fluctuated. In the early 5th century Antiochus the Dux (*PLRE* II, Antiochus, 9) told S. \*Symeon Stylites the Elder about a grand banquet to which he had been invited by al-Nu'man (*PLRE* II, Naamanes 1), King of the \*Lakhimids (*VSymeonStyl* [Syr.] 101). In 453, the historian \*Priscus of Panium was at Damascus and found the \*Magister Militum \*Ardabur, son of \*Aspar, in the process of negotiating a peace with the local \*Saracens after fighting them (fr. 26 Blockley = 20 Müller *FHG*). The military command was of sufficient importance in the 6th century for the Dux to remain independent of the new civil \*governor (\*Moderator) when in 535/6 \*Justinian I reorganized the local provincial administration; he was paid ten pounds of \*gold *per annum* (*EdJust* 4). However in 613 the city surrendered to the Persian general \*Shahrwaraz as he marched south from \*Antioch to \*Bosra and \*Jerusalem; he demanded \*tribute and took prisoners, and marched through again the following year on his way back north.

Damascus was captured by the Muslims early in the \*Arab conquest of Syria. \*Khalid b. al-Walid laid siege to the city in March AD 635 (14 AH) and took possession of it in September of that year. The city was legally deemed to have capitulated (a determination which had consequences for its later status in Islamic \*law), but the historical practicalities seem, to judge from the accounts in al-\*Baladhuri (*Futūh al-Buldān*, I, 186–99), to have been more complicated. Much of the population fled to the protection of the \*Emperor \*Heraclius at \*Antioch and Khalid made a pact with the \*bishop and \*Mansur b. \*Sarjun the military commander (and father, or possibly grandfather, of \*John of Damascus) which obliged the Christians to pay the poll-tax (\**jizya*) and feed their conquerors.

In 639 \*Umar I, the second \*caliph, appointed as governor of Syria \*Mu'awiya, son of a \*merchant family of \*Mecca. The third Caliph \*Uthman, a kinsman of Mu'awiya, was assassinated in 656, giving rise to the First \*Fitna or \*Arab Civil War, from which Mu'awiyah emerged in 661 as the fifth caliph, and first \*Umayyad caliph. He made Damascus his principal residence, and the city remained the centre of Islamic \*administration until the \*Abbasids overthrew the 'Umayyads in 750 and moved the political capital of the Muslim world, and with it the cultural heart of the Dar ul-Islam, to \*Mesopotamia (Iraq). **Damascus, Great Mosque of** The site of the Great Mosque in Damascus had been the focus of cultic activity in the city for millennia. At the time of the \*Arab conquest in c.635, the Church of S. John the Baptist stood within a large walled enclosure. The Muslim conquerors appropriated part of the space within the courtyard as their place of prayer. In a programme of \*mosque-building across the central lands of the \*caliphate, Caliph al-\*Walid I (705–15) demolished the church that had stood in the centre of the ancient temenos and turned the southern side of the enclosure into a vast congregational mosque with a transverse nave. The courtyard was adorned with \*mosaics depicting a city of lavish villas, abundant rivers, and trees set against a gold background. This has been interpreted as an ideal view of Damascus or a representation of the heavenly paradise that awaits believers on their deaths. EL

**Damasus** (c.305–384) \*Bishop of \*Rome (366–84). His pontificate began with violent suppression of a rival claimant, the \*deacon Ursinus; associated charges of misconduct plagued him throughout his episcopate. Nevertheless, Damasus' ambitious policies bolstered papal authority. He campaigned against Western \*Homoean bishops, calling synods and promulgating statements of faith, while intervening in a schism at \*Antioch. He rebuffed \*Priscillian's overtures, anathematized the doctrines of \*Apollinaris, and took measures against the Luciferians. In the earliest known papal decretal, he pronounced to the bishops of \*Gaul on church discipline.

After an imperial law (*CTb* XVI, 1, 2) declared official Christianity to be that practised by Damasus and \*Peter the \*Patriarch of \*Alexandria, Damasus first explicitly invoked the 'Petrine Text' of Matt. 16:18 to justify Roman primacy. At Rome Damasus refined the episcopal administration and enhanced the Church's prestige by courting the senatorial \*aristocracy and commissioning \*Jerome's initial revisions of the Old \*Latin \*Bible, leading eventually to the \*Vulgate. His church-building activities, summarized by the \**Liber Pontificalis* (39, 2–4), further altered Rome's urban \*landscape, and his transformation of \*martyr shrines into monuments brought them under episcopal control. His classicizing \*epigrams inscribed in \*catacomb \*martyria under the direction of Furius Dionysius \*Philocalus promoted a heroic vision of the Church's past that promoted a new sense of Romano-Christian identity. **Damghan** Capital (MP *sabrestān*) and largest city of the province of Kūmis (MP Kōmīš; Ar. Qūmis), in \*Gorgan, 335 km (208 miles) east of modern Tehran. The city was walled in the \*Sasanian period, as appears from al-\*Baladhuri's account of the Muslim attack on Damghan's gates during the \*Arab conquest. A Sasanian building at Tepe Hissar, 3 km (1.9 miles) south-east of Damghan, was a \*palace or possibly the \*fire temple in Kūmis called Ġarīs by al-\*Mas'ūdī and Ġarīr by al-Šahrastānī. Sasanian settlement around Damghan is abundant. DTP

**damnatio memoriae** A modern adaptation of references to *memoria damnata* and *memoria accusare* (CJust I, 5, 4, 4; VII, 2, 2), encompassing processes by which public figures were removed from public commemoration. The *damnatio* of \*emperors and other political figures involved the destruction of \*portraiture and \*inscriptions (e.g. \*Lactantius, *Mort.* 42), though the evidence, such as the erased inscriptions of Geta and the base of \*Stilicho's smashed equestrian statue remaining in the Roman \*Forum, could sometimes remind people of what they were supposed to be forgetting. *Damnatio* of living emperors might involve physical mutilation, as in the case of \*Justinian II Rhinotmetus (Slit-Nose—it was later replaced with a \*gold replica). The ecclesiastical equivalent for heretical \*bishops was to erase their names from the episcopal \*diptychs, so that they were no longer commemorated by name at the \*Eucharist.

**Daniel, Armenian Apocalypse of** \*Armenian translation of the *Apocalypse of Daniel*, believed to have emerged out of two phases: the original \*translation

(Arm. 1) based on the \*Syriac and the subsequent revision (Arm. 2) based on the \*Greek. Before the invention of the Armenian alphabet Syriac was the dominant literary language in use in Persarmenia; the Greek influence must be attributed to the period after 431 when the Greek text was brought from \*Constantinople. The Apocalypse thus contains elements from the Syriac Peshitta and the Greek Septuagint. This dual heritage is a feature of the translation activity at the time (see also BIBLE, VERSIONS OF, ARMENIAN). A striking feature of the Armenian text is the inclusion of 'Daniel's Seventh Vision', which its author regarded as consummating the first six visions into which the biblical prophecies had been divided. The vision includes a historical review of the Roman \*emperors from \*Constantine I to \*Marcian (450–7), and an eschatological prophecy of the appearance of the Antichrist and the Last Judgement.

ET S. Peter Cowe, *The Armenian Version of Daniel* (University of Pennsylvania Armenian Texts and Studies 9, 1992).

**Daniel, Greek Apocalypse of** An eschatological reflection on the depredations of 'the sons of Hagar' (the \*Arabs), a victorious king of the Romans, the demise of \*Constantinople, and the appearance of the Antichrist obviously indebted to the *Apocalypse of Ps.-Methodius*. It seems possible to date the Apocalypse precisely to sometime between the coronation of Charlemagne on Christmas Day, 800, and the end of the reign of the Empress Irene on 31 October 802, since the transfer of the kingdom from \*Constantinople to \*Rome is mentioned (7, 14) and the last ruler of Constantinople before the rise of the Antichrist is supposed to be a woman (6, 10). There is reference to three Byzantine rulers in the Apocalypse. The first, who defeats the Ishmaelites and restores peace and prosperity, seems to be identified with \*Constantine V, and the other two, a man and a woman described most unfavourably, with Leo IV and Irene. These identifications suggest that the author was an \*Iconoclast, although he makes no explicit mention of such an adherence.

**Daniel, Syriac Apocalypse of** (early 7th cent.) A \*Syriac apocalypse of the early Byzantine period, attested in a single manuscript (Harvard Ms. Syriac 42, fols. 117a–122b). The *Syriac Apocalypse of Daniel* is part of a sizeable body of post-biblical apocryphal

Daniel literature. It consists of two parts. In the prose narrative frame (chs. 1–13), Daniel tells of his deportation by Nebuchadnezzar and his service first under Cyrus, then under a certain Gemath the Magus, and finally under Darius, whom he follows to Persia. The poetic, eschatological part (chs. 14–40), which occupies the main portion of the text, provides a systematic account of the End Time events: the revolt of the peoples of the north is followed by the arrival of the Antichrist, the final theophany on Mount Zion, the second Advent of Christ, the Resurrection of the Dead, and the eternal banquet of peace in the Heavenly Jerusalem. The text's provenance is unknown, though a \*Chalcedonian, possibly \*Melkite origin is likely.

**Daniel, Tomb of the Prophet** \*Latin (\*Theodosius the pilgrim) and \*Armenian (\*Sebeos) authors accord with \*Syriac and \*Arabic traditions in recording that the tomb of Daniel was situated in \*Susa, where his memory is still celebrated.

According to the anonymous Syriac \**Chronicle of Khuzestan*, the Arab conquerors stole the treasure which had accumulated at the prophet's shrine since the time of Cyrus and Darius, and the \*silver \*reliquary. \*Tabari relates that the \*Caliph \*Umar b. al-Khattab (634–44) rebuilt the tomb somewhere on the banks of the Karun River or under a \*bridge, although later local traditions claim that the \*relics were transferred between shores of the river. Descriptions by Istakhri, Ibn Hauqal, and Benjamin of Tudela in 1167 relate how Jews and Christians alike asked for the prophet's intercession for rain.

Many other traditions place Daniel's tomb elsewhere, including one related by al-\*Baladhuri and Bar Salibi, which holds that the prophet's grave was located in Babylon. \*Kirkuk and \*Mosul also claimed his grave; the tomb at Mosul remained an important local monument until destroyed in 2014. The tomb in Susa was partly destroyed by a flood in 1287; the conical polygonal brick \*dome that surmounts the tomb today was built in the Qajar period.

**Daniel of Salah** (fl. mid-6th cent.) \*Syriac Orthodox biblical exegete and Abbot of Bet Salihe (which might or might not be Salah in the \*Tur 'Abdin). Upon the request of Abbot John of the \*Monastery of Mar Eusebios in Kaphra d-Birta (near \*Apamea), Daniel compiled a distinctively \*Miaphysite commentary on the Psalms, at a time when the Syriac Orthodox found themselves under significant pressure, both from advocates of \*Chalcedon and from supporters of \*Julian of Halicarnassus. In this commentary, completed in 541/2, Daniel treated all 150 Psalms, adopting a primarily Christological interpretation. He also wrote an influential \*letter to monks at the Monastery of Mar Bassus refuting the teachings of \*Julian of Halicarnassus and the Phantasiasts.

**Daniel of Scetis, S.** (5th/6th cent.) Monastic superior in \*Scetis. Stories about Abba Daniel, originally composed in \*Greek, survive in ten languages. They feature an unnamed narrator; he and Abba Daniel, a peripatetic pair, travel around \*Egypt, especially to \*Alexandria. The writings, not typical of hagiographies, have some central themes, in particular that holy persons do not reside only in the desert. While continuing the ascetic critique of society, the characters in Daniel's stories also confront and challenge the monastic tradition.

**Daniel the Stylite, S.** (409–93) Born near \*Samosata on the Euphrates, and admitted to a \*monastery nearby at the age of 12, where he stayed for 25 years. After five years of visiting hermits in \*Syria, including S. \*Symeon \*Stylites the Older, he moved to \*Constantinople (in 451), where he spent nine years in a former \*pagan \*temple. In 460, after the death of Symeon (459), he decided to adopt his manner of life, and the \*Emperor \*Leo I had a pillar built for him in the district of Anaplis on the European side of the \*Bosporus, 1.5 km (1 mile) inland from the sea. Leo consulted him on numerous occasions, and he negotiated

## Daphne-by-Antioch

an agreement between the emperor and King \*Gubaz I of \*Lazica. Most dramatically, in 477 he descended from his pillar in order to lead a mass protest against the encyclical of the \*usurper \*Basiliscus, which rejected the definition of the nature of Christ reached at the \*Council of \*Chalcedon. Basiliscus was obliged to receive Daniel with honour and to withdraw the encyclical. The oldest of the three Greek *Lives* is a reliable source. H. Delehaye, its first editor, considered it to be the authentic work of a disciple and contemporary, but H. G. Beck (*Kirche und theologische Literatur*, 411) proposed a date of c.600.

**Dara** (modern Oğuz, SE Turkey) \*City 'placed at the throat of the enemy' (\*John Lydus, *Mag.* 3, 28) on the eastern \*frontier. The decision of \*Anastasius I to construct a new fortress city to confront the Persian stronghold of \*Nisibis c.27 km (15 miles) to the south-east was a bold gesture designed to regain prestige after the costly \*Persian war of 502–4. Construction began by 505 and within a few years a major bastion for

the 'lands of the Romans' was created (\*Procopius, *Aed.* II, 1, 13).

The building project is especially well documented with detailed accounts by \*Marcellinus Comes and Ps.-\*Zacharias Rhetor, in addition to descriptions of \*Justinian I's works in Procopius' *Buildings*. The varying sources do not however present a consistent record. The \*Syriac source Ps.-Zacharias informs us that the city took two to three years to build (*HE* 7. 6) under the direction of John, \*Bishop of \*Amida, but in Marcellinus' account \*Calliopius the *hyparchos* oversaw the works, marking out the perimeter with a hoe in the classical manner. The new city was furnished with formidable defences and elegant public buildings, comprising \*baths, porticoes, storehouses, \*cisterns, a \*palace, and a \*statue of Anastasius. Two churches are noted, one the Great Church and another dedicated to S. Bartholomew furnished with \*relics brought from \*Cyprus. Renamed after its imperial founder—Anastasiopolis—and adorned with the rank of metropolis, the fortress became the base and stronghold of the \*Dux Mesopotamiae.

The subsequent history of Dara confirmed the selection of the original site and fortification. The city was besieged during the first Persian war of \*Justinian I's reign and was the scene of \*Belisarius' earliest victory over the Persians in 530 (Procopius, *Persian*, I, 13–14). In an attempted coup in 537 John Cottistis seized the palace of the Dux with the support of his bodyguard. During the renewed Persian war (539–44), the campaign of 540 saw the capture of \*Antioch by \*Khosrow I, but Dara alone was able to resist a Persian \*siege. In addition to the restorations carried out by Justinian, further work was undertaken on the \*water supply and elsewhere early in the reign of \*Justin II (565–78). It was only in 573 that the city fell for the first time to Persian assault. Whether through stubborn resistance or human error, no attempt was made to negotiate or to conclude a truce once the Persians had gained control of the defences. Instead, to the horror of the citizens, the \*city gates remained bolted so that they were unable to escape. Fighting within the city continued for seven days and the resultant carnage was horrific. Such a shock to Roman prestige was felt not only on the frontier but also in \*Constantinople where the news pushed the Emperor Justin II to insanity. Although the city was recovered after the peace of 590, it was captured again in 604 by \*Khosrow II and fell to the Arabs in 639. Overshadowed by its rival Nisibis throughout the Middle Ages, Dara declined to become a minor bishopric.

The remains of the city are located where the Dara River opens out from the rocky foothills of the \*Tur Abdin into the Mesopotamian plain, furnishing essential water for the citizens and for field \*armies. The river cuts through a basin formed by three hills, around which runs the line of the high curtain wall, towers, and in places

massive rock ditches. A plan, description, and photographs from the early 20th century by Preusser and Bell are an important archive pre-dating the recent expansion of the village. Research in the 1970s and 1980s by Crow and Whitby presented differing interpretations of the textual and structural remains, and further observation of the hydraulic system reveals the sophistication of water management at the city. Recent excavations have produced only short interim reports. The major monuments include the curtain wall with closely spaced U-shaped towers, a rock-cut ditch, and two water gates. Within the city are the remains of large \*cisterns (one was formerly mistakenly interpreted as a \*grain-store), churches, \*streets, and \*houses set within a modern village. In the \*quarries to the east are the remains of rock-cut tombs with relief \*sculptures. JCr

J. J. Wilkes, *The Illyrians* (1992).

**Dardanus** Claudius Postumus Dardanus was \*Praefectus Praetorio Galliarum, 412–13. He became prefect after a distinguished civil career, and remained loyal to the \*Emperor \*Honorius, executing the \*usurper \*Jovinus with his own hands in 413, an act for which he was apparently despised by some of his peers (\*Sidonius Apollinaris, *ep.* V, 9, 1). A devout Christian, he had an estate called \*Theopolis, in the French Alps north of Sisteron (*ILS* 1279). He received replies from \*Jerome in 414 and \*Augustine in 417 to his enquiries about the promised land (Jerome, *ep.* 129) and the omnipresence of God (Augustine, *ep.* 187).

**Dares of Phrygia** Name adopted by the author of what purported to be an original eyewitness account of the sack of Troy, which the original Dares lived through as the Trojan priest of Hephaestus (\*Homer, *Iliad*, V, 9), follower of Antenor. The \*Latin version of Dares, *De Excidiis Troiae Historia* ('On the History of the Fall of Troy'), survives in 44 chapters, and dates from the 5th to 6th centuries. Like the narrative of \*Dictys of Crete (which may have inspired it) this text provides a 'historical' version of the war at Troy that highlights inaccuracies and distortions present in Homer's poetic account. A fictional preface in the form of a \*letter from Cornelius Nepos to Sallust explains how an autograph manuscript came to be discovered in \*Athens and translated into Latin (by Nepos). It is possible, however, that the notion of a Greek 'original' is not a fiction and may indeed date from the late 1st century. In the 12th century Benoit de Sainte-Maure based his *Le Roman de Troie* on the accounts of both Dares and Dictys, and this provided fertile material (including the story of Troilus and Cressida) for the medieval world, inspiring both Boccaccio and Chaucer. Modern scholarship has come to regard the fictional narratives of Dares and Dictys as important landmarks in the evolution of the genre of the novel, but for many centuries they were regarded as 'serious' works of historiography.

**dastgird** Middle \*Persian term for income-generating property, either for a person or institution, such as a \*fire temple. Normally consisting of agricultural land, by extension the term had the connotation of an estate. Roman authors often refer to Persian royal estates anachronistically as a *paradeisos*, though we have no evidence in MP that the \*Sasanians commonly used this term.

Sasanian estates included plantations and storehouses, and noble and royal estates had \*palaces, pleasure \*gardens, and \*hunting enclosures. \*Ammianus Marcellinus describes such an estate, which he saw outside \*Ctesiphon, as 'an extensive round tract, enclosed by a strong fence and containing wild beasts that were kept for the king's entertainment' (XXIV, 5, 1), and both Bisotun and \*Taq-e Bostan preserve archaeological evidence of such enclosures.

Dastagerd appears as the Greek form of the name of \*Khosrow II's favourite estate. Located on the \*road between Ctesiphon and \*Hamadan, its storehouses contained great wealth, spoils of war including 300 Roman battle standards, \*silk, pepper, aloe wood (perhaps destined for sacred fires), and numerous ostriches, gazelles, pheasants, and exotic animals kept for hunting. It was destroyed by \*Heraclius in 628 (\*Theophanes, AM 6118). MPC

**David, S.** (d. 589?/601?) \*Bishop and monastic founder in south-west Wales. Fragments of his writings survive, confirming his reputation as a leader of the pan-Celtic 'Age of Saints'. His two medieval Lives are probably derived from a work by Rhigyfarch ap Sulien (d. 1099). They contain passages from his monastic Rule—severely ascetic, as implied by his nickname *Aquaticus* ('water-man'), found in *Vita Pauli Aureliani*, composed in \*Brittany in 884. Two further texts transmitted in Breton manuscripts, 'The Synod of the Grove of Victory' and 'Some Excerpts from a Book of David' (sixteen penitential canons), may be authentically associated with David. St Davids (Mynyw) in Dyfed had become his main cult site and an important episcopal see by c.800. CJB

**Davitisdze, Sumbat** (11th cent.) Georgian historian and royal chronicler. His only surviving work, *The Life and History of the Bagrationis*, is incorporated in the \**Kartlis Cxovreba* and is the most important source for the study of the early history of the \*Bagrationi dynasty and of the history of formation of early medieval Caucasian kingdoms. Sumbat claims that in the 6th century, the Bagrationis arrived from \*Palestine and Guarām became the first \*Erismtavari and the founder of the Georgian royal dynasty. NA

S. Rapp, 'Sumbat Davit's-dze and the Vocabulary of Political Authority in the Era of Georgian Unification', *JAOS* 120/4 (2000), 570–6.

**daxmag** (MP; Av. *daxma-*, NP *dakhma*) Elevated place to dispose of \*dead bodies through exposure to the elements and carrion birds according to \*Zoroastrian purity strictures. They could be rock-cut cavities in cliffs or masonry structures, like the round towers built on rocky hills in Iran (e.g. Yazd) or \*Transoxania. Wealthy families might collect the bones and place them in an \**astodan*; though most were simply swept into a central pit. POS

*EnIran* VI/3 (1993) 279–86 s.v. corpse (M. Boyce).

D. Huff, 'Archaeological Evidence of Zoroastrian Funerary Practices', in *Zoroastrian Rituals in Context* (2004), 593–630.

**deacon** The \*Greek *diakonos* is a common term for a servant (from *diakonia*). Specialized Christian *diakonoī* appear in the Acts of Apostles as those appointed to assist the Twelve Apostles with the practical charity of the community (Acts 6:1–6); the most famous among them were Stephen and Philip. Paul addresses his Letter to the Philippians to the *episkopoi* ('overseers', Eng. \*'bishops') and *diakonoī* of \*Philippi; the post-Pauline 1 Timothy (late 1st cent.) outlines requirements for assuming both offices (3:1–13). With the elaboration of the threefold ministry in the post-NT period, the service of deacons was subordinated to that of the *presbyteroi* ('elders', Eng. \*'priests'). From the 2nd century evidence points to liturgical roles for deacons at the \*Eucharist; later texts describe their assistance at \*baptisms and in liturgical proclamation of the gospel. \*Cyprian writes of them as messengers carrying his \*letters, and as frequent visitors to Christians in \*prison during \*persecutions. CAS

*DACL* 4/1 s.v. 'diacre', cols. 738–46 (Leclercq).

J. G. Davies, 'Deacons, Deaconesses and the Minor Orders in the Patristic Period', *JEH* 14 (1963), 1–15.

**deaconess** A female Christian minister. In the NT (Rom. 16:1), Paul refers to Phoebe, a female *diakonos* (the feminine form *diakonissa* appears only in the 4th century). Eastern Christian sources from the 3rd century speak of deaconesses consecrated for ministry to women (e.g. at \*baptisms) and in some cases instituted with a rite like that for male \*deacons, though other texts explicitly exclude parallels with the ordination and functions of male deacons. From the 5th century one finds some liturgical roles at the \*Eucharist for deaconesses in \*monasteries when there was no male deacon present. The term deaconess was also applied to those exercising leadership roles in female monasteries (e.g. \*Egeria, 23). The office had become obsolete by the medieval period. CAS

**dead, disposal of** The disparate civilizations of the Late Antique world had contrasting ways of honouring the mortal remains of their members, from Late Roman and Christian burial in \*sarcophagi (for the fortunate), \*catacombs and \*polyandria (for the less fortunate), and the honouring of the \*relics of saints and \*martyrs, to Germanic cremation or boat burials (like that at \*Sutton Hoo) and \*Zoroastrian exposure. Archaeology provides evidence for funeral rites (e.g. \*epitaphs, orientation, grave-goods) and, through the analysis of bones, data

dead, disposal of

about such matters as diet, disease, and dental hygiene. It also permits hypotheses about ancient notions about \*death and afterlife, which can in some cases be combined with written evidence. Also, especially in post-Roman Western Europe, \*cemeteries provide valuable demographic information and a basis on which to form hypotheses about social and economic relations. OPN

**dead, disposal of, Aksumite** Disposal of the dead at Aksum involved enormous disparities in the expenditure of labour and resources. Inhumation was invariable; cremation was unknown. During the late 3rd and early 4th centuries, kings were buried in elaborate stone-built tombs with rich and varied grave-goods, subsequently covered and marked by huge monolithic stelae, each carved to represent a multi-storey building; the largest of these stelae, never successfully erected, weighed c.520 tonnes and would have been 33 m (108 feet) high. Tombs of Christian kings after the mid-4th century were smaller, surmounted by a squat superstructure or, in the 6th century, by a church or funerary chapel. Other Aksumite tombs show bewildering variety, those of the less prosperous being simple pits, the corpses being accompanied by meagre grave-goods and marked—at least initially—by small undressed monoliths. DWP

Phillipson, *Foundations of an African Civilisation*, 139–57.

**dead, disposal of, Armenia** Before the \*conversion of \*Armenia to Christianity the dead were buried in \*sarcophagi, hypogean tombs, and in towers, sharing characteristics with Parthian and other Iranian, \*Zoroastrian groups. Exposure of the dead continued among Zoroastrian Armenian sectarians into medieval times.

Practice in 4th–7th-century Christian Armenia shows a continuation of the ancient and exuberant displays of mourning, including lacerations and dances, which were opposed by the Christian clergy and some laymen as contrary to the Christian hope. Christian funeral rites included procession to the grave with psalmody, blessing of the grave, and intercession for the deceased. TMvL

**dead, disposal of, Central Asia** Remnants of various types of burials, 'official' and 'public', have been identified in \*Khwarezm (Chorasnia), \*Sogdiana, Margiana, Parthia, and \*Bactria from the end of the 4th century BC

to the \*Arab conquest and later. Non-\*Zoroastrian-type burials include Greek types of funerary monuments and burials found at the Greek settlement of Ai Khanom. Cremation is found primarily in \*Buddhist contexts, and inhumation was practised perhaps by non-Zoroastrian populations. In the earliest period, free-standing, fairly large, mausolea were found in the lower Syr-Darya region, in which, presumably, corpses would decompose, leaving only the bones, or in which bones were gathered after the bodies had decomposed and the bones had been picked clean on the ground, according to Zoroastrian custom. At a later period, in Bactria, we also find open trenches, lined with bricks or mortar, and \*sarcophagi. Three \**daxmags* (*dakhmas*) of various types and dating from the Greek domination to the \*Arab conquest have been excavated in Sogdiana and Khwarezm. Various types of *daxmags* are also attested from the Kushan–\*Sasanian period. In Margiana, Khwarezm, and Sogdiana, corpses were commonly placed in graves isolated from the earth, and bones were subsequently put into containers, jars, and ossuaries of various shapes: male and female human forms, imitation buildings, and decorated plaster or ceramic caskets, some showing scenes from the afterlife. Several 6th/7th-century ossuaries show the ceremony for the dead and the arrival of the soul before the divine judges. Sogdian \*merchants in \*China were buried on funerary couches, also decorated with scenes from the afterlife. POS

P. Riboud, 'Bird-Priests in Central Asian Tombs of 6th-Century China and their Significance in the Funerary Realm', *Bulletin of the Asia Institute* 21 NS (2007), 1–23.

**dead, disposal of, Egypt** Bodies of the dead were either placed in *loculi* (individual slots, resembling those in the Roman \*Catacombs) or in purpose-built and reused funerary monuments, or they were inhumed in lined or unlined pits indicated by funerary stelae or other markers. The date of the last \*Fayyum portraits,

painted shrouds, and plaster masks is disputed, but is most likely c. AD 250–350.

\*Mummification by embalming probably ceased around the same time. S. \*Antony the Great specifically asked not to be preserved in a house but to be buried in the earth in expectation of the general resurrection (VAntonii 90–92). Nevertheless, handfuls of \*salt, natron, juniper, and other organic material distributed over corpses promoted natural dessication in burials dating up to c.800. The simplification of the burial process over time is apparent in the marked decrease of titles for funerary workers in c.4th–8th-century \*Greek documents.

Documented cemeteries are located in the \*Oases, at \*Saqqara, Dashur, Lisht, \*Naqlun, Fag el-Gamus, Karara, Sharuna, el-Hibeh, \*Antinopolis, Naga ed-Deir, and several sites in western \*Thebes. Such sites typically yield relatively simple graves in which people were either buried in (or with) their clothes or in mummiform bundles, wrappings of multiple shrouds, or reused soft furnishings, often bound by mummy ribbons. \*Coptic documents of c.7th–8th centuries demonstrate that monks in the Theban region were responsible for weaving shrouds (*hboos*) and mummy ribbons (*keiria*) (among others P.Mon.Epiph. 354, O.Crum 68). An elaborately painted 5th–7th-century wooden coffin from Karara, built to contain a mummy-bundle, is an exceptional find (ÄIH inv. 500).

**dead, disposal of, Georgia** In \*Georgia the dead were generally buried, usually one or two to a grave, although cremation was also practised in mountainous regions. The elite of \*Iberia were buried in stone chamber-burials or \*sarcophagi, most commonly in pit graves covered with tiles. The deceased were interred slightly bent or recumbent, the rich placed on couches with \*silver-coated legs and wearing garments with \*gold appliqués. Secondary burials had the bones placed on a silver plate. In west Georgia \*jewellery was prevalent in female burials, while males had weapons. In rare cases a \*horse and

\*dog have been found (Kldeeti). Almost all burials of the 1st–3rd centuries included grave-goods, apart from a few infant burials. Grave-goods decrease from the 4th century and gradually disappear, in keeping with Christian burial customs.

**dead, disposal of, Germanic (pre-406)** In barbarian Europe beyond the Danube and Rhine \*frontiers of the Roman Empire, cremation was by far the most widespread means of disposing of the dead during later prehistory and into the Early Middle Ages.

The dead person was usually cremated clothed on a pyre before burial in a cremation \*cemetery, which might comprise up to several thousand graves. Several different types of cremation deposit have been identified, and individual cemeteries are known to have contained varying combinations of them. In some cases, the pyre was built over a pit where all the remains from the cremation were buried, sometimes selectively. Other graves contain cremated ashes that had been separated from the remains of the pyre and buried either in a container or directly in a pit in the ground. Handmade ceramic urns were commonly used as containers, but other vessels, including bags or boxes made of organic materials, were also employed. Urns were sometimes interred in a pit along with the remains of the pyre. Grave-goods, sometimes burnt, accompanying the burials, included \*pottery vessels, knives, \*dress accessories, and animal bones. In the region between the Rhine and Elbe rivers, weapons were rarely placed in graves.

Inhumations were exceptional in Germany, though from the 3rd century in the so-called \*Hassleben-Leuna graves members of the \*aristocracy were buried along with grave-goods that often included \*glass, \*silver, or \*bronze vessels made in the Roman Empire. Other rich graves have been excavated at \*Gommern in Sachsen-Anhalt, at \*Jakuszowice in Poland, and at \*Årslev in Denmark. In Scandinavia, both inhumation and cremation were used in the 4th century, though some areas show strong preferences for one rite over the other.

dead, disposal of

**dead, disposal of, Jewish** Ancient Jewish burial customs were aptly characterized by the late 4th-century BC Greek ethnographer Hecataeus of Abdera: 'As to marriage and the burial of the dead, he (Moses) saw to it that their customs should differ widely from those of other men. But later when they became subject to foreign rule... many of their traditional practices were disturbed' (quoted by Diodorus Siculus, *Bibliotheca Historica*, 40, 3, 8).

Indeed, Jews often changed their burial customs in light of foreign influences. Burial in the Hasmonean period regularly featured the use of *loculi* (*kukhim*), a practice originating in \*Alexandria or Phoenicia, and often Hellenistic funerary monuments erected by the wealthy class. Under Herod, secondary burial (the collection of bones and their interment in small stone chests, ossuaries) was introduced into \*Jerusalem, a well-known practice in \*Rome and \*Italy whereby ashes from cremation were collected into similar-looking chests or urns.

Two major Jewish necropolises from the 3rd century on have been discovered, \*Beth She'arim in \*Galilee and the Jewish \*catacombs in Rome. In each case, local practice borrowed heavily from foreign models. The former included impressive façades, at least one large mausoleum, underground passageways lined with *arcosolia* and *loculi*, and a series of pagan mythological representations. The latter, like the nearby Christian catacombs, were constructed underground and were lined with *arcosolia* often containing \*sarcophagi, separate rooms for rich families, common decorative schemes, and the use of epitaphs.

L. I. Levine, *Visual Judaism in Late Antiquity* (2012), 40–3, 46–8, 80–96, 119–40, 141–65.

**dead, disposal of, Persian** In \*Zoroastrianism, \*fire, earth, and water were sacred elements, so dead bodies were barred from being burned, buried, or left in water. The \*Avesta says they should be abandoned on the ground in a dry place far from human traffic and left there, exposed to the \*Sun, until the bones are picked clean by flesh-eating creatures. The tombs of Cyrus the Great and the Achaemenid kings conformed to these requirements, that of Cyrus by being built on a high platform raised above the earth and encased in stone, those of the later kings by being cut into rocky cliffs, far above ground level. In the Avesta, Zoroastrians were enjoined to destroy \**daxmags*, which at that time denoted some kind of \*tomb, and to dig up the interred bodies and take them to *uzdānas*, probably similar to Sasanian ossuaries.

The Zoroastrian texts give precise instructions on how to remove bodies under various circumstances. A body should not be carried by one person alone, since that would expose him to the corpse \*demon. When a body is carried off, a \*dog should be present

(the corpse demon was thought to be smitten by its look). The body should not be covered, because that would be tantamount to burial (Tavadia, *Šāyast*, 30–6). Dead bodies should not be left in water, unless already disintegrated. If somebody died on a boat, to prevent contagion, the body could be consigned to the sea, and the water would be its 'ossuary' (Tavadia, *\*Sheyist ne Sheyist*, 117). In the \*Sasanian period, excarnated bones were often placed in a rock-cut tomb (an \**astodan*), many accompanied by \*inscriptions identifying the dead. The commentator on *\*Vendidad* 7, 48 mentions burial in a \*bronze coffin (*taban*).

**dead, disposal of, post-Roman Western Europe, Anglo-Saxon England** As in other parts of Late Roman north-west Europe, inhumation burial was normal throughout 4th-century \*Britain. The dead were often interred clothed or shrouded, with grave-goods such as \*pottery, \*glass, or metal vessels (whose number declined towards the end of the century). In the 5th century new practices developed in eastern England, including both inhumation and cremation. Inhumations were often clothed: \*dress accessories are common finds, for example brooches, necklaces, pins, and keys with females or knives and \*belt buckles with males. Other grave-goods might include glass or ceramic containers and sometimes weapon-sets for men.

In the 5th and 6th centuries, cremation cemeteries were also common in eastern England between the rivers Thames and Humber. The body was burned on a pyre before the selection of remains for burial, normally in a ceramic urn. Weapon-sets are rarer in cremation burials than in inhumations, but other types of grave-goods were added either before or after the pyre including \*combs, miniature or full-size toilet implements, metal tools, and animal remains. From the later 6th century a class of 'princely' burials included more lavish grave-goods, and were often marked by barrows (e.g. at \*Sutton Hoo). The use of grave-goods became increasingly uncommon over the course of the 7th century.

**dead, disposal of, post-Roman Western Europe, Gaul** In 4th-century \*Gaul, inhumation with a few grave-goods was common; there were some \*cremation \*burials around the Rhine \*frontier. From c.400 onwards more richly furnished burials appear, with items including brooches, buckles, and \*pottery or \*glass vessels, alongside \*jewellery in female graves or \*arms and armour in male ones (probably reflecting the increasing militarization of provincial society). By the end of the 5th century, lavishly equipped 'chieftain's burials' were accompanied by \*gold objects, swords, dress- and weapon-accessories and \*horse burials, sometimes under barrows. From the 5th century 'row-grave' cemeteries became common throughout the north-western European provinces of the former Roman Empire, comprising rows of inhumations that were often accompanied with jewellery for women or sets of weapons for men. Burials were normally aligned west-east, and were inserted into dug graves that could be lined with wood, stone, or, in some areas, even plaster. In the 7th century, the use of grave-goods became gradually less common, and more standardized, until it largely disappeared around 700. SCT

**dead, disposal of, post-Roman Western Europe, Italy** The preferred method for disposing of the dead in early medieval \*Italy was burial, whether in the ground or in \*sarcophagi. Proper inhumation testified to faith in the resurrection, respect for the dead, and love of the body (Rebillard, *Care for the Dead*, 85–7). Some \*epitaphs indicate a popular belief in the necessity of inhumation for resurrection in the Last Judgment (e.g. *ILCV* II, 3845 [Rome]).

\*Cemeteries and \*tombs were legally protected; Western laws indicate a concern about the dignity of the body and, in cases of tomb raiding, about sacrilege (Nock, 'Tomb Violations', 531–3). The subterranean \*catacomb networks on the outskirts of \*Rome became increasingly full during the 5th century. They were transformed into a destination for \*pilgrimage. In the 4th century, funerary \*basilicas outside Rome created numerous burial spaces under the aisles and nave. Churches which housed the remains of saints and \*martyrs often contained burials *ad sanctos*, of Christians who wished to be buried in close physical proximity to the holy dead.

During the late 4th and into the early 5th century, the barriers between *polis* and *necropolis*—city and city

of the dead—began to break down, perhaps hastened by the rise in the cult of the saints. The earlier Roman insistence on burial of the dead outside the \*city \*walls (cf. Cicero, *De Legibus*, II, 58) declined, and many burials occurred within the walls, beginning in the 6th century. SEB

**dead, disposal of, post-Roman Western Europe, Spain** Roman extramural \*cemeteries continued in use in Late Antiquity. On the east coast and at \*Cordoba, the importation of \*pagan and Christian \*sarcophagi from \*Rome in the 4th century gave way to imports from \*Carthage in the 5th century. On country \*estates there were polygonal mausolea at La Cocosá (Badajoz) and Pueblanueva la Vega (\*Toledo).

Study of burials in the 6th century has been dominated by attempts to differentiate between the possible ethnic identities in rural \*cemeteries, but it is increasingly appreciated that there was a substantial variety of burial rites. \*Spain in fact appears typical of Western Europe.

Recent excavations have taken place at \*Tarragona, Saragossa, and \*Mérida. The Francolí complex at Tarragona had two funerary \*basilicas and over 3,000 burials *ad sanctos* packed around a possible \*martyrium; earlier and later mausolea were attached and there were notable funerary \*mosaic slabs.

In small rural settlements burials used or were near pre-existing structures. Sometimes parts of \*villas used for burials were alongside residential rooms—cemeteries of the *meseta* are of this type. RJW

**dead, disposal of, Roman and Byzantine** By the mid-3rd century, cremation had ceased to be a common

mode of disposal in the Roman Empire and had been replaced by inhumation. This change, which began in the 1st century, still resists simple explanation. It was not the consequence of new religious and philosophical beliefs, and it started before Christianity had made any significant impact on Graeco-Roman society. The coming of inhumation was a new fashion, first introduced from \*Greece. Adopted early on by the \*emperors, first the elite and then the rest of the population embraced it as a way of identifying themselves with the imperial culture. The adoption of this new mode of disposal had important consequences for the suburban landscape, because of the need to offer a lot of space for burials. It is debatable whether columbaria and \*catacombs, which both provided a new, intensive use of the available space, developed independently from it. Another related change is the choice of well-to-do citizens to be buried in a \*sarcophagus (literally flesh-eating), coffin-like container, most often in stone and displayed above ground.

\*Cemeteries were as a rule located outside \*cities, very often alongside \*roads. From the 3rd century there also developed 'managed cemeteries', large areas of orderly rows of inhumation graves. There is little evidence about who managed them. Some might have been organized by local Christian churches, though the existence of Christian cemeteries has come under question for the earlier period. In a more general way, Christians seem to have conformed to the general patterns followed by the rest of the population of the Empire. The phenomenon of burial *ad sanctos*, the search for a burial in close proximity to a \*martyr tomb, was in the main limited to members of the clergy and to a few privileged lay Christians, and cemeteries did not move within the city walls before the end of Late Antiquity.

Burial was usually provided by \*families or \*patrons. The cities took care of abandoned corpses (see POLYANDRION). In \*Rome and \*Constantinople, the emperors subsidized the burial of the poor through the agency of the \*bishops, who also had their own systems of support.

**death and afterlife** Articulate observations and expectations about death and life after death have survived in various texts by \*pagan \*philosophers, poets, and \*rhetoricians, in the Jewish rabbinical literature, and in Christian genres of literature as disparate as philosophical theology, \*apocalyptic and eschatology, and \*saints' lives. Perhaps the most elaborate set of hopes and fears is expressed in \*Zoroastrian texts such as the \**Arday Wiraz Namag*, which lay out the rewards and punishments to be expected in the next world. Islamic convictions, presented in the \**Qur'ān* and elsewhere, are dominated by the expectation of judgement with physical rewards for the righteous. In the case of other civilizations, such as those of pre-Christian Germanic barbarians, notions about death and life after death have to be extrapolated entirely from hypotheses about possible intentions lying behind ways in which disposal of the \*dead was accomplished. OPN

**death and afterlife, Arab and Islamic** Death, the end of one's appointed lifespan (*ajal*), is the inescapable decree of God in contrast to the pre-Islamic notion of fate (*dahr*). God thus has powers that tribal idols do not. Death is merely a prelude to the final stage of existence when God returns creation to its intended destiny. The effect is to connect the pre-Islamic encouragement to personal honour (especially in battle) to the revealed notion of living for (or being tested by) God with expected reward in paradise (or punishment in hellfire for failing to do so). Believers, then, meet death, trusting in God's deliverance and vindication of their choice of devotion to God (\*Islam) over this world's allurements. The grave serves as a barrier (*barzakh*) to the final denouement when the \*angel Israfil blows the horn to summon souls to the resurrection (*ba'th*) and gathering (*hashr*). In an echo of the pre-creation pact when God drew all souls from the loins of Adam to witness to His lordship, humanity stands before Him again to witness the record of their deeds in this life, which get weighed on the scales of justice. The prophets will testify for or against their followers, as will human limbs that performed the deeds of individuals. There is the possibility of prophetic intercession (as expression of divine mercy), after which souls will walk the bridge above hellfire, either to fall into it or pass to paradise where they will enjoy physical pleasures in the sight of the angels who encircle the throne of God. **death and afterlife, Christian** Christians in both East and West were united in confessing the belief that death was not an end but a passage to an afterlife of reward or punishment.

Cemetery iconography, preserved fragments of \*prayers and rites for the dead, and extensive literary witnesses reveal primary emphasis on the lot of the faithful with little interest in the damned. Images of deliverance from both the Old and New Testaments such as the Crossing of the Red Sea, Daniel rescued from the \*lions, and Jesus raising Lazarus, and ritual practice such as the washing and anointing of corpses, all recall \*baptism. The threefold processional stations of home, church, and cemetery and the singing of psalms and \*hymns (rather than dirges) suggest that burial itself was understood as a laying to rest as if asleep (as is connoted by the name 'cemetery', meaning 'sleeping-place'). \*Funeral orations make Christian faith a consolation for grief and hold out hope for rest in the 'bosom of Abraham', a repose rewarding a faithful life like that of Jesus. A celebration of the \*Eucharist was a viaticum, food for the journey. These are all vivid witnesses to the fundamental Christian metaphor of death as journey together with the whole Church to Christ, with all the patriarchs, saints, and \*martyrs accompanying the faithful dead into Paradise.

\*Sermons and tracts on the nature of the soul and its destiny express this faith theologically as resurrection. In such theoretical writing the philosophical anthropology which speaks of the return of the soul to its origin with God and the Christian holistic notion of resurrection of the dead are held in tension. Christians in the East, such as \*Serapion, \*Bishop of Thmuis (*Euchologion*, 18), \*Ephrem the Syrian, \*Jerome (*ep.* 77, 11), and \*Dionysius the Ps.-Areopagite (*Ecclesiastical Hierarchy*, VII), agree with those in the West, such as \*Ambrose (*De Excessu Fratris*, I, 5; *De Obitu Theodosii*, 36), \*Augustine (*De Cura pro Mortuis Gerenda*, 6–7; 22; *Confessions*, IX, 3, 6), and \*Prudentius (*Liber Cathemerinon*, X: *Hymnus circa Exequias Defuncti*) in manifesting in homilies and catechetical writings and in prayers for the dead and hymns at burial the theme of life that death cannot destroy and rest awaiting resurrection. **death and afterlife, Jewish** Rabbinic literature provides insight into some Jews' attitudes to death, while

epitaphs are an alternative source for views about the afterlife. Idealized death was painless and dignified. Dying sages were imagined dispensing wisdom to disciples or debating with the Angel of Death, a figure who appears mainly in such scenes. In rabbinic thought, the dead retained some temporary consciousness, which had implications for how they were treated. Corpses transmitted ritual impurity, and mourners were expected to obey special rules. Being remembered after death was important, but funerary ostentation was generally disapproved, and words or good deeds could be seen as the best memorial.

Belief in an afterlife is implied when tomb-violators are threatened with loss of the 'portion in the world to come', or the tomb is described as 'eternal home'. Wishes for the soul to 'rest in the bond of life' or the deceased to 'sleep with the righteous' also assume existence after death. However, less emphasis was placed by the \*rabbis than in contemporary non-Jewish thought on the soul when separated from the body. Divine judgement could be held up as a threat but Sheol, the biblical underworld, does not seem to have been imagined as a Hades-like place of reward and punishment.

Sleep implies awakening, and belief in bodily resurrection (at least for the virtuous) was widespread, especially in the context of national restoration. Some believed burial in \*Palestine atoned for past sins, but it also had advantages for resurrection. The practice of collecting the bones of the dead after the flesh had decayed has been linked to the expectation of resurrection. The eventual reunion of body and soul was in any case seen as fundamental. DNo

D. Kraemer, *The Meanings of Death in Rabbinic Judaism* (2000).

J. Park, *Conceptions of Afterlife in Jewish Inscriptions* (2000).

**death and afterlife, Roman** Since Plato, classical \*philosophy had distinguished between the body and the soul. The soul (Gk. *psyche*, Lat. *anima*, *spiritus*) was that which makes the person alive rather than dead, and was closely allied with the mind (Gk. *nous*, Lat. *animus*, *mens*). Stoics considered the soul to be made of very fine matter, like gold to airy thinness beat; Platonists considered it to be immaterial. It naturally follows from such conceptions of the human person, that though the physical body dies, the soul may live on after death. Followers of Pythagoras believed in reincarnation, as did \*Plotinus, the founder of \*Neoplatonism, though his hope for himself was that by strenuous intellectual \*asceticism he would be able to reunite himself with the One (Gk. *to hen*), the single ineffable source of all things, and so save himself from the cycle of returning to the body. Later Neoplatonists were more inclined to believe that at death the soul was liberated from the earth altogether. Images on \*sarcophagi of men reading or

of the Muses may therefore be thought to have a more than literary resonance; they may suggest a life of the mind continuing after death.

Less philosophical notions were also represented on sarcophagi, articulated through the depiction of mythical figures such as Dionysius, Adonis, and Endymion; it is hard to know what to read into such scenes, because sarcophagi also bear depictions of \*hunting and other worldly activities. Thoughts about life after death culled from \*epitaphs and passing references are vague about the prospects of immortality. When the \*Oracle of Apollo at \*Didyma was asked whether the soul lived on after death or disintegrated, it replied that 'after the body has decayed the soul is borne entirely up into the aether, forever unageing, and continues for ever unharmed' (\*Lactantius, *Inst.* VII, 13, 6). The written and archaeological evidence for such private cults as \*Mithraism and the cult of \*Isis is no more specific.

All this contrasts sharply with the distinct Christian hope for the resurrection of both body and soul. Celsus, the great 2nd-century critic of Christianity, mistook this for a doctrine of reincarnation (\*Origen, *Contra Celsum*, VII, 32). During the Great Persecution a \*bishop, on trial for his life, explained to the Prefect of \*Egypt about the resurrection of the body: 'this flesh will rise again' (\**Passio of S. \*Phileas*, 4). The Prefect was so surprised by the idea that he repeated the bishop's words, twice: 'this flesh will rise again?' OPN

**death and afterlife, Zoroastrian** The beliefs of Zoroastrians and their concomitant rituals are spelled out in great detail in texts spanning millennia from the time of the \*Avesta all the way to the \*Sasanian period.

Three days and nights after their deaths the souls of the deceased travel at dawn into the beyond, where each is met by his *dēn*, the personification of his good and evil thoughts, words, and deeds. The souls are taken to the \*Chinwad Bridge, where their thoughts, words, and deeds are weighed. If the good thoughts outweigh the evil ones, they pass the bridge and continue up to heaven; if not, they are thrown into hell. If the good and bad thoughts are equal, the souls go to an intermediate place. The souls in hell suffer torments commensurate to their sins, as described in detail in the Pahlavi book of \**Arday Wiraz Namag*, of which there are several Persian manuscripts with illustrations of the punishments.

The Chinwad Bridge, originally, perhaps, 'the ford of the accountant', is already mentioned in the *Gāthās*,

hence dates from the 2nd millennium BC, and the journey into the beyond is told in the Avestan *Hādōkht nask* and the nineteenth chapter of the \**Vendidad*, redacted in the 1st millennium BC. The journey is also recounted in a 3rd-century AD \*inscription by the high priest \*Kerdīr and in several Pahlavi texts. In the *Gāthās*, the souls are guests in the House of Song, the abode of Ahura Mazdā (\*Ohrmazd). In later texts, upon arrival in paradise, the souls are treated to \*bread, \*meat, and \*wine. Souls are placed in paradise or hell in accordance with their merits or demerits in life. At the end of the world, the dead are resurrected by the \*Soshans (Avestan Saoshyant), and sinners are punished for another three days; everybody then passes through a river of molten metal, where the last traces of sin will be burnt out, and they will enjoy eternal life in the new world free from evil. Skjærvø, *Spirit*, 166–74, 180–90.

**debasement** The practice of alloying coins of a nobler metal with a baser one, and one often undertaken either to increase the profits of minting or to compensate for fiscal deficits. Debasement is sometimes regarded by scholars as an alternative measure to increased \*taxation on the part of the state, although debasement in practice is a form of taxation in itself.

The most notable episode of debasement was that of the Roman imperial \*antoninianus or radiate during the 3rd century. In AD 200 the fineness of the imperial \*silver \*coinage stood at about 46%, but by AD 270 it was less than 5%. The relationship between the rate of debasement of the silver coinage and \*inflation is debated. \*Prices do not seem to have risen as a result of the 3rd-century debasements, but most of the evidence for prices comes from \*Egypt, which until the late 3rd century had a closed currency system using a separate silver coinage of its own, meaning that the Egyptian price evidence may not translate to the rest of the Empire. **Debra Damo** Mountain-top \*monastery in the extreme north of \*Ethiopia. Its foundation is traditionally attributed to Za-Maka'el Aregawi, one of the \*Nine Saints, in the reign of King \*Gabra Masqal. The larger of the monastery's two churches is probably the oldest still in use in Ethiopia. Although subjected to repeated modification, its basic plan is so similar to dated examples at \*Aksum as to support its 6th-century origin. Built of wood and stone in Aksumite style, the church is \*basilican with lofts over the aisles; the carving of its coffered wooden ceiling is especially noteworthy.

Phillipson, *Ancient Churches of Ethiopia*, 66–7.

**debt** The concept of debt was central to the evolution of both Roman \*law and society. In Roman law, a debt might arise because one man had injured another or stolen or damaged his property (a debt *ex delicto*). Alternatively, a debt might arise by virtue of the fact that a formal act had been conducted which established the acknowledgement of a debt, or because one man had conveyed to another an item or sum of money to which he was either unentitled or no longer entitled (debts *ex contractu* or *quasi ex contractu*).

The emergence of the concept of the promissory debt *ex contractu* was essential to the development and fostering of commerce as it allowed for the regulation of more complicated forms of sale beyond that of the immediate or cash purchase. Likewise, procedures to enforce the collection of loans made *quasi ex contractu* helped to underpin the lively market in \*credit on which many were periodically obliged to rely.

The legal consequences of personal indebtedness arising from failure to repay a loan in cash or kind also helped to shape Late Antique social institutions. Although formally the institution of debt bondage (*nexum*) was abolished at an early date, the Late Antique evidence reveals that credit-based relations between landowners and peasants were central to the emergence of the \**colonus* \**adscripticius*, and that self-sale into \*slavery so as to

absolve a debt remained widely attested through to the early Middle Ages.

**Decii** Family of senatorial \*aristocracy. The origins of the family are not clear, but \*bronze *tesserae monumentorum* suggest that it was a 5th-century branch of the \*Ceionii (*CIL* XV, 7115–16; *PLRE* II, Albinus 2). \*Sidonius Apollinaris (*ep.* I, 9, 5) remarked that Fl. Caecina Decius Basilius (\*consul in 463) controlled appointments in \*Rome. Basilius' probable son Caecina Decius Maximus Basilius was the first consul appointed by \*Odoacer, in 480, after a gap of seven years in the West. The consular *fasti* of the \*Ostrogothic period were dominated by the family, as noted by \*Cassiodorus (*Variae*, IX, 23). Decii were involved in royal and ecclesiastical politics, especially during the final years of \*Theoderic's rule, when Theodorus and Inportunus were sent to \*Constantinople in an embassy (in 525) and \*Albinus was sued for maintaining secret communication with the Eastern court; he was defended by \*Boethius, and his fate is unknown.

**Decius** \*Emperor 249–51. G. Messius Quintus Trajanus Decius, a \*senator born near \*Sirmium, was commanding on the Balkan \*frontier in 249, when his troops acclaimed him as \*emperor, and defeated and killed the Emperor Philip the Arab (244–9). Decius then spent some months in \*Rome, where he built \*baths on the Aventine.

Early in 250 \*Goths and \*Carpi crossed the Danube. \*Nicomedia ad Istrum was besieged, Decius was defeated at Beroea (\*Stara Zagora), and barbarian forces under the leader referred to by \*Dexippus as the 'Scythian' Cniva sacked \*Philippopolis. The following year, Decius tried to intercept the Goths as they returned northwards, heavy with booty. He was ambushed at Abrittus (near mod. Razgrad, Bulgaria), defeated, and killed.

Later Christians believed that Decius' demise was punishment for his \*persecution of the Church (\*Lactantius, *Mort.* 4). Early in his reign, Decius issued an \*edict ordering all inhabitants of the Empire to \*sacrifice; some of the \*papyrus \*libelli certifying individual compliance survive. From the Christian sources it is not possible to discern if Decius was motivated more by \*pagan piety or by an active desire to entrap Christians. But the \*martyr passion of S. \*Pionius of \*Smyrna, fragments of \*Dionysius, \*Bishop of \*Alexandria, preserved by \*Eusebius (*HE* VI, 40–6), and the \*letters of \*Cyprian, Bishop of \*Carthage, all provide evidence for the enforcement and effects of this, the first Empire-wide persecution of Christians. Many Christians complied with the command to sacrifice; others fled. Many

who refused were imprisoned or executed; S. Fabian, Bishop of \*Rome, and S. Babylas of \*Antioch were martyred on 20 and 24 January 250 respectively. Decius' successor \*Trebonianus Gallus threatened to sustain the persecution (\*Origen in Eusebius, *HE* VII, 1; Cyprian, *ep.* 58–62), but died in 253. When it ended, under \*Valerian, local churches faced the difficulties of reconciling to the Christian community those who had sacrificed; such problems, delineated in Cyprian, *On the Lapsed*, suggest that in some places the policy of persecution certainly succeeded in smashing Christian solidarity.

The contemporary, if gratuitously circumlocutory, \**Sibylline Oracles* call Decius a 'great-hearted ruler, knowledgeable in war' (XIII, 82). His portrait \*sculptures present a distinctive head with sunken eyes and close-cropped hair.

**declamation, Greek** The composition of fictional speeches on historical or typical themes was the mainstay of Greek rhetorical training from the Hellenistic period onwards and provided practice in analysing a question, finding arguments (*heuresis*), organizing (*taxis*) and delivering (*bupokrisis*) a speech in an appropriate style (*lexis*). Declamations were pronounced in \*schools and in public competitions between orators who would take on the persona of the speaker in the case at issue. Several Late Antique authors such as \*Libanius, \*Himerius, and \*Choricius have left examples which often show an interest in character and emotion. The commentaries to the theoretical treatises by \*Hermogenes (2nd century) by \*Syrianus, and others, as well as the handbook *On the Division of Questions* by \*Sopater Rhetor, show that questions of rhetorical and argumentative strategy remained central.

D. A. Russell, *Greek Declamation* (1983).

**declamation, Latin** This pedagogical exercise, originally adapted to \*Latin in Roman society from Hellenistic practice, continued to be a mainstay of education under a \*rhetor in Late Antiquity. It still consisted of *suasoriae* and *controversiae*. It is best attested by the nineteen *Major Declamations* attributed to Quintilian by \*Jerome, but in modern times to

multiple anonymous authors from the late 1st to the early 3rd centuries; and by \*Ennodius' *Dictiones* which attest continuity in theme and style from the earlier Empire, despite the prevailing Christian climate. RDR

N. W. Bernstein, *Ethics, Identity, and Community in Later Roman Declamation* (2013).

**decorations, military** The military decorations (*dona militaria*) inherited from the Roman Republic, and systematized by \*emperors, are little in evidence after the Severan period. The occasional mentions are unreliable (*HA, Aurelianus*, 13, 2–4; *Probus*, 5, 1–3), or donors were making special cases (\*Ammianus, XXIV, 4, 24; \*Procopius, *Gothic*, VII, 1–8). However, bestowal of arm-rings (armillae) and neck-rings (torques) did continue into the 6th century; guardsmen are shown wearing them in depictions of the \*court, and so are \*military saints. Such torques were worn with other rich \*metalwork by high-ranking officers and \*draconarii. One of the latter even used his neck-ring as a substitute diadem when \*Julian was proclaimed emperor (*HA, Claudius*, 14, 5–10; Ammianus, XX, 4, 18). In their place, service, bravery, and loyalty were recognized by payments and rewards of money, \*silver plate, and such objects as \*dress and items of military equipment.

M. P. Speidel, 'Late Roman Military Decorations I: Neck- and Wristbands', *AntTard* 4 (1996), 235–43.

**decreta** Judicial or administrative enactments ('decrees'). The phrase *decreta principum* refers specifically to imperial enactments that were issued by the \*emperor either as final judgements of a case (including those heard on appeal), or as interlocutory decisions given during the course of proceedings. In Late Roman practice, imperial *decreta* were effectively handled as imperial statements of \*law. RvdB; CH Harries, *Law and Empire*.

W. Kunkel, *An Introduction to Roman Legal and Constitutional History*, tr. J. M. Kelly (2 1975).

**decurio** Term with three meanings: (1) \*city councillor (*curialis*); (2) junior cavalry officer (\*Vegetius, *De Re Militari*, 2, 14); (3) *decuriones Sacri Palatii* or \*Consistorii, senior \*palace officials managing the \**silentarii* (support staff at meetings of the \*Consistorium); in 437, the establishment was fixed at three *decuriones* and 30 *silentarii* (*CTh* VI, 23, 4, 1). CMK Jones, *LRE* 571–2.

Mary Whitby, 'On the Omission of a Ceremony in Mid-Sixth Century Constantinople: Candidati, Curopalatus, Silentarii, Excubitores and Others', *Historia* 36 (1987), 476–83.

**deer** Red deer (*cervus elaphus*), fallow deer (*dama dama*), and roe deer (*capreolus capreolus*) were widely distributed in Europe and western Asia in Late Antiquity. Venison was common and cheap; the \*Tetrarchic Price Edict (4, 44) assigned it a value equal to pork. Deer were kept in parks for \*hunting and \*food. There was a \**paradeisos* near the cave at \*Taq-e Bostan which is decorated with relief carvings of the \*Persian King hunting deer in enormous numbers, and deer are shown being hunted on the \*Piazza Armerina \*mosaics in \*Sicily. \*Justinian's *Institutes* (II, 1, 15) mentions deer so tame that they might come and go from the woods, and the \**Lex Salica* refers obscurely to penalties for harming deer (*Pactus Legis Salicae*, 118).

Deer-hunting is often shown in Late Roman art, whether the deer is being chased, caught in nets, or roped so that it can be taken to a park or for a *venatio* in an urban amphitheatre. Deer are also shown drinking from streams, something which in fact they seldom do, for instance in the \*mosaics of the building known as the Mausoleum of Galla Placidia at \*Ravenna. Since Aristotle, philosophers had characterized deer as timid and also thought that they ate snakes. \*Jerome (*On Jeremiah*, 14, 5; cf. Isidore, *Etymologies*, XII, 1, 18), probably following \*Pliny (*Natural History*, VIII, 18) says that the deer use the breath of their noses to get the snakes to emerge from their holes, which might suggest that the origin of the observation lies in the nose-worms (nasal bots) which red deer suffer from.

\*Augustine records that it was customary for the opening of Psalm 42 (41), 'like as the hart desireth the water-brooks, so longeth my soul after thee, o God', to be chanted as catechumens went forward for \*baptism; in the allegorical interpretation offered in his \*sermon on this psalm, the snakes are vices whose destruction makes the stag feel he needs a drink. He also suggests that deer set an example of mutual support by the way that they will take it in turns when swimming a river to offer their backs as a rest for the head of the deer behind them. \*Theodoret and \*John Chrysostom were also under the impression that deer were thirsty animals, influenced by the same psalm, which presumably referred originally to the instinct of hunted deer to run up river beds when heated in the chase. The significance of the deer on the head of the \*Sutton Hoo sceptre remains obscure. OPN; MD

**Defensor Civitatis (Defensor Plebis)** Important judicial official in each \*city. Attested in \*Egypt and \*Arabia in the early 4th century (Gk. *σύνδικος*, *ἑνδικος*), Defensores are first documented in other \*provinces in 368 as officials charged with safeguarding citizens against injustices of the powerful (*contra potentium iniurias*, *CTh* I, 29, 1, \*Illyricum). Defensores also acted as local judges in minor cases. They were later used for many other tasks (e.g. tax collection). The office survived among the \*Visigoths (later Judex Territorii). \*Justinian I made serving as Defensor a compulsory civic duty and enlarged their jurisdiction (*NovJust* 15, 535). MMos

**Degum** \*Village in the Hawzien Plain of Tigray, northern \*Ethiopia. A low rocky outcrop contains several rock-hewn features. The oldest element, now

incorporated within the later Selassie church, is a tomb approached down a steep rock-cut stair, strongly resembling built and rock-hewn tombs at \*Aksum, for which a date in the 6th or 7th century is plausible. Nearby is a funerary or reliquary chapel of a type represented by other examples—now modified for use as churches—elsewhere in the Hawzien Plain. DWP

**De Insidiis** See *EXCERPTA*.

**Deir Ain Abata (Sanctuary of Lot)** Church and \*monastery of the 4th–9th centuries commemorating the Cave of Lot (Gen. 18–19). It is situated above Ghor Safi (Zoara) at the south-east tip of the Dead Sea. The complex consists of a church with \*mosaics, the sacred cave, a monastery, pilgrim \*hostel, and hermits' cells. Burials of individuals with diseases, including women and children, indicate the \*pilgrimage and healing functions of the site. The earliest Christian phase is 4th century; the mosaics date from 572/3, 605, and 691.

Josephus (*Antiquities*, I, 11, 4; cf. \*Bede, *On Genesis*, 19, 26) records that the pillar of salt into which Lot's wife was transformed was visible in his day. \*Egeria (12, 6–7) was told by the local \*bishop that it had been submerged in the Dead Sea some years before her visit (cf. \*Theodosius, 20; \*Piacenza Pilgrim, 15). MESW

**Deir al-Suryani** \*Monastery built in the 6th century in Wadi an-Natrun (ancient \*Scetis) south-west of the \*Nile Delta. It was established in response to doctrinal differences by monks of the neighbouring Monastery of Abba Bishoi who followed \*Severus, the \*Miaphysite \*Patriarch of \*Antioch.

It was sold to a group of Syrian monks in the early 8th century and was bought by Marutha, from \*Takrit

in \*Mesopotamia. The main buildings at the monastery were constructed around AD 850, including the present principal church and the surviving fortification walls.

The most prominent abbot of the Syrian monastery was Moses of \*Nisibis (c.907–943). He constructed the wooden \*doors of the sanctuary of the Church of the Holy Virgin Mary and probably the entire sanctuary. Sent to Baghdad around 927 to seek tax exemptions, he collected an array of \*Syriac manuscripts in \*Mesopotamia and northern \*Syria and he brought about 250 books back to the monastery in 932. Some of these books are now in the Vatican and more in the British Library, including BL Add. 12150, containing *inter alia* \*Eusebius, *Martyrs of Palestine and Theophany*, \*Titus of \*Bosra's *Against the Manichees*, and the *Syriac Martyrology of 411*. The monastery was active until the 15th century. CK

**Deir S'eman** See QALAT SEMAN.

**Deir Zaferan (Syr. Dayro d'Kurkmo, Turkish Deyrulzaferan)** The 'Saffron Monastery', so called from the colour of its stone, stands on a slope 4.5 km (c.3 miles) south-east of \*Mardin, and is organized around a courtyard. The main church of the \*monastery is named after Mor Hanania, the \*bishop who refounded the monastery in 793. The main church and the burial chamber next to it have remarkable architectural \*sculpture in a classical style which can be dated to the 6th century. The Church of the Blessed Virgin \*Mary can also be dated to the 6th century, based on its floor \*mosaics and building technique. Between 1293 and 1932 it was the residence of the

\*Syrian Orthodox \*Patriarch of \*Antioch and is now the seat of the Bishop of Mardin. EKK

**Delphi** \*City, \*temple, and \*oracle of Apollo. The shrine continued to erect dedications to the \*emperors in the 4th century. It was visited by \*Libanius as a student and \*Iamblichus (*De Mysteriis*, III, 11) vouchsafes details concerning the oracle's operation. According to the *Passion* of S. \*Artemius (35), probably drawing on \*Philostorgius (VII, 1c = VII, 77), and to \*Cedrenus (532) the doctor \*Oribasius brought the \*Emperor \*Julian an oracle from Apollo; its authenticity is debated. The city flourished in the 5th century and acquired a \*bishop with a \*basilica near the temple. Some of the oracles collected in \*Porphyry's *Philosophy from Oracles* may come from Delphi. 'Delphic' oracles were circulating by c.500 making Apollo a prophet of

Christianity. Early Christian remains include a chapel of the 6th/7th century, and *extra muros* a three-aisled \*basilica with a \*mosaic floor. AK

**Demetrias** (fl. 413–440) A member of the \*Anicii \*family, a dedicated virgin, she received letters from \*Jerome (*ep.* 130), \*Pelagius (PL 30, 15; 30, 1099), and \*Augustine (*ep.* 150, 188). A \*patron in her own right, she built the \*basilica of S. Stephen on the Via Latina (ILCVI, 1765). LHCG

PLRE II, Demetrias.

PCBE II/1, Demetrias.

### Demetrius, S., and *Miracles of S. Demetrius*

S. Demetrius, patron saint of \*Thessalonica, is said to have been a \*martyr under Maximianus \*Galerius in the early 4th century. The \*Syriac *Martyrology of 411* records a \*deacon called Demetrius martyred at \*Sirmium. Encomia of S. Demetrius, none earlier than the 9th century, mention his aristocratic origin in Thessalonica and high official rank. Persecuted as a preacher of Christianity, he is said to have been imprisoned in the \*city's central public \*bath, where he was killed and buried. When \*persecution ended, a 'house' was built on the site of his martyrdom, later replaced by the grand \*Basilica of S. Demetrius, a \*pilgrimage centre whose \*mosaics depict S. Demetrius wearing the \*chlamys, the

\*dress of a Roman civilian official. The focal point of S. Demetrius' cult was the ciborium which stood in the central nave of the basilica.

The cult of S. Demetrius is recorded in *The Miracles of Saint Demetrius*. This comprises two books of the 7th century which relate \*miracles performed when S. Demetrius intervened to rescue Thessalonica and its inhabitants, not least from \*Slav and \*Avar attackers. This makes the *Miracles* an important source for the history of the \*Balkans in the 6th and 7th centuries.

The older Book I (early 7th cent.), attributed to John, Archbishop of Thessalonica, consists of fifteen chapters which record miraculous healings of physical and mental illnesses, the saint's concern for his basilica, and the protection of the \*city and its people from famine and invasions in the late 6th and early 7th centuries. Book II is anonymous, possibly by a clergyman, and complements the work of John 70 years after its composition. Its content is historical, relating specific events of the first half of the 7th century, such as the invasions and sieges of Thessalonica by Avars and Slavs, \*earthquakes, and fires. The two final chapters of Book II are probably a later addition. PM

**demonetization** The act of denying to a circulating currency the status of legal tender. In the case of coins circulating only in accordance with their intrinsic value (as \*gold did in Late Antiquity), this happens mostly for political reasons, e.g. when coins bearing the portrait and name of a \*usurper lost their monetary value and were melted down and the metal re-minted. In the case of coins with a nominal over-evaluation, a demonetization can take place as part of a monetary reform, which changes the monetary structure and removes the status of legal tender from previous coins. Such demonetized coins were generally withdrawn by the minting authorities (as attested by \*Zosimus, I, 61, 3 for the reform of the \*Emperor \*Aurelian). Coins remaining in circulation lost their nominal value and assumed the simple value of the metal they are made of. The reform of the divisional coinage undertaken in AD 348, like the second reform of the Emperor \*Anastasius I in AD 512,

entailed a demonetization of previous currency; this is apparent from coin \*hoards. A \*law of 395 (*CTh* IX, 23, 2) orders that the \**decargyrum* be withdrawn from circulation.

FC

**demons and daemons** Spiritual creatures who were thought to act as intermediaries between men and gods, or as minions of the Devil. Belief in the power of these spirits was widespread in Late Antiquity judging by the plethora of magical texts dealing with demons, and stories about possession. \*Neoplatonist accounts of the cosmos accommodated ideas of good and bad demons, and in broader \*pagan culture demons were represented variously as benign, neutral, and mischievous. Dualists claimed that demons (or their leaders) were responsible for creating the material world. By contrast, anti-dualist Christians argued that demons were part of God's good creation but had sinned and become evil (e.g. \*Lactantius, *Inst.* II, 14–16). The fatal sin of these \*angels was identified as lust, envy, or pride, depending on what scriptural or apocryphal texts were adduced. Early Christian literature is saturated with warnings and stories about demons' attempts to harass, tempt, and pervert believers from righteous living. Demons' bodies were too subtle to be visible, and they are often described as donning seductive or terrifying (but illusory) disguises to appear to humans and trick them. They could be distinguished from angels, said a \*sermon attributed to S. \*Antony of \*Egypt, because angels prefaced their appearances to humans with an exhortation not to be afraid (*VAntonii* 35–7). In extreme cases, demons possessed humans, taking over their bodies, effacing their identity, and making them behave in terrifying and unnatural ways. Within the Church, power over demons was thought to be granted to particular \*holy men by God, on the apostolic model, and \*saints' lives abound in triumphant stories of \*exorcism. The adjuration of demons, notably by \*exorcists, was also adapted and given liturgical shape at \*baptism and beyond. The conjuration and \*divination of demons continued to be practised in syncretistic Late Antique \*magic but was vigorously opposed by Christian leaders.

**demons in Middle Iranian religions** Demons (MP *dēw*, Av. *daēuua-*) were central to the dualist theology of both \*Zoroastrianism and \*Manichaeism and had consequences for their cosmogony, ritual, and ethics. In Zoroastrianism, the Evil Spirit (\*Ahriman) 'miscreated' his demons. As his agents, they are directly responsible for all forms of evil, corruption, and decay (\**Bundahishn*, 1). The present world is a 'mixture' (Pahlavi *gumēzišn*) since the demons have entered both the world at large and the bodies of humans.

Several of the demons recognized in Manichaeism are borrowed from Zoroastrianism. The 'King of Darkness' referred to as the Devil (*diabolos*) in \*Greek, \*Latin, and \*Coptic and as Satan in Aramaic in Manichaean Middle \*Persian and Parthian was a being called Ahreman (Ahriman).

**Demotic** See EGYPT, LANGUAGES IN.

**denarius** Roman \*silver coin denomination, theoretically weighing 1/72 of a Roman pound or c.4.5 grams (0.15 ounces). The *denarius* was the silver unit of account of Roman imperial currency until persistent \*debasement in the 2nd century reduced its stability and value. It ceased to be issued after the \*coinage reform of \*Diocletian in c.293/4 but continued as a unit of account, for example in the Tetrarchic \*Prices Edict, in which it apparently represented the lowest unit of reckoning. In post-/non-Roman contexts, the *denarius* gave a name to various precious-metal coinages, including the \*dinar and \*denier.

**Dendera** (also Nitentori, Gk. Tentyra) Town in the \*province of \*Thebais Secunda, famous for its Ptolemaic \*temple of the goddess Hathor, whose decoration was damaged in Late Antiquity. \*Pachomius cooperated with \*Bishop Sarapion of Nitentori and counted the steward and \*priest of the church there one of his closest friends. By the 5th century AD a \*triconch church had been built between the two birth houses of the temple on the north-west corner of its inner precinct, in part reusing stone from the birth houses.

Maenchen-Helfen, *World of the Huns*, 165–8.

**denier** Late medieval \*silver coin denomination, usually weighing 1.1 or 1.3 grams (c.0.04 ounces). The *denier*, derived from Latin \**denarius*, was introduced c.670 under the \*Merovingians though with little obvious royal supervision. Carolingian *deniers* (often called pennies) were more tightly controlled. Various late medieval silver coins based on the Carolingian silver coinage are also termed 'denier'. RRD

MEC 1.

**Denkard (Acts of Religion)** An encyclopedic work in Middle \*Persian, much of it in difficult and cryptic language, and compiled in the 9th century AD initially by Adur Farnbag Farrozzadan and after his death by Adurbad Emidan in Baghdad.

The *Denkard* was originally composed in nine books, of which Books 1 and 2 have been lost. Book 3 concerns itself with many issues, from the composition of the human body to opinions concerning relations between the \*Zoroastrian religious establishment and the \*Sasanian state, and includes the famous Persian dictum concerning the inseparability of religion and politics which is still evident in Persian religious circles: 'Know that kingship is religion and religion is kingship... kingship is arranged based on religion and religion based on kingship.' Book 4 has been called the Book of Manners or Customs and is perhaps the most difficult book, since it deals not only with the history of the sacred texts, but also with \*Greek and Indic science. Book 5 begins with a series of questions put by a non-believer to a Zoroastrian sage, and it deals with different issues, especially *xwedodah* or consanguineous \*marriage. Book 6 may be called a Book of Counsel, while Book 7 particularly deals with the story of Zoroaster, from his birth to his death. Book 8 is important because it is a

description of the contents of the 21 sections of the \**Avesta*. Each section (*nask*) is named and its content briefly mentioned, while Book 9 concentrates on three interpretations or *nasks* on the *Avesta*. TD

**Dentelin, Duchy of** A territorial unit first mentioned by \*Fredegar (IV, 20), when it was seized from \*Chlothar II by \*Theudebert II in 600, and described as lying 'between the Seine and the Oise, as far as the sea'. It was presumably the territory held by Chlothar II from his accession in 584. It was regained by him on Theudebert's death, and allocated to \*Neustria by \*Dagobert I in 633 (Fredegar IV, 37–8, 76). EJ

**Deogratias** \*Bishop of \*Carthage (454–7), ordained through the appeals of \*Valentinian III. He used church resources to redeem and care for captives of \*Geiseric's raid on \*Rome of 455. After his death, his see lay vacant for a generation, until the ordination of Eugenius (\*Victor of Vita, 1, 24–7). JPC

PCBE I, Deogratias 1.

**depopulation** See POPULATION.

**Derbent** (Iran. 'closed gates') A strategic fortress and pass in the north of medieval Caucasian \*Albania, located on a narrow strip of land between the Caspian Sea and the Caucasian range. Together with the \*Dariel

Pass, Derbent was often identified with the Gates of Alexander. As the northernmost fortress in the eastern Caucasus, it was both an important centre for the spread of Christianity and a defensive complex against the north Caucasian \*nomads. Owing to its strategic location, throughout Late Antiquity Derbent was a target of perpetual military raids. After the occupation of Albania in the 5th–6th centuries, Derbent was controlled by the \*Persian Empire. King \*Yazdegerd I and later \*Khosrow I Anushirvan constructed a massive fortification, which is still to be seen in the city. In 627, the city was captured by the Western Turkic Khaganate and later, in 651–4, by \*Arabs.

**De Rebus Bellicis** See ANONYMUS DE REBUS BELLICIS.

**dérivées des sigillées paléochrétiennes** Type of \*pottery produced in southern \*Gaul in the late 4th to mid-6th centuries. *Dérivées des sigillées paléochrétiennes* (DSP) tablewares succeeded the mid-2nd- to late 3rd-century evolution of the south Gaulish \*sigillata of the 1st and 2nd centuries, *sigillata chiara B* (pale orange slip), and its later iridescent products *terra sigillata (t.s.) chiara pre lucente* (Severan period) and *t.s. lucente* (late 3rd–5th centuries), produced in Savoy and the Rhône Valley.

DSP comprised three main wares over the late 4th to mid-6th centuries, each with their distinctive decorative schemes. Like \*African Red Slipware (ARS), in copying forms and decoration from contemporary metalware, DSP bears complex stamped decoration on the floor and on the rim. Whereas some products were oxidized (*orangée*), others, unlike ARS, were reduced, with a grey to black fabric and slip (*grise*). The *Groupe Languedocienne* (\*Narbonne) was active from the late 4th to mid-5th centuries. The *Groupe Provençale* (Provence and Lower Rhône Valley), based at \*Marseilles, produced primarily reduced vessels in the early 5th to mid-6th centuries. The *Groupe Atlantique* (Atlantic coast and \*Aquitaine), based at \*Bordeaux, was active in the 6th century, producing only *t.s. grise* decorated with distinctive designs, some including Celtic elements, notably \*animals.

**Descriptio Consulium** A complex document based upon consular fasti from 509 BC to AD 468, one of only

two such nearly complete lists to survive (with the fasti of the \*Codex-Calendar of 354). It was originally compiled in \*Trier in c.342 and travelled thence to \*Rome, \*Constantinople, \*Spain, and \*Africa. A variety of historical, literary, and Christian entries appear between the 1st century BC and the 3rd century AD. The evidence for contemporary compilation of historical events begins at the end of the 3rd century and entries appear almost annually between c.354 and 389, when the text was in Constantinople. Different recensions served as an important source for \*Jerome, \*Prosper, \*Hydatius, \*Socrates, the \**Consularia Berolinensia*, and the \**Chronicon Paschale*. Its unique preservation of many otherwise unknown or corrupt dates and unknown or poorly known events makes it of fundamental importance for the chronology of the 4th and early 5th centuries. It is preserved in only one independent manuscript, of the 9th century (Berlin, Phillipps 1829).

Burgess and Kulikowski, *Mosaics of Time*, 2.

**Desenzano** One of many Roman and Late Roman \*villas grouped around Lake Garda in \*Italy. It is associated with the Decentii, well attested at the imperial \*court of \*Milan in the 4th century. Excavations have revealed elements of a vast complex, notably its large peristyle with \*baths, nymphaeum, octagonal hall, and triapsidal \*triclinium. Extensive geometric and figured \*mosaic floors (including Cupids, Orpheus, \*Seasons, and \*hunting scenes) of c. AD 350 were probably made by \*African craftsmen. Christian use of the 'private' \*basilica north of the triclinium is postulated, but \*burials cutting through mosaics imply shrinkage, altered function, or abandonment in the 5th century.

**Desert Fathers** Term applied to the 4th- and 5th-century monks of \*Egypt; occasionally also to Palestinian monks in \*Gaza and the \*Judean Wilderness.

The exemplar of the desert ideal was \*Antony the Great (d. 356), an anchorite whose life was celebrated in \*Athanasius' *Vita Antonii* (c.358). Antony's 'withdrawal' (*anachōresis*) from his village to the desert came to define the ideal, and his disciples famously 'made the desert a city' (*VAntonii*, 14).

In Lower Egypt, \*Macarius the Egyptian (d. 390) founded the desert \*monastery of \*Scetis. The wisdom of the monks of Scetis is preserved in the anecdotes and aphorisms of the *\*Apophthegmata Patrum*. \*Amoun (d. c.353) founded two major desert monasteries in Lower Egypt, \*Nitria and \*Kellia, which were celebrated in \*Palladius' *Lausiac History* and the anonymous *\*Historia Monachorum in Aegypto*.

The fame of the Desert Fathers attracted foreign intellectuals who visited or settled in Egypt and, in their writings, broadcast Egyptian spiritual traditions to the wider Roman world. One was \*Evagrius Ponticus (d. 399), whose works catalogue the eight principal vices and map the soul's journey to God. Another was \*John Cassian (d. c.435) who, after a decade in Scetis, left Egypt and settled in \*Marseilles. His *Institutes* and *Conferences* helped translate desert traditions for the Latin West. The *Rule of S.\* Benedict* made Cassian required reading, ensuring that desert traditions remained an ideal for medieval monasticism.

The term 'desert mothers', used by certain modern authors, is inexact. Surviving papyri refer to *apotaktikai* ('women renouncers'), while Palladius recounts stories of various ascetic women; in both instances, the women lived not in the desert, but in or near towns. There were large coenobitic women's monasteries allied with \*Pachomius and \*Shenoute, but these were located quite close to the \*Nile. The *Apophthegmata Patrum* lists three *ammas* ('mothers'); one lived in the suburbs of \*Alexandria, another, in the Delta. While there is scant evidence of 'desert mothers', strictly speaking, large numbers of Christian women embraced a variety of ascetical lifestyles within the \*cities and villages of Egypt. JWH

**devaluation of currency** The opposite of \*revaluation. Devaluation indicates a deliberate reduction of the nominal value of a currency in respect to other currency with which it is in a fixed exchange ratio. Such fixed exchange rates did not exist in Late Antiquity in respect to foreign currencies. Devaluation however could occur inside the imperial monetary system itself. The best-known example is \*Licinius' decision to lower, around AD 320, the value of the so-called 'nummus' from 25 to 12.5 \*denarii. The nummus was thenceforth exchanged against \*silver coins at a ratio of 1:8 instead of 1:4. FC

Corcoran, *Tetrarchs*, 196.

**Dewashtich (Diwashini)** \*Sogdian ruler (708? – 22) based in \*Panjikent, whose archives were discovered at a fortress on Mount \*Mugh in 1932. Like \*Ghurak, his stronger rival, Dewashtich, a nominal Muslim, alternated between submission to the \*Arabs and alliances with the \*Türks. During the Sogdian rebellion of 722, Dewashtich retreated to Mount Mugh where, following an Arab massacre of Sogdians in Khojand and the siege of his fortress, he surrendered and was subsequently executed. **dexiosis** See HAND AND HAND GESTURES.

**Dexippus** (200/210–c.275) Historian. From an established Athenian family, Publius Herennius Dexippus held some of the most important offices at \*Athens, including the eponymous archonship (*IG* III, 1 714–17). In 267/8, when the Heruli \*invaded \*Greece and sacked Athens, amongst other cities, Dexippus gathered a force in the countryside and launched a counter-attack which drove them off.

\*Photius (*cod.* 82) mentions three works written by him: a *History after Alexander* in four books; a *Summary of History* in twelve books (which is elsewhere called *Chronicle* and *Chronological History*); and a *Scythica*.

The *History after Alexander*, which survives only in Photius' summary and some passages in the *Excerpta de Sententiis*, appear to have been a literary account of the manoeuvres after the death of Alexander the Great. The other two works appear to have been more popular. The *Chronicle* was used or referred to by \*Evagrius in his *HE*, by \*Stephanus of \*Byzantium, by \*George the Syncellus, and in the *\*Historia Augusta*. Its chronology was discussed at some length by \*Eunapius of \*Sardis, who continued it.

The *Chronicle* was an annalistic record of the main events and personalities of various peoples drawn from a number of sources, beginning with the earliest times and ending at the reign of \*Claudius II (270), set in a chronological framework of Olympiads and archon-years, and, apparently, ended with a synoptic table divided into millennia which coordinated the Olympiads and archon-years with consular years.

The *Scythica* was used by \*Jordanes in his *Getica*, by the \*Suda, and in the *\*Excerpta* compiled under Constantine VII in the 10th century, which preserve coherent passages of appreciable length. Further fragments were

recognized by J. Grusková in a Vienna palimpsest (*cod. Vindobonensis Hist. gr.* 73) in 2007. The *Scythica* gave a detailed account of the invasions by peoples north of the Danube \*frontier primarily into the Greek-speaking regions of Eastern Europe and \*Anatolia, beginning perhaps in 238 and continuing into the 270s, ending perhaps at the death of \*Aurelian in 275. The style of the *Scythica* was classicizing, with frequent references especially to Thucydides and extensive speeches and accounts of \*sieges in the Thucydidean manner. RCB

**dexter Dei** See HAND AND HAND GESTURES.

**dhimma** The covenant of protection established, in principle, indefinitely between the Muslim ruler and the communities of the revealed religions (the *ahl al-kitab*, People of the Book) living under Muslim rule. The *dhimmis* or *ahl al-dhimma*, People of the Covenant, lived under their own laws, customs, and leaders in exchange for the payment of a tax, the \**jizya*, as described in the \*Qur'an: 'Fight those who do not believe... until they pay the *jizya*' (Q. 9:24). Besides the \*Jews and Christians, who are mentioned in the Qur'an, \*Zoroastrians and other faiths not explicitly mentioned generally obtained the same status of *dhimma*, in contrast to idolaters, non-Muslims living in the areas not yet under Muslim rule, and non-Muslims temporarily residing in Muslim lands. The treatment of non-Muslims under \*Islam was governed by the precedent set by the prophet \*Muhammad and the circumstances at the time of the conquest, as well as the attitude of individual rulers. The consolidation of Islam brought more restrictions on public forms of non-Muslim worship, such as \*processions, \*bells, music, singing, and cultic buildings, as well as sumptuary and behavioural limitations. These limitations are said to be laid down in the apocryphal pact of \*Umar but more probably originated in a later period when cultural assimilation had increased. PMS

F. Donner, 'The Bakr b. Wa'il Tribes', *StudIsl* 51 (1980), 5–38.

**diaconicon** Small room at the east end of a church, alongside the main \*apse, used by \*deacons to prepare \*vestments and liturgical vessels necessary for Christian worship (cf. *SECRETARIUM*), often corresponding architecturally to the \*prothesis on the other side of the apse. EL

*DACL* 4/1 (1920) s.v. diaconicum, cols. 733–5 (Leclercq).  
 Mathews, *Early Churches*, 141–5.

**Diadochus** The head of the \*Neoplatonic Academy at \*Athens. He managed the resources of the \*school and represented a link in what was thought to be an unbroken interpretative tradition stretching back to Plato. This succession was defined in personal terms and the Diadochus acknowledged this by often using terms like 'father' and 'grandfather' when speaking about the \*philosophers who held the position before him. EW

**Diadochus of Photice** (bp. after 451, d. before 486) Greek spiritual writer noted for synthesizing the vivid language of the \**Macarian Homilies* and the intellectual spirituality of \*Evagrius Ponticus. Biographical data is sparse though sufficient to place him in the mid-5th century; his see is identified with modern Paramythia in southern \*Epirus (Greece).

His 100 *Practical Chapters of Knowledge and Spiritual Discernment* are presented as a 'century' of brief texts suitable for memorization, a format earlier favoured by Evagrius. Diadochus employs obviously Macarian vocabulary of spiritual sensation even as he follows Evagrius in emphasizing the imageless nature of \*prayer. His original contribution is the remembrance of the name of Jesus in prayer, thus establishing a crucial step toward development of the \*Jesus Prayer. His other works are a \*sermon on the Ascension and the *Vision*, a meditation on divine, \*angelic, and human natures. CAS

**dialogue, Greek** The genre of the dialogue has no uncomplicated origin; it is always a conflicted, self-conscious, and multiple form (Goldhill, 4). From its reputed origins in Plato's Socratic dialogues, it developed into a genre whose many forms broadly share the use of a conversational *mise-en-scène* and a *telos* of juxtaposing philosophical and related ideas.

Several major but by no means pure sub-types may be discerned:

- (1) the philosophical dialogue that harkens back to Plato's *Symposium* and continued to be used by \*Neoplatonists and other writers,
- (2) the satirical or Menippean dialogue associated with Lucian of Samosata,
- (3) the sympotic (or convivial/commensal) dialogue that found especial favour among authors of literary works.

During the \*Second Sophistic, writers of philosophical dialogues were reluctant to stage rational philosophical debates in a convivial (i.e. inebriated) setting

whilst composers of literary dialogues such as Athenaeus and Plutarch warmed to the convivial context for its implicit playfulness (König, 94–5). \*Latin writers of dialogues eschewed convivial settings for fear of seeming frivolous but remained aware of the dialogue's antecedents in the \*Greek symposium.

Early Christian authors used the form as Justin Martyr did in his *Dialogue with Trypho* to dramatize religious debate. Others, such as \*Methodius of Olympus, knowingly played on the Platonic form by reshaping both its dramatic setting and goal. Methodius' *Symposium* introduces a new type of interlocutor—ten Christian \*virgins, new topics—the ascetic virtue of celibacy, and a new *telos*—the glory of Christ's eschatological return. Likewise, \*Gregory of \*Nyssa stages a deathbed dialogue with his deceased sister S. \*Macrina (*De Anima et Resurrectione*) that is modelled on Socrates' deathbed in the *Phaedo* but explores Christian teaching regarding mortality, free will, and resurrection.

Greek dialogue form continued to attract writers who wished to give a rarefied air to their compositions. Though this might seem at odds with Christian notions of the saving efficacy of \**sermo humilis*, Late Antique Christians who composed works for religious controversies and catechetical instruction readily resorted to the dialogue. The Greek dialogue thus continued as a literary form well into the Byzantine period (Cameron and Hoyland). Current scholarly debate continues as to whether the triumph of Christianity led effectively to the decline of the dialogue. Certainly, other Christian forms of expression outside the genre of classical dialogue continued to be nourished by patterns of thinking associated with the dialogue (Goldhill).

**dialogue, Latin** Literary genre that remained popular but evolved in style and function. Cicero, who composed philosophical and rhetorical dialogues

incorporating historical and contemporary interlocutors, provided the ultimate \*Latin model. Ciceronian influence pervades Minucius Felix's *Octavius*, an early 3rd-century dialogue between a pagan and Christian speaker. Late Latin history of the philosophical dialogue, as well as its Christianization and associated hesitations about the form's utility (\*Augustine, *Retractiones*, prol.), begins with several works composed by Augustine at \*Cassiciacum and \*Thagaste. Thereafter several streams are evident. \*Sulpicius Severus wrote *Dialogues* as sequels to his *Life of S. \*Martin* while both \*John Cassian's *Conferences* and \*Gregory the Great's *Dialogues* use the conceits of *mise-en-scène* and question-and-answer to present the teaching and tales of spiritual heroes. Literary and intellectual aims are the main concerns of both \*Macrobius' *Saturnalia*, in which a group of dinner guests discuss the poetry of \*Vergil and ancient religious lore, and \*Boethius' *Consolation of Philosophy*, a record of the author's conversation with a personified Philosophia. Current scholarship is particularly concerned to probe the tension between openness and authority in the ancient dialogue in general and its Late Antique manifestations in particular and to ask whether Christian writers vitiated the form or rather developed it in new ways.

**Dialogue of Simon and Theophilus** A 5th-century AD Latin work dedicated to Valerius by one Evagrius who claims to have witnessed the disputation. Simon argues that Christ cannot be God because God is one, a virgin cannot give birth, crucifixion was a curse, and Christians neglect the Sabbath, circumcision, and dietary laws. Although Simon concedes that Christ is God early in the text, he continues to question Theophilus until at the end he requests to be baptized. JZP

W. Varner, *Ancient Jewish-Christian Dialogues: Athanasius and Zacchaeus, Simon and Theophilus, Timothy and Aquila: Introductions, Texts, and Translations* (2004).

**Dialogue of Timothy and Aquila** Anonymous \*Greek disputation which took final form in 6th-century \*Egypt and is placed during the archbishopric of \*Cyril of Alexandria (412–44). Timothy, a Christian, refutes the claims of Aquila (a Jew) that Jesus was not the Messiah and that he was crucified because he claimed to be God. Occasionally Aquila offers clever

rebuttals, which suggests some actual conversation lies behind the \*dialogue, but he is baptized in the end.

**Dialogue on Political Science (*Dialogus de Scientia Politica*)** Philosophical \*dialogue in the Platonic tradition, dating from late in \*Justinian I's reign. Only one and a half out of an original six books survive. It reflects the range of learning, \*Latin and \*Greek, then available in \*Constantinople, and is written from a distinctive perspective implicitly critical of the \*emperor. Book 4 outlines the responsibilities of a commander and explains why one must not favour \*infantry over \*cavalry, or antagonize civilian populations in war zones. Book 5 sketches a theory of political science, proposing a mixed constitution based on 'lawful and just', that is legitimate, authority (*Dial.* 5.46), a constitution where the emperor, the 'imitation of God', is a Platonic philosopher-ruler (*Dial.* 5.1). But, unlike mainstream imperial theory (e.g. in *InstJust* 2.17.18, or \*Agapetus), the *Dialogue* conceives of imperial authority as embedded within a binding legal and constitutional framework in which all social classes play their part—albeit small for the lower classes. This shows the strong influence of Cicero's *Republic*. PNB

W. L. Petersen, *Tatian's Diatessaron: Its Creation, Dissemination, Significance, and History in Scholarship* (VigChrist supplements 25, 1994).

**diatretra glass** Cups and goblets, also *situlae* (buckets), flasks, and *paterae* (shallow bowls), cut from a single thick-walled piece of \*glass, composed of an outer open-work 'cage' surrounding the interior wall of the vessel. The outer filigree 'cage' might be a geometrical design or, more rarely, figurative (as in the case of the \*Lycurgus Cup) and sometimes incorporated an \*inscription wishing luck. Both drinking glasses and \*lamps were produced by this intricate technology. Repair of a '*calicem diatretum*' is adduced in a specimen law-case by Ulpian (*Digest*, IX, 2, 27, § 29). Around 60 pieces are known, from all over the ancient world, but with a concentration in the Rhine Valley, where one workshop was located. MDN

D. B. Harden, *Glass of the Caesars* (1987).

**Dibsi Faraj** (possibly Roman Neocaesarea and/or Athis) Inundated fortified settlement on the right bank of the middle Euphrates (\*Syria, Tabqa Dam). The absence of epigraphic evidence for a name at the site coupled with the fact that a number of \*cities appearing in the historical record of the region remain unidentified has resulted in several suggested identifications, chief among them Thapsacus, Athis, and Neocaesarea. On the basis of the stratigraphy R. P. Harper ruled out Thapsacus, a prominent crossing of the Euphrates in Achaemenid-Hellenistic times, positing a Roman (early 1st-century AD) provenance. Harper proposed that it was originally the Athis named in \*Ptolemy's *Geography* and that during the Later Empire its name changed to Neocaesarea (named in \*Theodoret, *HE* I, 7; \*Procopius, *Aed.* II, 9, 10).

From the 3rd to the 6th century, a period in which the middle Euphrates was a main field of conflict between the Roman and \*Persian Empire, the fortress grew into an important bulwark against the Eastern power. This is indicated by the construction of a perimeter wall around the 5 ha (12.4 acre) citadel and the appearance of significant buildings such as the *principia* and a \*basilica (41.5 × 29.5 m; 136.1 × 96.8 feet). Outside the citadel a new \*bath complex and a \*martyrium marked continued expansion into the 5th century. As with other fortresses along the eastern frontier its defences were improved by \*Justinian I. Under the \*Umayyads, who took over following the \*Arab conquest, the site assumed the certain name of Qasri. The city's occupation was probably brought to an end by an \*earthquake in 859. Study of the excavation archive continues, directed by Dr. A. Leone of Durham University. SGB

R. P. Harper and T. J. Wilkinson, 'Excavations at Dibsi Faraj, Northern Syria, 1972-1974: A Preliminary Note on the Site and its Monuments', *DOP* 29 (1975), 319-38.  
N. Pollard, *Soldiers, Cities and Civilians in Roman Syria* (2000).

**Dichin** Fortress, founded c. AD 400, situated on a low hill, surrounded by the flood-plain of the River Rosita, 11 km (7 miles) west of \*Nicomolis ad Istrum in the \*province of \*Moesia Secunda (mod. Bulgaria). The fortress was built on a regular plan, with barracks, a church, and granaries, but no \*baths or headquarters building. The surrounding walls, 2 m (6 feet 6 inches) thick and originally 9 m (nearly 30 feet) high, had a rubble and concrete core with tile and limestone facings.

The settlement was violently sacked and burned sometime after 474, then levelled and rebuilt in the early 6th century before being sacked again and abandoned in c. 575/600. Coins, bones, and seeds sealed in the destroyed layers provide considerable evidence for the economic life of the place in the 5th and 6th centuries.

**Dicorus** 'Two-pupilled', nickname of the Emperor \*Anastasius I (491-518), because he had one black eye and one blue.

OPN

Haarer, *Anastasius*, 4-5.

**Dictys of Crete** Name adopted by the author of what purported to be an original eyewitness account of the Trojan War, which he claimed to have lived through as companion and scribe of Idomeneus, leader of the Cretans. His 'historical' narrative, possibly dating from the reign of Nero, was translated into \*Latin in the 4th century by one Lucius Septimius and survives in six books under the title of *Ephemeris belli Troiani* ('A Diary of the Trojan War'). Although clearly a work of fiction, it was taken seriously as a genuine account of the Trojan War against which to judge what some liked to think the 'later' poetic version of \*Homer—a remarkably bold example of early Homeric revisionism. The work begins with a \*letter from Septimius to Quintus Aradius Rufinus explaining who Dictys was and how his text came to be discovered. Septimius claims to have made a free translation from \*Greek into Latin. The narrative proper recounts the story of the war at Troy from the abduction of Helen to the death of Odysseus. An account of the Trojan War preserved in the *Chronicle* of \*John Malalas appears to derive (like a number of other later Byzantine texts), not from the Latin translation but from the 'original' Greek work—a fragment of which was discovered in 1907 (P. Tebt. 268: 2nd/3rd

cent.). The Latin version was itself highly prized during the Middle Ages when knowledge of Greek was rare (Petrarch's own Latin copy, Cod. Parisinus Latinus 5690, survives).

ed. S. Merckle, *Die Ephemeris Belli Troiani des Diktys von Kreta* (1989).

ET (annotated) R. M. Frazer, Jr., *The Trojan War: The Chronicles of Dictys of Crete and Dares the Phrygian* (1966).

**Didascalia Apostolorum** One of the longest \*church orders, early attributed to Jesus' apostles posthumously. Scholars concur that *Didascalia Apostolorum* was modelled on the *Didache* and written, originally in \*Greek, in the first half of the 3rd century in northern \*Syria. It survives only in \*Syriac, but the Greek original can be ascertained with some certainty because a much longer church order, the *\*Apostolic Constitutions*, which survives in Greek, draws on it. *Didascalia Apostolorum* contains admonitions about Christian life; instructions about the duties of \*bishops, \*deacons, and \*widows; the proper observance of \*Easter; \*penance after \*baptism; and about dangers to Christians, particularly converts from Judaism.

ET (annotated) A. Stewart-Sykes (2009).

**Dido** \*Bishop of \*Poitiers (c. 629-669) Member of an important Frankish aristocratic family, uncle of Gaerinus \*Comes of \*Paris, and of \*Leodegar, Bishop of \*Autun, whom he brought up, and also an associate of the \*Austrasian \*Mayor of the Palace \*Grimoald. When \*Sigibert III of Austrasia died in 656, he consigned Sigibert's son \*Dagobert II to \*exile in \*Ireland, clearing the way for \*Childebert the Adopted, probably Grimoald's own son, to become king.

RLJ

J.-M. Picard, 'Church and Politics in the Seventh Century:

The Irish exile of King Dagobert II', in J.-M. Picard, ed., *Ireland and Northern France, AD 600-850* (1991), 27-52.

**Didyma** (mod. Didim) \*Temple of Apollo on the Ionian coast, 20 km (12.5 miles) south of \*Miletus, housing a famous \*oracle. The temple was rebuilt in the late 4th century BC, though never completed; the oracle was even older. It occupied a temple within a temple, a sanctuary (*naiskos*) beside the sacred spring within the open-air adyton (*cella*) of a huge Ionic temple with a double colonnade 21 columns long and 10 columns wide. \*Inscriptions attest the worship of Artemis, Zeus, and other gods. In the Roman period major buildings were added, including a \*basilica, \*baths, and a theatre of the late 1st century AD, discovered in 2010.

\*Diocletian dedicated statues of Zeus and Leto, and sought the oracle's counsel when Christians caused a

\*sacrifice at \*court to fail (\*Lactantius, *Mort.* 11, 7). After the Great \*Persecution, the \*philosopher who held the office of *prophetes*, the high official who turned the god's utterances into verse, was tortured till he admitted that the oracles were a fraud (\*Eusebius, *Praeparatio Evangelica*, IV, 2, 11). Around the same time, \*Iamblichus was reverently expounding the way the oracle was inspired (*De Mysteriis*, III, 11). The \*Emperor \*Julian was appointed the oracle's *prophetes* (ep. 451 B), and instructed the \*governor of \*Caria to clear shrines to Christian \*martyrs from around the temple (\*Sozomen, V, 20, 7).

In the 5th century a church was built, incorporating the *naiskos*, and Didyma, renamed Hieron, and eventually Justinianopolis, became the see of a \*bishop. The temple, still largely intact when visited by Ciriaco of Ancona in 1446, collapsed during an \*earthquake in 1493.

**Didymus and Verinianus** Brothers, probably cousins of the \*Emperor \*Honorius, who led resistance to the \*usurper \*Constantine III and his son Constans in \*Spain, with an army including peasants and slaves. After success in \*Lusitania, they were captured by Constans, taken to Constantine in \*Gaul, and executed in 409. Accounts of their activities are given by \*Olympiodorus (16); \*Orosius (VII, 40, 5); \*Sozomen, IX, 11, 4; IX, 12, 1; and \*Zosimus (V, 42, 3–43, 2; VI, 1, 1; VI, 4, 3–4; VI, 5, 1–2).  
GDB  
*PLRE* II, Didymus 1 and Verinianus.

**Didymus the Blind** (c.313–398) Theologian, biblical writer, and teacher from \*Alexandria. Though blind at an early age, Didymus was renowned for his erudition and served as the director of the famous catechetical \*school in Alexandria. Both \*Jerome and \*Rufinus attest to Didymus' presence at the school and list him as their teacher. Rufinus claims that Didymus was appointed to his position by \*Athanasius. Didymus followed Athanasius in his Trinitarian theology, arguing

for the consubstantiality of the Father and Son in his *On the Trinity*. Another work, *On the Holy Spirit* (known only through Jerome's \*Latin translation), similarly predicates consubstantiality of the Holy Spirit. Modern scholars have argued that some Trinitarian works attributed to the Cappadocians (e.g. Books 4 and 5 of \*Basil's *Contra Eunomium*) were probably written by Didymus. Didymus is largely known for his contribution to the Alexandrian tradition of \*allegorical interpretation of the \*Bible, which marks a further refining of \*Origen's exegetical method. His biblical scholarship also makes him important for the study of the biblical canon. Portions of Didymus' commentaries on Genesis, Job, and Ecclesiastes on \*papyrus were found in 1941 in Tura, south of Cairo. A portion of a commentary on Psalms 20–44, attributed to Didymus, along with some texts of Origen was also in the collection. At the Third \*Council of \*Constantinople in 553, his writings were listed among those contaminated by \*Origenism, a charge that Jerome had levelled against him in the previous century. At issue was Didymus' supposed endorsement of Origen's belief in the *apokatastasis* and the pre-existence of souls. GED

**diet and regime** Political change, including the \*Barbarian Migrations in Europe and the \*Arab conquest, produced new patterns of production and consumption in Late Antique Europe and the Mediterranean, as did the emergence of Christianity and \*Islam. There was however also considerable continuity in \*food supply, production, and consumption between the classical era and Late Antiquity.

\*Grains were staples, supplemented by oils, legumes, \*vegetables, and \*meat and \*fish in smaller quantities.

Wheat varieties were prevalent in the Roman Empire, along with barley and oats; later free-threshing wheats (Lat. *triticum*) came to predominate over hulled wheats (*far*) in the West, while rye became more popular in Eastern Europe. Rice was more prominent in \*Africa and \*Spain after the Arab conquests. Legumes, leafy greens, and root vegetables were common, with considerable local variety. Arab expansion brought a new set of now-familiar \*fruits and vegetables to areas under the \*caliphate and then beyond, as well as disseminating both Byzantine and Persian cuisine.

The decline of animal \*sacrifice in the 4th century due to Christianization complemented a tendency regarding meat-eating evident in inclusion of meat in urban food doles under \*Aurelian in AD 270. Nevertheless regular access to meat still implied wealth and power. Judaism and Islam maintained dietary exclusions such as pork, and rules for slaughter. Christian avoidance of meat was temporary or only for specialists in \*asceticism.

Christians and Muslims observed the general fasts of Lent and \*Ramadan respectively, as well as developing forms of ascetic specialization. Monastic ideals included avoidance of meat, wine, and luxurious food, but monastic expansion enhanced communal production and dissemination of certain foods (and, ironically perhaps, wine). Literary sources, notably the *Medical Collections* of \*Oribasius, reflect interest in medical as well as culinary or aesthetic aspects of diet, at least among an elite. Given wars and other disruptions, much of the population will have been more concerned with assuaging hunger.

Wine and \*beer were important ways of using food crops and storing their nutritional value. Grape wine was characteristic of the Romans and spread north, partly through the link with the Christian \*Eucharist, although beers (from grains, particularly barley) also remained popular there, and were common in \*Egypt and \*Mesopotamia prior to Islam. **Digest** (Lat. *Digesta seu Pandectae*, adapted from the Gk. *pandektes* meaning 'all-containing') A digest of the works of the Roman \*jurists in 50 books, promulgated by \*Justinian I on 16 December 529, and forming the largest part of the *Corpus Iuris Civilis* alongside the \**Institutiones* of Justinian and \*Justinian's Code.

The *Digest* is the single most important source for the study of Roman \*law, above all of the classical period down to the 3rd century AD. The *Digest* was conceived as a condensation of the works of the great

jurists into a usable, authoritative reference volume that would complement the first edition of the *Code* of imperial legislation published in 529. The promulgation of the *Digest* was followed in 534 by a revised version of Justinian's *Code*.

The formidable \*Quaestor Sacri Palatii, \*Tribonian, was entrusted with compilation of the *Digest* and chose a commission of sixteen men to undertake the work. In *Constitutio Tanta* (CJust I, 17, 2, 1) Justinian claims that they excerpted nearly 2,000 books and reduced more than 3,000,000 lines of text to a mere 150,000. In 1820 Bluhme identified three major 'masses' into which this juristic literature was divided; attempts at greater precision remain controversial. The commission received the authority to bring the jurists' writings up to date; the identification of such 'interpolations' occupied legal scholars of the early 20th century. In *Constitutio Tanta* Justinian allowed for some repetition and omission in the *Digest*, but he defied the reader to detect any contradiction. The rediscovery c. 1100 of the complete Florentine manuscript of the *Digest* of the 6th century contributed to the revival of Roman law in medieval Europe. JND

**dining** All classes enjoyed eating together, both for the intrinsic pleasure of the thing and as a communal ritual.

\*Letters of \*Sidonius Apollinaris describing dinners (*convivium*) given by the \*Emperor Majorian show that traditional Roman manners persisted in the 5th century, with scent for the \*hair, pleasant-smelling \*lamps, \*silver dishes, and dancing girls (IX, 13, 3–6), and the customary formal precedence and witty repartee of the dining-couch (I, 11, 10–17). The couches on which such diners reclined (*stibadia*) were large and semicircular. \*Ausonius thought the ideal number to lie down to table on such occasions was six, counting the host (Ausonius, *Ephemeris*, 5); the author of the *\*Historia Augusta* knew a saying: 'seven make a dinner, twelve make a din' (*HA* Verus, 5, 1). The space inside the arc of the table might have a figural \*mosaic floor. The *\*stibadium* at Sidonius' \*villa had a view of the lake (II, 2, 11). The villa also had a different winter dining-room and a separate ladies' dining-room (II, 2, 9).

Those who could afford servants were waited upon. Those who could not served each other. Less exalted ranks of society ate from large dishes shared by two or more diners. Such communal eating might also have been the custom at banquets like those of professional guilds, \*circus \*factions, and the Church (Hudson).

In addition to private social meals, there were elaborate banquets, public dinners, and religious feasts. Formal banquets were held with a limited guest list. Public banquets (*epulum*, *epulae*) on the other hand were often associated with conspicuous expenditure and \*euergetism, as when in 286/93 the \*city council of Mididi in \*Byzacena gave a banquet to the entire populace of their small market town to celebrate the building of their council-chamber and commemorated the occasion in an \*inscription on the building (*CIL* VIII, 11774). During such public feasts the classes were separated, with those of higher rank (one or more of whom was often the \*patron of the entertainment)

occupying couches to recline on while the lower classes would sit on benches to eat. These might be the main occasions on which some people got to eat \*meat, though meat was sold at butchers' stalls in \*cities. Churches also laid on banquets.

In \*monasteries it was usual for the monks to eat seated and without conversation, as one of the brethren read to the community. The *Rule* of S. \*Benedict lays down that two cooked dishes should be provided, so that monks have a choice, and allows for a pound of \*bread a day—more if the abbot deemed that the monks were doing heavy physical work (39). It also concedes that though it is generally considered that monks should not drink wine, yet it is impossible to persuade monks of this, so they should be permitted to drink wine sparingly (40, 6). Refectory meals were simple, generally consisting of legumes, bread, \*olive oil, and wine.

For casual eating in \*cities there were \*taverns and cookshops (Lat. *tabernae* and *popinae*). Patronage of such 'smoky cookshops' (Ausonius, *Ephemeris*, 8, 21) was more likely to be from the lower classes as they provided simpler food and seats.

**diocese, ecclesiastical** Term for the area whose Christian communities are overseen by a single \*bishop (so distinct from the \**dioecesis* of the imperial civil \*administration). The bishop derived his authority from approval and consecration by other bishops who could trace a line of episcopal descent back to Christ and the Apostles, and his personal selection for the office of bishop from the choice of the Christian community. The bishop preached from his official \*chair (Gk. *thronos*, Lat. *cathedra*), so the church building in which it is placed is termed his cathedral, and the \*city in which it is located is termed his see. The *thronos* of James, brother of the Lord and the first Bishop of \*Jerusalem, was still preserved at Jerusalem in the time of \*Eusebius (*HE* VII, 19). The \*Council of \*Nicaea in 325 used the Greek *paroikia* (Lat. *parochia*, from which comes English 'parish') for the area overseen by a bishop, but the Latin form *dioecesis* was being used in the modern sense of diocese in 4th-century \*Africa.

The diocese of a bishop in general corresponded to the *territorium* of the city where he had his cathedral. The Councils of Nicaea, \*Antioch (341; canon 9), and \*Constantinople I (381; canon 2) recognized diocesan boundaries. These could embrace large areas; \*Theodoret, as Bishop of \*Cyrrhus in Syria \*Euphratensis, claimed that he oversaw 800 churches (*ep.* 113). The institution of the \*chorepiscopus ('country bishop') developed in 4th-century \*Anatolia and relieved the pressure of work. In most of the Roman Empire the bishop of the principal city of the civil \*province was deemed the \*metropolitan—in the provinces of \*Africa apart from \*Proconsularis the metropolitan was the senior bishop by date of consecration. \*Cyprian of \*Carthage (d. 258) appears to have been following established African custom when he convened annual meetings of the bishops in his jurisdiction. Canon 4 of the Council of Nicaea required that the metropolitan ratify any episcopal election within his province. Certain bishops were given the title of exarch and it was possible to appeal to them from decisions of a metropolitan; \*Socrates (*HE* V, 8) identifies Nectarius of \*Constantinople as exarch of \*Thrace and \*Timothy of \*Alexandria as exarch of Egypt. The bishops of Rome, Constantinople, Antioch, Alexandria, and Jerusalem

were recognized as the five \*patriarchs by the \*Council of \*Chalcedon in 451. BKS; OPN

**Dio Chrysostom in Late Antiquity** The works of Dio (c. AD 40–after 110) continued to be read in the centuries after his lifetime as we see from the assessments of his style by \*Menander Rhetor and his inclusion in Philostratus' *Lives of the Sophists* (486–8, 492). He plays a part in the *Life of Apollonius of Tyana* V, 27–40, making a contribution to a debate on political systems. This combination of philosophy and \*rhetoric, manifested in speeches of advice to emperors and to \*cities, together with the story of his exile under Domitian for his freedom of \*speech, made Dio a valuable model for Late Antique orators negotiating their public role vis-à-vis the ruling power of their day. \*Themistius' first oration shows the strong influence of Dio in both language and thought. \*Synesius of Cyrene devoted an essay to Dio in which he indirectly justifies his own pursuit of both rhetoric and philosophy. RW

**Diocletian** (c.244–c.313) Roman \*emperor (284–305).

#### *Life and reign*

C. Aurelius Valerius Diocletianus was born C. Valerius Diocles on 22 December c.244 in \*Dalmatia, probably near \*Salona. Possibly the son of a freedman, he married Aurelia \*Prisca and they had a daughter, \*Valeria. Following a military career under the 'soldier' emperors, he became commander of the \**protectores*. When \*Numerian died in murky circumstances, Diocletian was proclaimed emperor by the \*army at \*Nicomedia (20 November 284), personally executing Numerian's father-in-law Aper, the \*Praefectus Praetorio, as a regicide, perhaps to deflect suspicion. He then fought \*Carinus, Numerian's brother, in a battle at the River Margus (mod. Morava), during which Carinus was killed (spring 285). Shortly afterwards he appointed a military colleague, \*Maximian, as \*Caesar (summer 285), sending him to \*Gaul to deal with the \*Bacaudae uprisings, and soon promoted him to \*Augustus (1 April 286). This choice was crucial, since Maximian, Diocletian's imperial 'brother', was to prove reliable and loyal, if not always competent. In 287 the imperial *signa* of two tutelary deities, Jovius and Herculus, were adopted by Diocletian and Maximian respectively, emphasizing at once differing roles and traditional devotion. Diocletian himself campaigned on the eastern and Danube \*frontiers, but also conducted a joint campaign

with Maximian near \*Raetia (288). However, Maximian failed to suppress a revolt by \*Carausius, leading to the loss of \*Britain and northern Gaul (286). Diocletian and Maximian met in conference at \*Milan (c. December 290), but, with continuing multiple crises, Diocletian finally appointed two Caesars on 1 March 293—\*Constantius I to serve under Maximian, and Maximianus \*Galerius to serve under Diocletian himself, each Caesar being son-in-law to his Augustus, for whom, since neither had a suitable son, he was now the designated successor.

Constantius recovered Britain from \*Allectus (296), successor to the \*usurper Carausius, while Maximian campaigned successfully against insurgent tribes across North \*Africa. After initial setbacks and with support from Diocletian, Galerius decisively defeated the Persian King \*Narseh (297) and captured \*Ctesiphon, securing peace for 40 years and gaining much territory in northern \*Mesopotamia. Meanwhile, Diocletian suppressed the dangerous rebellion of \*Domitius Domitianus in \*Egypt, captured \*Alexandria (298), and reorganized the southern frontier. Together with Maximian, he celebrated his *Vicennalia*, his twentieth \*anniversary, at \*Rome (November 303), his first visit to the \*city, where Maximian was building the great \*baths complex, the Baths of Diocletian, in his honour (dedicated 306). Falling ill on the return journey, Diocletian finally abdicated at Nicomedia on 1 May 305 in an unprecedented act coordinated with Maximian. Their Caesars became Augusti, with two new Caesars appointed, in the persons of \*Maximin Daza in the East and \*Severus the Tetrarch in the West. Diocletian retired to a large \*palace at \*Split, near Salona, emerging only in 308 to be \*Consul and attend a conference of emperors at \*Carnuntum, where he refused to resume the \*purple, but endorsed Galerius' attempted constitutional settlement. Later he was spurned by both Maximinus and \*Licinius, each of whom mistreated his daughter (Galerius' wife) Valeria Galeria. His date of death is uncertain, but, having fallen into disfavour, he perhaps died from deliberate starvation in spring 313 (Roberto, 252–6), being buried in the mausoleum at Split. His wife and daughter were executed by Licinius in 314 (\*Lactantius, *Mort.* 52).

### Major reforms

Diocletian's reforms set the pattern for the Late Empire, even though not all changes are assignable to him alone, since much was already in train or only completed later. The \*Tetrarchy, 'rule of four', is the most distinctive feature, with a college of four rulers, split between East and West, two seniors (Augusti) aided by two juniors (Caesars), connected by \*marriage and with the succession (always a Roman constitutional weakness) marked out in advance. It is

unclear whether synchronized abdications were originally planned. The need for some de facto territorial division and autonomy for the Tetrarchs, including duplication of palatine offices, was balanced by official iconography and imperial titulature emphasizing harmonious fourfold rulership, with Diocletian retaining overall seniority (Corcoran 2015; Jones and McFadden). To Diocletian also is attributed the introduction of elaborate imperial \*ceremony (e.g. \*adoratio).

\*Rome, visited by Diocletian only once, ceased to be the effective capital, and key strategic cities became near-permanent imperial residences, most importantly \*Trier, \*Milan, \*Sirmium, \*Antioch, and, Diocletian's favourite, Nicomedia (Lactantius, *Mort.* 7, 8–10). These were furnished typically with a palace and adjacent circus for managing public appearances.

Military and civil posts were definitively separated. Continuing a previous process, the \*provinces were 'sliced and diced' (Lactantius, *Mort.* 7, 4), placed under purely civilian governors (mostly of equestrian status), and then grouped into aggregations called \**dioeceses*, each under a \*Vicarius (deputy of the Praefecti Praetorio), with a matching structure for financial administration, although the full system may have been instituted slightly later (313; Zuckerman). Even \*Italy was 'provincialized', divided into taxable *regiones* each under a senatorial \*Corrector. Otherwise, senatorial office-holding reached a nadir. The autonomy of city governments was also curtailed.

\*Taxation was overhauled, with the institution of regular empire-wide five-yearly \*censuses, which were enforced even down at \*village level (Barnes, *NEDC*, ch. 14; Corcoran, *Tetrarchs*, 175–6). \*Coinage reform (probably begun in 293), introduced a large copper coin, commonly termed a \**folles*, retired the heavily debased silver-copper alloyed \**antoniniani*, and introduced a \*gold coin, the \**aurus* weighing 1/60th of a Roman pound. Its effect was to centralize and reorder the monetary system but it did not halt inflation.

The \*army increased in size to serve the four Tetrarchs, while individual units tended to shrink, spread out along the frontiers. However, large mobile central armies were not yet the norm.

### Characterization

Like his chiselled depictions, Diocletian is seen as grim, but effective, skilled at choosing collaborators, impatient of insubordination, even punishing major cities irrespective of their loyalty (Alexandria: \*John Malalas, XII, 41; Antioch: \*Libanius, *Oration*, I, 3). Although remaining responsive to petitioners, he can reasonably be characterized as propagating to them and others a Roman conservatism in culture, \*law, and religion, a trait perhaps made more stark by being a \*Latin-speaker resident in the \*Greek East. He created Latin literary

posts at Nicomedia (e.g. Lactantius), possibly fostered the publication of authoritative law collections (\**Gregorian Code*, \**Hermogenian Code*), and certainly gave Latin a brief boost in the eastern administration. His religious traditionalism, seen by some contemporaries as \**superstitio*, led him to make laws couched in moralizing rhetorical tones against those who engaged in misbehaviour, such as the \**Manichaean Law* of 302 (*Collatio Legum Romanarum et Mosaicarum*, 15, 3), and the \**Marriage Edict* of 295, which castigated the incestuous (*Collatio*, 6, 4). This matches a tendency to more assertive government, perhaps encouraged by Galerius (Corcoran, 2007), with other major if ineffective initiatives such as the \**Prices Edict* of 301, which was intended to control inflation, and especially the Great Persecution of the \**Christians* which began in 303. Yet, while remembered darkly as a persecutor, the rhetoric and ambition of his administration was the natural precursor to the style of his Christian successors.

**Diodore of Tarsus** (d. c.392) \**Bishop* of \**Tarsus* of \**Cilicia* (378–c.392), theologian and disciple of Silvanus of Tarsus. After studies in \**Athens*, Diodore came to \**Antioch*, where, in 346, he opposed Leontius of Antioch for ordaining Aetius. Later, as a presbyter of Meletius of Antioch, he headed an \**ascetic community*, which included \**John Chrysostom* and \**Theodore* of

\**Mopsuestia*. Exiled in 372, he was made Bishop of Tarsus in 378. The dyoprosopic (two-Persons) Christology characteristic of Diodore was attacked at the \**Council* of \**Alexandria* (362) and by \**Gregory* of \**Nazianzus* before the Council of \**Constantinople* (381), after which the \**Emperor Theodosius I* identified Diodore's beliefs as a norm of orthodoxy. He was later condemned, in association with \**Nestorius* and Theodore of Mopsuestia. Only his *Commentary on the Psalms* survives complete. His exegesis focused on the narrative of the text, refusing to see the OT as speaking directly of or in the person of Christ, but allowing for a certain amount of typological correlation between the two, a dualism evident also in his Christology. JBe ODCC Diodore, Bp. of Tarsus.

**dioecesis** (administrative) Term originally used in \**Greek-speaking* \**provinces* for \**Latin* \**conventus*, the judicial district of a Roman \**governor*. Under the \**Tetrarchy*, the term was applied, in \**Latin*, to a new administrative unit consisting of a group of several provinces administered by a \**Vicarius*, so called because he was considered a deputy for the \**emperor's* \**Praefectus Praetorio*. The earliest comprehensive overview of the reformed system, the \**Verona List*, compiled under \**Constantine I*, shows twelve *dioeceses*: \**Oriens*, \**Pontica*, and \**Asiana*; \**Pannoniae*, \**Moesiae*, and \**Thraciae*; \**Italia* and \**Africa*; \**Britanniae*, \**Galliae*, \**Viennensis*, and \**Hispaniae*. The *Verona List* does not list territorial prefectures. Of the *Verona List* *dioeceses*, *Moesiae* was subsequently divided into \**Daciae* and \**Macedoniae*, \**Aegyptus* was separated off from *Oriens*, and *Italia* was divided between \**Italia Annonaria* and \**Italia Suburbicaria*. *Oriens*, which was twice the size of any other *dioecesis*, was administered by the \**Comes Orientis*.

Until at least late in the reign of Constantine, the *Praefectus Praetorio* was always a mobile official, travelling with the \**court* of the emperor he served. Subsequently individual *Praefecti* were given territorial responsibilities, so that in the \**Notitia Dignitatum* the *Praefectus* of *Oriens* was responsible for the *Dioeceses* of *Oriens*, *Aegyptus*, *Asiana*, *Pontica*, and *Thraciae*

## Diogenianus

(*or.* II, 1–6), the Praefectus of \*Illyricum for Macedoninae and Daciae (*or.* III, 1–6), the Praefectus of Italia for Italy, Illyricum, and \*Africa (*occ.* II, 1–8), and the Praefectus of Gaul for \*Hispaniae, \*Septem Provinciae, and \*Britanniae (*occ.* III, 1–4). The *dioeceses* functioned as important judicial and fiscal units under the Praetorian Prefectures, although a strict hierarchy from \*governor to Vicarius to Praefectus Praetorio was not rigorously observed. The dioecesan system disintegrated in the later 6th century and vanished in the 7th.

**Diogenianus** A \*Comes Scholarum, he commanded troops for \*Anastasius I in the \*Isaurian war, but was later \*exiled. \*Justin I recalled him and appointed him \*Magister Militum per \*Orientem (518–20). FKH *PLRE* II, Diogenianus 4.

**dioiketes** In Ptolemaic and Roman \*Egypt, the title of the principal financial officer, replaced under \*Diocletian by the \*Katholikos (Lat. \*Rationalis). The last Dioiketes is attested in P.Oxy VIII, 1115 (AD 284) and the first Katholikos in P.Oxy X, 1260 (AD 286). The term was also used of financial managers and stewards (e.g. *CJust* I, 3, 45, 1b of AD 530). RM; OPN

**Dionysias** (mod. Qasr Qarun) Ptolemaic foundation on the north-west edge of the \*Fayyum at the terminus of a desert route from the Oases. A fortress, built under the \*Tetrarchy and containing an apsidal hall, was garrisoned until at least 362 (P.Flor. I, 30, 5–6), after which it was emptied and its wooden doors closed. The \*archive (P.Abinn.) of its mid-century commander, Flavius \*Abinnaeus (*fl.* 342–51), contains over 80 documents (cf. \**Notitia Dignitatum* [*or.*] 28, 34). Due to lack of water, the town itself was probably also abandoned in the mid-4th century, but it may have been reoccupied in the 6th century (P.Laur. III, 93).

**Dionysius Exiguus** (c.470–544) Christian monk, scholar, and inventor of the Christian (or Dionysian) \*era. If Dionysius chose the surname 'exiguus'

(Lat. 'little') for himself, it was probably more from monastic self-deprecation than an allusion to diminutive stature. A native of \*Scythia Minor, Dionysius migrated to \*Rome c. AD 500. He was soon recognized there for his fluent \*Latin translations of \*Greek patristic writings, and his knowledge of the \*Bible, \*astronomy, and \*mathematics. His collections of synodal decrees and papal decretals laid the foundation for the study of \*canon law in the West.

Dionysius' formulation of the Christian era originated in a longstanding controversy over the dating of the Christian Pasch (\*Easter). Despite the \*Emperor \*Constantine I's call for uniformity in observance, the Churches of Rome and \*Alexandria remained at odds until Dionysius persuaded Rome to adopt the Alexandrian rule. In preparing his own \*Easter table, completed in the year 525, Dionysius deemed it unseemly to honour the memory of an emperor reviled for initiating the Great \*Persecution of Christianity. He therefore replaced the \*Era of \*Diocletian used in the Alexandrian computus with the era from the incarnation of Christ. How Dionysius determined this date is still disputed. Although Dionysius used the era from the Incarnation strictly as an aid in Paschal calculation, its subsequent adoption by Christian annalists and historians, most notably the Venerable \*Bede, assured its acceptance in ecclesiastical writings and ultimately as an international dating standard. **Dionysius of Alexandria** Pope of \*Alexandria 247–c. AD 265. \*Eusebius made considerable use of Dionysius' \*letters and other works in writing books 6 and 7 of his *Church History*. He recounts that Dionysius was born of pagan parents, and was taught by \*Origen (VI, 29), that he succeeded Heraclas as head of the Catechetical School of Alexandria in c.233, and as \*bishop in 247. He quotes letters of Dionysius describing the bishop's dramatic escape during the \*persecution of \*Decius (VI, 40), and part of the \*report of the legal proceedings which resulted in his \*exile during the persecution of \*Valerian (VII, 11). Other letters considered the rebaptism of heretics, \*Novatianus, and the Nature of the Trinity. Dionysius was too old and ill to attend a

council held at \*Antioch to discuss Paul of \*Samosata (VII, 27). \*Athanasius, who was consecrated in the church at Alexandria named after Dionysius, compiled a collection of extracts from his theological works. Later sources rely heavily on Eusebius. OPN

**Dionysius of Tel-Mahre** \*Patriarch of the \*Syriac Orthodox Church (sed. 818–45) and historian. Dionysius is mainly known as the author of a lost work of history dealing with ecclesiastical and secular affairs from the \*accession of the \*Emperor \*Maurice (582) until the death of the Emperor Theophilus and of \*Caliph Abu Ishaq al-Mu'tasim (842). It has not survived, except for fragments (ed. Brooks), but some of its material can be found in the anonymous \*Syriac *Chronicle up to the Year 1234* and the *Chronicle* of \*Michael the Elder (d. 1199).

Due to an erroneous attribution by J. S. Assemani in the 18th century, Dionysius of Tel-Mahre was until the end of the 19th century considered the author of the anonymous Syriac \**Chronicle of Zuqnin*, which consequently became known, confusingly, as the *Chronicle* of Pseudo-Dionysius of Tel-Mahre.

**Dionysius the Ps.-Areopagite** Unknown author of the *Corpus Areopagiticum*. In the second quarter of the 6th century, references are made to writings ascribed to Dionysius, the 1st-century judge of the Areopagus in \*Athens, converted by the Apostle Paul (Acts 17). They gradually gained immense popularity and their alleged authorship was accepted. This authenticity was challenged at the Renaissance, and finally at the end of the 19th century, their dependence on \*Proclus the

5th-century \*Neoplatonic \*philosopher was demonstrated and with that their pseudonymity, with a date no earlier than the late 5th century. Since then many attempts have been made to identify the author, with no agreed success; more promisingly, recent scholars have tried to understand their pseudonymity as an authorial device.

There are four treatises—*Celestial Hierarchy*, *Ecclesiastical Hierarchy*, *Divine Names*, *Mystical Theology*—and ten \*letters; the treatises are all ostensibly addressed to Timothy, presumably the sub-apostolic figure, and the letters to various other figures, some recognizably sub-apostolic. They present a picture of a graded universe, stretching from God, a Trinity beyond being, through celestial beings, ranked three by three, to the Church on earth, itself marked by threefold clerical and lay ranks, which celebrates three principal sacraments: \*baptism, *myron* or \*chrism, and the \*Eucharist.

Traditional Christian terminology is for the most part eschewed. The cosmos is conceived of as a glittering display in which God's activity reaches into the manifold of the universe and through which the whole created order is being drawn back into union with God: this process Dionysius calls 'hierarchy' (a term he coined). The process of being united with God is itself threefold: consisting of the stages of purification, illumination, and union or deification. God's manifestation in the cosmos and 'oracles' (Scripture) is beyond our human grasp; to express this, Dionysius develops (from Neoplatonic sources) notions of affirmative (cataphatic) theology, in which we affirm what we learn of God, and of negative (apophatic) theology, in which we deny these as inadequate. For Dionysius, however, the apophatic is more fundamental, undergirding the cataphatic, rather than correcting it, leading to an inexpressible union with God. The context of all this is the celebration of the Divine \*Liturgy, in which we use concepts and images to praise God. Dionysius' powerful union of the liturgical and the mystical, though expressed in Neoplatonic terminology, reflects themes already developed in Greek Christian theology, which perhaps accounts for their ready, and eager, acceptance. **Dionysus and Dionysiac themes in art** Dionysiac themes constitute one of the most common sources of subject matter for art in Late Antiquity, as they had in the earlier centuries of the Roman Empire. The god, his revelling troop of companions, satyrs, maenads, Silenus, and Pan, scenes from \*myths such as his birth and upbringing by the nymphs of Nysa, his discovery of the sleeping Ariadne on Naxos, his victory over the Indians and triumphal return in a chariot drawn by tigers, centaurs, or \*elephants, are found in a wide variety of contexts: on objects of daily use such as \*pottery or more valuable \*silver vessels, on luxury garments, on the \*mosaics, paintings, and \*textiles that decorated domestic buildings, and in funerary settings on 3rd- and 4th-century \*sarcophagi. Among outstanding examples are the mosaics from the House of Dionysus at \*Sepphoris (c. AD 200), with a series of panels showing scenes from mythology and cult among the god's worshippers; those of the House of Aion at Nea \*Paphos in \*Cyprus (mid-4th century AD), with the childhood of Dionysus and his triumph along with other mythological subjects; and a woven textile from \*Egypt in the Abegg Stiftung, Riggisberg, Switzerland (probably late 4th century), where Dionysus, Ariadne, and their followers are presented standing under an arcade. Some scholars have seen the popularity of such works as an expression of Dionysus' position as the god who guarantees his followers salvation and immortality, and even as the supreme \*pagan god in a new Late Antique \*cosmology, while others have seen Dionysus here as the god of \*wine, pleasure, and enjoyment, and these scenes as expressive of a worldly culture of convivial drinking and \*dining, devoid of deeper religious or cultic significance. The most common context for Dionysiac scenes is convivial, as decoration for dining rooms and for objects used at the banquet, where they are likely to have been regarded as appropriate decoration, acceptable to moderate Christians who wished to assert their commitment to traditional culture. They continue to appear as late as the early 6th century (e.g. \*Villa of the Falconer, \*Argos); while Dionysiac subject matter has been proposed for some of the wall paintings in the \*baths of the early 8th-century \*Umayyad \*palace at \*Qusayr 'Amra. More problematic is the interpretation of scenes which contain objects connected with Dionysiac cult or initiation, such as the Abegg Foundation textile or a mosaic from Sarrin (\*Osrhoene) which probably dates from the late 5th/early 6th century; they have been taken to provide evidence for the persistence of Dionysiac worship and his mysteries at a

very late date, while others see them as conventional symbols of festivity and good living. The earlier mosaics from Sepphoris, a major centre for \*Jews and Judaism, have similarly been interpreted as either the work of \*pagan devotees of Dionysus, or of Jewish patrons asserting only their commitment to Hellenic culture. The ambiguity reflects the polysemous nature of the god, profoundly rooted in Hellenic culture and mythological thought and capable of varying interpretations according to individual choice. His appeal is similarly reflected in the 5th-century epic *Dionysiaca* of \*Nonnus of \*Panopolis, another work which has caused commentators to puzzle over the religious affiliation of its creator. **Dioscorus** (d. 454) \*Patriarch of \*Alexandria (444–51), having been archdeacon of the Church of Alexandria under \*Cyril (412–44), whom he succeeded as bishop (444–51), making Cyril's relatives disgorge their ill-gotten gains. In a fresh Christological controversy he achieved a temporary victory at the Second 'Robber' \*Council of \*Ephesus in 449, which he dominated, and which condemned his principal opponents. But his triumph was undone by the death in 450 of the supportive \*Theodosius II, whose successor \*Marcian summoned a new council, at \*Chalcedon (451), which undid the work of Ephesus and tried and condemned Dioscorus, on ill-defined charges. Imprisoned at Gangra, he died a few years later. He is venerated as a saint in the non-Chalcedonian churches. RMP *CoptEnc* vol. 3 s.n. Dioscorus I, cols. 912b–915b (M. P. Roncaglia).

**Dioscorus of Aphrodito** (c.520–73/585) Lawyer (*scholasticus*—P.Cair.Masp. I 67064), landowner, and poet from the \*village of \*Aphrodito in the Antaiopolite \*nome of Middle \*Egypt. He was the son of Apollos, grandson of an elder Dioscorus, and great-grandson of Psimanobet. His papers, \*papyri that first came to light in 1905 at Kom Ishqau (Aphrodito's modern successor), are now scattered widely in museums, universities, and private collections. The most important holdings are in Cairo (Egyptian Museum—P.Cair.Masp. I–III) and London (British Library—P.Lond. V). It is on the basis of these that the reconstruction of Dioscorus' life story and cultural environment must depend.

He was probably born c.520, although his first dated appearance in the papyrus record falls on 28 December 543 (P.Cair.Masp. I, 67087). In the years that follow he appears mainly as a local landlord and official (a village \*headman, Protokometes). As such he was fully engaged in his village's struggle to retain \**autopragia*, and this entailed at least one journey to \*Constantinople on his part. His father, who (*pace* the PLRE entry) had died by 546/7, had gone there in 541 (P.Cair.Masp. II 67126). Dioscorus spent the years 566 to 573 in

\*Antinoopolis, capital of the Lower \*Thebaid. There as a notary he drafted \*wills, \*contracts, and other agreements, some of impressive length. Only the drafts survive, not the fair or notarized copies, and it was the backs of these that Dioscorus used as scraps for writing drafts of his honorific and petitionary poems. He has traditionally been thought to have been last alive in 585, but in fact he last appears in the documentary record in 573. His wife Sophia may have been responsible for the final gathering of his papers. JGK

**diplomacy** Process of ritualized negotiation, \*gift and information exchange with foreign empires, \*client kingdoms, \*tribes, and distant states. The Roman and \*Persian Empires developed elaborate systems of diplomacy over the course of Late Antiquity. These grew from indigenous traditions of communication and imperial \*administration within the two empires, eventually becoming a regular system in Late Antiquity. Diplomatic activities were managed by an educated bureaucracy and could range from the establishment of treaties ending wars or delineating spheres of influence, to requests for monetary or military assistance, to simple maintenance of relationships and information gathering. Because they were dominant in the Late Antique Mediterranean and Western Asia, Rome and Persia's diplomatic protocols and ranking of client kingdoms affected the ways in which other kingdoms interacted with one another. The traditions of diplomacy between Rome and Iran lived on after the \*Arab invasions, with the Western European states and the See of \*Rome basing their diplomatic practices on that of Rome, and the relationship between Byzantium and the \*caliphate continuing aspects of the earlier tradition. The two empires structured their relationships with their client kings and lesser foreign states by integrating them into their system of imperial offices and \*titles.

Diplomatic correspondence used familial terms to describe the relationship of one sovereign to the other,

and thus the relative relationship between the two political entities. In Late Antiquity, the Persian King of Kings was the only foreign ruler that the Roman \*emperor regularly treated as an equal. The Roman emperor referred to the Persian King of Kings in diplomatic correspondence as 'brother', and the Persian sovereign was the only foreign ruler that the Roman \*court regularly accorded the title of *basileus* (though not *basileus basileōn*—King of Kings).

All diplomacy took place through face-to-face meetings and exchanges of \*letters. No Roman or Persian sovereigns ever met face to face while they were reigning, so all meetings took place with proxies representing one if not both parties. The political and social importance of the envoy varied in relation to the importance of the state they were treating and the goal of the embassy. The most common types of meetings were those that took place between an envoy and a sovereign at the sovereign's court. Embassies sent between the Roman and Persian courts were either a 'Great Embassy', with plenipotentiary negotiating powers, or a 'Lesser Embassy', with only the ability to confirm negotiations that had already taken place or to exchange letters. A 'Lesser Embassy' was normally sent to thank the opposing power for the good treatment of a previous 'Great Embassy'. The Roman emperor received envoys most often in the Great Palace of \*Constantinople. The more itinerant Persian King of Kings received envoys wherever the king was located at the moment, including at \*fire temples or on the battlefield. When negotiations needed to take place on a predetermined topic, meetings would occasionally be arranged between two officials invested with plenipotentiary powers who met at a predetermined location on the \*frontier. The negotiated settlements would be recorded, checked at court, and sent back out to be ratified, with 'sacred letters' exchanged from both rulers confirming all points (\*Menander Protector, fr. 6.1).

Both the Roman and Persian empires adhered to detailed protocols for receiving envoys. These traditions were emulated by client kingdoms and \*successor states. The bureaucracies in Constantinople and \*Ctesiphon each maintained an office dedicated to diplomatic communication and receptions, as well as several officials to manage the actual reception rituals. The most important source for Late Roman diplomacy are the 5th- and 6th-century protocols compiled in the reign of \*Justinian I by \*Peter the Patrician, which \*Constantine VII Porphyrogenitus integrated in the first book of his 10th-century compilation, *\*Excerpta de Legationibus* (*De Ceremoniis Aulae Byzantinae*). Chapters 87 and 88 describe the protocol for receiving envoys from the (at that point, extinct) Western imperial court. Chapters 89 and 90 describe the Roman court's protocol for receiving a 'Great Embassy of the Persians'. The late

\*Sasanian compilations of protocol (*\*ā'n-nāma*; MP *\*ēwēn-nāmag*, 'book of customs' and *\*gāh-nāmag*, 'book of court ceremony') probably contained similar protocols. These texts are lost and known only in their reflections in Islamic era literature, such as the *Shahnameh* of Ferdowsi and Pseudo-al-Jāhiz's *Book of the Crown*. In the Late Roman Empire, records of diplomatic exchange were preserved by the *Scrinium Barbarorum* ('Office of the Barbarians'). The \*Magister Officiorum (Gk. *magistros tōn ophphikiōn*), an official involved in many aspects of court ritual, managed the Sasanian envoy's visit and himself was responsible for greeting him, arranging his lodging, and conducting the ritual protocol involved in his visit. During the actual reception, the *\*chartularii barbarorum* (*khartoularioi tōn barbarōn*), \*interpreters, and the *\*admissionales* appear to supervise the envoy's activities within the audience hall (*De cer.* 1, 89; 404–5). An analogous Sasanian official would probably be the *darīgān sālār* early on (ŠKZ 48) or the *handēmāngarān sālār* later, while in the *Shahnameh* this figure is the *sālār-e bār*.

The hosting state would cover the expenses of housing, food, and transport from the moment envoys crossed the frontier. Both empires used diplomatic ritual and entertainment to impress them with the power of the sovereign. \*Justin II's reception of \*Avar envoys as described by \*Corippus (III, 235–55) shows how the Romans used the ritual of the audience hall to inculcate a sense of awe. The late Sasanian Kings of Kings employed several spatial and symbolic devices to do the same, including automata, rotating \*thrones, and artificial climactic effects. Islamic remembrances of the court of \*Khosrow I indicate that it contained golden thrones representing the kings of all major regions (including Rome, \*India, \*China, and the steppe), which were arranged around the central throne of the Persian King of Kings (*Fārsnāma*, ed. Le Strange, 97). The envoy would be entertained with a number of highly symbolic activities, which included \*hunting at the Persian court, the \*circus games at the Roman court, and \*feasting at both. Roman envoys to the court of the \*Türk \*khaghan were forced to engage in mourning rituals in the funeral of the previous khaghan, including lacerating their faces (\*Menander Protector, 19.118–24) Persian envoys regularly were entertained at the hippodrome games and even witnessed Justinian I's 'triumph' over \*Gelimer in 534 (\*Zacharias of Mytilene, IX, 17). Diplomatic gifts were an integral part of all diplomatic exchanges.

**diplomacy, Aksumite** Diplomatic contact between \*Constantinople and the Roman Empire and \*Aksum is attested in both directions, its primary subject matter being both religious and political. Recognition of such contacts in Roman records is hindered by Roman use of the term 'India' to refer both to the south Asian peninsula and to the Horn of Africa (see ETHIOPIA): some embassies recorded as to or from 'India' may therefore represent contact with the Aksumite kingdom. Since Rome could make no claim to political authority over Aksum, some diplomatic contacts used the \*Patriarch of \*Alexandria as an intermediary, as in the mid-4th century when \*Constantius II expressed concern over \*Frumentius' role as \*Bishop of Aksum. Several embassies (such as those of \*Julian and \*Nonnosus) are recorded from the first half of the 6th century in connection with Aksumite military operations in southern \*Arabia to which Rome gave at least tacit support as part of her broader confrontation with the \*Persian Empire (\*Procopius, *Persian*, I, 19–20). **diptychs** (Gk. double-folded) Pairs of panels made of wood or \*ivory, hinged so as to open out like a \*book.

#### Secular

Romans sent \*letters enclosed in ivory tablets. \*Augustine owned a set and apologized to his \*patron for not using them to send a letter (*ep.* 15, 1 to Romanianus of 390). Ivory diptychs were in fact used for many purposes. It is probable that the official codicils which conferred office on officials in the imperial administration were, by the time of the \**Notitia Dignitatum*, made of ivory. Ivory diptychs might also be produced in multiple copies (e.g. the \*Nicomachorum–Symmachorum Diptych) to mark a notable occasion in a noble \*family. The \*Stilicho Diptych commemorates the promotion of the general's son Eucherius as Tribunus et Notarius probably when he was about 7 years old.

In particular diptychs were sent to friends and acquaintances to announce the successful completion of the games required of those promoted to high office at \*Rome and \*Constantinople or as Flamen of the

\*Imperial Cult in a \*province. A \*law of \*Theodosius I issued in the East in 384 restricted to \*consuls the presentation of \*gold and ivory gifts in connection with the games given by office-holders, presumably in order to prevent a spiral of conspicuous consumption at the newer capital at Constantinople. \*Symmachus wrote letters to those whom he wished to honour with his \*friendship informing them that the games his son had given as \*quaestor were now complete, and sending an ivory diptych and a \*silver bowl weighing two pounds to commemorate them; they were worth commemorating, as they had cost 2,000 lb of gold.

Over 40 presentation diptychs survive. The earliest dated specimen from the West is of 406, and 5th-century diptychs come mostly from the West. All known eastern diptychs date from between 506 and 541. They are generally 30–40 cm (12–16 inches) long, that being the greatest length of tusk that can be cut to make a flat plaque without incorporating the \*elephant's dentine. The inner surfaces are plain, often with slightly raised edges. The outer surfaces are carved to depict scenes from the games or figures from mythology or, most commonly on the eastern diptychs of the 6th century, a portrait of the consul dressed in his ceremonial \**toga picta* (*trabea*) holding up the kerchief (*mappa*) which, since the early 4th century in the East, had been the token used to signal the start of games of various types. The diptychs issued by \*Justinian I in 521 are decorated only with rosettes, roundels, and writing.

#### Ecclesiastical

From around the same time as the first secular diptychs were being produced, in the late 4th century, there are references to diptychs used in churches. These bore the names of people commemorated in \*prayer by the \*deacon in the course of the \*liturgy, whether \*bishops, \*martyrs, political figures, benefactors, or others. Two ecclesiastical diptychs survive, both from the 7th century. Neither is decorated on the back. One, now in Boston, is of wood, the other, dating from 661/7 and now in the British Museum, has a list of names written in ink directly onto the ivory.

The earliest evidence for the use of diptychs in church at Constantinople is from \*John Chrysostom, and from then on there is evidence for the use throughout the East. Innocent I of Rome wrote a letter to Decentius of Gubbio (AD 416) in which he mentions the 'recitation of names' in the Mass, and most scholars consider this a reference to the use of diptychs in the Latin tradition. Until the 7th century the eastern practice was to name the living before the dead; thereafter this was reversed. Ecclesiastical diptychs are most often referred to when a name is deleted from the diptychs on account of \*heresy or malfeasance. OPN; MFC

**dirham** \*Islamic \*silver coin denomination, weighing c.3 grams (0.1 ounces). It can also refer to silver coins from the \*Sasanian \*Persian Empire, also called *drachms*. The Caliph \*Abd al-Malik introduced the *dirham* in the 690s, abandoning experiments with Sasanian and Byzantine coin weight and design. The *dirham* combined the silver fabric of Sasanian silver coinage with an aniconic, Islamic design. It became the medieval silver unit of account in the Near East and was used in Russia and \*Britain. RRD

**disorder, public, Roman and post-Roman** In Late Antiquity intercommunal disorder or violence affected mainly \*cities, particularly in places such as \*Alexandria, \*Antioch, \*Rome, and \*Constantinople. Disorder frequently followed attempts to reassert traditional order following the disintegration of customary measures to resolve conflict (Haas, 12). Late Antique literary sources often focus on acts of religious violence. \*Pagans and pagan \*temples could be the objects of popular violence, complained of by \*Libanius in 386 (*Oratio*, XXX, *Pro Templis*), exemplified by the lynching of \*Hypatia in 4th-century Alexandria (\*Socrates,

VII, 15). The killing of George of Cappadocia (d. 361) by a mob in Alexandria in 361 is an instance of pagan retaliation. Accusations of \*heresy and schism (e.g. against \*Donatists, \*Novatianists) could also be accompanied by acts of popular violence. Occasionally, \*Jews might be targeted, as when the synagogue in \*Callinicum was destroyed in 388 (\*Ambrose, *ep.* 11, 12), an act led by a \*bishop. The role of the Church in popular violence in Late Antiquity was ambiguous. Bishops could sometimes incite a popular uprising, but in the late 4th and 5th centuries the task of crowd control also frequently fell to bishops (Brown, *Power and Persuasion*, 146–52).

Financial stringency, particularly the levying of taxes or heavy \*debt, could also provoke popular disorder, as has been the case in many periods. \*Bacaudae, roving bands first attested in \*Gaul in the late 3rd century (Aurelius Victor, *Caesars*, 39, 17), reappeared particularly in the 5th century in Gaul and northern \*Spain, and are described as reacting at least in part to taxation and corrupt officials (\*Salvian, *De Gubernatione Dei*, V, 5–6). In the 4th century, the \*Circumcellions in North \*Africa took out their ire particularly on creditors. In 532, the \*Nika Riot in Constantinople (\*Procopius, *Persian*, 1, 24, 7) occurred ostensibly due to an official decision against members of the circus \*factions, but were partly fuelled by dissatisfaction among sections of the population with Justinian I's tax policy. In 548 King \*Theudebert I's \*Magister Officiorum \*Parthenius was stoned and lynched in \*Trier after his imposition of heavy taxes (\*Gregory of Tours, *HF* III, 36). \*Famine and \*grain shortage and food \*hoarding also triggered acts of violence, which could be directed at city officials and even \*emperors (Stathakopoulos, 70–87). Popular violence was usually spontaneous and civilian but paid militias could also be involved, as in \*Damascus in 366.

While public disorder features significantly in Late Roman literary sources, it is difficult to gauge whether public violence actually increased, or whether it came to be increasingly emphasized because it interested authors or offered them opportunity for rhetorical effects (Zimmerman, 343–57). ### disputes and disputation literature, Christian

Surviving texts of Late Antique Christian dialogues with \*Jews are not transcripts of actual disputations but represent idealized Christian fiction. The persistence of this mostly anonymous literature suggests a perceived usefulness whether for Christian catechesis or for theological debate with Jews, or both. Stock 'proof texts' or *testimonia* from the Old Testament are used to demonstrate how Jesus can be God, yet God is one, how Jesus was the promised messiah, and so forth. The narrative settings vary from a simple dialogue between a Christian and a Jew (Athanasius and Zacchaeus, Simon and Theophilus, Timothy and Aquila—shorter recension), to more elaborate 'royal disputations' in the presence of king or emperor, sometimes with (arch)bishops and popes as interlocutors (Gregentius and Herban, *PG* 86 621–784; Silvester and the Jews of Rome, *PG* 121, 521–40). In the simpler form the Jewish interlocutor converts at the end, while in the royal form all the Jews present convert in response to a miracle. For example, in *The Dialogue of Gregentius* the Jews are blinded by the appearance of Christ and only after being baptized do they regain their sight and confess Christianity. JZP

### disputes and disputation literature, Syriac

Precedence disputes were an ancient Mesopotamian literary genre taken up and adapted by \*Syriac writers, usually in verse. \*Ephrem (d. 373) has three such disputes, between Death and Satan (*Nisibene Hymns*, 52–4). Some 50 poems in this genre survive, mostly anonymous and involving pairs of biblical characters (other topics include the Months, Body and Soul, Helena and the Jews). Several examples of actual theological disputations are recorded, especially from the 6th and 7th centuries. The \*Miaphysite \*Simeon of Bet Arsham (d. c. 548) was famous for his disputations with clergy of the \*Church of the East, held before a \*Zoroastrian umpire (\*John of Ephesus, *Lives of the Eastern Saints*, PO 17, 144–52). The Maronite \*Chronicle records a dispute between \*Maronites and 'Jacobites' before the \*Caliph \*Mu'awiya in 659.

A literary development consists of sets of questions to be posed to theological opponents, to which the answer must be 'yes' or 'no', resulting in a *reductio ad absurdum*. Interfaith disputations are also found, usually in an artificial literary form, as in \*Jacob of \*Sarug's imaginary debates with \*Jews (PO 38/1), though the debate between Sergius the \*Stylite and a Jew (CSCO 338–9) possibly goes back to a real debate. Several later examples involve Muslims (e.g. with a monk of Bet Hale). SB

**divination** See MAGIC AND DIVINATION.

**divorce** See MARRIAGE, ADULTERY, DIVORCE AND REMARRIAGE.

**Diyarbakır** See AMIDA.

**diwan** Military payroll or troop registry under Muslim rule. Instituted by \*Umar I (r. 634–44), though probably modelled on Byzantine or Sasanid practice, the first *diwan* was set up to organize the payment of the Islamic \*army. Over time, the *diwans* expanded in both number and scope, constituting a system of offices with varying administrative responsibilities such as correspondence (*diwan al-rasā'il*), \*taxation (*diwan al-kharāj*), and postal service (*diwan al-barīd*). The development of the *diwan* as an administrative institution occurred primarily during the \*Umayyad and \*Abbasid periods. MCE

M. Gordon, *The Rise of Islam* (2005).

**Dobruja** See SCYTHIA MINOR.

**Docimium** Ancient \*city of \*Phrygia Salutaris on the plain of Synnada (mod. İsehisar), and the most important source of white and polychrome \*marble on the Central High Plateau of \*Anatolia. The polychrome marble was \*quarried by imperial agents and exported to

the Mediterranean Basin, sometimes in combination with white marble, for example to provide polychrome wall revetment with white pilasters. This repertoire of architectural forms was adopted at \*Proconnesus and \*Constantinople, when \*Theodosius I enlarged the new capital. Later, white Docimian marble was employed to furnish churches throughout central Anatolia, where its superior workmanship and idiosyncratic formal repertoire was imitated by local workshops and led to the establishment of a distinctive regional style. V. Korać, 'Architektonski ukras u kamenu između antike i rane Vizantije, u ostacima grada Duklje (Doclea)', *Starinar* 59 (2009), 191–219.

**doctors** See MEDICINE.

**Dodona** Site of an \*oracle of great antiquity (\*Macrobius, *Saturnalia*, I, 7, 25), c.21 km (c.13 miles) south-south-west of mod. Ioannina, Greece, in the \*province of \*Epirus. Zeus was believed to speak through the rustling of oak-leaves (\*Symmachus, *ep.* IV, 33, 2) and inspired priestesses (Celsus in \*Origen, *Contra Celsum*, VII, 3; \*Iamblichus, *Life of Pythagoras*, 56). In 384 Symmachus complained that imperial disendowment of \*pagan rites had caused \*famine so severe that the peasants had had to eat acorns from the sacred oaks of Dodona (*Relatio*, III, 16; cf. \*Ambrose, *ep.* 18, 18). The statue of Zeus of Dodona, placed before the \*Senate House in \*Constantinople, survived a fire in the early 5th century (\*Zosimus, V, 24, 6–7).

A three-aisled Christian \*basilica was built in the early 5th century at the east end of the sanctuary of Zeus. A \*bishop is known from 431. An \*Ostrogothic naval expedition under \*Totila sacked the country around Dodona in 551 (\*Procopius, *Gothic*, VIII, 22, 31). \*Hierocles lists Dodona (651, 5), but it does not seem to have survived the arrival of the \*Slavs, who called the area Tsarkobista ('church-place').

Some early Christian allusions to Dodona (\*Arnobius, I, 26; \*Prudentius, *Apotheosis*, 441; \*Theodoret, *HE* III,

16 on \*Julian) may reflect reading rather than knowledge of contemporary conditions. OPN

*TIB* 3 (1981), 142.

S. I. Dakaris *Archaeological Guide to Dodona* (1971).

**dogs and hounds** Kept both for their utility and as pets. \*Nemesianus (103–239) expatiates upon a huntsman's care for his hounds. \*Augustine, who seems to have shared with \*Orosius a fondness for dogs (Orosius I, praef., 3–7; cf. V, 18, 9), allowed them in church (*De Fido et Operibus*, 7), the \*Seven Sleepers of \*Ephesus were accompanied by a dog called Viricanus (\*Theodosius, *De Situ Terrae Sanctae*, 26), and a poem of \*Luxorius (*Carmen*, 73) displays fond attachment between owner and puppy. \*John Chrysostom thought shamelessness was a prime characteristic of dogs (*Homily* 12 *On the Statues*, 2). They were a part of the street life of Levantine \*cities, both alive and performing (\*John Malalas, XVIII, 51) or dead and symbolic of saintly eccentricity (*VSymeonSalos*, 4). The \*Farmer's *Law* shows that they were essential for protecting flocks in an early Byzantine \*village from predators: if a villager kills a sheepdog and the \*sheep are harmed by a wild animal, he must give the value of the sheep and of the dog in restitution (55), and if a villager incites his powerful dog against weaker dogs and a dog is maimed or killed he must make it up to the dog's master and receive twelve lashes (77).

Dogs had an ambiguous relationship with humans. \*Zoroastrians value herd dogs and house dogs. The \**Bundahishn* (Bundahišn, 24, 38, tr. Anklesaria, p. 201) portrays the dog as created to protect flocks from wolves, hounds were used in \*hunting, and \*Arday Wiraz saw a man suffering in hell for withholding food from a dog (48, 4). Certain other Near Eastern traditions, however, equated black dogs with the Devil, a belief that persisted into the Islamic era. In classical \*Islam dogs were unclean but could be kept as working animals. Their major functions were to protect the family and its possessions, guard \*cattle, and aid in hunting.

In post-Roman Germanic lands hunting was increasingly important and hunting hounds were ubiquitous; high fines were assessed if they were killed (\**Lex Burgundionum*, 58 de Salis). Gazehounds spotted game and ran it down by sight, like the saluki of the Arabs which was used to hunt all kinds of game, including oryx. Tracking hounds followed game by scent. Heavier breeds followed quarry by scent and helped to bring large animals to bay. MD; OPN

*Enclran* VIII (1998) s.v. dog, ii in Zoroastrianism, 467–70 (Boyce).

**Domburg** (prov. Zeeland, Netherlands) An important bridgehead for relations between south-east England and the Continent in the 7th and 8th centuries, located on an island off the Rhine–Meuse Delta, and known as *Walacria* or Walcheren in the written sources. It was supplanted by \*Dorestad and then occupied by Vikings. It was probably one of the centres where English and \*Frisian \*silver coins, the so-called \**sceattas*, were struck, exchanged, and imitated.

- SL  
S. Lebecq, 'L'Emporium protomédiéval de Walcheren-Domburg: une mise en perspective', in *Peasants and Townsmen in Medieval Europe: Studia in honorem Adriaan Verhulst* (1995), 73–90.

**dome** An approximately hemispherical structure of stone, \*brick, hollow tubes, volcanic scoriae, or wood. A dome may sit directly upon a rotunda, but if it covers a polygonal space, transitional elements are necessary. If the polygonal space is defined by a pier at each corner, arches are built connecting adjacent piers, their crowns serving as the seat of the dome. The space between adjacent arches and the dome base is often filled with a triangular segment of a spherical surface (pendentive) to create a continuous circular footing for the dome. A dome may be shallow, continuing the curve of the pendentives (a 'pendentive dome' or 'domical vault'), or steeper, having a radius smaller than that of the pendentives (a 'dome on pendentives'). An alternative method for creating continuous support for the base of a dome over a polygonal space involved constructing squinches (lintels or arches) across the angles.

Roman \*architects placed domes on \*bathhouses and mausoleums; perhaps the most famous Roman dome is that of the \*Pantheon in \*Rome (made into a church in the 7th cent.). Domed imperial buildings of the \*Tetrarchy include the Palace Octagon and Rotunda of S. George at \*Thessalonica and the octagonal Mausoleum of \*Diocletian at \*Split. The burial place of \*Constantine I at the Church of the \*Holy Apostles in \*Constantinople was domed, as was the Constantinian church at \*Antioch known as the Domus Aurea described by \*Eusebius (*VCon* III, 50). Domes were placed at the crossings of conventionally shaped Christian \*basilicas such as S. John's at \*Ephesus, as well as on octagonal churches such as Ss. \*Sergius and Bacchus at Constantinople and S. Vitale at \*Ravenna. The \*ecphrasis of the first dome of \*Justinian I's Church of the Holy Wisdom at Constantinople by \*Procopius (*Aed.* I, 1, 28–9) indicates that contemporary observers were equally impressed by the geometry and the \*aesthetics of such feats of engineering.

**Dome of the Rock** See JERUSALEM, AQSA MOSQUE AND DOME OF THE ROCK.

**domestici** A corps of elite junior army officers, originally known as \**protectores* until those in attendance on the \*emperor were differentiated with this title in the early 4th century. Acquisition of the status was usually marked by the ceremony of \**adoratio* of the \*purple in the emperor's presence, and the corps had its own commander, the \*Comes Domesticorum. Those selected for service were seen as potential candidates for promotion to command of army units, so that the corps functioned as 'a kind of staff college' (Jones). The duties in which their suitability for greater responsibility was tested and developed included tasks such as organization of defences and escorting recruits, envoys, or important prisoners. Although often promoted from the ranks, they could also be appointed directly. The best-known example of a *protector domesticus* is \*Ammianus Marcellinus who served under the general \*Ursicinus in the 350s.

- ADL  
Jones, *LRE* 636–40.

**domesticus** A personal assistant. *Domestici* are documented for most officials of importance. To limit their influence, *domestici* were, for example, prohibited from purchasing property in, or marrying wives from,

## Dominus Julius mosaic

the \*province where they served. Upon leaving office, they were not to evade prosecution (*CTh* I, 34, 3; *CJust* I, 51, 3).

MMOS

Jones, *LRE* 602–3.

*RE* 5 (1903) 1296–9 (Seeck).

**Dominus Julius mosaic** Pavement of the late 4th/early 5th century from a house in \*Carthage, now in the Bardo Museum, Tunis. It shows the buildings of a great \*estate surrounded by rural activities appropriate to each \*season. Peasants bring a selection of produce to the owners of the \*villa; the master's name is written on a scroll presented to him.

R. Paret, 'Domitianus de Melitene et la politique religieuse de l'empereur Maurice', *REB* 15 (1957), 42–72.

**Domitianus II** \*Usurper in \*Gaul under \*Aurelian, who swiftly overpowered him (\*Zosimus, I, 49, 2). Two coins are now known.

OPN

*PLRE* I, Domitianus 1.

R. Abdy, 'The Domitian II Coin from Chalgrove: A Gallic Emperor Returns to History', *Antiquity* 83/321 (2009), 751–7.

**Domitius Alexander** \*Usurper in \*Africa and \*Sardinia from 308 until 309 or early 310. Domitius was \*Vicarius Africae in 308 under \*Maxentius. Anxious about the loyalty of the \*army in Africa, Maxentius demanded Alexander's son as a \*hostage. Alexander refused to send the youth and was proclaimed \*Augustus by his troops. The quick and devastating suppression of the revolt by \*Volusianus (Maxentius' \*Praefectus Praetorio) and Zenas is described by Aurelius \*Victor (40, 17–20) and \*Zosimus (II, 12–14).

JPC

*PLRE* I, Alexander 17.

*NEDC* 14–15.

**Domitius Domitianus** L. Domitius Domitianus was a \*usurper acclaimed in \*Egypt from the summer of 297 onwards. He issued \*coinage from the mint of

\*Alexandria, both Roman types and Greek tetradrachms, and is named in various \*papyri. The revolt may have arisen from tax reforms attested in P. Cair. Isid, 1. The literary sources (\*Jerome, *Chron.* 226c Helm, \*Eutropius, IX, 22–3, \*Orosius, VII, 25, 4 and 8) attribute the rebellion to Aurelius \*Achilleus, the Corrector of Domitianus, and it was Achilleus who was subjected to a long \*siege in \*Alexandria by \*Diocletian which extended into the spring of 298. It is likely that Domitianus had died at the end of 297.

**Domus Divina per Cappadociam** \*Imperial estates in \*Cappadocia whose revenues funded the imperial household (\*Cubiculum). Managed by the \*Comes Domorum per Cappadociam until 536, it was then transferred to the curatores Dominicae Domus (centrally) and the \*governor of Cappadocia Prima alongside fifteen magistri, thirteen responsible for individual estates (*NovJust* 30).

CMK

Delmaire, *Largesses*, 220–3, 228–33.

**Donatism** Christian schismatic movement in \*Africa precipitated by the Great \*Persecution. Donatists

accused Felix, \*Bishop of \*Abthungi, of being a *traditor* (one who hands over, a traitor), because in 303 he had surrendered copies of the \*Bible to the persecuting authorities. Felix had consecrated Caecilian as Bishop of \*Carthage after the Great Persecution, which in Africa lasted from 303 till 306/7. The purists who became the Donatist party therefore consecrated a rival Bishop of Carthage, the \*deacon Majorinus, who was eventually replaced by Donatus. The resulting division persisted beyond the period of \*Vandal rule in the 6th century.

The sources for the Donatism schism are heterogeneous. Documents concerning the early years of Donatism are preserved by \*Eusebius (imperial \*letters: *HE X*, 5–7) and in the \**Optatan Appendix*, a collection of texts appended to the treatise *Against Parmenian the Donatist*, written in 367 and revised in 385 by the Catholic (Caecilianist) writer \*Optatus, Bishop of \*Milevis, a treatise which also provides a narrative of the origins of the schism. The Donatist layman \*Tyconius (d. c.400) wrote theological treatises but was condemned by the Donatists themselves. Donatist \*martyr passions also survive, both Donatist versions of \*martyrs who suffered at the hands of pagan authorities and those who died in the 'Time of Macarius' in 347 when \*Constans I tried to impose Christian unity in Africa. \*Augustine, Catholic Bishop of \*Hippo Regius from 395 to 430, wrote copiously against the Donatists, citing many earlier texts, including those of Donatists themselves. Acts of the \*Councils of the Church concerned with the Donatists also survive.

The experience of persecution lay at the heart of Donatism. After the persecution under \*Decius (249–51), the diplomatic sensitivity of \*Cyprian had averted lasting splits between Christians who had given way to the demands of the authorities and their brethren who had no sympathy with such backsliding. In 303 African clergy had been ordered to surrender copies of the scriptures. Afterwards, those who had complied were viewed by many African Christians, especially in \*Numidia and \*Cirta (later Constantine), its principal \*city, as *traditores* who had polluted the Church and forfeited the Holy Spirit. Zeal for the purity of the Church combined with jealousy of Carthage's primatial see helped to fuel this volatile mixture of passions. By 307, two separate Churches existed.

In 313 the Emperor \*Constantine I recognized the Catholic side as the legitimate African Church, dispensing its clergy from onerous \*taxation. Donatist petitions to him were discussed by bishops in the \*Lateran Council of 313 at \*Rome and at the Council of \*Arles (314) but failed to find favour. A severe anti-Donatist law from Constantine in 317 ignited public \*disorder at Carthage, with troops slaughtering Donatists in churches (*Passio Donati*). These first martyrs

caused the sect to flourish, led by the formidable Donatus (Optatus, III, 3). Constantine's impending war against his imperial colleague \*Licinius in the East prompted Constantine to rescind his anti-Donatist laws (321), as he could not appear to be persecuting his fellow Christians. Around 336, Donatus convened a large council of 270 bishops at Carthage though the proceedings were marred by dissensions concerning the rebaptism of those who moved between the factions (Augustine, *ep.* 93, 43).

The violent partisans known as the \*Circumcellions first made an appearance c. 340; it is not clear if their affiliations were exclusively with the Donatists, though Optatus certainly portrays them as Donatist bands who perpetrated violence against Catholics (III, 4). In 346 the Emperor Constans I sent commissioners, Macarius and Paulus, to promote unity; their presence provoked massacres which gave the Donatists their most celebrated martyrs (*Passio Maximiani et Isaac*). Constans's \*Edict of Unity of 347 ordered confiscation of Donatist property and banishment of clergy (Optatus, II, 15) and the Catholic Council of Carthage (c.348) proclaimed a (short-lived) reunion between the two sides.

In 363, the neo-pagan Emperor \*Julian (361–3) permitted exiled Donatist clergy to return to Africa. Under the able direction of Parmenian, the Donatist Bishop of Carthage (362–91/2), Donatism outstripped Catholicism in popularity in Africa (\*Jerome, *Vir. Ill.* 93). They even established their own bishopric in \*Rome. Parmenian emphasized the gift of holiness among the Donatists rather than the worthiness of its clergy (Optatus, II, 9); Augustine in his treatise *Against Parmenian* was to counter this by arguing that the effectiveness of the Sacraments depended not on the holiness of the Donatists but on the holiness of Christ. The secession of the Rogatists and the political revolt of the \*usurper \*Firmus (372/3–4/5) and a schism at Rome failed to diminish Donatism's dominance. Parmenian even excommunicated the Donatist theologian \*Tyconius (c.385) for positing the notion that the Church should include sinners as well as saints. His thinking helped the formulation of Augustine's ideas in the *City of God*, and his rules of exegesis, crystallized in Augustine's *On Christian Doctrine*, had a formative influence on medieval interpretation of the \*Bible.

Donatism's decline began with the primacy of Bishop Primian (391–412). His ruthless tactics facilitated schism (393), seriously weakening Donatist unity. \*Aurelius, Catholic Bishop of Carthage (391/392–c.431), and Augustine orchestrated councils to revivify the Catholic Church. With Catholic bishops urging state coercion, the Emperor \*Honorius declared Donatism a heresy in 405. The Council of Carthage of 411 marked the last great debate between the two sides.

Honorius proscribed Donatism in 412 (*CTh* XVI, 5, 52); crushing penalties forced many conversions, but substantial pockets of resistance remained, especially in Numidia (Augustine, *Gesta cum Emerito*).

The Vandals (430–533) persecuted Donatists and Catholics intermittently but harshly. King \*Hunerich ordered that only Catholics were to attend the sole church council held in Vandal times (484). Byzantine Africa (533–698) affords glimpses of Donatism in Pope \*Gregory I's correspondence and in an anti-Donatist law of \*Justinian I (*NovJust* 37, 5, 8). Archaeological research promises new light on Vandal and Byzantine Donatism.

**donative** Term used for gifts to Roman soldiers from the \*emperor. From the later 3rd century, donatives were given at the \*accession of emperors (both \*Augusti and \*Caesars) and on their five-year \*anniversaries. During the 3rd century donatives were large cash payments, with legionaries being given about a year's pay for the accession of a Caesar, more for an

Augustus. Auxiliaries were given less, officers more. The \*Arras Hoard is an assemblage of multiples received as donatives by a senior officer.

By the mid-4th century, the \*accession donative had become standardized for all troops as a pound of \*silver and five \*solidi, the anniversary donatives as five *solidi*. These amounts remained unchanged until at least the late 6th century. Minting and issuing these sums was the responsibility of the \*Rationalis Rei Summae in the 3rd century and of the \*Comes Sacrarum Largitionum from the reign of \*Constantine I onwards. HE

**Donatus, Aelius** The most influential grammarian of the 4th century, whose pupils included the future S. \*Jerome. His two handbooks (*Artes*) attracted many commentators (e.g. \*Servius, Cledonius, Pompeius) and dominated grammatical learning in Europe until the emergence of Priscian in the 12th century. The *Ars Minor*, intended for beginners, deals with the eight parts of speech in question-and-answer format; the *Ars Maior* is more comprehensive and includes sections on the 'flaws' and 'virtues' of speech. Donatus also wrote commentaries on Terence and \*Vergil. The extant Terence commentary is a much abridged version (lacking *Heautontimoroumenos*), compiled at an unknown date, probably from two sets of marginal scholia in manuscripts of Terence. From the Vergil commentary there survive only the dedicatory epistle, the *Life* of Vergil (drawn from Suetonius), and the introduction to the *Eclogues*. But the 'vulgate' commentary of \*Servius contains much material from Donatus, and the augmented version of Servius ('Servius Danielis') still more. RAK

Comm. on Terence, ed. P. Wessner (1902–5).

*Life* of Vergil, ed. J. Brummer (1912), ed. G. Hardie (1954).

**Donatus, Tiberius Claudius** (late 4th/early 5th cent.?) Author of a line-by-line 'interpretation' of \*Vergil's *Aeneid* dedicated to his son (missing comment on *Aeneid* 6, 1–157 discovered by Marshall). Donatus disapproved of scholastic methods, and his work is largely independent of the scholastic commentary tradition on Vergil. Devoted to moralizing paraphrase, appreciative rhetorical analysis, and judgements (sometimes striking) on the characters' 'psychology', he knew little of the poem's cultural context yet was certain that it aimed to \*praise Aeneas and Augustus. His work embodies the ahistorical sensibility of a conservative ancient reader. RAK

**donor portraits** Persons who financed the building of a church or chapel were often prominently portrayed within that building. Donor portraits formed part of the \*mosaic decoration, their prominence depending on the donor's religious and social standing. Lay patrons appear in floor mosaics at the 6th-century Chapel of Priest John, Khirbet al-Mukhayyat (Jordan); a prefect, with the \*bishop, is depicted on the walls of S. Demetrius, \*Thessalonica; and an episcopal donor appears in the main \*apse at S. Euphrasius in \*Poreč, accompanied by the saint and presenting a model of the church to Christ. No imperial donor portrait survives from Late Antiquity; the famous mosaics of S. Vitale in \*Ravenna showing \*Justinian I and his entourage of high office-holders and clergy are not a record of the donor of the church, which was financed by the banker \*Julianus Argentarius, commemorated only in \*inscriptions. **doors** The wooden doors of Late Roman churches, with or without \*bronze revetment, were set in \*marble or stone frames which were typically moulded and might be inscribed with \*prayers or \*crosses, or decorated with sculpted \*foliage (as at the \*baptistery at \*Nisibis). \*Bronze doors decorated with crosses and imperial \*monograms survive at the Church of the \*Holy Wisdom in \*Constantinople, and wooden doors with biblical scenes at the Church of S. Sabina at \*Rome. The wooden doors carved with paradisiacal figures and plants at the \*Monastery of Mount \*Sinai are surmounted by a quotation carved on the lintel from Psalm 118:117: 'This is the gate of the Lord: the righteous shall enter into it.' Others are described by \*Eusebius (*HE* X, 4, 42) at the church of \*Tyre and by \*Joshua the Stylite (89) at \*Edessa. PhN

**Dorchester** Roman town in Oxfordshire, England, with important evidence for late 4th- and early

5th-century activity. The area has a group of mid-5th-century burials with both late Romano-British official \*belt fittings and early \*Anglo-Saxon items, and is also the focus of a cluster of early Anglo-Saxon \*cemeteries. The juxtaposition of sub-Roman activity around the town and these early cemeteries is intriguing. Dorchester became the seat of Birinus, the first \*bishop of the West Saxons, who converted their King Cynegils in AD 635 (\*Bede, *HE* III, 7). DAP

P. Booth and M. Henig, *Roman Oxfordshire* (2000), 188-95. J. Blair, *Anglo-Saxon Oxfordshire* (1994), 1-6.

**Dorestad** (prov. Utrecht, Netherlands) The most important port (*wik* or *emporium*) in continental northern Europe in the early Middle Ages. Situated at the head of the Rhine delta, close to an old Roman fort on the former Rhine \*frontier, its activity began during the 7th century, on the initiative of the independent \*Frisians, but it developed mainly after the site came under the control of the \*Franks at the turn of the 8th century. Its huge \*harbour complex, along the banks of the Old Rhine and the Lek, became the main bridgehead for trading relations between its Rhenish hinterland, eastern \*Britain, and Scandinavia. But the site was so wealthy that the Vikings raided it on many occasions, and Dorestad never recovered from the last of these sacks in 863. SL

H. J. Scheltema, D. Holwerda, and N. van der Wal, eds., *Basilicorum Libri LX*, Series B, 9 vols. (1953-85).

**Dorotheus of Antioch** Christian \*priest of \*Antioch, who knew Hebrew, was a congenital \*eunuch, and supervisor of the \*purple dye works at \*Tyre. \*Eusebius of Caesarea heard him preach (*HE* VII, 32, 2-4). Possibly identical with the courtier Dorotheus martyred at the start of the Great \*Persecution (*HE* VIII, 1, 4 and VIII, 6, 5). The *Syriac*

*\*Martyrology* of 411 lists a Dorotheus as one of nine martyrs at *\*Nicomedia* on 12 March. OPN  
PLRE I, Dorotheus 2 and 3.  
Barnes, *CE* 192.

**Dorotheus of Gaza** (6th cent.) A monk in the *\*coenobium* of Seridus near *\*Gaza* and famous disciple of *\*Barsanuphius* and John. Dorotheus was born c.505 in *\*Antioch* and died in his monastery near Gaza in the 560s or 580s. He absorbed the monastic tradition under the guidance of Barsanuphius and John, and also served the latter for nine years. His literary work, as well as his occupation in *\*medicine*, testify to a broad education. At the command of Barsanuphius and John, he became responsible for the *\*monastery's* *\*hostel*, and also agreed to serve as the porter. He established and ran a clinic in the monastery, in which he himself cared for ailing monks, with the assistance of his disciple, Dositheus. Dorotheus had brought his library with him from Antioch; this included medical books, and Barsanuphius encouraged him to make use of them. In a later stage, Dorotheus left the monastery of Seridus and settled in another monastery between Gaza and *\*Maiuma*.

There are four principal historical sources for Dorotheus' life and monastic teaching: his correspondence with Barsanuphius and John through Seridus which includes over 100 *\*letters*; his instructions to his monks; several other letters; and the anonymous *Life of Dositheus* (BHG 2117), apparently written by another of Dorotheus' disciples. **Dositheus** (not before 2nd half of 4th cent.?) Styled 'teacher' (*magister*) in the manuscripts of his work, Dositheus wrote an *Ars Grammatica* in *\*Latin* that was accompanied by a *\*Greek* translation: the handbook was presumably intended for Greek speakers attempting to learn Latin, which would in turn imply that Dositheus was active in the eastern half of the Empire. The handbook's doctrine places it in the grammatical tradition represented most significantly by Charisius. RAK

PLRE I, Dositheus.

Kaster, *Guardians*, 278.

ed. G. Bonnet (with FT and comm., 2005).

**dowry and brideprice** The two types of marital endowments in Eurasian societies, given or promised at *\*marriage*, to cover the expenses of the common household and to secure the livelihood of the wife

should she become a *\*widow*. Providing a dowry, furnished by the bride's family, was the prevalent practice in *\*Greece*, *\*Italy*, and *\*Egypt* to the 4th century. The brideprice (or bridegift, indirect dowry), contributed by the bridegroom's family, appears in Roman sources in the 3rd century, possibly reflecting various provincial usages. Its value increased especially in the 5th century, the brideprice being often included in the dowry. *\*Justinian I* decreed that the dowry and brideprice should be equal, but local differences may have survived. In the post-Roman West, except perhaps Italy, brideprice totally superseded the dowry. The underlying reasons for these developments are unknown, although the new system harmonized with Germanic practice, which knew diverse kinds of endowment only from the bridegroom. In the *\*Persian Empire*, both families contributed assets to the new household. For marriage among *\*Arabs*, brideprice was an essential constituent, part of it going to the bride and part to her father. She might also receive property from her natal family, but there was probably regional and social variation. The influence of Islamic teaching on traditional custom remains controversial. AAr

**draconarii** Bearers of the Roman snake *\*standard* in a range of military formations (*HA, Aurelianus*, 31, 7; *\*Vegetius, De Re Militari*, 2, 13). Officers' *draconarii* were sometimes instrumental in the *\*accession* of *\*emperors*, using *\*purple* cloth from the standard in the process (*\*Ammianus*, XV, 5, 16; XX, 4, 18). JCNC  
M. P. Speidel, 'The Master of the Dragon Standards and the Golden Torc: An Inscription from Prusias and Prudentius' *Peristephanon*, *TAPA* 115 (1985), 283–7.

**Dracontius, Blossius Aemilius** (c.450–after 500) *\*Latin* poet from *\*Vandal* *\*Carthage* who wrote on both *\*pagan* and Christian topics. From a *\*senatorial* family (he was *vir clarissimus*) and prominent (*togatus*) in the law *\*courts* of the *\*Proconsul* of Carthage, his rhetorical training suffuses his entire work. He was an outspoken Catholic, and for *\*praising* someone other than his *\*Homoean* (*\*Arian*) King *\*Gunthamund* (484–96) as *dominus* he was imprisoned, being released eventually by *\*Thrasamund* (496–524). His Christian works both date from his incarceration: *Satisfactio* is chiefly an appeal for regal clemency, *De Laudibus Dei* (three books) is a full but somewhat discouraged

account of the poet's faith. Book I was edited separately by \*Eugenius of \*Toledo as a \**hexaemeron* and issued together with the *Satisfactio*. Pagan poems (the incomplete *Romulea* and the *Orestis Tragoedia*) from every stage of his career, including after his release from \*prison, comprise rhetorical exercises, epithalamia, and miniature \*epics on familiar myths (Hylas, Helen, Medea, Orestes). Each of the latter contains significant innovations of plot and characterization, which many attribute to a Christian perspective, showing wide knowledge of both \*Greek and Latin sources and pervasive influence of the dramatic tradition, especially Seneca.

**dragons** See STANDARDS, MILITARY AND DRACONARII.

**drama and dance** The Attic plays of Classical Greece entwined drama and dance through the performance of masked actors and dancing choruses. Under the Roman Empire, the regular presentation of theatrical shows and the rise of the pantomime reconnected drama and dance in new and interesting ways.

The pantomime \*actor (Lat. *histrion*) performed a rhythmic dance with body movements and gestures that served to mimic the emotions of the same established characters from mythology and history as had inspired ancient drama (Wüst 1949). While the accompanying chorus supplied musical rhythm and contextual narrative through song, the pantomime's unvoiced dance held the key to the entire act (cf. \*Libanius, *Oration*, 64, 88). Yet the audience also needed to know which historical or mythological character he was impersonating at the time. \*Augustine (*De Doctrina Christiana*, II, 25) claims that a *histrion*'s movements and gestures cannot be understood without a herald who would first announce the theme and character. Ancient authors recognized the close link between dance and pantomimes who put on *dramatis personae* when they refer to pantomimes as dancers (Gk. *ὀρχησται* and, less commonly, Lat. *saltatores*). Not all stage dancers were pantomimes—*thymelicae*, for instance, were a type of dancing girls—but a special status was claimed for the pantomime's dance.

Just as the Attic plays of Classical Greece had competed in the City Dionysia, so pantomimes participated in sacral competition (Gk. *agones*) and stood to win crowns of victory as well as prizes. Some pantomimes even claimed to practise the tragic art through their rhythmic dance. Apologists such as Lucian of Samosata, in his *On the Dance* (c.160), defended such dance as being equal in nobility to the performances of past tragic and comedic actors, just as Libanius of Antioch, who calls pantomimes *ὀρχησται* (*Oration*, 64, *On Behalf of the Dancers*), pointedly rejected \*Aelius Aristides' belittling of their craft. The pantomimes' dance modulated from subtle registers, revealed through eye movements and fine hand motions, to bold leaps, twists, and turns. Accordingly, pantomimes had to undergo dedicated physical training, akin to that which Greek youths traditionally received in the gymnasium, to bring them to a level of athleticism comparable to that of modern male ballet dancers (Webb, 66–9).

Philosophical moralists had long accused pantomimes of corrupting the morals of their audience through sinuous dancing and the impersonation of female characters. Christian critics such as \*John Chrysostom (\*Patriarch of \*Constantinople 398–404) and \*Joshua the Stylite (28 and 46) and \*Jacob of Serugh in 6th-century \*Syria continued to condemn pantomimes' evocative dance as incitement to fornication and adultery, while at the same time berating them for redramatizing in their acts pagan mythological themes, including those related to divine adultery.

**draught animals** Muscle power for heavy labour was provided by animals. They pulled ploughs, threshing sledges, carts, and wagons (\**reda*, \**angaria*). Harness animals also performed numerous repetitive tasks involving rotary power: they turned millstones to grind \*grain or crush ore, lifted water using wheels,

and powered capstans used to raise heavy loads. Another common task for which animals provided power was the lifting of loads using pulleys; this was a common task in \*quarrying or mining as well as in raising water. In Arabia, the pulley-lifted waterskin called *delu* was raised by \*camels pulling on a rope attached to a pulley and trip which emptied the waterskin; the animal was then backed up to the wellhead and the process repeated.

The most common draught animal was the ox. In parts of North \*Africa, dromedaries were used to pull ploughs and to lift water. \*Horses were less used for these purposes because they are smaller, but they were much used in land transport and former scholarly doubt about Romans having the technology to harness horses for draught purposes has been largely dispelled. Mules were especially important; they were prized for their high endurance and ability to tolerate coarser food than finer Mediterranean horse breeds. Donkeys were commonly used to pull carts with light loads, while mules drew wagons with heavier burdens, as in the depiction from Late Antique \*Edessa of a mule being driven over a hapless pig (Daux, fig. 1). **dreams and dream interpretations** The images, stories, and sensations experienced during sleep, and the explanation of their meaning. The idea that dreams were sent to humans from the gods, \*demons, or the dead and were thus communications of esoteric knowledge was extremely ancient and continued to be influential in Late Antiquity, when dreams were exploited and circulated as sources of prophecy and wisdom by \*pagans, \*Jews, and \*Christians.

For pagans, overnight incubation at a sanctuary, especially one associated with a healing god like Asclepius, could stimulate dreams of oracular and therapeutic significance. An entire science of dream interpretation was articulated by authors such as Artemidorus. A Jewish magical text reveals that \*angels were believed to be in charge of dreaming, and requests their help in the interpretation of dreams (*Sepher Ha-Razim*, 2, 209–40).

For Christians, dreaming was variously a source of healing, instruction, or demonic influence. The practice of incubation was transferred to Christian shrines, where saints like S. \*Thecla were thought to perform healing miracles through dreams. Biblical and non-canonical literature was rich in prophetic dreams, from those of Pharaoh and Jacob, to the visions reported in the *Shepherd of Hermas*, and God was still believed to communicate through dreams in Late Antiquity, as exemplified by Constantine I's experience (\*Lactantius, *Mort.* 44, 5; \*Eusebius, *VCon* 1, 29). Some Christian

texts even contained dream-narratives accompanied by interpretations, as for example S. \*Perpetua's vision of her imminent \*martyrdom. However, Christian attitudes to dreams were often ambivalent. Tertullian explained that dreams could derive from demons, God, or the soul itself; identifying a dream's origin was key to interpreting its significance (*De Anima*, 47). \*Gregory the Great suggested that dreams could be stimulated variously by the stomach, illusion, thought, and revelation (*Dialogues*, 4, 50).

The fear that some dreams were sent by evil demons is vividly expressed in stories about \*holy men and women being tempted by sinful, often erotic, temptations in their dreams. The use of dreams to divine the future was controversial because it tapped into broader Christian and secular political anxieties about \*divination and magical practices. Although belief in the reliability and morality of dream interpretation was patchy, texts offering interpretations of particular and general dreams continued to be circulated and commented on by pagans, Christians, and Muslims in Late Antiquity, from \*Macrobius' *Commentary on Cicero's Dream of Scipio*, to Artemidorus' *Oneirocritica*.

**dress, barbarian** The dress of the principal tribal confederacies—\*Anglo-Saxons, \*Franks, \*Alamans, \*Burgundians, \*Visigoths, and \*Vandals—who occupied the former territory of the shrinking Roman Empire in the West was marked in the 5th century by some basic common garments. Men wore a comparatively tight-fitting shirt with long narrow sleeves, constricted at the waist by a \*belt with a sometimes

flamboyant buckle and, below that, \*trousers, supported by a belt. The outermost garment was a rectangular cloak, secured on the right shoulder with a brooch. The convention for women was an ankle-length bodice with long tight sleeves, over which a sleeveless tube-like tunic was worn, girdled, the upper edges pinned together on the shoulders with a pair of matching brooches, between which hung a string of beads. Clusters of metal objects such as chatelaines were suspended from the girdle.

By the 6th century the fibulate tunic had been replaced by a sleeved tunic sewn at the shoulder. A cloak might be draped round the shoulders, held together at the waist by brooches. The ensemble was completed by a bonnet or \*veil over the hair and stockings. The evidence for the above comes largely from the \*textile scraps adhering to metal brooches and furnishings in graves, principally of the barbarian warrior \*aristocracy from the period of the \*Barbarian Migrations. Garments were of wool (often twill), linen or, for the elite, imported \*silk, even cotton and rabbit wool. Fur, too, played a role. Tablet-woven braid trimmings were popular, and pleated linen and ribbed wool tunics and cloaks enhanced appearance for both sexes. It is clear that there was great fashion diversity at a regional level reflecting ethnic or tribal identity and social class. \*Anglo-Saxon graves in England and the \*Frankish royal tombs in \*Paris demonstrate that clearly. Trends were much influenced by Mediterranean fashion, but also directly from the East: the Persian open riding coat was worn by some leading males. Romans in turn adopted barbarian clothing, such as long trousers (the wearing of which in the \*city of \*Rome was forbidden by laws of 397 and 399: *CTh XIV*, 10, 2–3). JPW P. W. Rogers, *Cloth and Clothing in Early Anglo-Saxon England AD 450–700* (2007).

**dress, Persian** (MP *jāmag* or *paymōg*) Persian dress was broadly similar to that of other Iranian peoples and was especially suited to riding \*horses. Most primary source evidence for Persian dress comes from the visual arts, especially from \*rock reliefs. It consisted of loose-fitting \*trousers, boots, and a knee-length tunic that was bound with a \*belt (*kamar*). A heavy caftan, crossed at the chest, could be worn belted. In 3rd- and 4th-century representations, the tunic appears squared off at the bottom. From the late 4th century, the lower hem is rounded. Ornamental and figural \*textile motifs become prominent around the 6th and 7th centuries, as is apparent at \*Taq-e Bostan. Early reliefs and \*seals portray members of the \*aristocracy wearing domed or pointed hats (*kulāf*) with their heraldic symbols (*nīšān*)

on the side, often bound with diadems. Nobles were given the right to wear \*silk and \*jewellery. Women's dress consisted of long, flowing, sleeved or sleeveless tunics. They were worn belted under the breasts with a long cloak worn over the left shoulder or used as a veil. Clothing was an important element in royal \*gift-giving. It also marked social rank, as did jewellery, and textiles and their motifs. The king bestowed clothing and jewellery as a mark of distinction on those he desired to honour and presented his own robes to especially favoured family and courtiers (Jahiz, 173).

**dress, Roman, civilian, official** \*Vergil calls Romans the *gens togata*, the toga-wearing people (*Aeneid*, I, 282; cf. \*Macrobius, *Saturnalia*, VI, 5, 15). The \**toga picta*, the especial vestment of the \*consul, was shown on \*ivory \*diptychs until the end of the consulate in 540. The ordinary toga was still worn as formal dress in the late 4th century; indeed \*senators were required to wear it to meetings of the \*Senate at \*Constantinople, although they were permitted to adopt the \**colobium* (a tunic, often sleeveless) and *pae-nula* (a sleeveless topcoat, the ancestor of the modern Christian chasuble) as everyday dress (*CTh XIV*, 10, 1 of 382).

Study of statues suggests that the toga remained a frequent style of dress chosen by civilian notables who were having their portraits carved until the latter part of the 4th century. Sometimes such statues would be reused, in which case they depicted the old-style baggier type of toga with its more plunging neckline and ample *sinus* (fold). But in the \*cities of the East from c.388/92 onwards a new style of toga become common for members of the imperial \*aristocracy. It is to be seen on statues from \*Aphrodisias and is also worn by the men of the imperial \*family on the \*Obelisk Base of \*Theodosius I in the \*Circus at \*Constantinople. The new style of toga was more tightly fitting than the traditional style; about half of the 60 or so surviving statues are of the new style, but only two examples of the new style are known from the West, both from the Esquiline in \*Rome (LSA 1068 and 169). It seems to have been worn by those who held office under the \*emperor or those, now \**honorati*, who had previously done so; it therefore distinguished such men from normal civic notables, who were more likely to be portrayed wearing the *himation*.

The toga was a civilian garment. Officials in both the civilian and the military \*administration also wore the \*chlamys, in origin a form of military cloak. Senators were explicitly forbidden to wear it in Constantinople on account of its military associations (*CTh XIV*, 10, 1

of 382), just as the wearing of trousers and other barbarian dress was forbidden in Rome (*CTh* XIV, 10, 2–3). The chlamys was however commonly worn by civilian officials in the form of a very long mantle reaching from the shoulder nearly to the ankles, open down the right-hand side and held in place by a clasp. This permitted the right arm to be extended in the normal Roman \*hand gesture for a man making a speech—\*Ammianus writing of \*Valentinian I being interrupted when about to make a speech says, 'bracchium exsортante', 'he was just getting his arm out' (XXVI, 2, 3). The opening also drew attention to the \*tablion, the large rectangle of coloured cloth sewn onto the open edge at about waist height, visible on the chlamyses shown on the David Plates of the \*Cyprus Treasures, on those of Pontius Pilate and other officials in the \*Rossano Gospels, and on those in the \*mosaic of \*Justinian I and his \*court at S. Vitale in \*Ravenna. At S. Vitale the chlamys of Justinian is \*purple with a gold tablion; that of the two high officials next to him is white with a purple tablion. Parts of about twenty statues of men wearing chlamyses survive.

Also visible on the S. Vitale mosaic are the distinctive sandals, the *compagi* of the imperial aristocracy, apparently similar to those described by \*John Lydus in his confused account of Early Roman history as being worn by the first Fathers of the Roman state (*Mag.* I, 17—a passage in which he also says that they wore the chlamys; cf. I, 32). The *Chronicon Paschale* describes chlamyses and *compagi* being worn by those who on every anniversary of the birthday of Constantinople on 11 May brought a wooden statue of \*Constantine I into the circus for the emperor of the day to venerate (ad ann. AD 330).

\*Belts, sometimes with \*gold or jewelled clasps, were also worn by office-holders of all ranks from the emperor down to \*apparitors (ushers). OPN

**dress, Roman, military** The standard military uniform, as detailed by the Tetrarchic \*Prices Edict (19, 1a and 2; 22, 1a and 2), consisted of a *strictoria* (Grk. στίχρη, στιχάριον) and a \*chlamys. Clothing levy documents from \*Egypt add a \*pallium. The *strictoria* was a knee-length shirt in wool or linen with long tight sleeves, worn with a \*belt. The simplest style incorporated \*clavi of varying length, tapestry-woven panels (\*segmenta) on the shoulders and at knee level, and stripes at the wrist. Later *strictoriae* carry a single central *clavus* and decorative neck yoke. The chlamys was a half-moon cloak with tapestry panels, secured on the right shoulder with a crossbow or disc brooch. The

rectangular *pallium* may have served as an undress cloak—or a blanket.

Rank was indicated by the design, costliness, and number of the decorative elements in the garment and by the quality of its weave and the dyestuffs used: pure white nonetheless was highly regarded. The precise criteria governing the dress code cannot be recovered, but clearly elaborate brooches and \*belt buckles played a pivotal role. Cross-cultural influences had a marked impact on military clothing, especially in the East. The Persian riding coat with its false sleeves and \*silk-trimmed borders was commonly adopted. Long \*trousers of various types had long shed their barbarian image to become staple military attire. Headgear included the fez-like pilaeus and hooded scarf (*maphor(t)ium*). On campaign a padded arming doublet ('thoracomachus') was worn under armour. Mindful of the need to clothe the troops, emperors instituted clothing levies on the whole population, at first by requisition, then as \*taxation in kind, and ultimately in cash, to supplement the output of the \*gynaecia. **dress, Roman and post-Roman** By the late 3rd century the restrained clothing fashions of the Early Roman period had given way to richer, more florid styles: garment form, moreover, had been much influenced by contact with Celts, Germans, Parthians, and Persians. Information on everyday as opposed to elite dress, however, is not abundant, since art, literature, and cemetery archaeology are all concerned more with the well-to-do.

The principal garment for both sexes was a very loose-fitting tunic (*dalmatica*) with short wide sleeves, decorated with \*clavi front and back. Usually of wool, it was woven in one piece on a wide loom. Ankle-length for women, and eventually for men, too, there was a short male version (\*colobium). Also in vogue was a wide-fitting shirt (*strictoria*, *sticharion*) in wool or linen, with long tight sleeves, often (but not always) embellished with *clavi*, tapestry panels (\*segmenta) on the shoulders, and wrist bands. (The archaeological record indicates that between the two poles of *dalmatica* and *strictoria* there were numerous types of tunic with hybrid features.) When shirts were of linen, they might be assembled by a tailor from three or more sections that had been woven together on the loom. The shirt was worn by males with a \*belt and metal buckle, and a waist tuck was stitched in place surprisingly often to adjust the overall length. It might also be worn under the dalmatic by either sex.

Outer garb for men and women was a rectangular cloak (\**pallium*) with a gamma-shaped tapestry-woven motif in each corner: men might alternatively sport a hooded wool cape (*paenula*, *caracalla*, *birrus*). A variety of headgear could be chosen by women, including caps plaited in sprang technique, \*veils, and *maphor(t)ia* (part hood, part scarf). Children wore scaled-down versions of adult attire, often made from worn-out cloaks. (Clothing recycling was practised at every level.) The Tetrarchic \*Prices Edict provides maximum prices for many of these garments,

Specific occupations and activities were associated with particular dress, as can be seen in Late Antique art. In the countryside farmworkers wore a short, long-sleeved belted shirt, topped by a shoulder-length hooded *cucullus*. Leggings (*ocreae*) protected their calves and \*leather mittens (*manicilia*) their hands. \*Aristocrats out \*hunting and their servants are shown in brightly decorated *strictoriae*, with cross-gartering on their legs. Charioteers competing in the \*circus streamlined their shirts with bands wrapped tightly round their chests. Christian clergy defined their hierarchy by a strict dress code, in which some form of hooded cape was a common denominator. Late Roman society was acutely aware of the power of dress: the \**Theodosian Code* and later imperial enactments strove to restrain those who infringed contemporary dress conventions.

**Droctulf (Droctulft)** (d. after 606) \*Paul the \*Deacon transcribed the (lost) \*epitaph of Droctulf (*CIL* XI, 319). His career epitomizes the confusion of later 6th century \*Italy. Droctulf had \*Alamannic/\*Suebic roots, was brought up at the \*Lombard court, became a \*Dux, then defected to the Byzantines, for whom, in c.584, he regained Classis, the port of \*Ravenna, from \*Faroald I, Dux of \*Spoleto, soon after contesting (as a Dux) control of fortresses against King \*Authari's forces. In 587 he fought against \*Avars near \*Sirmium (\*Theophylact Simocatta, II, 17, 9–11). \*Gregory the Great recommended him to the \*Exarch of \*Carthage (*Registrum*, IX, 9). He died in Ravenna, and was buried in the Church of S. Vitale, his \*patron saint (\*Paul the Deacon, *History of the Lombards*, III, 18–19).

**dromon** (Gk. racer; 'for they can attain great speed': \*Procopius, *Vandalic*, III, 11) Most ancient authors used this term for any type of galley. In Late Antiquity, a *dromon* was a single-banked galley developed from the classical light ship types like the \**keles* and \**lembos*. It exemplified a new preference for speed over size, usually lacked a waterline ram, and carried a lateen sail. Government *dromones* of this sort were stationed at \*Constantinople to carry messengers (\*John Malalas, XVIII, 90). This type of ship came to be the *monoremes* or *galeae*.

The medieval Byzantine *dromon* (e.g. *De cer.* II, 45) was a different, two-banked version, more directly descended from the \**liburna*. It is first mentioned in the early 6th century. 'One hundred armed ships and as many *dromones* and 8,000 soldiers' took part in a raid on \*Tarentum in 508 (\*Marcellinus Comes, *Chron.* ad ann. 508) and imperial *dromones* fought the \*usurper \*Vitalian in the \*Bosporus in 515 (John Malalas, XVI, 16). The fleet of 92 fast *dromones* with single banks of oars manned by 2,000 rowers protected from missiles by decking over their heads which was employed by \*Belisarius to protect his troop transports during the African campaign of 534 had, however, only single banks of oars (Procopius, *Vandalic*, III, 11, 15–16). The *dromon* developed further up into the 9th century and came in a variety of sizes, ranging from 100 to 200 rowers. The later versions relied on \*artillery (e.g. the *siphon*) and marines as their offensive complement.

**druids** Religious figures in Celtic-speaking societies. Before Late Antiquity, they were portrayed in Classical sources as influential in Gaulish and British society, involved in sacrificial rites, judging disputes, and religious interpretation, having undertaken lengthy oral-based studies, but no conclusively associated archaeological evidence has been found for them. The word druid (Lat. plur. *druidae*, *druides*, Gk. plur. *druidai*, Old Irish sg. *druí*, plur. *druíd*) is probably Celtic, meaning 'people knowledgeable about the oak', a tree associated with them. By the 2nd century AD the druids were banned, ostensibly because they practised human \*sacrifice, but possibly also for fomenting rebellion. In Late Antiquity, earlier portrayals of druids were often repeated. When referring to more recent events, the druids are depicted not as high-status individuals but as men or women in the countryside offering

prophecies about prominent figures. Druidism died out as Christianity spread, but in 7th- and 8th-century \*Ireland the druids still had legal status, albeit reduced, and some \*magic powers, and are depicted positively and ambivalently, as well as negatively in \*saints' lives and tales. NJE

**ducenarius** See CENTENARIUS, DUCENARIUS AND TITLES OF HONOUR, ROMAN.

**Dunhuang** City in Gansu province, \*China, located in an oasis on the eastern edge of the \*Tarim basin, where two branches of the \*Silk Road join at the entrance to the Hexi Corridor. Originally established during the Han dynasty, Dunhuang variously came under Chinese, Tibetan, and \*Uighur Turkic rule. Its location made it an important commercial centre and \*Buddhist pilgrimage site.

The city is best known for the nearby Mogao Caves ('Caves of the Thousand Buddhas'), constructed between the 4th and 14th centuries. Here, more than 40,000 manuscripts, along with thousands of wall paintings, sculptures, paintings on \*silk and paper, printed texts, and \*textiles, were discovered in the early 20th century. Most are now in London or Paris, with smaller collections in Beijing, St Petersburg, and Kyoto.

The manuscripts, dating from the 5th to 11th centuries, reveal a variety of languages (Chinese, \*Khotanese, Sanskrit, \*Sogdian, Tangut, Tibetan, Uighur \*Turkic, and others), religions (Buddhism, Christianity, Daoism, \*Manichaeism, and \*Zoroastrianism), and genres (religious, philosophical, biographical, historical, literary, lexical, economic, medical, and others). Important texts discovered include Chinese hymns and prayers (including the 'Fragment Pelliot'), Manichaean prayers, hymns, and other texts in Sogdian, and Uighur Turkic (including the *Xuastvānjī*), the earliest extant printed book (868), a Chinese translation of the Buddhist *Diamond Sutra*, and the so-called *Jesus Sutras*, Chinese Christian texts utilizing Buddhist and Daoist terms. **Dura Europus** \*City on the west bank of the middle \*Euphrates, commanding a point where a desert route between \*Palmyra and southern \*Mesopotamia crossed the river. From the time of the Roman–Parthian wars of the 160s until it was abandoned following its capture by the Persians in 256/7, Dura was an important outpost of the eastern Roman \*frontier. The abandonment of the site to the sands of the desert made possible extensive archaeological investigation in the 20th century.

Dura occupies a height overlooking a bend in the Euphrates with *wadis* (seasonal rivers) to north and south. The walls on the western, desert side were some 3 m (c.10 feet) thick, and were provided with 26 towers; the principal \*city gate, the Palmyra Gate in the middle of the western walls, was protected by bastions, a shrine to the city's Tyche, and a stela sacred to Nemesis. The camp of the garrison was at the north end of the city; the residence of the garrison commander (Dux Ripae) and the citadel overlooked the river. The city was laid out in rectangular blocks, capable of housing about 5,000 people. It boasted a forum, \*baths, and an amphitheatre and was made a *colonia*, probably in the early 3rd century.

Coins and a great variety of \*inscriptions and \*papyrus documents both in \*Latin and \*Greek, and also in \*Syriac, Palmyrene, Parthian, and Middle \*Persian, illustrate the cosmopolitan cultural, linguistic, and religious life of the city and of its garrison. A \*map drawn on a \*leather shield-cover shows roads around the Black Sea with place names in Greek. Records concerning an imperial \*estate near Dura and commercial documents in both Greek and Syriac have been recovered. An inscription in Greek on an \*altar in the \*temple sacred to the civic divinities (Lat. Fortuna; Gk. Tyche) of Dura and Palmyra records a dedication to the Palmyrene god Iarlibhol by a military officer with a Latin name serving in the Cohors XX Palmyrenorum. There were several temples of Zeus worshipped under various epithets including Olympius and Dolichenus. A temple of the Semitic goddess Aphlad, erected by an association of \*merchants from Anatha, an island-fortress further down the Euphrates, was restored after an \*earthquake in 160. A papyrus roll from the garrison \*archives, housed in the Temple of Artemis-Azzanath-kona, provides a calendar (the *Feriale Duranum*) in \*Latin of the official religious and other annual \*festivals celebrated by the garrison.

Private houses were converted to provide for congregations with distinctive religious beliefs. The Mithraeum is first attested in a bilingual Greek and Palmyrene inscription of AD 168/9 and was twice considerably enlarged. The construction of the \*synagogue, just inside the western walls, is dated by an Aramaic inscription to AD 244/5, and a Greek inscription names its founder as 'Samuel, son of Eiddeos, *presbyteros* of the Jews'. There

are \**graffiti* in the synagogue in both Greek and Aramaic, as well as a few in Persian languages, and parchment fragments preserve a Hebrew liturgical text. The famous figurative wall paintings of the Exodus, Elijah, Samuel, Solomon, and other scenes from Jewish history are now in the National Museum at Damascus. The sanctuary of the Christian building, also adapted from a private house just inside the western wall, could hold around 100 worshippers. The remains of the wall paintings from the \*baptistery are now at Yale University; the scenes they show have been identified as coming from both the Old and New Testaments. There are a few inscriptions, mostly in Greek, one mentioning a date equivalent to AD 232/3.

After a brief Persian occupation in 253/4 (from which fragments of Middle \*Persian documents survive), the \*Sasanian King \*Shapur I captured Dura violently from the Romans in 256/7. The attackers undermined the walls in several places; the defenders dug down to meet them, but near Tower 19, at the south end of the western wall, they were overwhelmed underground. The Romans blocked their entrance in panic, and the Persians fired their side of the mine, probably using naphtha and sulphur: eighteen Roman soldiers were trapped, suffocated, and burned. After the capture of Dura, the Romans retreated from the middle Euphrates. When the Emperor \*Julian's army passed through in 363 the city was deserted, except for the tomb of Gordian III (\*Ammianus, XXIII, 5, 8; \*Zosimus, III, 14, 2).

**Durostorum** (Dorostolon, mod. Silistra, Bulgaria) Roman \*city and fortress in \*Moesia Inferior on the Danube, important during the 3rd-century invasions of \*Goths and \*Sarmatians, visited by \*Diocletian during inspections of the \*frontier and by \*Valens in 367 between periods residing at nearby \*Marcianopolis.

According to \*Jerome, the \*martyr S. Aemilianus was burned at Durostorum under \*Julian as punishment for overturning pagan \*altars (*Chron.* 243a Helm). Legends of a dozen earlier \*martyrs also associated with Durostorum include that of S. Dasius, whose surviving Passion (*BHG* 491) with its picturesque account of the \*Saturnalia must post-date 381. The first attested \*bishop, \*Auxentius of Durostorum, was a foster-son of the missionary-bishop \*Ulfillas.

The general \*Aëtius was born at Durostorum (\*Jordanes, 176). \*Justinian I rebuilt the fortress (\*Procopius, *Aed.* IV, 7. 10); it was sacked by the \*Avars in 586 (\*Theophylact Simocatta, I, 8, 10), and embroiled in \*Priscus' campaigns against the \*Slavs in 593 (Theophylact Simocatta, VI, 6, 5).

Archaeological work since the early 20th century has revealed the late 3rd-century fortress, a 2nd-century public \*bath, a late 3rd-century aristocratic \*tomb that contained a chariot, and a painted tomb dated to the mid-4th century.

**Dust Veil of 536** An atmospheric phenomenon described in a number of written sources, the exact cause, duration, extent, and effects of which are debated. The event was consistently described as a dimming of the Sun for a period between one year and eighteen months. \*Cassiodorus associated it with prolonged cold and drought, resulting in crop failures in \*Italy. \*Procopius of \*Caesarea, at that time in the centre of the Mediterranean basin, also noted the phenomenon, while other sources recorded food shortages in \*Ireland and northern Italy. Further east, \*Zacharias Rhetor, \*John Lydus, and sources reliant upon \*John of \*Ephesus report the souring of \*wine and destruction of produce in the area of \*Constantinople and Asia Minor, in conjunction with an observed dimming of the sun.

Dendrochronological evidence from northern Europe and North America points to a period of reduced growth between c.536 and c.550.

However, the chronological imprecision of these indicators and the lack of archaeological evidence makes it difficult to assess the material impact of the event. Maximal interpretations of the dust veil have seen it as a major climatic event, linked to dislocations across northern Eurasia, and as a causal antecedent of the Justinianic \*Plague. More minimal interpretations have emphasized both the regional nature of the literary evidence and the inconclusiveness of the physical indicators, arguing that the event caused only a transitory disruption to a society inured to intermittent \*famines.

**Dux** Commander of Roman \*armies in \*frontier \*provinces. The formal rank emerged as \*Diocletian increasingly separated civil and military responsibilities in provinces, a development completed by \*Constantine I. *Duces* commanded forces which came to be known as \**limitanei*. The remit of individual *duces* sometimes encompassed a number of provinces, but in problematic regions such as \*Isauria and \*Tripolitania civil and military powers might remain combined (under a \*Comes or \*Praeses). *Duces* were lower in status than \*Magistri Militum, and from at least the 360s were subordinate to them. The \**Notitia Dignitatum* lists twelve ducates in the West and thirteen in the East; the latter had increased to seventeen by \*Leo I's reign, with further additions under \*Justinian I, who also re-established them in \*Africa and \*Italy following the reconquest.

In post-Roman societies the Dux was a superior leader with command over a large region. Typically he had charge over several counties, usually in a border \*province. The office and title is found in \*Francia (e.g. the Duchy of \*Dentelin in the far north in the late 6th cent.), \*Lombard \*Italy, and \*Visigothic \*Spain. The Dux was principally a military leader with responsibility for defending the borders of his territory, but where larger kingdoms were formed out of smaller units, the Dux could have a command over what had once been a \*frontier region but had become an internal division. The Dux of Champagne was such a figure. As a military leader in what were highly militarized societies, the Dux was close to the king in the political

hierarchy, and the office was associated with political as well as military leadership. Some Duces were also termed 'princes' (*principes*) and several challenged for the throne. \*Julian of Toledo's *Historiae Wambae* written in Visigothic Spain in the late 7th century shows at least three Duces on different sides in a rebellion in which one of them aimed to become king and another to create an independent statelet. From soon after their arrival in 568, Lombard rule in Italy was exercised by Duces of \*Friuli, \*Spoleto, and \*Benevento who were equally capable of independent action.

**Dvin** (Middle Iranian \**duwīn* 'hill'; Gk. Doubios, Arab. Dabil) City in the Ararat Valley, \*Armenia (40° 01' N, 44° 35' E); founded probably in the late 4th century. The Arsacid (Arshakuni) capital until 428, it was the main \*city of eastern Armenia until 893 when it was destroyed in an \*earthquake. It remained inhabited until the 13th century. Around 485 Dvin became the residence of the Persian governor, the \*Marzban. The see of the \*Catholicus of Armenia moved there at the same time, remaining, with some interruptions, until the early 10th century. After the \*Arab invasions, Dvin was the residence of the *ostikan*, the Arab governor from 654 onwards. Greek and Arab travellers attest to its prosperity; it was famous for \*silk and \*glass production. Dvin was a hub of international trade, the population at various times including \*Jews, Syrians, Greeks, and others.

**dyes** Dyeing, a branch of empirical chemistry, enabled the \*textile industry to deliver the essential nuances of colour in increasingly rich clothing decoration through which social standing in Late Antiquity was displayed. Dyers were prominent in urban life, but dyework remains are seldom found: that at Athribis (\*Egypt) with its stained vats is exceptional. A few dyers' recipes are preserved in compendia of \*alchemy, and concentrate on non-mollusc \*purples. Wool was normally dyed in the fleece, flax (which takes dyes reluctantly) in the hank. There was occasional piece-dyeing and resist-dyeing. Analyses of Roman yarn samples from \*Syria and Egypt by high-performance liquid chromatography give insights into the dyers' repertoire. Direct (vat) dyes included true purples from muricid

whelks and blue from woad or indigo. Most fibres, however, had to be pre-treated with a mordant such as alum or iron to fix the dyestuff. Red came from madder root or the more expensive kermes and cochineal scale insects. Weld yielded yellow, green (with woad), and orange (with madder). After 640, lac (a scale insect), fustic, and redwood (heartwoods) were imported. Several dyes were often combined to achieve a specific shade. JPW

B. Dumézil, in Y. Codou and M. Lauwers, eds., *Lérins, une île sainte de l'antiquité au moyen âge* (2009), 191–2.

**Dynamius Patricius** (c.545–c.595) Husband of \*Eucheria and grandfather of \*Dynamius (2), who wrote an \*epitaph alluding to his noble birth and death aged 50. Correspondent in the late 560s of \*Venantius Fortunatus, who praises his poetry, of which only one line survives. Two extant \*letters (*Ep. Aust.* 12, 17) and a \*saint's life of Maximus of Riez (*BHL* 5853) display his epistolographic and hagiographic talents. His authorship of a grammatical treatise (Keil, *GrammLat* V, 579, 13) and a *Life* of Marius of Val-Bodon (*BHL* 5540) is more contentious. By 581 he was \*Patricius of \*Provence, but had been ousted before 587, when he was reconciled with \*Childebert II (\*Gregory of \*Tours, *HF* VI, 7; VI, 11; IX, 11). He reappears as *patricius* in 593, administering the \*Patrimonium Si. Petri in \*Gaul, but had resigned by 595 (\*Gregory the Great, *ep.* III, 33; VI, 6), and must have died soon afterwards. STL

**Dyrrachium** (mod. Durrës, also Durazzo, Albania) Provincial capital of \*Epirus Nova, western terminus of the \*Via Egnatia, and birthplace of the \*Emperor \*Anastasius I, who provided the \*city with many buildings, including a \*circus, though they were damaged in a natural disaster soon after his death (\*John Malalas, XVII, 15). The 2nd-century amphitheatre contains a later chapel with wall paintings and \*mosaics, dated to the late 6th/11th century (a later date is now preferred). An extensive \*cemetery developed within the amphitheatre from the 7th century. A circular colonnaded plaza, with a central base for an honorific column or statue, dates to the 5th–6th century and is plausibly associated with Anastasius. A 2.8 km (1.75 mile) wall circuit, constructed entirely of brick (with \*monograms of Anastasius and \*Justinian I), is also dated to the 5th–6th century. Justinian's construction activity is recorded by \*Procopius (*Aed.* IV, 4, 1). WB

# E

**earrings** A distinctive aspect of feminine \*dress in the Later Roman Empire. Earlier forms were circular or rectangular, often set with precious \*stones or \*cameos and further embellished with pierced-work or granulation, and generally having attached pendants threaded with further \*pearls or gems. This is the type of earring which is being worn in the \*mosaic of \*Theodora and her \*court in S. Vitale at \*Ravenna. From the 6th century, the distinctive early Byzantine lunate earring appears. These too are frequently of pierced-work with decorative motifs, a \*cross or christogram, peacocks or other \*birds, or a religious invocation. They are widely disseminated in the Byzantine world but the finest have been attributed to a workshop in \*Constantinople. MEH

R. Cormack and M. Vassilaki, eds., *Byzantium 330–1453* (2008), 417–18, nos. 153–8.

**Earthly Paradise** Images of \*animals amidst lush \*foliage depicted Paradise on earth, created by God at the Creation, as outlined in the Christian \*cosmology expounded in \*hexaemeron literature, and to be re-established by God after the Second Coming. These scenes often included the four Rivers of Paradise, and were especially popular in the 6th century. The Earthly Paradise appears in \*mosaic in the \*apses and on the walls and floors of churches, e.g. in the \*Basilica of S. \*Demetrius at \*Nicopolis of \*Epirus. Not all Christians approved of these images: \*Nilus of Sinai expressed disapproval of such scenes in a letter to the Prefect Olympiodorus (PG 79, 677–80). Mosaics and paintings of Adam naming the animals and of Adam and Eve in the Garden of Eden, including one in a church in \*Beirut described by \*Severus of \*Antioch (*Homiliae cathedrales*, 72, PO 12, 83–4), featured similar flora and fauna. **earthquakes** Seismic activity was as constant in the Mediterranean world of Late Antiquity as it is today. The areas covered by modern \*Greece, \*Anatolia, \*Armenia, southern \*Italy, Libya, and Tunisia are particularly prone to earthquakes. Written sources from the period record over 120 earthquakes in Late Antiquity, but these represent only a fraction of the actual phenomena, namely those earthquakes that were particularly destructive and were felt beyond the confines of their immediate epicentres. The record is more complete regarding earthquakes that hit major \*cities—especially \*Constantinople, \*Antioch, and \*Alexandria.

In recent years archaeological studies of destruction levels have begun to complement written accounts. There were periods when earthquakes seemed to occur in clusters: a series of earthquakes hit the eastern Mediterranean between 358 and 365 and another cluster is recorded from the 490s to the 570s. However, as Christians considered earthquakes one of the Signs of the End, they tended to be more accurately monitored and recorded during times of heightened eschatological awareness such as the years around AD 500 (e.g. \*Joshua the Stylite, 33–6 and 47), or when they caused spectacular damage, as in the \*Nicomedia earthquake of 24 August 359, the earthquake and \*tsunami of 365, which destroyed buildings on \*Crete, the earthquakes of 526 and 528 at Antioch, after which the city was apotropically renamed Theopolis (city of God), the \*Beirut earthquake of 551, and the earthquake centred on the island of \*Thera in 726.

Late Antique understanding of earthquakes was of various sorts. Firmilian, a \*bishop in \*Cappadocia, described how in 235 or soon thereafter a series of earthquakes was blamed on the local Christians who were consequently subjected to \*persecution—matters were complicated by a \*demon-possessed woman who claimed to be able to cause earthquakes and to be a Christian \*priest (\*Cyprian, *ep.* 75, 10). \*Ammianus Marcellinus digresses from his account of the Nicomedia earthquake of 359 to juxtapose horrific description, \*pagan ritual precaution, and scientific explanation. He

distinguishes four categories of earthquake but considers them all caused by movements of water (Aristotle) or air (Anaximander) within the *syringges* or cracks in the earth (XVII, 7). This commonly held theory formed the basis of a practical joke which \*Anthemius of \*Tralles, the \*architect of the Church of the \*Holy Wisdom, played on a \*rhetorician called Zeno, his rebarbative upstairs neighbour; Anthemius rigged up a system of closed cauldrons with tubes attached to the ceiling, so that when the cauldrons were heated the steam made the ceiling shake and caused Zeno and his guests to run out into the street in alarm (\*Agathias, *Histories*, V, 7–8).

More seriously, during the Constantinople earthquake of 447, 'no one dared to remain at home, but all fled outside the city, chanting litanies day and night; for there was great peril, such as there had not been from the beginning of time' (\**Chronicon Paschale*, ad ann. 447). The earliest record of emperor and people praying together in public after an earthquake comes from the year 396 (\*Orosius, III, 3, 2; \*Sozomen, II, 4, 4). From the mid-5th century onwards, annual liturgical \*processions went through the \*streets of the capital commemorating its deliverance from the earthquakes of 438 and 447. Though Romans saw the earthquakes of Late Antiquity and their deliverance from them as connected functions of divine providence, modern science detects no signs that the disruption they caused was systemic or interregional.

**Easter (Gk. Pascha)** The most important \*festival of the Christian Church and the celebration of the central mystery of the Christian faith. The word Pascha, which signifies Easter in \*Greek and \*Latin, derives from Pesach, the Hebrew for Passover, though as early as the 2nd century AD Christians connected it also with the Greek *paschein*, meaning 'to suffer'.

The celebration of the Resurrection of Jesus, as is apparent from the homily *On the Pasch* by Melito of Sardis delivered at a Paschal Vigil in the late 2nd century, was integrated with the commemoration of his suffering and death. The three-day observance, the Triduum spanning Good Friday and Easter Sunday, developed under influence from the Church of \*Jerusalem in the course of the 4th century. The ceremonies in and around the Church of the Holy Sepulchre (Anastasis) whose construction by \*Constantine the Great was watched in AD 333 by the Bordeaux Pilgrim (594) are described in detail by \*Egeria, who was on \*pilgrimage in the \*Holy Land and \*Egypt between 381 and 384.

The Easter vigil was an occasion when the churches were filled with \*light; \*Eusebius remarks particularly on the light in the churches at Eastertide in 311 when Christians thought that the Great \*Persecution was finally over (*HE* IX, 1, 8). A \*church order, which gives details about the conduct of the Easter vigil and has been assigned dates as far apart as the 3rd and the 7th century, asserts that the Paschal Vigil is a type of the Kingdom of Heaven (*Testamentum Domini Nostri*, II, 19). It also indicates that the young women of the congregation should go home with their mothers.

A number of ceremonies came to form part of the vigil. The announcement of the Resurrection and the blessing of a Paschal candle accompanied by an elaborate \*chant sung by the \*deacon certainly formed part of the rite by the end of the 4th century. The words to the chant known as the \*Exultet are said to have been written by S. \*Ambrose, though their use did not become universal until considerably later. The only three lines of poetry which survive by S. \*Augustine may be \*praise of a Paschal Candle.

The Easter vigil was also the usual occasion for the \*baptism of catechumens (unbaptized Christians) who would have gone through weeks of preparation and instruction to prepare them to take on the obligations of joining the faithful (Lat. *fideles*). Such instruction was certainly going on during the 2nd century. In the years following the \*Council of \*Nicaea in 325, Lent, the period of fasting and preparation for Easter, became standardized at 40 days, and it became usual for those seeking baptism to give their names in to the \*bishop at the beginning of Lent. The process of baptism was seen as foreshadowed in the safe passage of the Children of Israel through the Red Sea at the Exodus, a subject frequently depicted on wall paintings in the \*catacombs at \*Rome and on Christian \*sarcophagi (for instance at \*Arles), so indicating another connection between God's liberating his ancient people, the \*Jews, and his freeing of Christians from servitude to the world.

The centrality of Easter to the Christian faith, and its importance in regulating the \*calendar for the rest of the year, meant that reckoning the date of \*Easter was as

necessary as it was mathematically and astronomically complex. OPN; MFC

M. Vinzent, *Christ's Resurrection in Early Christianity: And the Making of the New Testament* (2011).

**Easter, date of, and Easter tables** \*Augustine, on being asked why the festival of the birth of Jesus was observed on a fixed date in the solar calendar whereas \*Easter moved around, explained that \*Christmas merely commemorated a past event whereas Easter is sacramental, as it is an occasion which in the present makes available something sacred, namely a passing over from death to life (*ep.* 55, 1, 2). Christ's death and resurrection had occurred during the Passover season and Christians from the first saw Easter prefigured in the divine intervention which brought about the liberation of the \*Jews from servitude in Egypt at the Exodus, celebrated by Jews at Passover. Some Christians also associated the Easter vigil with Christ's Second Coming at the End of Times: for \*Lactantius 'this night has a double significance, for on it he both received life when he had suffered and later he will receive rule over the whole world' (*Inst.* VII, 19, 3; cf. \*Isidore of Seville, *Etymologies*, VI, 17, 12). The celebration of Easter at the correct time was therefore a matter of some practical interest.

Methods of calculating the date of Easter varied from the earliest period. Some Christians in eastern parts of the Roman Empire, especially in \*Anatolia, celebrated Easter on the same day as the Jewish Passover, the fourteenth day of the Jewish lunar month Nisan, that is to say the day of the first full moon following the vernal equinox; they were known as Quartodecimans (Fourteeners). Others insisted that Easter be always on a \*Sunday, the Lord's Day (Gk. *kyriakon*). Disagreement

over this began as early as the late 2nd century, between Polycrates, \*Bishop of \*Ephesus, and Victor, Bishop of \*Rome. Quartodeciman practice was forbidden at the \*Council of \*Nicaea in 325, and the practices of the Church at Rome and \*Alexandria adopted, but Quarto-decimanism was still treated as a live issue at the Council of \*Laodicea ad Lycum later in the 4th century. Further difficulties arose from the fact that the imperfections in the Julian solar calendar caused differences of opinion about the date of the vernal equinox.

The complexities involved in synchronizing the lunar and solar calendars and with standard \*eras and such methods of measuring time as dating by \*consuls, \*indications, Olympiads, and the \*Era of Creation encouraged experts in \*chronography (*computus*) to summarize their calculations in tabular form. The most influential tables were those of the \*patriarchs \*Theophilus of \*Alexandria (*sed.* 385–412) and \*Cyril of Alexandria (*sed.* 412–44). In the West, their methods were deployed by \*Victorius of \*Aquitaine (457), then by \*Dionysius Exiguus (525), who reconciled the Alexandrian and Roman calendars to produce a new table using for the first time the AD era, calculated from the supposed date of the birth of Christ. The nineteen-year cycle of Dionysius became the standard in the Western Church.

There was a further dispute about the date of Easter in 7th-century Britain, whose details are recorded by the Venerable \*Bede, himself a formidable '*catholicus calculator*' and author of two books on the reckoning of time. Indigenous British and Irish Christians had continued to use the former 84-year cycle, but the mission which in 597 arrived from Rome headed by S. \*Augustine of \*Canterbury followed Dionysius' nineteen-year cycle. For Northumbria the matter was settled by King \*Oswy at the Synod of \*Whitby of 664 (Bede, *HE* III, 24) and Christians in Scotland, \*Ireland, and other parts of Britain eventually fell into line (Bede, *HE* III, 4). **Ebroin** \*Mayor of the Palace in \*Neustria-\*Burgundy (c.657–80). A controversial figure, largely because he was vilified in the *Passio* of his great opponent \*Leodegar, \*Bishop of \*Autun, whose execution he ordered in c.678. Accusations of tyranny reflect the fact that Ebroin was a powerful and successful ruler who dominated successive kings and curbed the privileges of the Neustro-Burgundian \*aristocracy. He was ousted from power in a coup of 673 but returned with a vengeance in 675/6, and subsequently defeated the \*Austrasians in battle. After his murder, the power of Neustria-Burgundy declined and subsequent dominance of Austrasia led to the rise to power of the Carolingians. PJF *LexMA* 3, 1531–3 'Ebroin' (E. Ewig).

**Écija** See ASTIGI.

**eclipse** Ancient understanding of lunar and solar eclipses drew on a general sense of the interconnectedness of the cosmos, such as was articulated by Stoic \*philosophers in their notion of *sympatheia*. Starting with Thales in the 6th century BC (e.g. \*Augustine, *City of God*, VIII, 2), Graeco-Roman science had come to be able to predict eclipses with considerable accuracy (e.g. Cicero, *De Natura Deorum*, II, 153; Augustine, *ep.* 55, 4, 6). The mathematician \*Theon of \*Alexandria used his observation of the partial eclipse of 364 to demonstrate the accuracy of the calculations of \*Ptolemy. Indeed the accuracy of such scientific predictions helped turn Augustine away from \*Manichaeism; there were solar eclipses in 378 and 381, but the accounts of such matters given by Mani 'did not agree with the rational explanations which I had verified by calculation and had observed with my own eyes' (*Confessions*, V, 3, 6).

Philosophers like \*Proclus could describe the causes of eclipses and predict their occurrence. It was also possible to look for their effect on life on earth. This was the aspect which interested \*John Lydus, pupil of a pupil of Proclus, in his *De Ostentis* (9). Indeed so keen was he to associate great political events with celestial events that he massaged the date of the eclipse of 29 June 512 to associate it with the events surrounding the revolt of \*Vitalian against \*Anastasius I (*De Ostentis*, 6). To some writers the need to associate heavenly and earthly crises was so imperative that they invented eclipses to accompany decisive events, as did \*Zosimus (IV, 58, 3, presumably following \*Eunapius) when he assigned an eclipse to accompany \*Theodosius I's victory at the Battle of the River \*Frigidus on 5–6 September 394. Augustine suspected that the ancient reports of the apotheosis of Romulus had been doctored in exactly this way, so as to make the event coincide with a solar eclipse (*City of God*, III, 15)—while at the same time asserting that the darkening of the sun which occurred at the death of Jesus was not a natural eclipse, as it occurred at the time of a (Paschal) full moon, a view which \*Bede attributes also to Jerome (*De Temporibus Ratione*, 27).

Eclipses, as \*Ammianus Marcellinus noted in a stock description of a solar eclipse seen not only not by himself, but in fact by no one in the Roman Empire, were expected to cause terror (XX, 3, 1). In the early 5th century, \*Maximus of Turin upbraided his people for uttering incantations to rescue the moon during its eclipse; they should put their trust in God who made

the moon in the first place. Similarly in 6th-century \*Provence people cheered on the eclipsed moon with \*bells and trumpets: 'You go, Moon'; \*Caesarius of \*Arles equally disapproved (*Sermon*, 52, 3). OPN D. J. Schove and A. Fletcher, *Chronology of Eclipses and Comets AD 1–1000* (1984).

**Ecloga of Leo III** (Ἐκλογή τῶν νόμων) Law book officially promulgated in 741 by \*Leo III and \*Constantine V. Though issued by \*Iconoclast \*emperors, the *Ecloga* is not Iconoclast in nature. Innovations in the law book—which contains eighteen titles—pertain to \*divorce law (title 2, 9), penal law (title 17), and the division of war booty (title 18). In its entirety, the *Ecloga* is itself a novelty, in being the first example of a new genre, namely the Byzantine manual of law, aimed at regulating norms for daily life. A supplement, the *Appendix Eclogae* (which came to include the \**Farmer's Law*, the \**Soldier's Law*, and the \**Rhodian Sea Law*), was soon added to the law book. ThEvB

**ecphrasis** Originally a technical term belonging to the ancient rhetorical vocabulary and designating a 'speech that brings the subject vividly before the eyes'. The composition of ecphrases of persons, events, times, and places was one of the elementary rhetorical exercises (\**progymnasmata*). Ecphrases of various subjects were frequently used in \*rhetoric and \*historiography: epideictic speeches often include ecphrases of individuals and their actions, in wedding speeches or in imperial \*panegyric, or of \*cities and other locations. Christian \*sermons and poetry in both \*Greek and \*Latin often made use of similar techniques to encourage audiences to imagine events from the \*Bible or scenes of martyrdom and thus to create a sense of presence. The rhetorical origins of ecphrasis are reflected in these uses of the technique to involve and move, exhort or dissuade, or as evidence for the qualities of an individual.

From the 3rd century onwards paintings, \*sculptures, and buildings became more frequent subjects of ecphrasis and this development is reflected in the modern use of the term to mean primarily a 'description of a work or art or architecture'. Church buildings were a particularly

important subject of ecphrasis in Late Antiquity and these were either embedded within a longer encomium of the patron (as in \*Choricius' encomia of \*Bishop Marcian or \*Procopius' *Buildings*), within poems on \*martyrs (as in \*Prudentius' *Peristephanon*), or as free-standing compositions, as in \*Paul the \*Silentiary's verse ecphrasis of the Church of the \*Holy Wisdom and in several works by members of the School of \*Gaza. These descriptions bring out the aesthetic and spiritual qualities of the buildings and thus reveal the aspects that were appreciated by contemporary viewers. The ecphrases of the Church of the \*Holy Wisdom in particular also have a clear political function, emphasizing the role of the \*Emperor \*Justinian I and of divine guidance in the creation of the building. **Ekthesis of Heraclius** Literally a 'Statement of Faith', the *Ekthesis* was a formula issued by the \*Emperor \*Heraclius in 638 that attempted to reconcile \*Miaphysites and advocates of \*Chalcedon by supporting \*Monotheletism. Following his victories over the \*Persian Empire, Heraclius sought to reunite the Christian Church, or at least minimize divisive debates, by finding a compromise Christological formula. His first attempt was Monoenergism, which declared that the two natures of Christ were united in one 'energy', yet this was objected to, especially by \*Patriarch \*Sophronius of \*Jerusalem. The *Ekthesis*, drafted by Sergius, Patriarch of \*Constantinople, sought to end these debates by forbidding all discussion about whether Christ had one or two 'energies'. Instead, the *Ekthesis* asserted that the two natures of Christ were united in a single will. The formula of 'one will' was posited in a letter by Pope Honorius I of \*Rome to Sergius, and was supported by \*councils held in Constantinople in 638 and 639. However, Honorius' successors condemned Monotheletism and Heraclius did little to enforce it. Eventually in 648 the \**Typos of Constans II* withdrew the *Ekthesis*. MTGH

**Eddius Stephanus** See STEPHEN OF RIPON.

**Edessa** (mod. Urfa or Sanliurfa, SE Turkey) Capital of the \*Verona List \*province of \*Osrhoene. Its indigenous name was Orhay from which the name of the province and the modern name of the city probably derive.

### City history

Seleucus I Nicator (d. 281 BC) refounded it as a Greek \*city called Edessa after its abundant waters. It appears on the coins of Antiochus IV Epiphanes (d. 164 BC) as Antiochia Kallirhoe (Gk. 'beautifully flowing'). After the Seleucids withdrew west of the Euphrates following their defeat by the Persians in 130 BC, Edessa became the seat of the independent kingdom of Osroene. The city therefore long enjoyed a symbiosis of Semitic and Greek civilization.

From 69 BC onwards, the Romans attempted to control Edessa. In AD 212/13 it became a Roman *colonia* but local kings are recorded until 243 or 248. After that it became an important centre behind the Roman Eastern \*frontier. It did not fall to \*Shapur I during his third campaign against the Roman Empire (\**Res Gestae Divi Saporis*, 18 and 22: Urha). \*Ammianus Marcellinus describes how strongly it was defended during the invasion of 359 (XVIII, 7, 7). \*Julian confiscated the wealth of the 'Arian Church' of Edessa (424 CD = ep. 40 Wright) and his march into the \*Persian Empire went by way of \*Harran, Edessa's pagan rival. The *Chronicle* attributed to \*Joshua the \*Stylite gives a detailed account of the military operations around Edessa in the first decade of the 6th century. Despite its strategic position on the road to \*Zeugma and \*Antioch, Edessa was not captured by the Persians until 609/10 (\**Chronicon Paschale* ad ann. AD 609). Persian control lasted until after \*Heraclius' victorious campaign of 627–8. The \*Arabs took Edessa in 638, and although the Romans tried to regain the city several times, they were not successful until the mid-10th century.

### Christianity and Syriac civilization

According to the \**Teaching of Addai*, the fictional foundation text of the Church of Edessa, Christianity came early to the city—unlike its pagan neighbour Harran (Carrhae). The \*Abgar Legend and later elaborations concerning the \*Mandylion of Edessa obscure the facts about the city's conversion. The martyrdom of Mar \*Sharbel, set in the reign of Trajan, is fictional and, though the presence of \*Bardaisan (AD 154–222) is evidence of Christianity in the city at an early date, \*Eusebius was optimistic in claiming that 'the whole city' was in his time 'devoted to the name of Christ', even if he had found copies of the Letter of Abgar and Jesus' reply in the public \*archives at Edessa (HE II, 1, 7; I, 13, 5). The text of the Letter of Jesus was inscribed on the walls of the city and was believed to protect the city from enemies (Egeria, 19, 8–19; \*Procopius, *Persian*, II, 12, 7–34; Joshua the Stylite, 5 and 60).

In Late Antiquity, Edessa was a place of \*pilgrimage with numerous churches. About 23 churches and \*monasteries are known from texts to have existed in

the city and 24 in the immediate surroundings. According to the \**Chronicle of Edessa* (12), written soon after 540, the cathedral was founded directly after the end of the Great \*Persecution and the \*Letter of \*Licinius in 313; it was dedicated to the Holy Wisdom and there is a description of it in a Syriac \*ecphrasis of the 6th century, the *Sogitha on the Church at \*Edessa*. \*Egeria (19, 2) visited the \*martyrium of S. Thomas in 384; ten years later S. Thomas' \*relics were moved into his great church and in 442 were encased in a \*silver coffin (*Chronicle of Edessa*, 38 and 60). \*Gregory of \*Tours (*Glory of the Martyrs*, 31–2) thought that the apostle's body had been brought back from \*India and describes a fair held at his church every July (presumably in connection with the saint's feast day on 3 July) during which no customs fees were charged, there were no flies, and water was found even in shallow wells. A shrine for local martyrs was built outside the walls in 346/7, and burnt by the Persian King \*Qobad in 503 (Joshua the Stylite, 62). A shrine of S. Stephen was installed in a former \*synagogue by the scholarly \*Rabbula, Bishop of Edessa, between 411/12 and 435 (*Chronicle of Edessa*, 51).

\*Syriac is the Edessan dialect of Aramaic and the city was home to many Syriac writers such as Bardaisan, \*Ephrem (c.306–73) after he was obliged to leave \*Nisibis in 363, the Bishop Rabbula, and \*Jacob of Edessa. It was also known as a centre of Greek learning and had a famous theological school which was closed in 489 on account of its affinities with \*Nestorian Christology. Edessa's Christian community was in fact often divided over the principal theological and Christological controversies of the age. Until at least the beginning of the 5th century it also had some pagan inhabitants as well as a considerable Jewish community.

### City topography

The citadel is the main feature of the city's topography. The River Daisan (Lat. Scirtus, mod. Kara Koyun) originally flowed through the city and caused flooding, which frequently damaged the city walls, as recorded in the *Chronicle of Edessa* (106; cf. Egeria, 19, 7–15); after the flood of 525/6 \*Justinian I redirected it by raising an existing dyke higher and digging an overflow channel (Procopius, *Aed.* II, 7, 1–16; *Anecd.* 18, 38). Remains recorded in the city include floor \*mosaics from the early 3rd century that reflect the hybrid, Greek and Aramaic, character of the city, sections of city walls, architectural fragments in the citadel, rock-cut tombs, and architectural \*spolia reused in \*mosques. Recently discovered Late Antique residences and the Halepli Bahçe mosaics await publication. Edessa is surrounded with hills whose Late Antique monuments deserve detailed investigation.

**Edessa, schools at** When the Romans ceded \*Nisibis to the \*Persian Empire in 363, its scholarly activities moved to \*Edessa. This probably explains the name 'School of the Persians'. The foundation is attributed to \*Ephrem the Syrian. Circles of learning already existed, such as those of \*Bardaisan (late 2nd cent.), and Macarius, a century later. Qiore (d. 437), the first known director, replaced in the programme the teachings of Ephrem with the exegesis of \*Theodore of \*Mopsuestia. Qiore was succeeded by \*Narsai, who reorganized the professoriate and promoted \*translation into \*Syriac of the \*Greek fathers, \*Diodore of \*Tarsus, Theodore, and also Aristotle. Proba, a senior medic from \*Antioch, worked on the *Organon* and \*Ibas on \*Porphyry's *Isagoge*. The school became an important point of transfer of Hellenic culture to the East.

The curriculum was divided into two classes. The first was focused on the Psalms, learnt by heart, on \*writing and calligraphy and vocalized reading. The second was devoted to theology. The overtly Christian character of the Syriac schools at Edessa contrasted with the classical character of \*Greek and \*Latin \*rhetorical education in other parts of the Roman Empire.

During the 5th century, the Christological convictions of the \*bishops, some of them Dyophysites others

\*Miaphysite supporters of \*Cyril of \*Alexandria, contributed to dividing the scholastic community. Most of the teachers and students eventually went into exile at Nisibis and the Edessa school was closed by \*Emperor \*Zeno in 489 at the instigation of \*Philoxenus, Bishop of Mabbug, and finally destroyed. **'Edict of Milan'** See LETTER OF LICINIUS.

**Edjmiatsin (Etchmiadzin) Gospels** The Edjmiatsin Gospels (Erevan: Matenadaran ms. 2374) contains four folios believed to date from the latter 6th or 7th century, sewn into the back of the text block of a 10th-century manuscript. The folios are full-page miniatures of the Annunciation to Zachariah, the Annunciation to the Virgin, the Adoration of the Magi, and the Baptism. Scholars have associated the imagery with \*Syriac, \*Coptic, and Sasanian art, and with local apocryphal tradition. The manuscript is bound between two early Byzantine \*ivory plaques.

T. F. Mathews, 'The Early Armenian Iconographic Program of the Ējmiacin Gospel', in N. G. Garsoïan, T. F. Mathews, and R. W. Thomson, eds., *East of Byzantium: Syria and Armenia in the Formative Period* (1982), 199–215.

**Edjmiatsin (Etchmiadzin, Ējmiacin)** (Armenian for The Only Begotten Descended) Mother See of the Armenian Apostolic Church, residence of the Armenian \*catholicos (patriarch) from the late 4th century to 484, when the residence was transferred to \*Dvin, and again from 1441 to the present.

\*Agat'angelos (c. 460) relates how S. \*Gregory the Illuminator (Surb Grigor Lusarowits') saw a vision explained by 'a man descended in the form of light' (§733) as the place where he should erect churches. The name Edjmiatsin (Ējmiacin) is first attested for the church in the 11th century.

Data about building and renovations at Edjmiatsin are incomplete. An early 4th-century foundation is likely. What seems to be a \*fire altar possibly dates to c.380, when \*Zoroastrianism temporarily regained ground. Renovations were carried out by the Catholicos \*Sahak I the Great (early 5th cent.) and by the \*Marzban \*Vahan \*Mamikonian (487), and the wooden roof was replaced with stone by Catholicos Komitas (618). The current plan is a square with a central \*dome with four conches and four protruding \*apses (Zarian et al.). A 7th-century \*inscription appears on a ceramic shard. Sculpted slabs showing Ss. Paul and \*Thecla and a \*cross flanked by doves are inscribed in \*Greek and date to the Early Christian period. There are also the sculpted cross-stones known as \*khatchkars (*xač'kars*).

**education and schools, Egypt** \*Greek school exercises surviving from Late Antique \*Egypt show that education continued with little change from before and teachers plied their trade at the various levels (elementary, grammatical, and rhetorical). Primary education could be found in \*villages but higher education existed mostly in large centres. The method of teaching writing through copying texts (and not by learning the syllables first) became popular in this period.

Greek and \*Coptic education were combined at the level of alphabets but diverged at higher levels. Greek education concentrated on the classical authors (\*Homer, Euripides, and Aristophanes) and the learning of \*rhetoric. Primary Coptic education at initial levels focused on the copying of personal \*letters, a part of education that Greek teachers instilled only at the level of rhetoric. Coptic school exercises are extant from \*monasteries such as the one of S. \*Epiphanius in Upper Egypt. Almost nothing is known of Coptic education at higher levels. No \*papyri have been preserved from the \*Nile Delta as evidence of the renowned school of rhetoric in \*Alexandria, but the literary sources testify that schools of rhetoric and \*philosophy flourished there. RC

R. Cribiore, *Gymnastics of the Mind: Greek Education in Hellenistic and Roman Egypt* (2001).

**education and schools, Greek** Greek education (Gk. *paideia*) continued with remarkable stability in Late Antiquity to be a marker of social and political prominence and a method of achieving it. At its core was the mastery of language, the learning of letters, of \*grammar, and of \*rhetoric.

Primary education reached a relatively broad range of boys and some girls. Higher instruction was provided to

a narrower clientele. Men of slight education rarely reached high positions in the \*administration (see \*Libanius, *Oration*, 42, 23–4). In the \*Latin-speaking West, the study of the \*Greek language declined in the years between \*Augustine and \*Gregory the Great. Latin continued to be studied in the Greek East into the 6th century. In the East, people were exposed in everyday life to a contemporary form of Greek (*Koine*); formal rhetoric required the classical Attic dialect and it was the concern of grammarians to articulate and teach its grammatical rules. Homeric texts, written in the Ionic dialect, required glosses and paraphrases to enable readers to comprehend them. \*Homer remained the poet par excellence in grammatical and rhetorical schools together with Hesiod, Pindar, and Aristophanes. In spite of the difficulties his language presents, Aristophanes was more highly valued than Menander Comicus. Even more than in earlier times, Euripides was the best-known tragedian, because his Greek was less challenging and his texts were useful to those learning and using the art of rhetoric.

Christians attended the same schools as pagans and received the same education but \*bishops such as \*Basil (*On Greek Literature*) advised students to be selective in their reading. On 17 June 362, the \*Emperor \*Julian issued an \*edict followed by a \*rescript (*CTh* XIII, 3, 5; Julian, *ep.* 61C) that had a significant, if short-lived impact; it insisted that there should be no discrepancy between the personal religious convictions of instructors and what they professed and taught to their students. The emperor required Christian teachers of rhetoric to resign (while making an exception for his own teacher, \*Proaeresius of \*Athens, an exception which Proaeresius declined to avail himself of). \*Gregory of \*Nazianzus protested violently (*Oration*, 4 and 5) and even the pagan \*Ammianus Marcellinus declared this legislation inequitable (XXV, 4, 20). Meanwhile \*Apollinaris, \*Bishop of \*Laodicea, proceeded to rewrite Bible stories in the style of Greek literature, so overcoming the objection that they were written in the crude Greek of the uneducated, and with the result that young Christians were religiously edified and at the same time provided with the literary education that would prepare them for a future in public life.

Schools of rhetoric and philosophy existed in \*Athens, \*Alexandria, and elsewhere in the Roman East and students and teachers travelled around the Mediterranean for the sake of learning. In the 4th century the most prominent teachers of rhetoric in Athens were Prohaeresius and \*Himerius. The first, a Christian, distinguished himself for his sonorous rhetoric and taught both the pagan \*Eunapius and the Christians Basil and Gregory of Nazianzus. After Himerius left, the Athens school of rhetoric lost some prestige. Little is known of individual sophists in the

5th century. One was \*Plutarch; it is debated whether he should be identified with the founder of the \*Neoplatonic school in Athens. In the 5th century the sources mention primarily philosophers at Athens. Plutarch was the earliest exponent of the style of Neoplatonism inaugurated by \*Iamblichus and the school continued after him under other philosophers such as \*Proclus. After the \*Academy closed in 529, the teaching of philosophy in Athens ceased.

Schools of rhetoric flourished in \*Constantinople, \*Antioch, \*Gaza, Alexandria, and elsewhere. Himerius and \*Themistius were active in Constantinople. \*Libanius (314 to c.393) led the main school of rhetoric in Antioch. He took over at the death of his predecessor Zenobius in 355 but after his own demise the school seems to have disappeared. Libanius left a huge corpus that included 1,500 \*letters, 64 orations, and many \**progymnasmata* (preliminary rhetorical exercises) and declamations for students.

Gaza in \*Palestine also had an important school of rhetoric and philosophy, led by \*Aeneas of Gaza (b. c.445). In 491/495 \*Procopius of Gaza succeeded Aeneas and on his death left the chair to his student \*Choricus. These teachers left letters and orations that are evidence of their learning and their networks of like-minded *littérateurs*. Gaza was a centre of pagan learning until the beginning of the 5th century but then continued to exercise a cultural influence, which was enhanced by the numerous \*monasteries nearby.

Literature, rhetoric, philosophy, \*medicine, and \*mathematics flourished in Alexandria, the city which in the Late Roman period produced such great teachers as \*Hypatia, \*Horapollon, \*Ammonius, \*Asclepiodotus, \*Aphthonius, and \*John Philoponus. In the 4th century, pagan Alexandria became mostly Christian. The Christian catechetical school of \*Didymus the Blind, a disciple of \*Origen, engaged in interpretation of the \*Bible and left outstanding examples of Christian exegesis. In the 5th century many students who had gone to Athens returned to Alexandria so that its schools thrived. Recent excavations at Kom el-Dikka in the city have brought to light several lecture halls and schoolrooms dating from the 6th century which were built over similar remains from the 5th century. RC

**education and schools, Jewish** There are no indications of schools or organized frameworks of Jewish education in the \*Bible, where the burden was apparently placed on the shoulders of the child's father (e.g.

Deuteronomy 6:7; 11:19). Early rabbinic sources also ascribe to the father the responsibility to teach a child Torah (Mishnah Kiddushin 4:14; \*Tosefta Hagigah 1:2). Later rabbinic traditions locate the earliest stages of a Jewish school system either in the early 1st century BC, during the last stages of Jewish independence under the Hasmoneans, or in the final years of the Second Temple period. Both claims appear to be anachronistic projections of a reality that only emerged in the \*Talmudic era (AD c.200–500), in \*Palestine as well as the \*Babylonian diaspora. Palestinian sources describe a graded system, with children initially learning how to read biblical texts and then advancing to the second stage, devoted to the study of oral tradition. In all likelihood a process of attrition limited the number of those advancing to the second level. The dual track may correspond to the stages of *ludus litterarius* and \**grammaticus* in contemporary Roman society, but the Jewish curriculum at both stages comprised entirely religious material (Bible and its rabbinic interpretation), and there are no traces of a 'general' or 'secular' component. Similar systems for learning how to read may have been employed in the Graeco-Roman as well as Jewish schools, with rabbinic references to tablets, upon which the letters of the alphabet were inscribed or carved in wax and memorized by children. It is far from certain whether Jewish children were also taught how to write, as this may have been considered a professional requirement rather than a religious imperative. Reading proficiency, however, would be required of one called up to publicly read from the Torah in the \*synagogue. Rabbinic tradition relates that while schools initially were established in \*Jerusalem (possibly serving priests at first), they were subsequently set up in towns throughout the land. Palestinian rabbinic sources suggest that these were not maintained solely by the parents of pupils, but also through a special tax imposed on all residents of the town, including those without children. The municipal role of these schools may explain references to the practical setting of a school within the public domain, most notably in the courtyard of a synagogue. We do hear of some schoolteachers setting up their practice in private yards, which apparently led to tension with neighbours. Schoolteachers appear to have been regarded as one of the weaker rungs of the societal ladder, and could be dismissed at the whim of the local residents. The more advanced frameworks of Jewish learning, in Palestine as well as Babylonia, probably began as disciple circles taught by recognized rabbinic scholars, while formal academic frameworks (*yeshivot*) are evident only in the late Talmudic and early geonic periods. **education and schools, Latin** By Late Antiquity, Roman education had evolved a tripartite structure, largely following \*Greek models, although without the physical education of the Greek *gymnasium*. This system remained stable throughout Late Antiquity, despite the emergence of Christianity as a cultural force.

Evidence for education in the Latin West and Greek East is not always forthcoming, but a degree of parallelism can be perceived. Elementary education began at about the age of 7; delivered by a *magister*, it consisted of basic literacy and numeracy. From there, aged about 12, a pupil moved to the care of a *\*grammaticus* who taught grammar, syntax, and explication of canonical literature, pre-eminently \*Vergil, but also including Cicero, Sallust, Horace, Terence, Plautus, etc. In Late Antiquity, study of classical Greek literature in the Latin West became less common. Repetitive drills and learning grammar and texts by heart were standard features of Latin education, and corporal punishment was regularly deployed.

In the mid-teens, a pupil moved to a *rhetor* where instruction in rhetorical argument and delivery was given through study of treatises such as Cicero's *De Inventione* and Quintilian's *Institutiones Oratoricae*, and by exercises in *\*progymnasmata* and *\*declamation*. This rhetorical education was considered useful preparation for careers in imperial *\*administration* in particular, and so there developed close relationships between *\*courts* and schools—for example, a *rhetor*'s responsibilities could extend to delivering epideictic speeches to political delegates on his *\*city's* behalf. *\*Philosophy* was not a part of standard education, although dedicated schools grew up in major cities, such as \*Athens and \*Alexandria. As knowledge of Greek faded in the Latin West, so too did instruction in (\*Neoplatonic) philosophy, although \*Marius Victorinus and others translated much of the relevant philosophical material into Latin.

There survives minimal evidence for Schools of \*Law in the Latin West, but they can be assumed to have existed, as an alternative to rhetorical education. Technical handbooks seem to have been fundamental in education in *\*medicine*, *\*veterinary medicine*, architecture, and *\*engineering*, although education in these professions was regularly delivered by apprenticeships.

Details of the physical circumstances of education are generally lacking: elementary education probably took place in public spaces, such as town squares; *grammatici* and *rhetores* generally operated out of buildings. Schools were in towns and cities, not *\*villages*, making education an essentially urban phenomenon. Some cities established reputations for their Schools of \*Rhetoric, such as \*Autun, \*Bordeaux, \*Carthage, \*Madauros (mod. M'Daourouch, Algeria), and Rome.

Local provision of education was sometimes supported by a benefactor. Some towns and also the imperial government funded *grammatici* and *rhetores*, but not *magistri*. There was a charge for education with the fees for the *magister*, *grammaticus*, and *rhetor* specified in the Tetrarchic *\*Prices Edict* (7). These fees probably ruled out the poor. Education was generally for males. Across Roman society, levels of illiteracy remained high.

The social status of the teachers varied across the levels of education, but there was no professional qualification for practice as a teacher. Various handbooks of Latin grammar survive from Late Antiquity, apparently intended for teachers rather than their pupils: they include those by Victorinus, Charisius, Diomedes, Aelius \*Donatus, and \*Priscian. The position of professor of rhetoric at one of the more distinguished schools brought the holder money, influence, and opportunity. The \*Emperor \*Julian barred Christians from teaching (CTh XIII, 3, 5; \*Ammianus, XXII, 10, 7).

Except in monastic schools, the Church does not seem to have sought to replace the traditional (pagan) provision, but to have complemented it: Christian and pagan pupils would share classes of the *grammaticus* and further instruction in Christian texts could take place at home. Under non-Roman rule in later Late Antiquity, schools in the Latin West suffered, and education and learning withdrew into the *\*libraries* of the aristocratic elite and *\*monasteries*. Christian *\*priests* took over the work formerly done by *magistri* and so laid down the seeds of the cathedral and parish schools of the medieval period.

**education and schools, Syriac** In the late 6th century, \*Barhadbeshabba 'Arbaya described world history as a succession of schools in which knowledge was transmitted from the Creation down to the formation of scholastic institutions. It was in this sense that schools were conceived of during the 2nd–3rd centuries AD; a school essentially referred to a current of thought or a circle which shared common religious and philosophical experiences and was weakly structured around a teacher such as \*Bardaisan in 2nd-century \*Edessa. The masters of doctrinal movements were often presented as heads of schools, like Marcion in the *Panarion* by \*Epiphanius.

An elementary education was offered to children in most village schools: training in reading, especially the New Testament and Psalms, an introduction to commentary on the \*Bible, and the pronunciation of words (without vowels in \*Syriac). Education was based on the performance of liturgical songs which missionaries developed as a method of disseminating knowledge. In north \*Mesopotamia, east Syrians founded teaching centres in the \*villages they visited. Babai the Musician created a network with about 30 schools.

Only notables could pay a private tutor to educate their children. Monastic schools were less numerous. The school of Dura d-Qonie, founded by Mar 'Abda in 385, was particularly famous later under the \*Abbasids as a centre for educating those who would serve in the caliphs' administration.

Monks might also teach in schools, such as in Balad (\*Church of the East) or Shurzaq on the opposite bank of the Tigris River (\*Syriac Orthodox). In the Beth-Sahde at \*Nisibis, Church of the East monks from the Great \*Monastery of \*Abraham of Kashkar on Mount \*Izla participated in education in the 6th century. Strict regulations were in place in monasteries because of the children they cared for. After a young man had been educated in a monastery, he could apply to join the community. Studying the \*Bible was the main activity, but in a spiritual rather than a scholarly way.

Centres of higher education, placed under the authority of the bishop, are better known. The most famous one was the east Syrian School of \*Nisibis, the *Statutes* of which have been preserved. In 540, the school was temporarily closed and some of the teachers went to the school of \*Seleucia-Ctesiphon which then developed considerably. Syriac Orthodox (Jacobite) Christians founded their own school in the capital after 580. Students who wanted to complete their education could go to \*Beirut to study Roman \*law or to \*Alexandria to study \*philosophy. Future leaders in the Church were trained in high-level schools.

Secular schools maintained the Hellenic *paideia*. \*Greek philosophical education was at the heart of the educational system, especially Aristotle: his *Organon* was used as an introduction to the study of theology. East Syrians considered this treatise an exegetical tool for studying the commentaries of the theologian \*Theodore of \*Mopsuestia, as Abraham Bar Dashed did at the school of Bashosh in \*Marga. The works of the Greek fathers were read and translated in both monasteries and schools, and had considerable influence on Syriac literature, theology, and \*rhetoric.

When \*Abraham of Beth-Rabban managed the school of Nisibis (530–69), the curriculum was organized to last over a course of three years. The first year was probably taken up with the epistles of S. Paul, the

Pentateuch, and the breviary; the second with the Psalms and the Prophets, with liturgical \*hymns; and the third with the Gospels and responses for offices. \*Junilius Africanus described the exegetical method used at the school in about 527.

Alongside exegesis and biblical theology, \*translation of \*Greek secular works in philosophy, natural science, medicine, and astronomy were part of the teaching programme in schools of higher education and in monasteries such as \*Qenneshre. Practical and theoretical training in medicine was sometimes put in the *cursus studiorum*, for example in \*Gondeshapur during the Abbasid period, and in Nisibis at the school of Beth-Sahde in 590. The teaching consisted in learning the works of Galen and Hippocrates.

A hierarchical structure governed these scholastic institutions: the Director was also the Interpreter who was in charge of exegesis of the \*bible. One master taught cantillation (chanting), Syriac pronunciation, and homiletics, another calligraphy. The *rabbaita* was responsible for the whole administration. The statutes imposed ascetic rules for the students.

There is less evidence of education for women. But there are examples of nuns who practised reading, catechized, and instructed lay women from their region. CJ

**education and schools, Zoroastrian** Our knowledge of religious education and literacy in \*Zoroastrianism in Late Antiquity is largely derived from the observations of foreign authors and sources, and internally from Middle \*Persian (Pahlavi) texts like the *Herbedestan* (*Priestly School* or more generally, *Religious Education*), an Avestan–Pahlavi bilingual text, which is our primary literary source for priestly education. For example, Strabo alludes to the oral nature of Zoroastrian priestly education: 'They [the Persians] use as teachers of science their wisest men, who also interweave their teachings with the mythical element, thus reducing that element to a useful purpose, and rehearse both with song and without song the deeds both of the gods and of the noblest men' (XV, 3, 18).

The importance of religious education is repeatedly stressed in Pahlavi texts such as the *\*Denkard*: 'Do not consider attending the *herbedestan* as bad; for attending the *herbedestan* is the life of the people' (VI, 316). It appears that religious education was open to both men and women of the household with the proviso that whichever of the two was better at administering the household should remain (*Herbedestan*, ch. 5). It has been argued that the Sasanian remodelling of *\*Kuh-e Kwaja* incorporated an *herbedestan*. The coming of *\*Islam* saw the breakdown of priestly hierarchies and a consequent weakening of religious training. YSDV

**Egypt** The term 'Late Antique' has been applied to Egypt only recently, in particular since the publication of R. S. Bagnall, *Egypt in Late Antiquity*, in 1993. When specialists on Egypt, including papyrologists, have written of 'Late Antiquity' they have generally been referring to the period from \*Diocletian's accession (284) to the mid-5th century. The term they have preferred for the entire period of Egyptian history from Diocletian's accession (284) to the \*Arab conquest (639–42) has been 'Byzantine', sometimes divided into early and late phases. The era following it they refer to as the Islamic or \*Umayyad period, ending with the \*Abbasid transfer of the seat of the \*caliphate from \*Damascus to \*Mesopotamia in 750. The present entry is concerned with the entirety of the period 250–750.

#### Roman administration

The earlier decades of the Late Antique period were marked by several experiments in provincial

reorganization based on divisions of the original Roman province as well as subdivisions of those divisions. The \*Verona List itemizes the following five \*provinces in Egypt: \*Aegyptus Jovia and Herculia, \*Libya Inferior and Superior, and \*Thebais. The short-lived province of \*Mercuriana was created from Aegyptus Herculiana between 322 and 324. In 341 the province of \*Augustamnica was created corresponding approximately to the former Aegyptus Herculiana in north-eastern Egypt. \*Arcadia took territory from Augustamnica in the late 4th century; Augustamnica was itself later subdivided into Augustamnica Prima and Secunda. In or around 381, Egypt was separated from the \*Dioecesis of \*Oriens into which its provinces had been placed under the \*Tetrarchy, and constituted as a separate Dioecesis of \*Aegyptus, subject to the uniquely named \*Praefectus Augustalis, who performed the functions of the \*Vicarius.

A final, major administrative reorganization was accomplished through \*Justinian I's Edict XIII of 539, which divided Egypt into six \*provinces—Aegyptus, Libya, Thebais, Augustamnica, Pentapolis (formerly part of Libya, it seems), and Arcadia. Most of the six were also divided in half—Arcadia being the sole clear exception—and had, very roughly speaking, administrations shared in one way or another between military and civil \*governors. The Praefectus Augustalis was deprived of his former control over the whole *dioecesis*, though he retained ultimate responsibility for overseeing the \*grain fleet which shipped the \*grain taxes (*\*annona*) from \*Alexandria to \*Constantinople, grain which from the time of its foundation had been used to feed \*Constantine I's new capital city. In this and in other fiscal matters he was assisted by an official known as the Rationalis ('accountant', Gk. \*Katholikos). Later, at some time between the end of the \*Persian invasion and occupation (619–29) and the \*Arab conquest, the governor of Arcadia, formerly a civilian \*Praeses, became a military governor, a \*Dux.

Each of these provinces had its own bureaucratic apparatus, (Gk. *taxis*, Lat. *\*officium*). Evidence from the \*papyri (e.g. P.Sijp. 35) and the provincial lists, including the *\*Notitia Dignitatum*, provide much information about the activities of these various provincial officials in Late Roman Egypt. They often appear in the papyri, with a wide array of clerical and non-clerical titles, functioning in a personal capacity in such private transactions as loans and \*leases. However, the evidence for the official processes through which Egypt's provincial governments operated on the ground is not abundant and to date has not been greatly studied. On the local level, the old \*nomes were divided, in 307–8, into numbered *\*pagi* (districts). Eventually, in the 5th century, a new institution, the pagarchy, was created to supervise tax collection in all areas not supervised

directly by city administrations. The pagarchy (Gk. and Lat. *pagarchia*) was in effect a liturgy (a public duty) assigned to an official known as the pagarch, but its responsibilities could be, and often were, shared by more than one man or woman, with pagarchs sometimes operating in pairs.

### History and economy

Egypt was relatively untroubled by the political turmoil of the Third Century \*Crisis. However in 269 the \*army of \*Zenobia of Palmyra took over Egypt for several years until the \*Emperor \*Aurelian besieged \*Alexandria and regained control (\*Ammianus Marcellinus, XXII, 16, 15; \*Zosimus, I, 43 and 61). A generation later, in 297–8, the Emperor Diocletian personally put down the \*usurpers \*Achilleus and \*Domitius Domitianus, again besieging Alexandria. He proceeded to give up the region of \*Nubia known as the Dodekaschoinos, thereby withdrawing \*Egypt's southern frontier to the First Cataract of the \*Nile at \*Syene (modern Aswan) (\*Procopius, *Persian*, I, 19, 27–37, cf. the \*Panopolis Papyri). This decision to establish the frontier further north was a strategic success. The frontier zone was well garrisoned and remained generally peaceful in the centuries that followed, as is apparent from the documents of the military units stationed much later (493–616) at \*Philae, \*Elephantine, and Syene (P.Lond. V, 1722–39; P.Münch. I). The units stationed at the First Cataract, though never named as \**limitanei*, were usually treated as if that is what they were, constituting a kind of border 'militia'. But there were also units of regular troops stationed in detachments throughout the country, including (after the military reform by \*Justinian I in the 6th century) the Scythae Iustiniani at various points in the \*Thebaid. All such soldiers, like all government servants, acquired the imperial status designation \*Flavius to distinguish them from the civilian population who had the designation Aurelius.

After the defeat of the Eastern Emperor \*Licinius in 324, Constantine I gained control of the whole Empire, including Egypt, and proceeded to promote Christianity. On the economic front, following a period of monetary chaos, Constantine's creation of the standard \*gold coin, the \**solidus*, helped restore confidence in the monetary system and promoted in the long term the maintenance of a monetized economy throughout the period, even at the \*village level.

Egypt's wealth, like that of all preindustrial societies, was generated largely by \*farming, the land being naturally blessed by the annual flooding of the \*Nile, which was carefully exploited through \*irrigation. Beginning in the Ptolemaic period and continuing through the Roman, the land itself had been increasingly privatized.

The trend seems to have accelerated in the 5th century, reaching its height (as far as can be seen in the documentary evidence) in the 6th century. The result was the engrossment of large \*estates, albeit not in integrated tracts but in scattered plots. The evidence for this is greatest for the Nome of \*Oxyrhynchus and for its principal \**oikos*, that of the \*Apion \*family.

The exact size of the Apion and other \*estates is currently debated (Sarris, Hickey). There is also discussion about the ways estates were worked: Sarris considers they were exploited through wage labour, Hickey thinks they were farmed through a network of leaseholds. Sarris also considers the estates were commercial, profit-seeking ventures whereas Hickey thinks them aimed strictly at self-sustenance or autarky. Of particular importance is the relationship between these private institutions and the state: were they instances of \*feudalism or semi-feudalism and engaged in a power struggle with a weak imperial government (Sarris), or were they cooperative ventures, self-interested perhaps, but at the same time assisting the imperial government to function efficiently on the local level in, for instance, administering the \*taxation system and \*recruiting for the \*army (Gascou)?

Large estates were sometimes owned by individual churches (not by 'the Church' as a whole). The landscape also featured countless smaller landholdings and the population also included some entrepreneurial figures: modest landowners who also functioned in complex networks of relationships as \*tenants, sublessors, organizers of labour, rent-collectors, and stewards to large estates.

### Law

Extensive private property rights like these usually imply the existence of dependable legal institutions, and these certainly existed in Late Roman Egypt (*see also* LAW, EGYPTIAN). Egyptian legal tradition reaches back to the Pharaohs, but was subsequently influenced by the influx of immigrant legal 'systems', Hellenistic and then Roman. It is to some extent possible to see operating in Ptolemaic and Roman Egypt the 'principle of personality', whereby individuals were subject to the legal rules and courts appropriate to their ethnicity, Egyptian or Greek. Till the early 3rd century substantive Roman law (as opposed to procedural law) was not available to all Egyptians, but only to the minority group which held the Roman citizenship. Theoretically, this should have changed with the promulgation and application of the Constitutio Antoniniana of 212, Caracalla's \*edict that accorded Roman citizenship to virtually all inhabitants of the Empire, a change often signalled in the papyri by the new citizens' assumption of the imperial *nomen* \*Aurelius. Nonetheless, legal

practices continued to be a mixture of the local and the Roman, though it is possible to perceive in the 3rd and 4th centuries both a trend towards \*Latin in legal terminology and an apparently increasing influence of Roman \*law in matters concerning personal law and \*inheritance. A significant late example can be found in a will dating from the late 560s (P.Cair.Masp. III 67312, with *CAH* XIV 618–25), in which a provincial staff officer named Flavius Theodorus left the bulk of his property to monastic institutions, and a much lesser share to his maternal grandmother. The will was at pains to make it clear that the proportion of the property being alienated from the family fell within the limit imposed by the *Lex Falcidia* of 40 BC; this allusion to a 600-year-old law of the Roman Republic is surely suggestive. The most important question concerning the study of law in Late Roman Egypt is the extent to which people were cognizant of or employed \*Justinian's *Code*. Recent opinion (Beaucamp) takes a positive view of the situation.

The shift of the imperial capital from Rome to \*Constantinople (330) resulted in a reorientation of Egypt's outward direction. If Egypt's position under the Romans had been somewhat 'special' (a topic of debate), it was now more fully integrated into what would become the Byzantine Empire—to such an extent that some scholars (Banaji, Zuckerman) now consider that Egyptian evidence can be used to provide answers to questions about fiscal and demographic matters as they apply to the entire Empire. This means that Egypt and its elites come to appear more closely connected to the Empire than they had been in the Roman period, at least if it is possible to generalize from the careers of various members of the \*Apion family, one of whose members became \*Consul Ordinarius in 539. That family, or 'clan', obviously had networks of relationships that extended from Egypt to Constantinople, even into the imperial \*court, and beyond (as shown most recently by Hickey). But even persons of more modest means and standing, such as the villagers of \*Aphrodito in Middle Egypt in the mid-6th century (P.Cair.Masp. I, 67032), could try to achieve access to the imperial court in defence of their own perceived rights.

### Christianity

Christian literature credits the evangelist S. Mark with introducing Christianity into Egypt under the Emperor Claudius (\*Eusebius, *HE* II, 16), and tradition considers him the first \*Patriarch or Pope of \*Alexandria (*HistCoptPatr* I). Documentary evidence, including 2nd-century New Testament manuscripts, comes later, but still well precedes \*Diocletian's personal presence in Egypt and the subsequent Great \*Persecution

starting in 303, which caused the new religion to spread more confidently and which became so embedded in the Egyptian memory that it gave rise to the \*Era of the Martyrs. The complicated process of \*conversion and Christianization was largely complete by the late 4th or early 5th century. Evidence for it is found in shifts in personal naming practices apparent in the documentary \*papyri, where biblical names, saints' names, and other identifiably Christian names become increasingly common. It is also visible in other features of documents, such as *nomina sacra* (specially abbreviated 'sacred names'), Christian formulae in \*letters, and ecclesiastical references. The papyri, \*Greek and \*Coptic, have preserved abundant traces of Christianity both in its mainstream forms, and also in various schismatic or heretical manifestations. These include \*Meletians (P. Lond. VI), \*Gnostics (the \*Pistis Sophia and \*Nag Hammadi codices), and \*Manichaeans (documents from \*Kellis in the Libyan Desert); and the Cologne \*Mani codex (provenance unknown).

Egypt was also where desert \*monasticism began, in its hermetic (S. \*Antony), coenobitic or communitarian (S. \*Pachomius), and mixed forms (e.g. the \*monastery at \*Naqlun, where both both papyrological and archaeological evidence survives). The first use of *monachos* (Gk. 'monk') in a surviving papyrus dates from AD 324, and the monk in question appears to be a familiar part of the \*village where he was breaking up a brawl (P. Coll. Youtie 77).

In the 5th century, many Egyptian Christians rejected the 'Two Natures' Christological definition adopted at the \*Council of \*Chalcedon of 451, and during the 6th century a separate \*Miaphysite (Gk. 'One Nature') hierarchy, often called the Coptic Church, came to command the loyalty of most Egyptians, although there continued to be Chalcedonian (\*Melkite) Patriarchs of Alexandria (e.g. \*John the Almsgiver, \*Cyrus al-Muqawqis). The \*conversion of Egypt's population from Christianity to \*Islam following the \*Arab conquest was a complex process and is, to this day, still not complete, with the Coptic minority generally estimated to be about 10 per cent of the total population.

### Persian and Arab invasions

Apart from raids by desert \*nomads and occasional disturbances in Alexandria, Egypt was a peaceful land not only on its southern frontier but everywhere, for most of the Late Roman period. That all changed in the 7th century with the irruption of the Persians. The \*Persian invasion (and subsequent domination) of Egypt was a brief interlude, lasting only one decade from 619 until 629. The evidence for Egypt in these years of Persian rule is relatively small: the famous Greek archive of the Apion family disappears early on,

and the *\*Chronicle* of *\*John* of *\*Nikius* is cryptic and in part lost. Although there are thousands of *\*Pahlavi* papyri, mostly unpublished, they have not so far been informative on matters of general importance.

In some sense, the Persian occupation may be viewed as foreshadowing the *\*Arab* conquest achieved between 639 and 642 which had lasting effects. Once established in power the Arabs faced little or no internal resistance. A critical decision at the start of Arab rule was to establish Egypt's capital in the vicinity of the Roman fortress of *\*Babylon*, a strategically positioned bulwark and the focal point of an extended siege during the conquest itself, now part of the Old City of Cairo. Evidence for the construction of the new capital is apparent in the documents published by W. Diem in the *Corpus Papyrorum Raineri*, XVI (1993), dating from shortly after the conquest and detailing downriver shipments of *\*bricks*, mortar, lime, and dung.

Egypt was treated as a single large province in the Islamic Caliphate, as before under the Early Roman Empire, with an Arab emir as governor (*\*Arabic wali*). The best known of these governors in the documentary record is *\*Qurra b. Sharik*, known especially through his correspondence with a regional *\*pagarch* in Middle Egypt named Flavius *\*Basilius* of Aphrodito (e.g. P. Lond. IV, early 8th cent., from Aphrodito). At first, Arab military presence was modest and the new Arab population mostly resident in cities.

The process of conversion from Christianity to *\*Islam* was slow; the imposition of a poll-tax on the Christian population is sometimes construed as providing Egyptians with an incentive to convert. *\*Bilingualism* persisted for a time. *\*Greek* continued as the administrative language, often in tandem with *\*Arabic*, to the end of the 8th century. Coptic, the Egyptian language written in a mostly Greek alphabet (see EGYPT, LANGUAGES IN), continued especially in the 8th century to be a language of legal contracts before its total replacement by Arabic. By the 11th century both Coptic and Greek had been supplanted by Arabic as the language of everyday life, even among Coptic Christians, except for the *\*liturgy*. JGK

**Egypt, churches and monasteries in** Nothing now remains of the churches of Egypt from before the time of *\*Constantine I*. In the 3rd century the *\*city* of *\*Alexandria* was already divided into five districts. *\*Epiphanius* of Salamis in the late 4th century gives the names of nine churches, including the Caesareum (Kaisareion, the cathedral), the Baucalis (where *\*Arius* preached), and others named after 3rd-century *\*bishops* including Theonas and Pierius. There was a *\*martyrium* of S. Mark on the east side of the city.

Considerable work has been done since the 1970s on ecclesiastical architecture in *\*Egypt*. The guide-book of Samuel al Syriani describes 211 buildings and the catalogue of D. Andriolo and S. Curto lists 168 churches situated in towns, *\*villages*, or *\*monasteries*. P. Grossmann has published a study of the great place of *\*pilgrimage* at *\*Abu Mina* and in his subsequent volume of the *Handbuch der Orientalistik* has traced the entire evolution of Christian architecture in Egypt. Considerable restoration work has also been carried out, directed by E. S. Bolman, on the 6th/8th-century paintings in the church of the *\*Red Monastery* at Sohag.

S. \*Antony retired to the edge of his town, then to a former Roman fort, then to a desert as a hermit. Solitary hermit lives leave few traces, but when 'old men' gathered disciples, and monks began to settle in communities with rules, as they did under S. \*Pachomius, they left physical evidence which may be studied. Followers of Antony peopled Lower Egypt, followers of \*Amun the desert of \*Nitria, and followers of \*Macarius that of \*Scetis. Eventually the \*Kellia was also founded and in c.323, Pachomius created a community at \*Tabennese in Upper Egypt, then a convent for women and others at \*Phbow, Schmim, and Tsmine. At the end of the 4th century, Shenoute organized, in accordance with his rules, the community of the \*White Monastery at Sohag (Deir al-Abyad). Such Pachomian monasteries and \**coenobia*, being more hierarchical and organized in accordance with severe rules, did not in general survive the \*Arab conquest of the 7th century.

Some monks established themselves in natural cavities, as at \*Naqlun, and at \*Esna, or in buildings or tombs of the Pharaonic era. At Beni Hassan, the zone around the Middle Kingdom site of Speos Artemidos has even been given the name of the Valley of the Anchorites. Non-monastic church buildings are also to be found in Ancient Egyptian temple enclosures, as at \*Philae, \*Dendera (near Mamissi), and in front of the Temple of Khnum at \*Esna.

Other reuse of earlier structures for monastic purposes may be observed in the region of \*Thebes, Luxor, and Karnak. There is the Deir al-Bakit in the Valley of the Kings and the reuse of the tomb of the Pharaoh Rameses IV, and of the tombs 1, 53, 60, 73, as well as the Deir er-Roumi in the Valley of the Queens, the church in the tomb of Dega at Sheikh Abd-el Gournah. There is also the Monastery of S. \*Epiphanius at Thebes and that of Cyriacus which encompasses four tombs. Other reuse by monks has been noted at Deir al-Bahari, the convent of S. \*Phoibammon, at the church in the Temple of Ramesses III at Medinet Habou and the village of \*Jeme, the Monastery of Mark at Gurna Mura'i, the Monastery of Samuel or Deir al-Gissas, the five churches of Luxor, and the monasteries and churches of Karnak.

All monks practised, with more or less rigour, similar rules of life, requiring \*prayer and manual labour, poverty and strict celibacy. Whether or not the monastery was a *coenobium* or had the looser structure of a \**lavra*, all monastic communities had cells, churches, communal buildings, and reception rooms as at Abu Mina, Natrun, \*Saqqara, \*Bawit, Aswan.

The sheer volume of surviving architecture at Kellia makes it possible to chart its evolution—over 1,500 individual hermitages have been identified. At Qusur Isa sud 1 (Q Isa 1) at the eastern end of Kellia (ancient Pherme) the first stage of construction (as at Esna) was

to dig into the hillside a simple shelter with a couch. The first church appears around AD 380, a second, on a \*basilica plan with a \*baptistry, around 450, then a third at the end of the 6th century. An overall plan then emerges: a great rectangle approximately 35 m long by 25 m broad (115 × 82 feet) with high walls enclosing a \*garden, latrines, kitchens, and cells (those of the Old Man and of the disciples). Each cell includes a room for living in and a private oratory with a niche oriented towards the east, like the choir of a church. In the course of centuries, reception rooms with richer ornament were added, but the original plan was preserved; N. Heinen and M. Wuttman have devoted considerable study to each architectural element.

**Egypt, languages in** The Egyptian language existed for almost 5,000 years (from approximately 3500 BC to the 15th century AD). It belongs to the so-called 'Hamitic-Semitic' or 'Afroasiatic' group, in which it occupies a unique position.

Its hieroglyphic written form, developed around 3500 BC, was used until \*pagan \*temples were officially closed in AD 391. Hieratic, a cursive system, was employed in sacred and administrative texts written on \*papyrus.

Several stages of evolution can be distinguished within the classical Egyptian language: ancient, middle, and neo-Egyptian. The popular or Demotic tongue also possessed a written form derived from hieroglyphics, which was used alongside the other variants from the 7th century BC until the 5th century AD, the date of the last \**graffiti* in pagan temples. With the conquest by Alexander the Great in 330 BC, \*Greek was officially introduced to \*Egypt and the two languages existed side by side without influencing each other in any significant way. However, between the 2nd century BC and the 3rd century AD, for reasons at once religious and practical, several attempts were made to transcribe Egyptian words in the Greek alphabet. The corpus of these texts, said to be written in 'old Coptic', was mostly magical in nature and demanded exact pronunciation of words, something not always permitted by Egyptian

writing, which is purely consonantal. Another significant corpus used in determining the history of the language is made up of hundreds of \*ostraca (shards of inscribed \*pottery) discovered at Narmouthis at the \*Fayyum oasis. They represent the \*bilingual \*archives (in Demotic and Greek) of a community of pagan \*priests from the 2nd century AD. The extent of the incorporation of Greek lexical items may be observed there, and the Demotic texts present grammatical traits that later show up in Coptic; this reflects a transitional stage for which evidence had long been missing.

Finally, a decisive change occurred with the \*conversion and Christianization of Egypt. With translation into Egyptian of Christian texts written in Greek, the hieroglyphic system, which had become both unwieldy and too markedly pagan, was abandoned. It was replaced by the Greek alphabet supplemented with letters borrowed from Demotic that allowed the transcription of sounds unknown in Greek. That literary language is precisely the one called 'Coptic', a term that derives from the adjective *aiguptios*, 'Egyptian', in its Arabized form *qubti*.

The earliest manuscripts attesting Coptic date from the end of the 3rd century. At its beginning, the language was characterized by strong diversity of dialects. For the first three centuries of Coptic's existence, there were at least six major dialects, not to mention dialectic varieties of which there are but single attestations. The six main dialects were (from south to north) Akhmimic, Sahidic, Lycopolitan, Oxyrhynchitic, Fayyumic, and Bohairic. These dialects were distinguished by several factors: alphabet (variations in the form and number of Demotic letters), vocalization, lexicon, and syntax. Starting in the 4th century, Sahidic became the literary and vehicular dialect of the \*Nile Valley; the lesser dialects disappeared towards the 6th century, except for Fayyumic and Bohairic. The latter was the language of Lower Egypt; in the 11th century it became, and remains to this day, the official language of the Coptic Church. While the syntax of the various Coptic dialects stayed profoundly Egyptian and reflected its legacy from both Neo-Egyptian and Demotic, its lexicon contained a great number of words, some 4,000, borrowed from Greek.

Until the 6th century, Coptic seemed confined to religious literature and the private sphere, whereas Greek, the language of the local authority, was quite pervasive and served as the preponderant vehicle for legal and administrative purposes. Its decline started with the \*Arab conquest of 641. Following the rapid Arabization of the country, Coptic was unable to establish itself durably. In the 13th century, scholars of the Egyptian Church attempted to record the structures of the language in bilingual works in Coptic and \*Arabic;

the language was already in danger at this time, and became extinct no later than the 15th century. AB *CoptEnc* vol. 8 s.v. languages, Coptic, cols. A145a–151b (R. Kasser).

**El Bovalar** Rural site by the River Segre near Lleida (Catalonia) with a ruined three-aisled \*basilica on three levels, reusing Roman \*spolia, and, a small \*baptistry to the north, reconstructed in the Museu de Lleida. The buildings whose foundations about the church were probably domestic, as finds included \*tools for carding wool and for \*farming. Late \*Visigothic \*gold coins of 711/14, scattered across the site not in the church, and not concentrated in a \*hoard, may have been connected with \*trade. The site was occupied between the 6th and 8th centuries, and was destroyed by fire. Publication of the excavations is incomplete. RJW

R. Collins, *Visigothic Spain 409–711* (2006), 211–12.

M. Kulikowski, *Late Roman Spain and its Cities* (2004), 300–1.

**elephant** Symbol of imperial power and conquest in \*ceremony, spectacle, and art. Although viewed in \*Zoroastrianism as creatures of \*Ahriman, elephants accompanied Persian \*armies in the 3rd century (e.g. *HA* Gordian, III) and the 6th and 7th centuries (\*Evagrius, *HE* V, 14; \*Sebeos, 11). Sculptural reliefs at \*Taq-e Bostan in Media show elephants used in royal hunting expeditions. \*Ammianus describes the terror which the noise, smell, and appearance of Persian elephants aroused in Roman armies (XXV, 1, 14; 3, 4).

Romans had access to elephants in \*Africa, but used them primarily in staged hunts (\**venationes*) and imperial \*processions. Elephants captured from the Persians in 298 are depicted on the Arch of \*Galerius in \*Thessalonica and thirteen of them were paraded through \*Rome in 303 (*Chronicle of 354*, p. 148 Mommsen). \*Lactantius marvelled at the human ability to control so vast a beast (*De Opificio Dei*, 3, 16–18). Persian elephants captured by the Romans in the late 6th century were taught to make the sign of the \*Cross with their trunks when filing past a church (\*John of Ephesus, *HE* III, 2, 48). In 582 the \*Avar \*Khagan was offered an elephant as a diplomatic gift (\*Theophylact Simocatta, I, 3, 8–10).

Decorative \*mosaics often associate elephants with spectacle (\*Piazza Armerina; Great \*Palace of \*Constantinople). Writers of natural history (\*Ambrose, *Hexaemeron*, VI, 5; \*Cassiodorus, *Variae*, X, 30; \*Isidore of \*Seville, *Etymologiae*, XII, 2, 14) often acquired information about elephants from classical sources (esp. \*Pliny, *Natural History*, VIII, 1–32). Bochartus, *Hierozoicon*, Liber II, cap. 23–7, vol. I, 247–73.

**Elephantine** Town on an island in the \*Nile opposite \*Syene. Despite being secondary in importance to Syene (Aswan) within the region in Late Antiquity, Elephantine possessed a significant army unit and at least three churches. One of these was located on the forecourt of the \*Temple of Khnum, which was reused for housing from the early 5th century onwards. JHFD

**Elesboas** See KALEB.

**Eleusis** Site of a \*temple near \*Athens where mystery initiations were held. In 326, Nicagoras, torch-bearer of the Eleusinian mysteries, visited \*Egypt to secure an \*obelisk for \*Constantine I and left \*graffiti in the Valley of the Kings. \*Julian was initiated and the hierophant travelled to \*Gaul to help him fight \*Constantius II (\*Eunapius, *Lives of the Philosophers*, 476). \*Zosimus relates (IV, 3) that when \*Valentinian I banned nocturnal \*sacrifices (*CTh* IX, 16, 7 of 364), \*Praetextatus, then \*Proconsul \*Achaea, persuaded him not to apply this to \*Greece. The Nestorius mentioned by Zosimus (IV, 18) as miraculously saving Athens from an \*earthquake in 375 had no connection with Eleusis. A three-aisled Christian \*basilica has been partially excavated. **Eleutherius** (d. 619) \*Eunuch and \*Exarch of \*Ravenna (615–19), who suppressed revolts and made peace with the \*Lombards. In 619 he proclaimed himself \*emperor, but was murdered by his soldiers while en route to \*Rome. JJA

*PLRE* III, Eleutherius.

D. M. Deliyannis, *Ravenna in Late Antiquity* (2010).

**Elias of Alexandria** (mid- to late 6th century) Elias is the name associated with the \*Alexandrian \*philosopher often credited with commentaries on \*Porphyry's *Isagoge*, Aristotle's *Categories*, and the *Prior Analytics*. He may also have assembled the *Anonymous Prolegomena to Platonic Philosophy*. These commentaries bear stylistic similarities to those composed by \*Olympiodorus and for this reason it has been supposed that Elias was a student of Olympiodorus. A late medieval manuscript of the *Prior Analytics* commentary identifies its author with a prefect named Elias, possibly identifiable with the \*Praefectus Praetorio of \*Illyricum mentioned in \*Justinian I's *Novels* 111 and 153, laws issued in 541. Despite his Christian name, Elias' commentaries affirm doctrines like the eternity of the world that, while maintained consistently by Alexandrian Neoplatonists, conflicted with Christian teaching. **Eligius of Noyon** \*Bishop of Noyon (641–59/60). A native of the Limousin, apprenticed to a goldsmith before his talents gave him an *entrée* to the \*Neustrian \*court, where he undertook commissions for \*Chlothar II and \*Dagobert I, and joined a circle which included \*Desiderius of Cahors and \*Audoenus of \*Rouen, who it has recently been confirmed was the author of his *Vita*. His minting in \*Paris and \*Marseilles implies his key part in royal monetary policy; he also undertook diplomatic missions including treaty negotiations with the Bretons. He founded \*monasteries with royal backing in Paris and at Solignac, before \*Clovis II made him Bishop of Noyon, from which he directed missionary efforts in rural north-eastern Francia. STL

**Elijah, Apocalypses of** Apocryphal texts extant in a number of versions: two Sahidic and Akhmimic \*Coptic texts, \*Greek and Hebrew fragments, and later Hebrew texts. It was long considered a composite text, a Hebrew original of the late 1st century AD (perhaps from the Jewish community in \*Alexandria) reworked by Egyptian Christians in Greek during the 2nd and 3rd centuries AD, and translated into Coptic (Wintermute, 729–30). D. Frankfurter presents a strong case that 1 Elijah is in fact a late 3rd-century AD Christian writing from Upper Egypt, the product of a regional culture which admired Christian \*martyrs and was distinct from early Christianity in Alexandria. It follows from Frankfurter's argument that 1 Elijah is independent of the Hebrew *Sefer Eliyahu*, 2 Elijah (see Bittenwieser, and dated to the 7th century AD by Frankfurter, 49–50).

Unlike most apocalypses, 1 Elijah does not depict Elijah receiving revelation from an \*angel, but instead reports the direct Word of God. The text's division of humanity between the sealed (righteous) and sinners, its narrative connecting historical time to the Last Day (1 Elijah 2 mentions Assyrians, Persians, and events in Egypt), and its depictions of Antichrist and natural disasters prior to final salvation are \*apocalyptic themes.

The Hebrew *Sefer Eliyahu* approximates a more typical apocalypse structure and its details differ from those in the Coptic 1 Elijah. There also appears to have been a third Elijah Apocalypse, now lost but for fragmentary evidence: a Greek text containing a tour of Hell which Frankfurter (45–9, 55) dates to perhaps the 2nd century AD.

**Elishe Vardapet (Elīšē Vardapēt)** Author of the *History of Vardan and the Armenian War*, an account of the revolt of 451 led by \*Vardan Mamikonean against the Persian King \*Yazdegerd (Isdigerdes) II, one of the best-known works of Armenian \*historiography. Within his work Elishe identifies himself as an eyewitness to events. Although this claim was accepted without question throughout the Middle Ages and into recent times, it is considered suspect by modern

Western scholars. Thomson detects in the text literary themes and reliance on sources that would not have been available in \*Armenian before the mid-6th century. It is currently suspected that the appearance of the *History* is linked to the 571 revolt of Vardan II \*Mamikonian and his flight to \*Constantinople.

Given the dispute over dating the *History*, nothing is known for certain of its author although many medieval commentators filled in biographical details. Elishe was represented by later medieval writers as a student of \*Mashtots' in the 440s, as a clerical scholar (thus the title 'vardapet') who personally served \*Vardan I and, after Vardan's defeat at the Battle of \*Avarayr, became a monastic hermit. In the 10th century \*Tovma Artsruni includes Elishe in his own *History* as a historical character, and writes that Elishe unwittingly lent the manuscript of his *History* to an enemy of the Artsruni clan, who took the opportunity to remove the Artsruni hero of the Battle of Avarayr from the narrative.

Although the earlier *History* of \*Lazar P'arpets'i remained known and consulted throughout the medieval era, it was the version of Elishe that informed Armenian national consciousness and rendered Vardan Mamikonian a national hero even to the present day.

**Elmet** A small post-Roman Brythonic kingdom in north-west England. An early Christian \*inscription from \*Wales refers to an Elmetian. During the 7th century Elmet was incorporated into Northumbria and assessed at 600 hides in the *Tribal Hidage*. JFG  
B. Yorke, *Kings and Kingdoms of Early Anglo-Saxon England* (1990).

**Els Munts** (mod. Altafulla, Tarragona, \*Spain) Residential \*villa positioned directly on the sea on the *territorium* of ancient Tarraco. The residence had reception rooms and bedrooms, decorated with \*mosaics and sculptures of \*pagan gods. There were \*baths and large \*cisterns, and also work rooms for processing products and a \*cemetery with 170 graves. A pictorial \*inscription associates the villa with C. Valerius Avitus, a mid-2nd-century \*governor of \*Tarracensis, although the earliest occupation was in the 1st century AD. A serious fire destroyed much of the residence around 260, but it was rebuilt on a grand scale in the 4th century. It was abandoned in the early 8th century. F. Tarrats, 'Villa dels Munts', in P. de Palol and A. Pladevall, eds., *Del romà al romànic: història, art i cultura de la Tarracense mediterrània entre els segles IV i X* (1999), 132–3.

A. Chavarría Arnau, *El final de las villae en Hispania (siglos IV–VII D.C.)* (BiblAntTard 7, 2007), 183–6.

**Elterish (Ilterish)** (r. 682–92) Leader of the Ashina \*Türks who, along with his comrade Tonyuquq, ended Chinese domination of the Türks to found the Second Türk Empire (682–744), over which he ruled as \*kha-gan (*qaghan*). He gathered most of the Turkic tribes under his leadership, including the influential Toquz Oghuz (\*Uighurs), and reconquered much of the former territory of the First Türk Empire. He was succeeded by his brother Kapghan \*Khagan (r. 691–716), under whom the Empire reached its greatest extent.

**Elusa** (mod. Halusa/Halutza, Ar. al-Khalus) Principal city of the central \*Negev, established by the Nabateans in the late 4th or early 3rd century BC, mentioned by Ptolemy and marked on the Peutinger and \*Madaba \*maps. It reached its acme in the Late Roman period, first as part of the \*province of \*Arabia, subsequently in \*Palaestina Tertia. Tombstones indicate the presence of \*pagans into the early 5th century. \*Bishops of Elusa participated in the church \*councils of \*Ephesus (431) and \*Chalcedon (451) and in synods at \*Jerusalem in 518 and 536. In the 6th century, the monk Paul of Elusa wrote a biography of S. Theognis, Bishop of Bithyion (*BHG* 1786), and the city was mentioned by the pilgrim \*Theodosius in 530 (27) and visited by the \*Piacenza Pilgrim in 570 (34). In the early 7th century, \*John Moschus mentions a \*lavra at Elusa (*Pratum*, 164; PG 87, 3032) and the *Narrations of \*Nilus* (PG 79, 587–694) mention a bishop of Elusa. Elusa remained an administrative centre in the early Islamic period, but declined in the 8th century. Excavations in 1973 and 1979–80 uncovered a house, a theatre, and the east church, and work was resumed (1997–2000) in and around the cathedral church.

**Elvira** (province of Granada, Spain) The Roman *munici-pium* Florentinum Iliberritanum, or Illiberis, in Hispania \*Baetica. Site of the \*Council of Elvira (300/6), and \*diocese of Gregory, \*Bishop of Elvira (d. c.392).

RLS

M. Orfila Pons, 'Iliberri-Elvira (Granada), ciudad romana y Christiania', in M. S. Muro and J. F. Ubiña, eds., *El Concilio de Elvira y su Tiempo* (2005), 117–35.

**Elvira, Council of** Church \*council that met in \*Elvira (Iliberris) in southern \*Spain in an uncertain year in the early 4th century. Various dates have been proposed, from c.300 to post-314, but probability favours a date shortly before the Great \*Persecution began in 303. Nineteen Spanish \*bishops attended, including \*Ossius of \*Cordoba. According to tradition they composed 81 \*canons, the earliest extant canon collection from any Christian council. It has however been argued that only the first 21 canons were actually composed at Elvira, and that the remaining 60 accumulated across the 4th century, although this interpretation remains controversial. Even those 21 canons provide a crucial source for church concerns in this formative period before \*Constantine I when Christians became increasingly integrated into Roman civic life. Additional canons include the oldest requirement for clerical celibacy (canon 33) and a condemnation of voluntary \*martyrs (canon 60).

**Ely (Lat. Elge)** \*Anglo-Saxon \*minster in eastern England, surrounded by marsh, full, says \*Bede, of eels (IV, 17). He records the construction here in the 670s of a \*monastery for women by Æthelthryth (Etheldreda, Audrey), the virgin queen of King

embassies

Ecgrith of Northumbria (670–85). Æthelthryth was abbess of this ascetic community for seven years; her sister Sexburg, former Queen of Kent, succeeded her. No local records survive before the 10th century. Archaeology shows the low island where the church stood was a major focus throughout the early Middle Ages with excavated settlement (showing signs of planning) and cemeteries.

R. Mortimer, R. Regan, and S. Lucy, *The Saxon and Medieval Settlement at West Fen Road, Ely: The Ashwell Site* (2005).

**embassies** See DIPLOMACY.

**Ember Days** Three days of \*fasting (Wednesday, Friday, and Saturday) in each of the four seasons (\*Latin *quattuor tempora*, from which the English 'Ember' may derive), though the spring Ember Days emerged later than the other three. Ember Days appeared in the later 4th century in northern \*Italy, then in the 5th century in \*Rome under \*Leo I the Great, who described them as ancient.

MFC  
G. G. Willis, 'Ember Days', *Essays in Early Roman Liturgy* (Alcuin Club Collections 46, 1964), 49–97.

**embole** See ANNONA.

**Emesa** (mod. Homs, Syria) \*City in the Orontes Valley roughly halfway between \*Aleppo and \*Damas-cus and controlling the Homs Gap through which runs the shortest route from the Mediterranean coast to \*Palmyra in the Syrian Desert. Emesa was made a *colonia* by the \*Emperor Caracalla, whose grandfather had been priest of the famous \*Temple of Elagabal at Emesa.

During the Persian invasion of 252/3 the forces of \*Shapur I were apparently impeded from advancing south of Emesa by a local force led by a priest of Aphrodite; at the same time \*coinage was issued in the name of a local \*usurper called Uranius (Millar, *RNE* 160–1). In the 260s Emesa formed part of the Empire of \*Palmyra and in 272 \*Aurelian defeated \*Zenobia before advancing on Palmyra itself (\*Zosimus, I, 50–4).

The dam which forms Lake Homs from waters of the Orontes is ascribed by rabbinic traditions to the \*Emperor \*Diocletian, who passed through the city on 10 May 290 (*CJust* IX, 41, 9). As elsewhere in \*Syria, marginal land around Emesa was brought into production during Late Antiquity. Silvanus, 'bishop of the churches about Emesa', was fed to wild beasts as a \*martyr of the last phase of the Great \*Persecution, having ministered for 40 years (*HE* VIII, 13, 4; IX, 6, 1).

\*Constantius II visited in 358 (*CTb* XII, 1, 25). \*Eusebius, Bishop of Emesa (d. 359), was active in the \*Arian Controversy. Under \*Julian a statue of

Dionysus was said to have been erected in the Great Church (*ChronPasch* s.a. 362; cf. \*Theodoret, *HE* III, 7, 5 and \*Theophanes, AM 5853).

\*Nemesius, bishop perhaps in the later 4th century, wrote a remarkable book *On the Nature of Man*. The novelist \*Heliodorus, author of the *Ethiopica*, came from Emesa. In the 4th/5th century a \*grammaticus Salustius of Emesa wrote a commentary on the Hellenistic poet Callimachus.

\*Sozomen describes the Church of Emesa as famous for its beauty (III, 17). Paul, Bishop of Emesa, negotiated an agreement between Syrian bishops and \*Cyril of Alexandria in 433 after the First \*Council of \*Ephesus. Uranius, bishop in the mid-5th century, was a correspondent of Theodoret (*ep.* 122ff.) and signed the condemnation of \*Eutyches at the Council of \*Constantinople of 449. The city was the home of S. \*Symeon the Holy Fool, who numbered among his acquaintance a \*Jewish \*glass blower.

One of the Heads of S. John the Baptist was discovered in 452 after the archimandrite Marcellus of the Monastery of the Cave had visions; Marcellus recorded the events (*BHG* 840 = *AASS* June IV, 724; *BHL* 4291–2; cf. \*Marcellinus Comes s.a. AD 453; *ChronPasch* s.a. AD 453). It was venerated by \*Severus of \*Antioch and adored (in a glass jar) by the \*Piacenza Pilgrim (46). It was moved to a church in the city in 759/60 (\*Theophanes, AM 6252). Half of the church was subsequently made into a \*mosque.

During the \*Arab invasion the Romans won a victory at Emesa in 633 (Theophanes, AM 6125) but the city capitulated to the Arabs after a four-month siege in January 636. \*Khalid b. al-Walid, one of the commanders in the siege, was buried at Emesa in 642. At the time of the Battle of \*Siffin in 657 the city sided with \*'Ali. Emesa became involved in the fighting between the \*Caliph \*Marwan II and \*Suleiman b. Hisham in 743–5, suffering a siege of four months, after which Marwan destroyed its city walls (\*Agapius, 259–60).

**Emmaus** See NICOPOLIS EMMAUS.

**emperor** The emperor's principal title was \*Augustus (plur. Augusti) with the term \*Caesar being used

from time to time to designate a junior emperor. There were many cases of co-rule, including rule by two or more Augusti, as well as the periodic designation of Caesars. The effectiveness of these arrangements varied greatly, case by case. Early practice had indicated that imperial office and titles were conferred by a decree of the \*Senate. In reality, numerous reigns were launched by the \*acclamation of an \*army, leaving \*senators to ratify a *fait accompli*.

The beginning of Late Antiquity was marked by chronic instability in high Roman politics, the so-called Third Century \*Crisis. Whereas Septimius Severus died of natural causes in 211, after a reign of almost eighteen years, the next six Augusti were all murdered over a period of 24 years, ending the Severan dynasty in 235. This instability then became worse. Between the proclamation of Maximinus I the Thracian in 235 and the killing of \*Carinus in 285, there were some 28 legitimized or presumed-legitimate Augusti. (These included several near-forgotten sons of better-known fathers: Philip II son of Philip the Arab, Herennius Etruscus and Hostilian sons of \*Decius, Volusianus son of \*Trebonianus Gallus, Valerian II and Saloninus sons of \*Gallienus). Of these 28, the majority died violently, chiefly in civil war or by assassination but occasionally in foreign wars. There were also numerous other claimants (see USURPER).

The final emperor to emerge in this volatile half-century, \*Diocletian (284–305), is often taken to mark the beginning of the Later Roman state. But this view is simplistic. Despite its instability, the mid-3rd century saw some important emperors: Gallienus (253–68) and \*Aurelian (270–5) secured military and political reforms, and strategic successes. Major reforms unfolded over the period from Gallienus to \*Constantine I (306–37).

The inherent difficulties of sole emperors in an empire with three important and active military \*frontiers and in need of a secure system of succession were obvious. In 293, the Augusti Diocletian and \*Maximian created the \*Tetrarchy—rule by a college of four emperors—by appointing two Caesars. Diocletian and Maximian stepped down (the latter unwillingly) in 305, giving way to the Caesars. But the notion of retirement did not prove popular with emperors. The Tetrarchic experiment soon broke down with a resurgence of individual and dynastic ambitions. For most of the next century and a half, emperors were drawn from the dynasties of \*Constantine, \*Valentinian I (364–75), and \*Theodosius I (379–95).

Co-rule remained usual until the disappearance of the Western Empire. The rank of Caesar, or even Augustus, was sometimes given to minors in the imperial family, and adult co-rule was also commonplace. It is somewhat misleading to think that the death of Theodosius I in 395, and the division of the Empire

between his young sons \*Honorius (393–423) and \*Arcadius (395–408), marked a turning point. Theodosius had only been sole ruler very briefly in the 390s. Before that, one must turn back a generation to find rule from a single \*court, to the brief reigns of \*Julian (361–3) and \*Jovian (363–4).

What is also noticeable is the relative stability of the throne at \*Constantinople in the three centuries following Theodosius I's death. Some of this stability was due to effective regencies. From Arcadius to the end of the Heraclian dynasty in 695, there were twenty emperors and one \*empress, with some phases of co-rule. Subsequent years saw renewed volatility, until the long reigns of \*Leo III (717–41) and \*Constantine V (741–75).

The elevation of minors serves to underline the importance of the court that surrounded each emperor. The closing years of the Western Empire were marked by a tendency for leading generals to dominate policy. In the Eastern Empire, a stronger civilian influence at court should not mask the fact that even adult emperors were highly reliant on the senior officials around them. Too uniform a picture of 'the emperor at work' is misleading. During the half-millennium of Late Antiquity, the work ethic and aptitude even of adult emperors varied greatly. Some, for better or worse, were addicted to their work. \*Justinian I (527–65) had a reputation for not sleeping, chillingly described in the *Secret History* of \*Procopius (*Anecd.* 12, 20–3). Others balanced work with hobbies: the many diversions of \*Theodosius II (408–50) included calligraphy, \*sculpture, and \*polo; yet he also kept more of an eye on government than his critics supposed. Some were desperately wayward, such as the Caesar \*Gallus (351–4), who had a penchant for gratuitous violence against officials and members of the civic \*aristocracy, displayed an excessive fondness for the \*circus, and liked to tour the \*taverns of \*Antioch in disguise asking drinkers their opinion of the Caesar Gallus (\*Ammianus, XIV, 1, 9).

All emperors were confronted by a heavy sediment of received wisdom. They were expected to symbolize imperial unity. An ancient legacy of classical notions about kingship, much of it framed in the Hellenistic Age, may be found, for instance, in \*Eusebius of \*Caesarea's Tricennalia Oration in honour of Constantine. This had created expectations about giving justice, satisfying the divine powers (whether pagan or, after Constantine, Christian), and providing leadership in war. This is particularly visible in the 5th-century East, where the *noblesse de robe* who ran the central \*administration at Constantinople had clear ideas about the proper way things should be done. The author who speaks for them is \*John Lydus, and the emperor who emerged from their ranks was \*Anastasius I; Procopius expressed the anger of this imperial \*aristocracy at the way Justinian passed them over and

appointed to high office ill-educated boors such as \*John the Cappadocian.

Imperial publicity, in \*panegyrics and on the \*coinage, strove to express this set of received ideas. But the interpretation of received wisdom was often hotly contested. For example, the rise of Christianity directly affected ideas about the relation between royal and divine authority and the conduct of the \*imperial cult. In practice, the core workload of all emperors involved the oversight of the principal civil and military officials, who often gathered in the \*Consistorium—an emergency meeting of the Consistorium is described by Ammianus (XV, 5, 18–22). At a less ideological level, however monolithic autocracies appear to outsiders and to those they govern, they have their internal politics (e.g. Ammianus, XVI, 7, 1–2). It was not only the emperor who decided what was commanded in his name.

Different emperors would be involved to varying degrees in policy decisions; the promulgation of laws and the giving of decisions in legal cases; in receiving delegations from within or beyond the Empire, and in conferring appointments and other \*patronage. \*Valentinian I died of 'a mighty fit of wrath' brought on by an embassy of the \*Quadi (Ammianus, XXX, 6, 1–3). Yet the Augusti faced no coherent form of performance management. Posthumous judgement might extend to \*damnatio memoriae. Violent death was an occupational hazard. But the Roman Empire's higher governance included no effective civil process for relieving an emperor of office, or rendering him publicly accountable for shortcomings. AGS

**emphyteusis** A form of \*lease. The Roman institution of *emphyteusis* originated in the practice whereby municipal land or land belonging to the state was leased out for very long periods (or perpetually) in return for an annual rent. Unlike normal leases or usufructuary rights, these grants were deemed to be both inheritable and alienable. In Late Antiquity, this practice was assimilated under the title of *emphyteusis* (which initially applied to a similar practice of Greek origin) and came

to be adopted by private landowners and the Church. Perpetual *emphyteusis* in particular effectively granted a lessee full rights of ownership without conveying full title. For that reason, the emphyteutic leasing of ecclesiastical property (which was meant to be inalienable) came to be regarded with considerable suspicion. PS Nicholas, *Introduction to Roman Law*.

**empress** Women in the Roman imperial \*household might bear the title \*Augusta (analogous to the male title \*Augustus) and sometimes, in the 5th century, the title \*Aelia (e.g. the sisters of \*Theodosius II). The title Augusta had been conferred selectively on the immediate relations of emperors since the early 1st century AD. It was most often given to the wives of emperors; but mothers, daughters, and others also received it. For example, it was \*Constantine I (306–37) who named his mother \*Helena as Augusta; while \*Honorius, sister of \*Valentinian III (425–55), received the title as a child. The family name Aelia, associated with \*Aelia Flavia Flaccilla, wife of \*Theodosius I (379–95), appears to have become a supplementary title. \*Eudoxia became Augusta in 400, though she had married \*Arcadius (395–408) five years earlier. And she was styled Aelia Eudoxia Augusta on \*coinage, despite there being apparently no relevant family connection. Such patterns were repeated several times in the 5th century.

Roman empresses in Late Antiquity might very occasionally rule in their own right, for very brief but crucial interludes. When Theodosius II (408–50) died, his sister \*Pulcheria, already an empress, initially ruled alone. After about a month, however, she was obliged to choose the next emperor, selecting \*Marcian (450–7) by arranging to marry him. It is possible that she conferred the imperial diadem and vestments on him personally. Not dissimilarly, though even more quickly, the Empress \*Ariadne, widow of \*Zeno (474–5; 476–91), chose \*Anastasius I (491–518) as the next emperor two days after Zeno's death, also arranging to marry him. It is only when we pass beyond Late Antiquity to the end of the 8th century that we find an 'empress regnant' for an extended time in the case of Irene (797–802).

Empresses in Late Antiquity could possess great influence and, at times, power. This included the ability to address the emperor and chief ministers freely—a form of \**parrhesia* allegedly deployed to notable effect by \*Theodora, wife of \*Justinian I (527–65), during the \*Nika Riots at \*Constantinople in 532. When Justinian was considering fleeing the city, Theodora is reported (\*Procopius, *Persian*, I, 24, 37) to have echoed an ancient saying: 'Empire is a fine shroud' (or perhaps, as it sometimes rendered, 'The purple is a fine winding sheet'). Thereupon, Justinian is said to have discovered his courage, deciding to stay and face the public \*disorder. The episode might be fictional; but it remains a

revealing index of what could be thought, by contemporaries, to be credible about the influence of an empress's forthright speech. Theodora was not afraid to adopt a position different from that of Justinian on Christological questions which were dividing the East and took into her palace \*Miaphysite refugees from Mesopotamia, including \*John of Ephesus.

Empresses could exercise influence and power either as regents or simply by way of close kinship (Gk. *kedeia*) with emperors. Pulcheria, for example, was a determined and able politician from a very early age. The historian \*Sozomen thought her decision to remain a \*virgin was a deliberate strategy to avoid coming under the influence of a husband and his kin, maximizing her independence (IX, 1, 3–4). At the age of about 15 she had taken over from the powerful \*eunuch Antiochus the important post of tutor to her brother Theodosius II and waged a court campaign against Antiochus which culminated in his dismissal as \*Praepositus Sacri Cubiculi in 421 and priestly ordination. Similarly Theodora's plotting for the removal of the Praefectus Praetorio John the Cappadocian culminated in his dismissal and ordination in 541.

Where Pulcheria had adapted the public virtues of piety and chastity to her political advantage, other virtues could lend themselves to a similar end. For example, philanthropy could become a form of \*patronage. Helena was famous for acts of giving, drawing lavishly on the imperial treasury with her son's permission (\*Eusebius, *VCon* III, 44–5). Constantine put his mother Helena and his wife \*Fausta on the coinage, as \*Diocletian had put \*Prisca.

Roman empresses in Late Antiquity should not be underestimated. They were often very near, and sometimes managed to become, the centre of power. Their prestige was regularly underscored through public iconography. Their perceived virtues were part of a public persona.

**enamel** A paste made of powdered, coloured \*glass, which is melted and bonded with a metal base plate (mostly \*gold, \*silver, or \*copper alloys) creating effects of contrasts between colours and materials. Different coloured opaque glasses are often combined with translucent glasses, which allow the gold from underneath to reflect the light. While in Antiquity \*champlevé enamel was favoured, during the Early Middle Ages \*cloisonné enamel became common. A variation, mainly known from Byzantine art, is the 'sunken enamel' (*Senkschmelz*), where parts of the object are decorated with sunken cloisonné enamel, while the rest remains bare metal. This creates the effect that the motif is floating on a gold ground. In Carolingian times enamel reverted to the champlevé technique. In the British Isles enamel has a long tradition in Celtic art, developing under Roman influence to high-quality techniques (e.g. millefiori enamel inlays). During the 8th century AD in \*Ireland enamel craft flourished, creating unique artworks, such as the Ardagh Chalice.

**Encratites** Term used in heresiological literature to describe an ascetic movement of the 2nd century, from Gk. *enkrateia*, 'discipline'. Their \*asceticism consisted principally of abstention from \*marriage and from the eating of meat. They are associated most famously with Tatian (fl. c.170), who was born in \*Mesopotamia ('Assyria') and became a Christian in \*Rome, where he was a student of Justin Martyr. He returned to his homeland, where such asceticism was more widely practised. His Gospel harmony, the *Diatessaron*, evidences an ascetic interpretation. Since all reports about the Encratites are hostile, it is impossible to know if there was an identifiable group or if the term was used to signify a more generalized ascetic form of Christianity prevalent in Mesopotamia.

**engineering** The principles of Roman engineering, based on authorities like \*Philo of Byzantium, \*Vitruvius, and \*Hero of Alexandria, remained familiar to builders, military advisers, and technical writers throughout Late Antiquity. Considerable overlap existed between civil and military applications. Land \*surveyors were essential to \*city building and military campaigning, from the choice of individual sites to their connection by skilfully sited \*roads and \*bridges.

The expansion and maintenance of a network of state-sponsored roads, as recorded by the *Peutingere Map*, were essential to the Late Empire's military and economic security. \*Procopius and others recognized the construction of stone and \*timber bridges (such as the \*Sangarius Bridge) as significant achievements in the 6th century.

Traditional principles of hydrological engineering informed the design and repair of \*water supply systems, from rural \*qanats and \*aqueducts to urban distribution networks and household facilities. Force pumps and similar water-lifting devices were needed equally at sea and for \*mining. The challenge of \*quarrying and of moving \*obelisks (as illustrated on the base of the Obelisk of \*Theodosius I at \*Constantinople), large columns, and other stone objects encouraged the use of architectural \*spolia, especially for state-sponsored projects such as urban fortifications. Military engineers drew on Hellenistic authorities in developing field weaponry and siegecraft, and from the 6th century turned increasingly from torsion \*artillery to the tension-powered ballista and traction trebuchet.

The greatest achievements took place in Constantinople under imperial sponsorship. The \*city's early development included surveying an irregular site, laying out \*streets and plazas, shaping \*harbours, and devising a water system with reservoirs, \*cisterns, \*baths, and fountains fed by an extraordinarily long aqueduct. The early 5th-century land walls included a forward moat and two powerful walls, each with more than 90 towers and six main gates spread over a length of nearly 6 km

(3.7 miles). The building of the Church of the \*Holy Wisdom by \*Anthemius of \*Tralles and \*Isidore of \*Miletus deployed complex structural forms on an unprecedented scale. Other advanced technological devices include a public *horologion* and hydraulic or pneumatic automata in the imperial \*Palace. MLR Oleson, *OHETCW*.

**Ennaton, Monastery of** Named from its location at the ninth milestone on the road west of \*Alexandria, Ennaton (Enaton) became a major monastic centre. At its height in the 5th–7th centuries, it included numerous independent monastic establishments federated under a superior (*hegumenos*) and community assembly. Ennaton was a centre of learning and became a haven of Coptic \*Miaphysite theology and devotion. Its superior Longinus rallied behind \*Dioscorus, \*Patriarch of Alexandria, during the disputes engaged at the \*Council of \*Chalcedon (AD 451). The community was subsequently a refuge for opponents of the council. It provided Coptic Patriarchs of Alexandria, some of whom resided there. \*John Moschus and \*Sophronius visited. Although sacked during the \*Persian invasion in 619, the Ennaton survived into the 14th/16th centuries, though evidence of its later years is scarce. JEG

*CoptEnc* 3 (1991) s.v. Enaton, cols. 954–8 (Gascou).

*Life of Longinus*: ET T. Vivian, *Words to Live By: Journeys in Ancient and Modern Egyptian Monasticism* (CSS 207P, 2005), 237–81.

**Ennodius, Magnus Felix** (474–17 July 521) Saint, \*Bishop of \*Pavia (513/14), and principal source (with \*Boethius and \*Cassiodorus) for the \*fall of the Western Roman Empire and the \*Ostrogothic kingdom of \*Italy.

Ennodius' writings pre-date his episcopate. All in \*Latin, they range from \*letters and \*epigrams to \*saints' lives, \*hymns, and controversial pamphlets. The best known are the \*Panegyric of \*Theoderic the \*Ostrogoth (CPL 1492) and the *Life* of \*Epiphanius of \*Pavia (CPL 1494).

An orphaned aristocrat from \*Arles, he was brought up in \*Liguria by an aunt and studied with the \*grammaticus Deuterius of \*Milan. Ennodius married young, but the relationship ended during Theoderic's campaign against \*Odoacer and he entered the religious life (*Opera*, 438 Vogel). His \*rhetorical talents commended him to Bishop Epiphanius of Pavia (Ticinum), whom he celebrated in poetry and prose (*Opera*, 43 and

80 Vogel). After Epiphanius died in 496, Ennodius joined the clergy of Laurentius of \*Milan, Pavia's \*metropolitan bishop, and eventually became a \*deacon. He also served as papal amanuensis during the schism that arose in the \*City of \*Rome in 498 under the shadow of the \*Acacian Schism, when \*Symmachus, a popular deacon, was elected Pope simultaneously with the pro-Byzantine \*priest \*Laurentius. The first author to call the Bishop of Rome exclusively 'papa', Ennodius wrote several pieces for Symmachus, notably the *Libellus pro Synodo* (*Opera*, 49 Vogel), which defended the synod of 502 and asserted the superiority of the Bishop of Rome, as successor to S. Peter, to all earthly judgement. He also wrote letters on doctrinal and disciplinary matters and provided material support.

Ennodius' letters, together with the declamations and the *Paraenesis Didascalica* for Ambrosius and Beatus (*Opera*, 452 Vogel), show his lively interest in literary and pedagogical matters, clerical responsibilities notwithstanding. His contacts encompassed \*court functionaries at \*Ravenna, Roman \*senators, particularly the family of the pro-Symmachan Faustus Niger and his sons Avienus and Messala, and friends and relatives in \*Italy and \*Gaul, including \*Boethius, \*Constantius, Ennodius' sister Euprepia, nephews Lupicinus and Parthenius, Maximus (who received the epithalamium in *Opera*, 388 Vogel), \*Arator (future author of *De Actibus Apostolorum*), Laconius (adviser to the \*Burgundian King \*Gundobad), the *rhetor* \*Julianus Pomerius, holy women like Ennodius' ex-wife Speciosa, and various clergymen. Dispatched to \*Constantinople in 515 and 517 to settle the Acacian Schism (\**Liber Pontificalis*, 54; \**Collectio Avellana*, 116, 116a–b, 125–7, 138), Ennodius was thwarted by Pope \*Hormisdas' inflexible instructions and \*Anastasius I's imperial self-respect. His metrical \*epitaph (*CPL* 1501, now in the Church of S. Michele Maggiore, Pavia) nevertheless claims credit for reunifying the Eastern and Western Churches. SAHK

**entertainment, public** Staged mass spectacles such as animal hunts (\**venationes*), \*gladiatorial games (*munera*), \*chariot racing (*ludi circenses*), theatrical drama (*ludi scaenici*), and athletic contests (*certamines* or *agones*) were the staples of public entertainment in the \*cities of the Roman Empire.

Roman-style chariot games spread widely along with \*circus architecture, and literary and material evidence, ranging from \*epigrams to floor \*mosaics, attests to their appeal and pervasive influence on a popular culture of entertainment shared by all classes. \*Ammianus Marcellinus describes vividly the eager anticipation of the *plebs urbana* for the dawn of a racing day at the Circus Maximus (XXVIII, 4, 31).

Gladiatorial *munera* originated in \*Rome but found universal support, and the widespread adoption of amphitheatre games was an important way of spreading Roman customs to the \*provinces. Theatrical shows featuring \*drama and dance performed on stage by pantomimes and mimes were the commonest kind of public entertainment. Interestingly, even athletic contests became more theatrical as a 'spectator sport', with athletes both competing for prizes at sacral agonistic \*festivals and also appearing in medley civic shows alongside dancing girls and animal fighters.

The people's demand for these public spectacles did not diminish in Late Antiquity. The \**Codex-Calendar* of 354 lays out the annual rhythms of the City of Rome set by festival days with associated *ludi* and *munera*: it lists 101 days of *ludi scaenici*, 64 of *ludi circenses*, and 10 of *munera*. Few cities had endowed civic funds to support such shows. Imperial gifts and conspicuous spending by the civic \*aristocracy paid for the exhibition of wild beasts, animal fighters, and gladiators in amphitheatres, for the \*horses and charioteers in hippodromes, and for pantomimes and mimes to perform in theatres.

The ability of the City of Rome to call on the support of both a very rich senatorial \*aristocracy and the (non-resident) \*emperors for support was exceptional; but even at Rome the demand for shows sometimes outstripped available resources. As \*Praefectus Urbi in 384–5, \*Symmachus the orator asked \*Valentinian II to provide for chariot races and theatrical shows; next to their food supply, Symmachus pleads (*Relatio* 6), what the people of Rome most cared about was entertainment. At a time when religious divisions threatened to hinder cooperation between the \*Senate and the Christian emperor, provision for civic entertainment was a shared priority.

Despite various vicissitudes and dwindling resources, cities struggled to recruit trained gladiators, and

competed for \*actors in travelling troupes to provide their civic shows. Imperial legislation forbade cities to kidnap actresses (*CTh* XV, 7, 5; XI, 41, 5). Rome and \*Carthage even sought to create their own permanent corps of stage performers coordinated by a *Tribunus Voluptatum* (Lim 1996; Jiménez Sánchez). The *ludi* and *munera* had a sacred character for pagans, so their religious connotations were much discussed in Late Antiquity. Imperial publicity presented the *gaudium* and *laetitia* of the people, their joy and pleasure at shows, as outward signs of the emperors' success in securing the *felicitas temporum*, the Good Fortune of the Age, and so represented the shows as *commoda*, necessary civic amenities. *Voluptates*, a term used already in the Early Empire, came to be the word which denoted in their entirety the mass spectacles that made up Roman public entertainment (Salzmann, 237–9; Lim 1996; Puk, 63–8); the word was a 'neutral' label without religious connotations, albeit a word which seldom lacked the implication that entertainments were concessions to vulgar taste. Yet Christian authors criticized even such desacralized public entertainment just as vigorously as they had when public \*sacrifices were still being offered; preachers such as Tertullian, \*John Chrysostom, and, latterly, \*Augustine denounced the public shows as both immoral and idolatrous, even while much of the general Christian population found no incompatibility between their faith and their attendance at shows. The Church responded to the allurements of secular spectacles by developing Christian liturgical calendars filled with \*festivals dedicated to \*martyrs, apparent at Rome in the *Codex-Calendar of 354* and in central \*Anatolia in the \*sermons of \*Basil of \*Caesarea and \*Gregory of \*Nyssa; Christian rituals became more theatrical and their significance was amplified by public \*preaching. Texts that reflect the Christian critique of mass spectacles supply much of our knowledge about them but are challenging to interpret as historical sources (Jürgen; Weismann; Luggaresi). Depicting *ludi* and *munera* as necessary forms of public entertainment became a convenient trope as Christian rulers rationalized their own support for them as concessions to the people's *voluntas spectandi*, their wish for spectacles. Categorizing spectacles as merely secular entertainment protected them from elimination by those who sought the wholesale Christianization of society (Markus; Lim 1999).

Political change in the 5th-century West caused urban life, and concomitant civic entertainments, to contract. Most Romans saw the \*Barbarian Migrations as a sign of decline, but \*Salvian of \*Marseilles praised the \*Vandals for ending or at least lessening the corrupting influence of shows on Roman cities. But the public entertainments did not cease suddenly in the 5th-century West. \*Caesarius preached against observance of

the \*Kalends of January at \*Arles as a manifestation of \*paganism, despite the fact that the celebrations seem to have been simply secular (\**Sermons*, 192–3). Around the same time, Vandal kings presented entertainments as royal spectacles and \*Theoderic the \*Ostrogoth sponsored chariot races, animal hunts, and theatrical shows.

In the East, the \*circus came to occupy a central place in public entertainment, particularly at \*Constantinople, but also at other great cities including \*Antioch, \*Alexandria, \*Apamea, and \*Gerasa. \*Lions were still being collected for use in civic entertainment in the early 5th century (*CTh* XV, 11, 2) and wild beast shows survived long enough in the cities of the East to be prohibited by the Emperor \*Anastasius I in 499 (\*Joshua the Stylite, 34; \*Procopius of \*Gaza, *Panegyric*, 16; \*Theophanes, AM 5993). His abolition of pantomime dancers in all the cities of the Empire two years later was cordially welcomed by the chronicler known as Joshua the Stylite (46; cf. 27, 30 and 33 and \*Zosimus, I, 6, 1). In the late 6th century, \*Corippus (*In Laudem Iustini Minoris*, I, 314–44) composed a complex account of the cosmological significance of chariot racing, of the hippodrome where it was performed, and of the colours of the \*factions which sustained it. Less cerebral partisans of the factions, on the other hand, were potent promoters of public \*disorder right up to the eve of the \*Arab conquests, as is evident from the *Teaching of \*Jacob the Newly-Baptized*. **Ephesus** The greatest \*city of ancient Asia Minor, Ephesus (near modern Selçuk, at the mouth of the Cayster River Valley) is one of the most fully excavated Late Antique cities of the eastern Mediterranean. The city was the capital both of the \*Tetrarchic \*province of \*Asia and the \*Diocesis \*Asiana; its civic government remained active through the 4th and early 5th centuries, and the city's reputed links with Ss. John the Evangelist, Mary Magdalene, and the Blessed Virgin \*Mary made it an important place of \*pilgrimage throughout Late Antiquity. The Roman city was seriously damaged by a series of 3rd-century \*earthquakes, and a large-scale reconstruction of public buildings was not undertaken until the late 4th or early 5th century.

The western part of the city was extensively remodelled in Late Antiquity. The broad avenue running from the theatre to the \*harbour (the 'Arcadiane') was reconstructed c.400 with covered colonnades and \*shops on both sides, and night-time street lighting; a lavish monument to the four Evangelists on this \*street may date to the reign of \*Justinian I. The Harbour \*baths were renovated by \*Constantius II. To the north of the Arcadiane, beyond a large residential area, was a great \*basilica dedicated to the Virgin Mary, built in the ruins of the south stoa of the colossal \*Temple of Hadrian Olympios. The date of the church has been disputed, but recent excavations suggest a late 4th-century date; the church should therefore be identified as the site of the church \*councils of 431 and 449. The most important secular building of Late Antique Ephesus is a large palatial complex of the early 5th century, the 'Byzantine Governor's Palace', east of the Church of the Virgin Mary, perhaps the residence of a provincial official.

The centre of the Late Antique city was the Embolos, the wide paved road connecting the western part of the city to the Upper Agora and Temple of Domitian. Late Roman public documents and honorific statues for \*governors, private citizens, and members of the imperial family were erected here, and \*graffiti and \*acclamations are found in great numbers. On the north side of the Embolos, statues of the members of the first Tetrarchy were erected in front of the small Temple of Hadrian. The reliefs from the temple itself, traditionally attributed to the Tetrarchic or \*Theodosian period, have now been firmly dated to the early 2nd century AD. The 2nd-century baths adjoining the temple were restored in the late 4th century by a woman named Scholastica.

To the south of the Embolos, the lavish terrace \*houses ('Hanghäuser') suffered extensive earthquake

damage in the late 3rd century AD. Some of the housing plots were divided up into smaller dwellings and continued to be occupied in Late Antiquity, but the fine internal decoration of Hanghaus 2, formerly considered as evidence for standards of living in Late Roman Ephesus, is now dated in its entirety to the 2nd and 3rd centuries. The old public buildings of the Upper Agora, at the east end of the Embolos, were also gradually replaced by shops and private houses.

Outside the urban centre, the most important building of Late Roman Ephesus was the Church of S. John on the hill of Selçuk (Byzantine Theologo), the traditional burial place of S. John the Evangelist. A small church had existed on the site since the 4th century; \*Egeria planned to visit it (23, 10). \*Justinian I replaced this with an enormous cruciform basilica (begun in 535/6), with lavish interior decoration, on the same plan as the Church of the \*Holy Apostles in \*Constantinople. Its courtyard was used for clandestine nocturnal \*Miaphysite ordinations (\*John of Ephesus, *Lives of the Eastern Saints*, 25). The extant \*aqueduct serving the hill of Selçuk probably dates to the same period.

Widespread destruction took place on the Embolos and the Upper Agora in the early 7th century, perhaps as the result of an \*earthquake in c.614; the population of Ephesus declined sharply in the late 7th century. At an uncertain date, probably in the 7th or 8th century, a new fortification wall was built, enclosing a drastically reduced area in the north-west of the ancient settlement; the hill of Selçuk was also walled at around the same time. Ephesus retained its regional significance in the 8th century and afterwards, as capital of the \*Thra-kesion \*Theme. PJT

**Ephesus, councils of** Two \*councils of the Church were held at \*Ephesus, the Third Œcumenical Council of 431 which condemned \*Nestorius, and the so-called Latrocinium or 'Robber' Council of 449, whose decrees were nullified by the Council of \*Chalcedon in 451.

The council of 431 was convened by the \*Emperor \*Theodosius II to address the theological problem posed by Nestorius, \*Patriarch of \*Constantinople. \*Cyril, Patriarch of \*Alexandria, and Memnon, \*Bishop

of Ephesus, presided over approximately 200 bishops gathered between 22 June and 22 July 431 in the Church of S. \*Mary, near the \*harbour in Ephesus. They summoned Nestorius three times to appear, but he refused. The council met without him. In his absence, they judged, by the standard of the \*Creed articulated at the Council of \*Nicaea (325), Nestorius' teaching that Christ consisted of two natures and possibly two persons, the human and the divine. Among the documents the council incorporated into their evidence was Cyril's third \*letter to Nestorius, which affirmed that the divine and human natures of Christ were truly united in a natural union. After considering Nestorius' letters, \*sermons he had delivered in Ephesus, and a *florilegium* of his writings, the council deposed him (22 June 431) according to the ecclesiastical \*canons and in accord with a synodal decree from \*Rome (August 430). The delegation from \*Antioch, under the leadership of John, Patriarch of Antioch, arrived too late to participate in the proceedings and held a counter-synod of 43 bishops and \*priests to depose Cyril and Memnon (28 June 431). Theodosius II summoned Cyril and John first to Chalcedon (September/October 431) and then to \*Nicomedia to negotiate their differences.

Theodosius II convened the 'Robber' Council of Ephesus II in August 449, by an imperial *sacra* (30 March 449) to judge the orthodoxy of \*Eutyches, who had been deposed by a local synod under Flavian, Patriarch of Constantinople, for teaching that Christ had two natures before the union, but one nature afterwards. \*Dioscorus, Cyril's successor at Alexandria, presided over a gathering of 130 Eastern bishops and clergy, supporters of Eutyches who were generally sympathetic to his plight. They voted to overturn Eutyches' conviction and passed a sentence of deposition against Flavian and Eusebius of Dorylaeum, both of whom were later judged orthodox. The events unfolded amid threats of physical violence against anyone who refused to cooperate. After the accession of the \*Emperor \*Marcian in 451 the Council of Chalcedon overturned the 'Robber' Council of Ephesus for violating the canons and for its brutal suppression of orthodox bishops. **Ephrem** (c.306–373) \*Syriac poet and theologian.

### Life

Ephrem was born in the early years of the 4th century and spent most of his life serving as a \*deacon under the local \*bishop (the first being \*Jacob of \*Nisibis, d. 338) in the border \*city of Nisibis. However, when Nisibis was handed over to the \*Persian Empire and the Christian population had to leave, Ephrem became a refugee, eventually settling in the more Hellenized \*Edessa, where he lived for the last ten years of his life. He died on 9 June 373 (thus the 6th-cent. \**Chronicle of Edessa*). Ephrem was already known in his lifetime to \*Epiphanius, who calls him 'the sage among the Syrians' (*Panarion*, VI, 22, 7), and in 392 \*Jerome included him in his *De Viris Illustribus* (115). In his \*panegyric on Ephrem the later poet \*Jacob of Sarug (d. 521) portrays him as instituting choirs for women. Rather later in the 6th century, the *Life* of Ephrem sought to bring him up to date for contemporary readers, anachronistically making him into a monk, and linking him to the wider Christian world by having him visit \*Basil in \*Cappadocia and Bishoi in \*Egypt (in both cases the stories are based on the wrong identification of an anonymous 'Syrian').

### Works

Ephrem's extensive writings fall into four categories: (1) prose, (2) artistic prose, (3) narrative poetry, and (4) stanzaic poetry. His most important prose works are the commentaries on Genesis (which show a knowledge of a number of Jewish exegetical traditions), and on the \*Diatessaron (perhaps put together after his death), and various treatises against \*Marcion, \*Bardaisan, and the \*Manichaeans. Further commentaries on the \*Bible, on Acts and the Pauline Epistles, survive only in \*Armenian. Artistic prose is represented by the *Treatise on our Lord*, and the *Letter to Publius* (a meditation on the Last Judgement). A great many poems (\**memre*, 'sermones') in the seven-syllable metre (known as the 'metre of Ephrem') came to be wrongly attributed to Ephrem; those that are genuine include six poems *On Faith*, sixteen *On Nicomedia* (composed after the city's destruction in the \*earthquake of 358), and narrative poems on Jonah and the repentance of Nineveh and on the Sinful Woman of Luke 7 (*Sermones*, II, 1 and 4; both were translated into \*Greek and other languages).

Ephrem's reputation as a poet and theologian, however, rests on his stanzaic poems (\**madrashé*, 'hymni'), of which some 500 survive; these come down in

collections of different sizes, the largest being *On Faith* (87), *On Nisibis* (77; only the first half are on Nisibis; many of the rest are on Christ's Descent to Sheol), *Against Heresies* (56), *On the Church* (52), and *On Virginity* (52). Of the smaller collections especially important are those *On the Nativity* (28) and *Against Julian* (4). This last must date from shortly after the \*Emperor \*Julian's death in 363, but considerable uncertainty surrounds the chronology of his other works, and whether or not the collections go back to Ephrem himself. It is likely, however, that the *Prose Refutations*, and the *madrashe Against Heresies* and *On Faith* all date from his Edessene period.

The collections are preserved in full only in a small number of 6th-century manuscripts (in the subsequent liturgical tradition only excerpts from his genuine poems are to be found). From a 7th-century index of the melodies (*gale*) used by Ephrem, it is clear that two further extensive collections once existed. Particularly famous is a group of five 'On the Pearl', in the collection *On Faith*. Many of the *madrashe* in the collection on Nisibis concern its bishops and the \*siege by \*Shapur II in 350.

A key term in Ephrem's thought is *raza* (plural *raze*), 'mystery, symbol' (in a strong sense); it is through these *raze*, hidden in both the natural world and the Bible, that he sees God as revealing something of Himself to humanity: by means of the right exercise of free will and through faith a person becomes able to perceive these *raze* with the purified interior eye, and thus to discover the interconnections in time and space between this world and the divine reality. Ephrem probably had little or no knowledge of \*Greek, but he was clearly well aware of contemporary currents of thought in the Greek-speaking world. SB

**Ephrem of Amida** \*Comes Orientis (523–4; 526), and later \*Patriarch of \*Antioch (527–45). A native of \*Amida, he spoke \*Syriac and \*Greek. As Comes, Ephrem displayed administrative skill after the Antioch \*earthquake in 526. (\**Chronicle of Edessa*, 97–9). Elected Patriarch of Antioch in 527 (\**Malalas*, XVII, 22), Ephrem violently enforced Chalcedonian Christianity in largely \*Miaphysite areas of northern \*Mesopotamia. Ephrem's contribution to theology was his Neo-Chalcedonian Christology. \*Photius summarized Ephrem's works in his *Bibliotheca* (30). Many of his theological

works are lost, but a few fragments survive, known through \*Anastasius of Sinai, Photius, and \*John of Damascus. Miaphysite sources remember Ephrem as a persecutor (\*John of \*Nikiu, 90, 32). Both Miaphysite and Chalcedonian authors acclaim Ephrem's administrative abilities (\*Zacharias Rhetor: *HE* VIII, 4; \*Michael the Elder, *Chron.* 9, 26). During \*Khosrow I's invasion of 540 he took refuge in \*Cilicia (\*Procopius, *Persian*, II, 7, 17). JNSL PLRE II, Ephraemius.

**Ephrem Syrus Graecus** Over 200 works in \*Greek are ascribed to \*Ephrem the Syrian. These fall into three main categories: (1) texts translated from \*Syriac and genuinely by Ephrem; (2) texts translated from Syriac but not by Ephrem; and (3) texts originally composed in Greek, some of which may in fact be by \*Ephrem of Amida, \*Patriarch of \*Antioch (527–45) rather than Ephrem the Syrian. Among works in the first category are the narrative poems on Jonah and the Repentance of Nineveh, and on the Sinful Woman who anointed the feet of Jesus (Luke 7); and among those in the second are the Testament of Ephrem, and the Life of Abraham of Qidun. All these were in due course translated into \*Latin. SB

**epic, Greek** Hexameter poetry continued to enjoy enormous popularity throughout Late Antiquity. Poets

enjoyed great mobility, but it is \*Egypt that stands out as a particular hotbed of poetic production and consumption.

Small-scale 'epyllia' on mythological themes (including the Calydonian Boar hunt and the sack of Troy) were produced by poets such as \*Triphiodorus, \*Colluthus, \*Soterichus, and \*Musaeus; interest both in the story of Jason and his quest for the Golden Fleece and in the Hellenistic poet Apollonius of Rhodes is suggested by an extant *Argonautica*, purportedly the work of Orpheus.

At the same time full-scale mythological epics were produced by \*Quintus of \*Smyrna (a continuation of \*Homer's *Iliad* in fourteen books) and \*Nonnus of \*Panopolis (on the adventures of Dionysus and his efforts to earn a place for himself in Olympus, in 48 books). Pisander of Laranda outdid both of these with a 60-book epic, the *Heroikai Theogamiai*, which told the story of the world down to the age of Alexander the Great. Such was its popularity that it was said to have led to the demise of the Epic Cycle.

Historical epic also flourished in its own right. An account of the sack of Thebes by Alexander the Great was the subject of a poem by Soterichus. Three fragments preserve evidence of an anonymous *Blemmyomachia* (P. Berol. 5003)—a Homeric-style account of a Roman campaign against the \*Blemmyes. \*Christodorus of \*Coptus is known to have written historical epics with the names *Isaurica* and *Lydiaca*. His hexameter description of the statues in the Baths of Zeuxippus in \*Constantinople (Book 2 of the \**Greek Anthology*) sheds light on a Late Antique interest in \*ecphrasis. Historical and scholarly/antiquarian interest is further represented by the genre of *Patria*: poems on the foundation stories of various \*cities.

A delight in verbal pyrotechnics and a playful relationship with the Classical canon (most specifically with Homer) can be clearly seen in the production of lipogrammatic versions of the *Iliad* and *Odyssey* (by Nestor of Laranda and Triphiodorus) and in the recontextualization of Homeric lines into new \*cento poems. The genre of biblical epic, well established for the \*Latin tradition, is represented by a hexameter paraphrase of S. John's Gospel, widely and plausibly accepted as the work of Nonnus. The writing of hexameters continues into the late 6th century with the short encomia by \*Dioscurus of \*Aphroditon and a two-book poem on a picture of the heavens by \*John of \*Gaza. RECS

Laura Miguélez Caverro, *Poems in Context: Greek Poetry in the Egyptian Thebaid 200–600 AD* (Sozomena—Studies in the Recovery of Ancient Texts 2, 2008).

**epic, Latin** \*Latin Late Antiquity saw the production of four main types of epic: mythological, \*panegyric, biblical, and \*hagiographical.

The sole substantial example of mythological epic is the incomplete *De Raptu Proserpinae* of \*Claudian, though we have some lines of a Latin Gigantomachy from the same author and shorter mythological poems (epyllia) from \*Dracontius.

Panegyric epic was first extensively practised by Claudian. His poems on the \*consulships of \*Honorius and \*Stilicho and the African and Gothic wars combine epic narrative techniques with the rhetorical imperatives of panegyric in a way that complicates generic identity. His example was followed by Flavius \*Merobaudes, \*Sidonius Apollinaris, Dracontius (in a poem now lost), \*Priscian, and \*Corippus.

Biblical epic, hexameter narrative poetry based on biblical texts, was the first substantial Christian poetic genre, inaugurated by \*Juvenius (c.329/30). \*Sedulius followed Juvenius in taking the Gospels as his subject, while \*Arator wrote on Acts. Recently some portions of the Gospel epic of \*Severus of Malaga have been discovered. Old Testament poetry is represented by a pseudonymous *Heptateuchos*, and by Claudius \*Marius Victorius of \*Marseilles and \*Avitus of \*Vienne (all 5th cent.).

The hagiographical epic depends extensively on the model of Sedulius' Gospel epic. Both surviving examples, by \*Paulinus of Périgueux and \*Venantius Fortunatus, treat the life of S. \*Martin of \*Tours following \*Sulpicius Severus' *Life of Saint Martin* and the supplementary stories in his *Dialogues*. \*Prudentius in his *Psychomachia* forges a new form of hexameter narrative poetry, combining personification \*allegory, epic scenes of battle, and the multiple levels of Christian exegesis. Common to much Late Latin epic, whatever its subject, is a tendency to discontinuity and a fragmented narrative structure.

**Epidaurum** (mod. Cavtat, Croatia, from *civitas*) \*City on the \*Dalmatian coast with remains of an \*aqueduct, \*temple, and two suburban \*villas. \*Bishop Fabricius attended \*councils at \*Salona in 530 and 533. In 536, at the start of the \*Gothic War, \*Justinian I's forces advanced up the Adriatic Coast from the \*harbour (\*Procopius, *Gothic*, V, 7, 26–33). The last coin from Epidaurum is from the time of \*Phocas (602–10). The \**Anonymi Cosmographia* (IV, 16) refers to *Epitaurum id est Ragusium*. \*Constantine Porphyrogenitus (*De Administrando Imperio*, 29) attributes the foundation of the nearby coastal fort of Ragusa (mod. Dubrovnik) to refugees from \*Avar and \*Slav invasion.

IDS

M. Suić, *Antički Grad: na istočnom Jadranu* (2003).

**Epidaurus** (\*Greece) \*Pagan healing sanctuary on the east coast of the Peloponnese, 40 km (25 miles) south-east of \*Corinth. The last securely datable pagan dedication (to Aesculapius of \*Aegae) was made in AD 355 in accordance with a \*dream by Mnaseas Hermioneus, the last attested \*pagan priest (*IG* IV<sup>2</sup>, 438). Three Christian churches of the early 5th and 7th centuries were built at the site; one of them, a five-aisled \*basilica, built just outside the pagan *temenos* c. AD 400, decorated with \*mosaics and with an attached \*baptistry, is one of the earliest churches in Greece. A 5th-century \*house preserves mosaics from a local school of mosaicists.

**epidemic diseases** It is difficult to identify past epidemics. The use of written sources for retrospective diagnoses is controversial and often disputed by natural scientists, because of both the absence of clear descriptions of symptoms and the possible mutation of pathogens which would alter the clinical picture of infectious diseases. Relatively few such infectious diseases leave marks on the human skeleton making them traceable by palaeopathologists while more recent attempts to identify the presence of specific epidemic diseases based on samples of DNA extracted from human remains are still controversial.

Nevertheless, some major epidemics of the past are quite safely identified due to their abundant and detailed record in the sources: the Justinianic \*Plague, \*malaria, and to a lesser extent smallpox. It is assumed that smallpox was the epidemic disease that ravaged various regions in the eastern Mediterranean in 312–13 (\*Eusebius, *HE* IX, 8, 11–12) as well as the \*city of \*Edessa in two recurring outbreaks between 494 and 502 (\*Joshua the Stylite, 26 and 38–44). The chief symptoms included pustules spread all over the body, loss of sight, and scarification among survivors, all of which agree with modern epidemiology.

Leprosy, which is recorded in \*sermons and \*saints' lives from the 4th century onwards, can be traced on human remains, but so far no sample from Late Antique populations has been securely attested. Apart from malaria, however, probably the most widespread infectious diseases in Late Antiquity would have been those of the gastrointestinal tract such as typhoid fever and shigellosis, since they thrive in conditions of poor \*sanitation and hygiene and were chiefly caused by contaminated water. Their chief symptoms, fever and diarrhoea, are ubiquitous in the source record.

Mass poisonings due to contaminated food, such as ergotism, aspergillotoxicoses (both caused by the

consumption of fungus-contaminated grain), or botulism (caused by the consumption of contaminated meat), while not epidemic diseases in the strict sense, probably also affected large groups in the period, although more securely identified instances are uncommon.

In the centuries before \*Constantine I, \*cities sought to avert epidemics by performing the sort of religious \*festivals derided by \*Arnobius (VII, 39). Later, Christian communities sought relief through \*prayer, sometimes in communal \*processions, sometimes through the intercession of \*holy men, sometimes in a combination of both, as when \*Gallus, \*Bishop of \*Clermont-Ferrand, instituted a lengthy Lenten \*pilgrimage of \*rogation when the Justinianic Plague threatened his city (\*Gregory of Tours, *HF* IV, 5). Simple physical proximity to \*relics of holy men might also provide protection, as at \*Emesa during the Justinianic Plague (\*Zacharias Rhetor, X, 9a) or at \*Antioch (\*Evagrius, IV, 35). Evagrius observed that plague came and went in accordance with the cycle of the \*indiction (IV, 29). \*Agathias records that some people thought that recurrences of disease followed natural cycles, whereas others thought they resulted from divine anger at human sin; he himself could not decide (V, 10, 5–7).

Mortality caused by epidemic diseases was considerable given that their causes were not understood and that the medical establishment could do little to contain or manage them, much less cure them. Our sources also preserve instances of epidemic diseases affecting \*animals, especially those required for agricultural labour (e.g. *VTheodSyk* 45). Such disease could contribute to failed harvests and shortages.

**epigram** Originally, a poem, usually short, inscribed on a monument. Hellenistic poets translated this epigraphic tradition into a literary genre that flourished down to the 2nd century AD. After this, virtually nothing survives until a revival of inscriptional and literary epigram in the 4th–6th centuries. It enjoyed popularity and longevity as a literary form in Late Antiquity, and the period saw both emulation of, and innovation upon, classical models.

In \*Greek the usual \*metre was the elegiac couplet, but iambic trimeter and especially stichic hexameter were also employed. Notable practitioners include the pagan \*Palladas (mainly satire), the Christian \*Bishop \*Gregory of \*Nazianzus (mainly \*epitaphs), and the poets of \*Agathias' *Cycle* (in a range of subgenres, including epideictic, \*ecphrastic, and erotic). Important

epigrams have been recovered from \*inscriptions on Late Antique buildings and monuments erected for celebrated individuals.

In \*Latin the influence of Martial is very evident in, for example, the epigrams of \*Luxorius. But the taste for translation into Latin from Greek models in the \**Epigrammata Bobiensia*, and for bilingual (Latin/Greek) epigrams in \*Ausonius, is new, as are the Christian themes in the epigrams of \*Prosper. Poets such as \*Damasus and \*Ennodius returned the epigram to its epigraphic origins by composing inscriptions for use on churches and tombs. Late Antiquity also saw the anthologizing of epigrams, in particular in the \**Anthologia Latina* in North \*Africa.

**epigraphy** See INSCRIPTIONS.

**Epigrammata Bobiensia** An anthology of \*epigrams assembled probably in the early 5th century AD. It takes its name from a lost 8th-century codex from the \*monastery of \*Bobbio, which contained the poems. Its 71 pieces vary in content, length, and metre; over 40 translate \*Greek originals. Authors include \*Naucellius, identified by some critics as the compiler of the anthology, Anicius Probinus, and Ps.-Sulpicia. While its subjects are classicizing, the anthology need not be viewed as \*pagan in character. With \*Ausonius, \*Claudian, and others, it demonstrates the popularity of epigram in Late Antiquity.

**epilepsy** Whether epilepsy was a somatic disease, with convulsions, foaming at the mouth, and physical collapse (hence 'the falling sickness'), or whether it manifested the seizure of the body by a \*demon, was a question on which Late Antique cultures reached no lasting consensus. The naturalistic views of \*Galen

predominated among doctors of the \*Greek-speaking world, as did the treatments involving \*diet, purging, and bleeding that he advocated, although other authorities cautiously embraced such remedies as \*gladiators' blood and turtle bile. However, outside the consulting room, sufferers were likely to be viewed as demoniacs or lunatics. It is no coincidence that the \*Emperor \*Zeno was posthumously stigmatized as an epileptic as well as a libertine. PHO

**Epinicus** Former \**notarius*, protégé of the \*Empress \*Verina, and a rapacious \*Praefectus Praetorio under the \*usurper \*Basiliscus in 475, he was reconciled to the Emperor \*Zeno in 476. Exiled to \*Isauria in 478 for plotting against \*Illus, then Zeno's \*Magister Officiorum, he was allowed to return after blaming Verina.

OPN

PLRE II, Epinicus.

**Epiphania** (Gk. Emathous; mod. Hama, Syria) Walled \*city of great antiquity in \*Syria Secunda on the banks of the River Orontes, about 54 km (33 miles) north of \*Emesa.

The city was one of those captured by \*Shapur I in 253 (ŠKZ 16: Chamath). \*Bishop Minicius, who attended the Synod of \*Antioch of 324/5 and the Council of \*Nicaea in 325, is the earliest bishop known by name. Under the \*Emperor \*Julian, according to the \**Chronicon Paschale*, Bishop Eustathius was so distressed at pagans, with flutes, bringing the image of a pagan god into the church, that he dropped dead (*s.a.* AD 362).

After an \*earthquake in the 4th century, the city walls and other buildings were reconstructed. A Christian \*basilica with \*mosaics and a \*baptistery bore building \*inscriptions of 412 and 415. \*Baths were provided by a private benefactor, together with wages for poor folk employed about the building (*IGLS* V/13–14, no. 1999).

The great \*houses on the Acropolis included one with elaborate floor mosaics from which the figures were subsequently obliterated. In the 5th and 6th century Epiphania was the home-town of the historians \*Eustathius of Epiphania (d. c.505), \*John of Epiphania (6th cent.), and \*Evagrius Scholasticus (c.536–c.594). In the early 6th century Bishop Cosmas was a vigorous opponent of \*Severus, the \*Miaphysite \*Patriarch of Antioch. The \*Piacenza Pilgrim passed through (46).

During the \*Arab conquest, Hama surrendered to Abu Ubayda in 636/7 and was incorporated into the

\*jund of \*Emesa (Homs). Much use was made of Late Roman \*spolia in the buildings of the Islamic city; the relation of the \*Umayyad \*Mosque to the Christian buildings preceding it is problematic. OPN

**Epiphanius, Monastery of S.** Monastic community on the west bank of the \*Nile at \*Thebes (Luxor). The \*monastery was of an informal character and consisted of several hermitages centred around a cell installed in the rock-cut tomb of the 11th-dynasty vizier Daga. From this core, the community gradually expanded to include various buildings and cells, two towers, an enclosure wall, and a cemetery.

Excavations by the Metropolitan Museum of Art in 1912–14 revealed considerable archaeological material, and \*ostraca and \*papyri (P.Mon.Epiph., written mainly in \*Greek and \*Coptic), which provide details about the community's monastic life and its relations with other communities on the west bank. A central figure in these texts is Epiphanius, who was spiritual leader of the community probably in the first quarter of the 7th century. Another person mentioned in the texts is \*Pisentius (Pesynthios), Bishop of \*Coptos (599–632), who stayed in the community at least temporarily and whose archive, now in the Louvre and various other collections, is probably also from here. Other literary works recovered from the monastery are those of Bishops \*Severus of \*Antioch (512–18) and \*Damianus of \*Alexandria (578–607), both champions of \*Miaphysitism; this reveals the doctrinal loyalties of the community. The \*papyri of the works of Severus are important as records for the transmission of his writings in Coptic.

Correspondence with Frange, a monk living in a nearby tomb, shows that the community was still functioning in the first half of the 8th century. JHFD

**Epiphanius of Pavia** (438/9–96) \*Bishop of \*Pavia 466/7–96 and frequent diplomat. In 471 he established peace between the \*Emperor \*Anthemius and the \**patricius* \*Ricimer. Later, he helped to broker a treaty between the Emperor \*Julius Nepos and the \*Visigothic King \*Euric, travelling to the \*court of the latter in 474/5. After the coup of \*Odoacer in 476, he secured good relations between the king and his \*Ligurian flock. During the conquest of \*Italy (489–93) by \*Theoderic the \*Ostrogoth, he remained neutral, ransoming captives, receiving Theoderic's \*patronage, and securing a general amnesty following Theoderic's victory. In 494 Theoderic sent him on a mission to King \*Gundobad in \*Burgundy in order to establish peace and free Ligurian captives. He was successful, ransoming 6,000 individuals. He died of an illness in \*Pavia, having returned recently from a mission to \*Ravenna. The principal sources for his life are a birthday speech and *Vita*, both composed by \*Ennodius in 495 and 501/4, respectively. JJA

**Epiphanius of Salamis** (367–403) \*Bishop of Constantia (\*Salamis) in \*Cyprus. Born in 310/20 in Besanduce, near Eleutheropolis in \*Palestine, Epiphanius was educated from boyhood by monks in \*Egypt (\*Sozomen, VI, 32). He retained a deep knowledge of scripture, a distrust of systematic speculation in Christian or non-Christian thought, a lifelong devotion to \*Athanasius, and an antipathy to \*Arianism which would eventually show itself in an aversion to the \*Origenism which he regarded as its forerunner.

Around 335 he founded a \*monastery in or near Besanduce. In the 30 years of his abbacy which followed, he was already busy collecting material about non-Christian and heterodox Christian ways of

thought, and refuting those which threatened to infect the churches of his region.

The background to his election in 367 to the metropolitan see of Constantia (formerly Salamis) in Cyprus is obscure. Despite his clear anti-Arian credentials, the \*Homoean \*Emperor \*Valens made no move to block his appointment.

His campaign against \*heresy continued with his publication in 373/4 of the *Ancoratus*, the tract 'anchored' in the biblical faith and conceived as a \*letter of instruction about mission and \*baptism intended to assist in winning over those who denied the divinity of the Holy Spirit. It was followed in 375–377/8 by his most important work, the *Panarion* ('Medicine-Chest' against heterodoxy) or *Adversus Haereses*, which describes and criticizes the 80 *haireseis* or divisions of the human race along religious or philosophical lines which arise from the absence of the illumination of divine revelation from human life and thought. His descriptions, from a variety of sources, retain their value when treated critically. His accounts of the classical \*philosophers will represent what was found in the handbooks of his time, and the publication of the \*Mani \*papyri and the \*Nag Hammadi \*library in the last century have enhanced his credibility as a reporter of sectarian practices.

His literary work continued with the publication c.392 of *De Mensuris et Ponderibus*, a general introduction to the text of the (Greek) Old Testament, including an explanation of biblical \*weights and measures, and of *De XII Gemmis* in c.390 or 393/4, a commentary on the twelve precious \*stones on Aaron's robes (cf. Exodus 28:9–21).

He was also busy with church affairs outside Cyprus; in 392 he attended the Synod of \*Rome, which dealt with the divisions in the Church of \*Antioch, and in the 390s he strove repeatedly (and futilely) to get John, \*Patriarch of \*Jerusalem, to condemn \*Origen (\*Letter preserved in \*Latin as \*Jerome, *ep.* 51; \*Socrates, VI, 10). After his own synod condemned Origen in 401, though, he brought its decree to \*Constantinople himself at the request of \*Theophilus, Patriarch of \*Alexandria, whose \*Origenist monks had sought refuge at Constantinople with \*John Chrysostom after Theophilus had driven them out of \*Egypt. He at first treated John Chrysostom with the same contemptuous arrogance that he had formerly displayed toward John of Jerusalem, but something seems eventually to have suggested to him that he had misunderstood the true state of affairs, and in 403 he took ship for Cyprus, only to die on board (Socrates, VI, 12 and 14–15; Sozomen, VIII, 14–16). The \*Piacenza Pilgrim (1) records his tomb at Constantia (\*Salamis). PRA

Zu Cassiodorus-Epiphanius Historia Ecclesiastica Tripartita* (1972).

**Epiphany** The \*Greek word *epiphaneia* (showing forth) appears several times in the New Testament. The \*festival emerges at the beginning of the 3rd century in \*Egypt. It was initially a celebration of the \*Baptism of Jesus as the manifestation of his divinity ('This is my Son, my Beloved...'), and in some churches supplemented \*Easter as a time for baptism

of new Christians. The visit of the Magi to the infant Jesus is not associated with it until the mid-4th century.

The earliest extant Epiphany sermon in \*Latin was preached by \*Chromatius, \*Bishop of \*Aquilaia (c.388–407), and like the earlier Egyptian festival it also celebrates the revelation of Jesus' divinity at his Baptism. However, other contemporary churches were celebrating other aspects of the manifestation of Christ's divinity at Epiphany, such as his Birth, his Transfiguration, his first \*miracle performed at a wedding at Cana of Galilee, and the visit of the Magi.

Western Christians had celebrated the birth of Jesus on 25 December since at least the early 4th century and the spread of this festival (first mentioned in the East in the *\*Apostolic Constitutions and Canons*) seems to have whittled away some of the significance of Epiphany, which shifted from being the *Dies Epiphaniarum* (Day of Epiphanies) to being the celebration of a single epiphany, the revelation to the Magi (Matthew 1: 1–12). Though many Eastern churches adopted the Western chronology, with 25 December as the Nativity and 6 January as the Epiphany, some Eastern churches maintained the multiplicity of epiphanies and gave priority to the Baptism of Jesus. **Epirus Vetus and Epirus Novus** Mountainous region with a fertile coastal strip between the Pindus Mountains and the Ionian Sea. By the time of the \*Verona List Epirus had been divided into the \*provinces of Epirus Vetus ('Old') with its capital at \*Nicomolis, and Epirus Novus ('New'), also known as Illyria Graeca, with its capital at \*Dyrrachium (Epidamnus). It places both in the \*Dioecesis of \*Moesia. In the *\*Notitia Dignitatum* both were in the Dioecesis of \*Macedonia (or. 3, 12–13) and each was governed by a \*Praeses. \*Justinian I's refortification of its principal settlements did not withstand the \*Slavs in the 6th and 7th centuries. PA

TIR K–34 (1976); TIB 3 (1981).

W. Bowden, *Epirus Vetus: The Archaeology of a Late Antique Province* (2003).

**episcopal audientia** See BISHOP'S COURT.

**Epistulae Arelatenses** Collection of correspondence concerned with the history of the primacy of the see of \*Arles in southern \*Gaul. It comprises 55 \*letters written between 417 and 557 by popes to \*bishops of Arles or their suffragans, and several of their answers, as well as a constitution (*Ep. Arel.* 8) of the \*emperors \*Honorius and \*Theodosius II (418), which restored the Council of the \*Dioecesis of \*Septem Provinciae to

Arles. The compilation was probably assembled in the late 550s by Bishop Sapaudus of Arles to affirm the status and privileges accorded by popes and emperors to his see. MHei

*Ep. Arel.*, ed. W. Gundlach in MGH, Epp. III, *Epistulae Merovingici et Karolini aevi* (1892), 1–83.

D. Jasper and H. Fuhrmann, *Papal Letters in the Early Middle Ages* (2001), 85–7.

**Epistulae Austrasicae** A collection of 48 public and private \*letters written in \*Austrasia between the 470s and the 590s, transmitted in a 9th-century manuscript written in Lorsch. Their authors were important figures such as \*Remigius of \*Reims, \*Nicetius of \*Trier, \*Germanus of \*Paris, \*Venantius Fortunatus, and \*Dynamius, \*Patricius of \*Provence. More than half of the letters shed light on diplomatic relations between the Austrasian kings and the Eastern Roman Empire. The gathering of the collection has generally been dated to the late 6th century, and is perhaps attributable to Magneric, \*Bishop of Trier, and counsellor of \*Brunhild and \*Childebert II in the 580s, but a Carolingian date of compilation has also recently been suggested.

**epistulares** Officials of the Sacra \*Scrinia (imperial secretariats), 34 in number under \*Leo I (*CJust* XII, 19, 10), assisting the \*Magister Epistularum, and processing judicial records, particularly those of provincial \*governors. The Scrinium Epistularum also issued letters of appointment to officials of the \*Praefectus Praetorio and \*Praefectus Urbi, \*proconsuls, and \*Vicarii. DSI

Kelly, *Ruling the Later Roman Empire*.

Jones, *LRE* 575–7.

**epitaphs, Greek** Literary epitaphs, often for fictional or mythological characters, continued to be composed up until the 6th century. Actual grave inscriptions take a wide variety of forms from a simple name in the genitive case to identify the occupant of a grave, to sophisticated poetic texts composed in literary dialects. Epitaphs often contain information about professions, include imprecations threatening anyone who disturbs the grave or reuses the \*sarcophagus. As in earlier periods, \*inscriptions often seem to have been designed to be read aloud.

It is often difficult to identify the religious affiliation of the person commemorated: mythological allusions are not confined to \*pagan tombstones but are also found in Christian and \*Jewish epitaphs, and both Jewish and Christian epitaphs make use of Old Testament quotations and allusions, though preferences do vary between the two groups. Names and the use of symbols such as the \*cross or the \*menorah may help to establish the religion.

Among the poems collected in the \*Greek Anthology are epitaphs for contemporary figures which may have been inscribed on funerary monuments, and others for heroes from \*Homer which were clearly purely literary. Both types of epitaph figure in the work of \*Leontius while \*Julian of \*Egypt also composed poems for contemporaries. RW

G. Agosti, 'Saxa Loquuntur? Epigrammi Epigrafici e diffusione della *paideia* nell'oriente tardo antico', *AntTard* 18 (2010), 163–80.

**epitaphs, Latin** Epitaphs have been estimated to constitute two-thirds of all surviving \*Latin \*inscriptions. This proportion became higher in Late Antiquity, largely due to Christian attitudes towards \*death and the desire of believers to make statements of faith and hope, like the pleasant elegiacs inscribed on the tomb of the aristocratic consecrated \*virgin Manlia Daedalia: 'she loved always the way by which she might seek for heaven' (*CIL* V, 6240 = *ILCV* 1700).

Epitaphs offer historians a valuable means of assessing the character and aspirations of individuals and communities. They also provide an index of Latin linguistic change across time and geographical area. Scholars have also studied Christian epitaphs in order to measure the rate and spread of \*conversion to Christianity across the Empire.

The length of inscriptions and the materials used vary, but the desire to be commemorated by an epitaph was not limited to the wealthy; indeed, funerary inscriptions are one valuable window into the lives of poorer Romans, about whom literary sources are generally silent.

Monumental inscriptions were also used in Late Antiquity as a means of indicating the significance of public space, as in the case of the verse epitaphs composed by \*Bishop \*Damasus of \*Rome, which were inscribed with exquisite craftsmanship on \*marble slabs at the tombs of \*martyrs. Lines on the side of the tomb of S. \*Martin at \*Tours proclaimed the presence of the saint, manifest in every grace of the \*miracles performed through him (Le Blant, *Inscriptions*, I, 240). JFU

**Epitome de Caesaribus** A short set of anonymous imperial biographies (*breviarium*) from Augustus to \*Theodosius I, written soon after the death of the latter in 395. The work is a complex mix of Aurelius \*Victor (the bulk of chs. 1 to 11), Suetonius, the \**Kaiser-geschichte*, Marius Maximus, \*Eunapius, and other sources (though not \*Nicomachus Flavianus as is often stated). The work was used by several later epitomators, such as \*Paul the Deacon and Landolfus Sagax, but it had little influence until the modern period, even though it was known to a variety of medieval authors, such as Freulf of Lisieux, Lupus of Ferrières, Sedulius Scottus, and Helgaud of Fleury. It survives in over a dozen manuscripts that range from the 9th to the 15th century, mainly from the 10th and 11th. RWB

**Epitome Juliani** See JULIANUS ANTECESSOR.

**epoikion** Principal steading of a large \*estate in Roman \*Egypt (e.g. the Appianus estate of the 3rd cent.), comprising \*barns, stables, and other farm buildings. Between the 5th and 7th centuries *epoikia* grew into human settlements distinct from \*villages (*komai*), being owned by the landowner and inhabited by his \**coloni*, the lessees and the wage labourers who were registered as part of a large estate's tax responsibilities. Sarris, *Economy and Society*.

**epulae** Banquets to which the public was invited to dine en masse at the cost of a benefactor, such as a \*city, the \*emperor, local magistrates, civic notables, or the Church. The fact that *epulae* were paid for by local notables or institutions indicates that they were civic occasions inspired by \**philotimia* and \**euergetism*. At \*Mididi in \*Africa, for instance, the \*city council provided a public banquet for the people at the opening of the new council chamber in 290/3 (*CIL* VIII, 11774). Secular *epulae* were often given to accompany public games; a feast for the general public might be provided alongside a private dinner held at the same time for notables (\*Sidonius Apollinaris, *ep.* I, 11, 10–16). Religious *epulae* may be described as public meals provided outdoors for Christian communities. These were often associated with \*monasteries; they were typically simple and tended to include meat slaughtered for the purpose, bread, and wine (*VNicSion*, 55–6). NFH

K. M. D. Dunbabin, *The Roman Banquet: Images of Conviviality* (2003).

**equites singulares** Mounted bodyguards for provincial \*governors and \*emperors. *Equites singulares Augusti* were the emperor's Horseguard. Established probably by Trajan, and 1,000 strong, they were recruited from northern frontier auxiliaries. Doubled in size by Septimius Severus, the Horseguard occupied two Castra in \*Rome. It appears escorting 3rd-century emperors and during the \*Tetrarchy, but not thereafter. \*Constantine I probably abolished the Horseguard with the Praetorians for having backed \*Maxentius, building churches over their Castra and cemetery. JCNC

M. P. Speidel, *Riding for Caesar: The Roman Emperors' Horse Guards* (1994).

**Equitius** Roman priest who provided land adjoining the Baths of Domitian in \*Rome to \*Silvester for a church still called Titulus Equitii in the 7th century. \*Constantine I contributed a \*silver paten weighing 6 Roman pounds (\**Liber Pontificalis*, 34, 3). It may be associated with the 3rd-century hall under the present S. Martino ai Monti. CARM; OPN

PCBE II/1, Equitius 1.

Krautheimer, *Corpus*, III, 97–104.

**Eranshahr (Iranshahr)** (Realm/Empire of the Iranians) Name of the \*Sasanian Empire. The Middle \*Persian word *Eranshahr* is a political and geographical concept fashioned by the Sasanians. *Ērān* ('Iran', 'of the Iranians') is first attested in the coin legends of

\*Ardashir (MP Ardaxshir) I, where he calls himself 'king of kings of Iran' (*sābān sāsān ērān*). Occurring often in later Pahlavi texts, *Ērānšāhr* is first attested in the \*inscription of \*Shapur (MP Shabuhr) I at \*Naqsh-e Rostam known as the *\*Res Gestae Divi Saporis*. Although damaged in the MP version, the word *Ērānšāhr* can be reconstructed from the Parthian and \*Greek versions (*ŠKZ* 1, 11). The inscription of the high priest \*Kerdir (Karter) provides the most complete list of provinces considered to be part of Eranshahr: Persis (\*Fars), Parthia, \*Khuzestan, \*Asorestan (in \*Mesopotamia), Meshan (Gk. Mesene in southern Mesopotamia), Nodshiragan (\*Adiabene in northern Mesopotamia), Adurbadagan (Azerbaijan), Spahan, \*Rayy, \*Kerman, \*Sagastan (mod. Sistan, \*Gk. Hyrcania), \*Merv, Herat, Abarsahar (\*Khorasan), Turestan, Makuran, and the Kushan country up to Peshawar. The political concept was an adaptation of the \*Zoroastrian tradition of the 'Expanse of the Aryans/Iranians', mentioned in the \*Avesta, which the Sasanians transposed onto the Iranian Plateau. The late Sasanian Middle Persian geographical text the *Shāhrestānīh-i Eranshahr* (The Provincial Capitals of Iran) lists the important cities in Eranshahr, detailing their founders, notable features, and sacred histories. **Erarich** (d. 541) \*Rugian who became King of the \*Ostrogoths in 541 after the murder of \*Ildibad. Viewed as incompetent, he was murdered within months and succeeded by \*Totila. JJA

PLRE IIIA, Erarichus.

Wolfram, *Goths*.

**eras** Mathematical and astronomical calculations concerned with the measurement of time preoccupied scholars from ancient Babylonia to the Venerable \*Bede.

For legal and other practical purposes Romans indicated the date by giving the names of the two ordinary \*consuls who were appointed by the \*emperor to take up office on 1 January each year. In years where, for whatever reason, no consul was appointed, or one part of the Empire did not recognize the consul(s) appointed in the other part, the year would be stated as that of 'the consuls who will be announced' and as the year after (or two or three years after) the last known consuls. In the West after 476, dating is often by the western consul alone. The last western consul to take up office was Flavius Paulinus in 534. The last non-imperial eastern consul was Anicius Faustus Albinus Basilius of 541.

From the late 3rd century onwards a fifteen-year \*taxation cycle called the \*indiction was also widely employed; a year would be identified as a particular year 'of the indiction'. This raises problems for historians as it is not always clear in which fifteen-year cycle the year in question fell. Regnal years of emperors were also used, and in 537 \*Justinian I ordered that in all legal documents the regnal year should be stated first before the consular year and the indiction (*NovJust* 47).

Local eras were also used. In the \*Syriac-speaking world the year was generally given according to the Era of the Greeks (starting on 1 October 312 BC) and in \*Egypt according to the Era of \*Diocletian (reckoned from 284/5). Dates were also given according to eras starting from the foundation of a \*city or of a Roman \*province; the Era of \*Bosra, for instance, started in AD 106, the date of the formation of the Roman province of \*Arabia of which it was the metropolis.

Historians and scholars interested in the science of \*chronography used several systems. \*Greek historians generally used the era of the Olympiad, a four-year cycle starting in 776 BC. Roman historians (such as Livy and \*Orosius) used an era starting with the Foundation of the City of \*Rome on 21 April 753 BC (AUC, for *Ab Urbe Condita*).

The calculations of Christian chronographers were able to draw on long traditions of Hellenistic historical scholarship; in the early 3rd century Julius Africanus produced a chronography of all world history which placed the Creation 5,501 years before the Birth of Christ and synchronized details of Hebrew and Greek history. This *Chronographia* survives only in fragments, but its Era of the Creation (AM for Anno Mundi) continued to be used by such Greek chroniclers as \*George the Syncellus and \*Theophanes. Much of the detail in these later Greek chronicles, however, is derived from the *Chronicle* of \*Eusebius of \*Caesarea (d. 339).

The Greek original of Eusebius' *Chronicle* is lost, but separate parts of it survive in an \*Armenian translation and in the \*Latin translation of \*Jerome, who extended it up to his own time. Eusebius eschewed detailed coverage of dates prior to Abraham; his *Chronicle* used 'the year of Abraham' (equivalent of 2016 BC; 20Aab, 20Bef Helm) as the starting point for an extensive series of synchronisms, so that the surviving 5th-century manuscript of Jerome's Latin translation (Oxford, Bodleian Auct. T. 2. 26) is both a record of events and a diagram of the passage of time. Jerome's Latin translation was continued by various later Latin chroniclers, notably \*Prosper of Aquitaine (who dated from the supposed year of Christ's Passion, that of the consulship of the two Gemini, equivalent to AD 29) and \*Marcellinus Comes (who combined the indiction with regnal years of emperors).

In the early 6th century the chronographical scholar \*Dionysius Exiguus produced an \*Easter table based on computus calculated in \*Alexandria, substituting for the Era of \*Diocletian an era based on the date of the Birth of Christ (AD for Anno Domini). The works on chronography of the Venerable Bede illustrate the complexity of the mathematical and astronomical problems faced by scholars studying chronography and computus. In the *Greater Chronicle* which he attached to his work on the reckoning of time (*De Temporum Ratione*) he used a system of dating based on his own computation from the Creation, equivalent to 3952 BC. But in his *Ecclesiastical History of the English People* (*HE*) he used dates based on Dionysius' calculation from the Birth of Christ, anchoring them with mentions of regnal years of \*Anglo-Saxon kings (e.g. *HE* III, 1), Roman emperors (e.g. III, 4), and, like Eusebius in his *Church History* (*HE*), the succession of \*bishops (e.g. Bede, *HE* III, 20). The popularity of Bede's *Ecclesiastical History* did much to establish Anno Domini as the normal system of dating in the Latin world.

The Muslim era (AH) dates from the \*Hijra of \*Muhammad in AD 622. After the \*Arab conquest of the \*Persian Empire, \*Zoroastrians used an era starting from the coronation of the last \*Sasanian Shah, \*Yazdegerd III, in 631.

**eras, Era of the Creation** Detailed calculations, based on biblical and other texts, intended to establish exactly the mathematical and cosmic connections between the date of Christ's crucifixion and that of God's Creation of the World were being carried out as early as the 2nd century by Theophilus of Antioch (c. AD 180) and Julius Africanus (c. 180-c. 250). Complex computation of the 19-year lunar and 28-year solar cycles culminated in the 7th century, with the determination

of the 'Byzantine Era' of Creation commencing on 21 March 5509 BC. This was used in such chronicles as that of \*Theophanes.

**estates and estate management** Large estates owned by members of the Roman governing classes were a common feature of the social and economic landscape in Late Antiquity, especially in the most fertile and economically productive regions such as \*Egypt. The role of large estates would appear to have become more pronounced across the course of the 4th century, as members of the new imperial \*aristocracy of service invested the profits they derived from imperial service in land (which remained the most reliable source of income), and also deployed their social prestige and powers of \*patronage to induce other less well-connected landowners to hand over or sell their properties. This process of estate expansion is reflected in the legislation contained in the *\*Theodosian Code* on rural patronage (*\*patrocinium vicorum*), with the imperial authorities anxious that the expansion of estates should not disrupt the flow of \*taxation expected from the \*emperor's overwhelmingly rural subjects. So central did large estates become to the social and economic life of parts of the Empire, that it has been argued that over the course of the 5th and 6th centuries many government responsibilities hitherto delegated to \*city councils in the Eastern Empire were increasingly delegated to the estates of locally dominant landowners, such as the \*Apion family around the \*city of \*Oxyrhynchus in Middle Egypt.

Modes of estate management necessarily varied considerably from region to region and across time. In general terms, where population levels were highest, and levels of more general economic commercialization and monetization most pronounced, the direct management of estates and the utilization of \*wage labour were common; the estates of the Apion family around Oxyrhynchus again exemplify both tendencies. Where a market in agricultural labour was less readily available, landowners are likely either to have made greater use of slave labour (in the context of direct forms of estate management) or are more likely to have simply leased out portions of their estates to \*tenant farmers. Accordingly, it would probably be correct to assume a higher profile for direct management and wage labour in the Late Antique East, and a greater preponderance of \*slavery and tenancy arrangements in the Late Antique West. The same is likely to have applied with respect to \*imperial estates and church lands. In the East, estates are also more likely to have been run as commercial

ventures, seeking to secure a cash income for their owners, who typically lived in \*cities and thus depended upon a commodification of estate production so as to maintain their *\*solidus*-fuelled way of life. By contrast, in the West, aristocratic life tended to be more focused on \*villas, with autarky and the direct consumption of estate produce playing a greater role.

The upper echelons of the Late Roman world, such as the grandest senatorial \*aristocracy of \*Rome and \*Constantinople, came to acquire property portfolios that traversed regions and \*provinces. So, for example, the very rich early 5th-century Roman heiress S. \*Melania the Younger and her husband are recorded to have owned property throughout the western provinces, including \*Italy, \*Sicily, \*Africa, \*Britain, and \*Spain. Likewise, the Apion family are recorded to have owned urban and rural property in Middle Egypt, \*Alexandria, Constantinople, and possibly Sicily. Such networks of properties were maintained and managed by stewards and employees ultimately answerable to a central estate office, so that the head of the Apion family in the 6th century could intervene in estate affairs in Oxyrhynchus even when himself present in Constantinople. Lower down the social scale, the landed interests tended to be more regional and requiring less elaborate administration. The agricultural handbook of \*Palladius, written in \*Latin probably in the 5th century, offered the landowner literary advice on estate management.

The military events of the 5th to 7th centuries probably had a highly disruptive effect on estate structures. In the West, estates belonging to absentee landowners and the imperial government would appear to have been regarded as ripe for confiscation by both the leadership and military rank-and-file of the newly emergent Romano-Germanic kingdoms. In particular, estates are recorded to have been broken up to facilitate settlement, and peasants are likely to have taken advantage of military disruption to shake off aristocratic control. In the East, the \*Persian invasion and \*Arab conquests are also likely to have disrupted patterns of aristocratic landownership to the advantage of peasant smallholders.

**Ethelbert (Æthelberht)** King of Kent (c.560/585–616), member of the Kentish royal dynasty, traceable to \*Hengest, and the first \*Anglo-Saxon ruler to adopt Christianity. By 581, he had married \*Bertha, a Christian and daughter of the \*Frankish King \*Charibert. Ethelbert's authority extended beyond Kentish borders; he was the third of seven successive \*Bretwaldas (overkings). The Christian mission of \*Augustine arrived in

Thanet in 597 and settled at \*Canterbury. A few years later, c.602/3, Ethelbert established the first English law code in the vernacular, perhaps with the help of Augustine; as \*Bede notes he followed 'the examples of the Romans' (Bede, *HE* ii.5). NAS

**Ethiopia** Application of the name has varied at different times and in different contexts. Late Antiquity saw a continuation of the earlier practice whereby Ethiopia designated \*Nile Valley regions south of Aswan or, more broadly, the African continent south of \*Egypt. Some more recent writers have retained this usage, causing confusion with the modern nation of Ethiopia. Designation of the modern nation itself causes further uncertainties; the polity did not attain its recent geographical extent until the late 19th century. From 1962 until 1991 it incorporated also what is now the separate nation of Eritrea. Substantial parts of both modern nations maintain cultural continuity with the tradition that is commonly designated Ethiopian, although it is more appropriate to refer to the general geographical region as the northern Horn of Africa. The geography of this region was not clearly distinguished by outsiders in Late Antiquity, being often considered as part of India especially when, as was then usual, it was approached by way of the Red Sea.

The core of the northern Horn comprises the highlands now divided between, on the one hand, Tigray and adjacent regions of northern Ethiopia and, on the other, south-central Eritrea. It was here that, during the first eight centuries AD, the ancient kingdom of \*Aksum, named after its first capital in what is now central Tigray, flourished. This is the principal part of the northern Horn that falls within the purview of this volume which is concerned primarily with those aspects of Aksumite civilization that impinged upon that state's contemporaries in the Mediterranean basin. The Aksumite kingdom was, for example, the only polity of its time in Ethiopia, or for that matter in any part of sub-Saharan \*Africa, marked by indigenous \*literacy, its own \*coinage, \*Christianity, \*trade, and \*diplomacy with the Mediterranean basin. It is important, however, to emphasize that the Aksumites also had relations with neighbours whose economic and political circumstances were significantly different, albeit in

some cases their antecedents during the last millennium BC had been closely related.

Territory directly subject to Aksum extended to part of the Red Sea coast and, at least in the 4th century, northwards and westwards to the Nile Valley and adjacent plains of Sudan and northern Eritrea. To the south, the extent and nature of penetration is less clear, although it appears that crops and, perhaps, other resources originating from these regions became available in the Aksumite kingdom. The transfer of the political capital from Aksum to a more easterly location, while marking economic decline, did not interrupt the strong cultural continuity that is now recognized in the highlands through the closing centuries of the 1st millennium. The coastlands and offshore islands, however, saw increasing influence from southern \*Arabia, notably the adoption and spread of \*Islam; contacts between these communities and the Christian kingdom in the highlands are as yet poorly understood. **Ethiopian languages** Ge'ez (Classical Ethiopic, Old Ethiopic, Ethiopic) was spoken and written in the kingdom of \*Aksum (c.250–c.750). The Ethio-Semitic languages form an independent subgroup of the Semitic languages. Ge'ez belongs to the North Ethiopic group and its nearest descendants are Tigre and Tigrinya. However, it has typological features with other classical Semitic languages, such as \*Arabic, Hebrew, or \*Syriac. \*Greek was widely known; therefore Ge'ez has loanwords from Greek. Further, it has loans from Cushitic languages and from other Semitic languages.

The earliest extant texts are \*inscriptions of the 3rd century AD written in an unvocalized script. A number of inscriptions on stelae of the 4th century AD have been discovered in three languages: Sabaic, Greek, and Ge'ez. Besides these, there are Aksumite coins bearing Ge'ez words and some \*pottery showing Ge'ez texts. The Ethiopic writing system is the product of a reduction of the previous Sabaic alphabet that underwent a thorough and deliberate reform under the Christian King \*Ezana, or shortly before his reign, during the

4th century. Some old Ge'ez texts are in pseudo-Sabaic, imitating Sabaic using certain loanwords and graphic imitation. There are several transcriptions of Aksumite words, usually names, in Sabaic and Greek texts that might help in the reconstruction of Ge'ez phonetics and phonology.

Compared to Proto-Semitic, Ge'ez has abandoned some consonants and added some others. The Semitic vowel system has been transformed into fixed consonant + vowel characters. There are 26 consonants together with seven vowels. The four labialized velars, with five vowels each, are perhaps Cushitic loans. Altogether there are 202 letters. In addition, the numerals have their own signs derived from the Greek alphabet.

Ge'ez syntax has a flexible verb–subject–object word order showing almost any possible order. It frequently reflects Greek (and later Arabic or Amharic) models, depending on whether the text in question is a translated one, whether it is an Aksumite classical or post-classical text, and on whether its milieu is monastic or courtly.

\*Bible translation into Ge'ez from Greek started early. The oldest known fragments in \*inscriptions are from the Septuagint version of the Psalms. The Gospels were completed in the 5th century, the whole Bible not later than the 6th century AD. The Gospel of Matthew shows already in this early stage the Ethiopian way of translating 'freely', adapting the text to a new cultural background. Some patristic works, \*hagiographies, monastic rules, and books of ecclesiastical laws were also translated in the first Christian centuries.

Ge'ez was the only written language—besides medieval Arabic and some attempts at Amharic—until the 17th century, and in Ethiopia until the 19th century. Ge'ez is still used as the liturgical language in the Ethiopian Orthodox Tewahido Church. MAP

**ethnogenesis** See BARBARIAN IDENTITY; BARBARIAN MIGRATIONS.

**Euchaïta** Late Antique \*city in the Pontic region of \*Anatolia, about 56 km (35 miles) west of \*Amaseia; currently identified with modern Avkat. Euchaïta was the cult site of S. \*Theodore Tiro (*BHG* 1760–73), whose \*relics were venerated there until their dispersal some time before the 11th century. Surviving \*inscriptions from the reign of \*Anastasius I (491–518) mention construction of a wall and the conferral of civic and episcopal status upon the town. Contemporary authors frequently confused Euchaïta with neighbouring Euchaneia (or Euchaïna), the cult centre of another \*military saint, S. Theodore Stratelates (*BHG* 1750–3).

A homily attributed to \*Gregory of \*Nyssa (*BHG* 1760) composed for the feast of S. Theodore does not mention the town by name, but describes a church with the saint's \*relics and an \*icon depicting scenes from his life. This may have been the Euchaïta sanctuary. An anonymous 8th-century encomium with accompanying \*miracle collection (*BHG* 1764) was composed and set in the city. SEI

**Eucharist** The central communal ritual of Christianity, consisting of sharing bread and wine that have been blessed in \*prayer. Originating in the NT accounts of the Last Supper of Jesus with his disciples, the Eucharist was typically celebrated weekly in obedience to Jesus' command 'Do this in memory of me' (Luke 22:19). The Eucharist was associated particularly with \*Sunday, the day of Jesus' resurrection, which replaced the Jewish Sabbath as the Christian holy day. Although originally celebrated within the context of a meal, the Eucharist soon became a distinct rite (cf. 1 Cor. 11:20–2) consisting of biblical readings, the \*'kiss of peace' (a gesture of reconciliation among the participants), prayers, and the distribution of the blessed bread and wine. Early testimonies to the importance and manner of celebrating the Eucharist can be found in the late 1st-century *Didache* (9–10), the 2nd-century account in Justin Martyr's *First Apology* (65–6), and the 3rd-century text found in the *Apostolic Tradition* traditionally but erroneously attributed to \*Hippolytus of \*Rome. Christians believed that in Eucharistic communion they were receiving the Body and Blood of Christ under the outward forms of bread and wine, though only in the Latin Middle Ages were theories developed to explain the mode of this presence.

Standard regional *patterns* of Eucharistic praying emerged fairly early, though fixed *texts* for the anaphora, or central Eucharistic prayer, were not typical until the 3rd and 4th centuries. The earliest examples show the influence of Jewish table blessings, but by the 4th century all known examples feature the *Sanctus* ('Holy, holy, holy, Lord God of hosts...') as an \*acclamation within the anaphora, an explicit narrative of the Last Supper, and an invocation of the Holy Spirit (*epiklēsis*) to hallow the bread and wine.

The celebration and \*liturgy of the Eucharist gradually acquired sacrificial language and symbolism. With these came a revisioning of liturgical ministry in terms of priestly mediation between God and people, and corresponding shifts in ritual practice. The 4th century saw the adoption of imperial ceremonial such as \*processions, \*incense, lights, and stylized \*vestments. Freedom for Christians to worship in public led to the construction of prominent and elaborately adorned church buildings. As the Christian population grew and churches became larger, especially in the cities, the ritual had to bear more and more of the meaning of the rite. Congregational singing at the Eucharist was based almost entirely on the \*Psalms, although some liturgical \*hymns that would become important elements of devotional prayer date from the early centuries, e.g. the \*Gloria in excelsis and \*Trisagion. **Euclid in Late Antiquity** The Euclidean corpus was edited in Late Antiquity, lightly in the case of the *Elements* and *Data*, by \*Theon of \*Alexandria (whose recensions we now read), or heavily in the case of the *Optics* and *Phaenomena*, by unknown authors. These were commented on by mathematicians (\*Pappus, at least on *Elements* X) or philosophically oriented authors (\*Proclus on *Elements* I). No commentary on the whole of the *Elements* is extant or attested, though the imperial-age polymath \*Hero of Alexandria may have redacted one; rich collections of scholia on the *Elements* have been transmitted. Pappus is probably the last to have read the Euclidean 'analytical' writings: the *Porisms* and the *Loci on a Surface*. \*Boethius is credited with having translated (parts of) the *Elements* into \*Latin. Fouracre, *Charles Martel*, 82–7.

**Eudocia** \*Aelia. \*Augusta in the East 423–60. Originally Athenais, \*pagan daughter of the sophist Leontius of \*Athens, \*Pulcheria allegedly found her a suitable consort for \*Theodosius II. The \*marriage followed her \*baptism in 421. She bore Licinia \*Eudoxia and two other children. Often in conflict with Pulcheria, she may have emerged from a rival group within the elite, although \*bishops addressed \*letters to both \*empresses hoping to influence Theodosius. She founded the Church of S. \*Polyeuctus at \*Constantinople. Represented as both beautiful and learned, she composed poems, now lost, celebrating imperial \*victories over the \*Persian Empire in 421 and 422 (CPG 6020), as well as an extant verse *Life* of S. Cyprian of \*Antioch, a pagan magician allegedly converted to Christianity and \*martyred under \*Diocletian (BHG 458–9), and (with others) the extant *Homocentones* (CPG 6025), paraphrases of Old Testament books in \*Homeric diction (\*Photius 183–4). In 438–9 she made a \*pilgrimage to the \*Holy Land, where she encountered S. \*Melania the Younger. Accused of impropriety involving the \*Praefectus Praetorio \*Cyrus of \*Panopolis, in 443 she went and settled amid a circle of learned men in \*Jerusalem. There she supported the rebellion of \*Miaphysite monks against imperial efforts to enforce the decisions of the \*Council of \*Chalcedon but returned to orthodoxy shortly before her death in 460. She was buried at the Church of S. Stephen in Jerusalem. KGH

PLRE II, Eudocia 2.

Alan Cameron, 'The Empress and the Poet: Paganism and Politics at the Court of Theodosius II', *YCS* 27 (1981) 217–89.

Holum, *Empresses*, ch. 4.

**Eudocia** (c.438–72) Elder daughter of \*Valentinian III and Licinia \*Eudoxia. The \*Vandal King \*Geiseric abducted her with her mother from \*Rome in 455 and married her to his son \*Huneric. In 471/2, she removed to \*Jerusalem, where she died, leaving her estate to the \*Holy Sepulchre. KGH

PLRE II, Eudocia 1.

Holum, *Empresses*.

**Eudocia** \*Empress (610–12). First wife of \*Heraclius I, mother of \*Epiphania and \*Constantine III. Imprisoned by \*Phocas at \*Constantinople (610), the \*Green \*faction delivered her to Heraclius. She was married to him and proclaimed empress on his coronation day. She died 13 August 612. MTGH

PLRE III, Eudocia quae et Fabia.

**Eudoxia** \*Aelia. \*Augusta in the East 400–4. Daughter of the \*Frank \*Bauto, she grew up in \*Constantinople and married \*Emperor \*Arcadius in 395. By him she had five children: Flaccilla (397), \*Pulcheria (399), \*Arcadia (400), \*Theodosius II (401), and \*Marina (403). In 404 she died of a miscarriage, thus was pregnant for at least six out of nine years of \*marriage, so fecundity helps account for her elevation to Augusta. She dominated the ineffectual Arcadius and quarrelled with \*John Chrysostom, \*Patriarch of Constantinople, who blamed her for the conflict that led to his deposition and \*exile. Her reputation as 'Jezebel' was undeserved. KGH

PLRE II, Eudocia 1.

Holum, *Empresses*, 48–78.

W. Meyer, 'Doing Violence to the Image of an Empress: The Destruction of Eudoxia's Reputation', in Drake, *Violence in Late Antiquity*, 203–12.

**Eudoxia, Licinia** \*Augusta 439–after 462. Born 422 in \*Constantinople to \*Theodosius II and \*Eudocia, she married \*Valentinian III in 437 and returned with him to the West, where, at \*Ravenna in 439, he elevated her to Augusta. Their daughters were \*Eudocia and \*Placidia. After Valentinian's murder in 455, \*Petronius Maximus tried to force himself on her, but the \*Vandal King \*Geiseric, allegedly at her invitation, sacked \*Rome and carried her to \*Africa with her daughters. After Eudocia married Geiseric's son \*Huneric, in 462, Geiseric sent Eudoxia and Placidia to Constantinople, where Eudoxia owned property. KGH

PLRE II, Eudoxia 2.

Holum, *Empresses*.

**euergetism** Derived from the \*Greek word for doing good, 'euergetism' is an inelegant term used by scholars to describe the traditional civic munificence of Antiquity, through which donors (primarily the local

civic \*aristocracy) provided their communities with amenities, in return for \*praise and \*honour during their lifetimes, and a good name throughout eternity. Such munificence paid for almost all public \*entertainments and entertainment-buildings, the \*bathhouses, the public feasting, and the porticoed pavements, that made \*city life 'civilized' and pleasant for citizens, even in very small centres of the Roman world.

In the first two centuries of the Empire, benefactors had vied with each other to provide embellishment and luxury for their home cities. In the Late Roman period, however, such traditional munificence was in severe decline, largely because of a falling-off of the prestige of civic life, as imperial power and the benefits of imperial office became ever more apparent, and as the \*taxation burden (the responsibility for which fell on \*city councillors) increased. Local men, who had once competed for office in their home cities, paying for amenities in their struggle to obtain it, now sought, just as assiduously, to avoid it. Euergetism was an important victim of this change, though its decline occurred at a different pace in different parts of the Empire: in many \*provinces, traditional munificence had already disappeared before the 4th century, while in other regions (such as those dominated by the City of \*Rome's highly traditional senatorial \*aristocracy) it persisted in attenuated form into the 5th century, and even into the 6th.

A further change that occurred in the Late Roman period was the rise of Christian charitable giving, and the steady flow of wealth into church buildings and church institutions. This kind of giving could supply some of the benefits of traditional munificence: donors' names, for instance, were often prominently displayed in the churches they embellished, for the benefit both of contemporaries and of posterity. But charity was also different from munificence—in particular its beneficiaries were the \*poor and the Church, rather than fellow citizens, and its major aim, at least in theory, was eternal bliss, not fame on earth. Charity did come to replace munificence as the primary form of communal giving by the rich, but it would be a mistake to see this as a direct substitution, and in most of the Empire traditional secular munificence had died long before charitable giving became significant.

**Eugendus** See JURA FATHERS.

**Eugenius** \*Usurper 392–4. Following the death of \*Valentinian II in May 392, a three-month

interregnum ended when \*Arbogast, a \*Frank and \*Magister Militum, raised to the throne his puppet Eugenius, \*rhetorician and \*Magister Scriniorum. Eugenius appointed the prominent \*senator \*Nicomachus Flavianus as his \*Praefectus Praetorio and extended his authority as far as the \*Balkans. It took two years for \*Theodosius I to gather sufficient forces to recover the West. The armies met at the River \*Frigidus in the Julian Alps (mod. Slovenia). Eugenius' troops were successful on the first day of the battle, but on the second were routed in a cyclonic wind storm (the Bora) which concealed the movements of the Theodosian army. \*Orosius attributed the usurper's defeat to the piety of Theodosius and the wind to divine intervention (VII, 35). Eugenius was executed, Arbogast committed \*suicide, and Theodosius' younger son \*Honorius was installed as \*emperor in \*Italy.

**Eugippius** (d. shortly after 533) Abbot of the \*monastery at Castellum Lucullanum (\*Campania) and author of the *Vita* of S. \*Severinus of \*Noricum (BHL 7655). Written in 510/11, when Eugippius was abbot at Lucullanum, and covering the years 455–88, scholars often cite the *VSeverini* as exemplifying the end of a Roman \*frontier province. Eugippius' origins are uncertain, nor is it known whether he knew S. Severinus or participated in the evacuation of Noricum (488).

Eugippius' involvement in the growth of Lucullanum as an intellectual centre is better attested.

Eugippius probably knew Barbaria, who donated land for the community at Lucullanum. Her son, \*Romulus Augustulus, the last Western Roman \*emperor, may have lived at the monastery. Eugippius was also connected to the clergy at Rome through the \*deacon Paschasius, to whom he dedicated the *VSeverini*. Eugippius' correspondents included the learned exegete \*Dionysius Exiguus, who translated a work of \*Gregory of \*Nyssa for him. Through the noblewoman Proba, Eugippius was also connected to the North \*African \*Bishop \*Fulgentius. Eugippius may have used the library of Proba to assemble his anthology of \*Augustine's writing. According to \*Cassiodorus, Eugippius dedicated the anthology to Proba (Cassiodorus, *Institutes*, I, 23, 1). Cassiodorus' possible family relationship to Proba suggests intellectual ties between Lucullanum and \*Vivarium. Eugippius also had ties to the monastery of \*Lérins. In addition to the *VSeverini* and an Augustine anthology (CPL 676), Eugippius also composed a monastic rule. MSB

**Euhemerism** The notion that the \*pagan Gods were originally mortal kings whose grateful subjects worshipped them as gods. The term derives from the name of the late 4th-century BC Greek writer Euhemerus. He expounded this view in his utopian novel *The Sacred Scripture* (*Hiera Anagraphe*) which told how visitors to an island in the Indian Ocean discovered a golden monument describing the accomplishments of Uranus, Cronus, and Zeus, the great gods of the Greek Theogonic myth best known through Hesiod. The original text has not survived.

Euhemerus' story appears to have been much more important for Roman writers than it was for Greeks. A summary by Diodorus Siculus (1st cent. BC) of the Greek text survives in \*Eusebius' *Praeparatio Evangelica* (II, 2) and Ennius made a Latin version. Christian writers found Euhemerism highly congenial. Eusebius treats the novel as a historical source for the era when the gods lived on earth and \*Lactantius' *Divine Institutes* I uses Ennius's *Euhemerus* similarly. DSP; OPN Fragments in *FGrHist* Jacoby, 63, and ed. M. Winarczyk (1991).

RAC VI (1966), 877–90 (K. Thraede).

**Eulogius** Chalcedonian \*Patriarch (Pope) of \*Alexandria (579/580–607). He seized numerous churches

of the \*Miaphysites, and wrote polemical treatises against Miaphysite groups (Gaianites, Theodosians, Agnoetae) which, apart from a single \*sermon which survives complete, are extant only in fragments referred to in \*Photius, *Bibliotheca*, 182, 208, 225–7. He was a friend of Pope \*Gregory the Great of \*Rome, and exchanged with him \*letters in the numbering of the Latin edition in the CCSL series vol. 140–140a: *epp.* V, 41; VI, 61; VII, 31; VIII, 28–9; IX, 176; X, 14 and 21; XII, 16; XIII, 42–3 and in that of the English translation in the *NPNF* series vols. 12–13: *epp.* V, 43; VI, 60; VII, 34 and 40; VIII, 29–30; IX, 78; X, 35; XII, 50; XIII, 41–2. CJH

CPG 3,6971–6.

**Eulogius, Favonius** (fl. c.390) \*Rhetor at \*Carthage and former pupil of \*Augustine who wrote a surviving *Disputatio* on Cicero's *Dream of Scipio*, expounding, amongst other things, the presence of \*mathematical ratios in \*musical intervals and \*astronomical realities. He once \*dreamed Augustine appeared to him and explained a problematic passage in Cicero (Augustine, *De Cura pro Mortuis Gerenda*, XI, 13). ETH

**Eumeneia** Town in the upper Maeander Valley (mod. Işıklı, western Turkey), garrisoned by a succession of Roman auxiliary cohorts. Christian epitaphs of the 3rd and 4th centuries regularly include the so-called 'Eumeneian formula' (grave-robbers 'will have to reckon with God'). PJT

Thonemann, *Maeander Valley*, 130–77.

P. Trebilco, 'The Christian and Jewish Eumeneian formula', *Mediterraneo antico* 5/1 (2002), 63–97.

**Eumenius** From his quotation of a \*letter, Eumenius is identified as the author of a speech known as the *Pro Instaurandis Scholis*, preserved in the *XII \*Panegyrici Latini*. The speech (*PanLat* IX [IV]) is addressed to a provincial \*governor and dates from 298. Other *Panegyrici* have also occasionally been attributed to him. Eumenius was professor of \*rhetoric at the Maeniana School in \*Autun, renovated under the \*Tetrarchy, and had been \*Magister Memoriae. His grandfather had come from \*Athens via \*Rome. The successes of the schools were praised in the presence of \*Constantine I by an Autun orator in *Latin Panegyric*, V (VIII) on 25 July 311. RDR

**Eunapius** (347/8–after 404) Born at \*Sardis, the provincial capital of \*Lydia, Eunapius first studied in his home town with his relative, the \*pagan \*philosopher \*Chrysanthius, and then, from 362/3, with the Christian rhetorician \*Proaeresius at \*Athens, where he was also initiated into the \*Eleusinian Mysteries. In 366/7, instead of travelling to \*Egypt, as he had planned, he was summoned back to Sardis where he remained, teaching \*rhetoric, until his death.

Two works by Eunapius are known, a *History in Continuation of Dexippus* (from 270 to 404) and *Lives of the Philosophers and Sophists*.

The *Continuation of Dexippus* appeared in two editions, and there is disagreement over the differences between them. One view is that the first edition ended perhaps in 395 with the death of \*Theodosius I and the second continued to 404 (Treadgold, *Early Byzantine Historians*, 82f.); the other is that both editions ended in 404 and in the second edition new material (e.g. on the \*Huns) was added and some of the more offensively anti-Christian passages were excised (Blockley, *FCHLRE* vol. 1, 2–5). Substantial fragments of the text are included in the \**Excerpta de Legationibus* and the \**Excerpta de Sententiis*; the \**Suda* preserves over 50 fragments; it was used, directly or indirectly, by \*Peter the Patrician, \*John of \*Antioch, the \**Epitome de Caesaribus*, and \*Philostorgius, \*Sozomen, and, possibly, \*Socrates in their Ecclesiastical Histories. Most importantly, it was the main, if not exclusive, source for the relevant part (1, 47–5, 25) of \*Zosimus' *New History*.

Eunapius' *History* was clearly important. It revived large-scale \*Greek historiography in the classical manner (\*Ammianus Marcellinus probably wrote earlier, but in \*Latin and in the West). Despite its openly anti-Christian stance, it was apparently influential with pagans and Christians alike. Its stylistic and narrative weaknesses are, however, legion and obvious. They include deficient sources and a paucity of historical detail filled out with classical motifs and clichés (except when covering \*Julian); an uncritical hostility to Christians and encomiastic treatment of Julian; ill-judged rhetoric; a style that (despite the qualified approval of \*Photius, *Bibl.* 77) is pompous, overblown, occasionally imprecise, and mixes classicisms (at times misused), vulgarisms, and contemporary usages; and an inability to weigh the relative importance of the events

under discussion and to assign them the appropriate weight in the narrative.

The *Lives of the Philosophers and Sophists*, which offers biographies of many of the pagan intellectuals of the late 3rd and 4th centuries, preserves valuable information on various of its subjects, although it is very unbalanced in its treatment. It furnishes, for instance, a very short section on \*Plotinus; a longer and more valuable one on \*Porphyry; dismissive sections on \*Libanius and \*Himerius; and more extended and laudatory discussions of \*Iamblichus and \*Maximus of Ephesus, practitioners of \*theurgy who so significantly influenced the \*Emperor Julian. While the *Lives* provide useful information, they display the same characteristics as the *History* and their main value lies in showing what was fashionable amongst pagan intellectuals in the second half of the 4th century. **Eunomius and the Eunomians** Eunomius was born in \*Cappadocia and studied under Aetius in \*Alexandria in the mid-350s. In his *Syntagmation*, Aetius had argued that the title of 'unbegotten' (*agenetos*) was descriptive of the Divine Essence (*ousia*) and that God the Son, scripturally designated as only-begotten, was therefore of a different essence (*heterousion*) from God the Father. Eunomius adopted and popularized this teaching, which was reduced by his opponents to that of \*Anomoeans, the belief that God the Son was unlike God the Father (*anomoios*). In a \*council at \*Constantinople in 360, Eunomius defended himself against this charge by explaining that he held that God the Son was like God the Father 'according to the Scriptures'. This was not a likeness of essence but of activity and will. Shortly after this council, Eunomius was consecrated as \*Bishop of \*Cyzicus, and after the death of Aetius, he became the recognized leader of the 'heterousian' party, who came to be called 'Eunomians'. Eunomius was subsequently exiled under the \*emperors \*Valens and \*Theodosius I, and his teaching was condemned at the Council of \*Constantinople of 381. The church historian \*Philostorgius was an associate of Eunomius. KA

**eunuchs** It had been illegal since the time of Domitian to castrate boys or men on Roman territory (Suetonius, *Domitian*, 7; \*Ammianus, XVIII, 4, 5; *CJust* IV, 42, 1 of \*Constantine, and IV, 42, 2 of \*Leo I). There were, however, eunuchs serving in great houses, in particular to wait upon ladies (e.g. Cassius Dio, 75, 14; cf. Clement of \*Alexandria, *Paedagogus*, III, 4). They were familiar in the 2nd and 3rd centuries as \*priests of various exotic \*pagan cults, in particular that of the Magna Mater; Apuleius cast witty aspersions on the carnal voracity of the castrated priests of the Dea Syria (*Metamorphoses*, VIII, 26). The 4th-century doctor Basil \*Bishop of Ancyra (\*Ankara) also opined that eunuchs were exceptionally libidinous (*On Preserving Virginity*, 61).

Probably under the \*Tetrarchy and certainly by the time of Constantine I, eunuch chamberlains were serving in the imperial \*Cubiculum and, being in daily contact with the \*emperor, came to control access to him, to exercise considerable power and accumulate substantial wealth. None of these activities made them popular with others either inside or outside the \*administration. In the 6th century \*Procopius claimed that \*Abasgia (mod. Abkhazia on the Black Sea) was a source for imperial \*cubicularii (*Gothic*, VIII, 3, 15–19).

The term 'eunuch' was also used for men who chose to live a continent life, thereby conserving their inner fire and the purity of their *élan vital*. A true eunuch, said Clement of Alexandria (c.150–c.215) is one who is unwilling to enjoy pleasure, rather than one who is unable to do so (*Paedagogus*, III, 4). His contemporary Melito of \*Sardis was admired as a eunuch who 'lived in the Holy Spirit in all things' (Polycrates of \*Ephesus in \*Eusebius, *HE* V, 24, 5).

Some men sought to eliminate temptation through surgery; in the early 2nd century a young man in Alexandria sought a surgeon to perform the necessary operation for the comfort of his soul, but the surgeons felt obliged to seek the permission of the Prefect of \*Egypt—and failed to secure it (Justin Martyr, *1Apology*, 29). It was believed that the great theologian \*Origen had taken this step (\*Eusebius, *HE* VI, 8, 2–3).

The Church expressed its disapproval. The first canon of the \*Council of \*Nicaea excluded from the

clergy all voluntary eunuchs, though not natural or involuntary eunuchs. Even so, S. \*Sabas (439–532) had to take care of an unfortunate monk who had interpreted as a command the words of Jesus that there are some which have made themselves eunuchs for the sake of the kingdom of heaven (Matt. 19:12). **Euphemia** \*Empress (518–c.523/4) of \*Justin I, called Lupicina before she became empress. \*Procopius claims she was a barbarian slave and a former owner's concubine before marrying Justin (*Anecd.* 6, 17). Virtuous, but rustic and no politician, she opposed the marriage of \*Justinian I and \*Theodora (9, 47–9). GBG *PLRE* II, Euphemia 5.

Vasiliev, *Justin*, 60–1, 91–2, 98–9.

**Euphemia** \*Aelia Marcia Euphemia, only daughter of the \*Emperor \*Marcian; c.453 she married the \*patricius \*Anthemius (Western emperor 467–72). *PLRE* II, Euphemia 6.

**Euphemia and the Goth** \*Syriac romance of the 5th century, surviving in two manuscripts, and also in \*Greek. The tale goes that in AD 396 a \*Gothic soldier in the Roman \*army stationed at \*Edessa to repel \*Huns lodged with a \*widow called Sophia and married her only daughter Euphemia, having made vows over the tomb of the Confessors \*Shmona, Guria, and Habib that he would treat her well. He takes her off to his own land, where he hands her over as a slave to his Gothic wife, who proceeds to poison Euphemia's baby. Euphemia gets even by poisoning the Gothic wife, but the Goths shut her up in the wife's tomb. She prays to the Confessors and is miraculously transported home to Edessa where she is reunited with her mother. Some time later the Goth returns to Edessa where he is confronted by Sophia and Euphemia, who make an affidavit about Euphemia's sufferings, on the strength of which the Stratelates of Edessa has him beheaded, despite the intercession of Eulogius the \*bishop on his behalf. Eulogius is a historical personage; he was the Bishop of Edessa (AD 379–87) who welcomed \*Egeria to the \*city in 384 (Egeria, 19, 5–19; \*Chronicle of Edessa, 34; cf. \*Theodoret, *HE* V, 4). **Euphratensis (Augusta Euphratensis)** Roman \*province formed from the north-eastern part of the former (Severan) province of Syria Coele, bounded on the east by the River Euphrates. It is included in the \*Verona List (255, 19) in the \*Dioecesis of \*Oriens, but not in the list of episcopal signatories at the \*Council of \*Nicaea. \*Ammianus (XIV, 8, 7; cf. \*Procopius, *Persian*, I, 17, 2 and 23) gives Euphratensis as the current name of the former Commagene. The \**Notitia Dignitatum* lists \*cavalry units under the \*Dux Syriae at Barbalissus, Neocaesarea (perhaps \*Dibsi Faraj), and \*Rusafa and Legio XVI Flavia Firma at Sura (*or.* XXXIII, 24–8). It has Euphratensis (*or.* II, 19) as governed by a \*Praeses (*or.* I, 90), to whom laws were issued in 417 (*CTh* VII, 11, 2; XV, 11, 2). \*Hierocles lists twelve cities in the province, headed by \*Hierapolis (Mabbug) and including \*Cyrrhus and \*Samosata (712, 10–713, 11). \*Justinian I rebuilt \*fortifications in Euphratensis (*Aed.* II, 9, 3–17). After the \*Arab conquest in 637 it was subsumed into the \*jund of \*Qinnasrin. PWMF; OPN  
*Spilia, Reorganisation of Provincial Territories.*

**Euplus, S.** Christian \*martyr at Catania. On 29 April 304, outside the \*secretarium of the \*Corrector of \*Sicily, Euplus shouted that he wanted to die because he was a Christian. He was brought in and questioned about the Gospel book he was carrying (contrary to the First Edict of the Great \*Persecution). His confession was made public and he was tried (still with the book) on 12 August and executed on 29 August. His \*martyr passion (in \*Greek) follows the form of a \*report of court proceedings, and contains elements which suggest authenticity. A \*basilica honoured him at Messina in the 6th century (\*Gregory the Great, *ep.* II, 6) and a church at Rome in the 7th (\**Liber Pontificalis*, 75, 5 and 97, 74). OPN

BHG 629: ed. Franchi de' Cavalieri, *Note agiografiche* 7 (ST 49, 1928), 47–8.

Barnes, *Hagiography*, 126–8.

**Eupsychius of Caesarea** \*Notary of \*Caesarea of \*Cappadocia, who reacted to \*Julian's \*paganism by destroying the \*city's last remaining \*temple (that dedicated to its \*Tyche). Julian removed the city's civic privileges (\*Libanius, *Oration*, 16, 14). Eupsychius's martyrdom (on 7 September 362) was recalled by \*Gregory of Nazianzus (*Oration*, 4, 92) and \*Basil (*ep.* 100), described by \*Sozomen (V, 4, 1–6; V, 11, 8), and celebrated annually at Caesarea while Basil was \*bishop (Basil, *ep.* 200). The story grew in the telling. OPN

BHG 2130: ed. (with FT) F. Halkin, *Le Muséon* 97 (1984), 197–206.

F. Halkin, 'Arethas de Césarée et le martyr Saint Eupsychius', *AnalBoll* 91 (1973), 414.

**Euric** \*Visigothic King (r. 466–84), son of \*Theoderic I, brother of Thorismund and \*Theoderic II, and father of \*Alaric II. In 466, he killed his brother Theoderic II, and succeeded to the throne (\*Hydatius, 238; \*Jordanes, *Getica*, 235; *Gallie Chronicle of 511*, 643).

The reign of Euric saw constant expansion of the Visigothic kingdom, to its greatest extent. At first limited to the \*provinces of \*Aquitania Secunda, \*Novempopulana, and \*Narbonensis Prima, Euric soon ended the *foedus* with the Romans (\*Sidonius, *ep.* VII, 6, 4), and campaigned from 468 against the \*Suebes, conquering most of \*Spain (\*Isidore, *Historia Gothorum*, 34). Having defeated the people of \*Brittany under \*Riothamus to the north of the Loire, but being blocked from further advance by the \*Franks, he conquered the Auvergne, yet continued to face resistance from local Gallo-Roman aristocrats under \*Ecdicius (Jordanes, *Getica*, 238–40). By 471, he had pushed into south-east \*Gaul, destroying the Roman \*army there. Although hindered by the \*Burgundians in \*Provence, he managed to have his conquests (including \*Clermont-Ferrand, surrendered by its \*bishop \*Sidonius Apollinaris) recognized by the \*Emperor \*Julius Nepos in 475, after negotiations through Bishop \*Epiphanius of \*Pavia. The next year, he captured \*Arles and \*Marseilles from the Romans (*Gallie Chronicle of 511*, 657; \**Consularia Hafniensia Ordo Prior ad ann.* 476), allegedly bribed by the \*Vandal King \*Geiseric, and the following year he took southern Provence, conquests praised in a poem of Sidonius (*ep.* VIII, 9).

Reportedly Euric was an active legislator, but the fragmentary codification of provincial Roman \*law known as the *Code of \*Euric* is not securely of his reign. A robust \*Arian, he persecuted Catholics (Sidonius, *ep.* VII, 6, 6; \*Gregory of Tours, *HF* II, 25) and spoke through an interpreter when replying in \*Latin to the ambassador of Julius Nepos (\*Ennodius, *Life of Epiphanius of Pavia*, 90). He died at Arles in 484 (*Gallie Chronicle of 511*, 666, *HF* II, 20), succeeded by his son \*Alaric II (Jordanes, *Getica*, 244–5; Cassiodorus, *Variae*, III, 3, 3; *Consularia Hafniensia Ordo Prior & Ordo Posterior ad ann.* 486). GDB

A. Gillett, 'The Accession of Euric', *Francia* 26/1 (1999), 1–40.

**Euric, Code of (Codex Euricianus)** The earliest surviving \*Visigothic legal text, surviving only in

palimpsest fragments in manuscript Paris BN Lat. 12161. It was probably compiled under King \*Euric, but several kings have been suggested. It is possible that \*Leo of \*Narbonne was involved in its production. It has been understood as legislation valid for those identifying themselves as ethnically \*Gothic, while Roman \*law, redigested in 506 in the *Lex Romana Visigothorum* (the *Breviarium of \*Alaric*), was used by the Roman population. However, some now interpret it as law binding over a territorial area regardless of ethnicity. Some of its laws were included in revised form in the *\*Book of Judges (Leges Visigothorum)* of \*Reccesuinth.

**Eusebia** \*Empress, second wife of \*Constantius II, c.353–c.360. Her family was from \*Thessalonica; her brothers Eusebius and Hypatius were \*consuls in 359. She played a significant part in the life of \*Julian, who wrote a *Speech of Thanks* to her for her apparent protection and support of him in the years 354–5. Reputedly she defended him following the fall of \*Gallus, was instrumental in him being sent to study in \*Athens, advocated or supported his promotion as \*Caesar, and gave him a travelling library to take to \*Gaul (Julian, *Oration* 2 (3) *On Eusebia*, 15).

However, the reputation of Eusebia in the sources is mixed. \*Ammianus claims that she treacherously ensured that Julian and his wife Helena were childless (XVI, 10, 18–19); \*Philostorgius depicts her as a

harriidan (as well as a convinced 'Arian'). Constantius gave the \*Dioecesis of \*Pontica the name 'Pietas' to honour her. She was childless, perhaps as a consequence of illness. She died c.360.

SFT

*PLRE* I, Eusebia.

**Eusebius** \*Praepositus Sacri Cubiculi of \*Constantius II, a \*eunuch chamberlain so powerful that \*Ammianus (who loathed him) joked that Constantius had some influence with Eusebius (XVIII, 4, 3). The future \*Emperor \*Julian blamed Eusebius for the death of his half-brother the \*Caesar \*Gallus and for his own bad relations with his cousin Constantius (*Epistle to the Athenians*, 272D and 274AB). Some sources confuse the eunuch with his potent contemporary, the influential \*Bishop \*Eusebius of \*Nicomedia. Eusebius was condemned to death by the tribunal held at \*Chalcedon, at the beginning of Julian's sole reign.

SFT

*PLRE* I, Eusebius 11.

Matthews, *Ammianus*, 274–5.

**Eusebius Gallicanus** A collection of \*sermons drawn from late 5th-century sources associated with the \*monastery of \*Lérins. The CCSL edition consists of 76 sermons. \*Faustus of Riez has been identified as one author. The sermons were used for preaching, teaching, and reflection, by monks, clergy, and the laity. They provide a distinctive perspective on the process of \*Christianization in Late Antique \*Gaul.

L. K. Bailey, *Christianity's Quiet Success: The Eusebius Gallicanus Sermon Collection and the Power of the Church in Late Antique Gaul* (2010).

**Eusebius of Caesarea** (c.260–c.339) Biblical exegete, Christian apologist in the era of the Great \*Persecution, author of various historical and geographical works, and (from c.313) \*Bishop of \*Caesarea of \*Palestine. Eusebius was also deeply involved in theological controversies, particularly those surrounding the \*Council of \*Nicaea in the newly Christian Empire of \*Constantine I.

#### Scholar and bishop

Eusebius lived his adult life in Caesarea, the Roman \*city built by Herod the Great on the Mediterranean, capital of the Roman \*province of \*Palestine. He was the pupil of \*Pamphilus, a theological heir of \*Origen. Their \*library at Caesarea contained important philosophical, Jewish, and Christian works as well as being a place where scribes produced texts. Eusebius' writings

therefore preserve many precious fragments of ancient authors, Christian and non-Christian. Eusebius and Pamphilus together wrote *A Defence of Origen*. After the execution of Pamphilus during the Great \*Persecution in 310, Eusebius travelled in Palestine and \*Egypt recording these events in *The Martyrs of Palestine* and his *Church History*. He became Bishop of Caesarea around 313.

Earlier, Eusebius had charted in his *Chronicle* the whole of world history culminating in the Roman Empire and Christianity; this chronology with tables was completed in 311, and versions survive in \*Armenian and, continued by \*Jerome down to 378, in \*Latin. The *Church History*, composed and revised several times over a series of years in ten books, was finished in its final version around 325. Basing his chronology on the reigns of \*emperors and the sequence of bishops in various cities as the successors of the Apostles Eusebius systematically describes the history of the Church up to c.280, its \*martyrs, its teachers, and the rise of \*heresies and persecutions which tested it. The last three books deal with developments in Eusebius' own time, particularly the Great Persecution. A feature unprecedented in Graeco-Roman \*historiography is the large-scale incorporation of lengthy *verbatim* excerpts from earlier writings. Eusebius' *Collection of Ancient Martyrdoms* (CPG 3491) is lost.

His encyclopedic, apologetic, and pedagogical works (c.314–21) were a response to criticisms by such anti-Christian writers as Celsus and \*Porphyry. Of the ten books of his apologetic *General Elementary Introduction* there survive books 6–9 and parts of 10. *The Preparation for the Gospel* made good use of the Caesarea library, to argue through various quotations that Greek religion and philosophy were dependent on Phoenicia and on Egypt. Furthermore, he claims, the Greeks had also plagiarized the Jews; Christians therefore were neither novel nor derivative, but were engaged in restoring primeval practice and belief, which had existed from the Creation until later civilizations had corrupted them. The twenty books (ten are extant) of the *Demonstration of the Gospel* argue that Hebrew prophecy is fulfilled in the life of Christ, so that Christians are its true heirs. Eusebius' other later works included commentaries on Isaiah and the Psalms as well as *Questions and Answers*, a treatise on \*Easter, and a biblical gazetteer, the *Onomasticon*. It has been argued that a different Eusebius composed the tract *Against Hierocles*, written to combat the pagan \*Hierocles, who had asserted that Christ was no more remarkable than \*Apollonius of \*Tyana.

#### Nicene crisis and Constantine

In the controversy between \*Arius and his bishop Alexander of \*Alexandria, Eusebius defended Arius as to the

necessary priority and separate divine nature of the Father as the cause of the Son (Opitz, *Urkunden*, 7). This led to Eusebius' condemnation at a synod in \*Antioch in 324. In a \*letter Eusebius offered a rare glimpse of the \*Council of \*Nicaea in 325, claiming that he proposed a \*creed as a means of theological reconciliation. He attributed the inclusion of the controversial term *homoousios* (which indicated that God the Father and God the Son share the same nature) to the \*Emperor \*Constantine I himself (Opitz, *Urkunden*, 22). Afterwards he joined a number of other bishops in attacking theologies which were assumed to blur the distinctions between the Father and the Son. Eusebius presided over the deposition of \*Eustathius of Antioch in 328, and aided in the deposition of \*Athanasius of Alexandria at \*Tyre in 335. In 336 he was part of the council at \*Constantinople that deposed \*Marcellus of \*Ancyra and attempted to readmit Arius to the Church.

In his later controversial works (337–8), *Against Marcellus* and *The Ecclesiastical Theology*, Eusebius used both philosophy and interpretation of the \*Bible to defend the notion that the Father is the transcendent origin of all being, and that the Son is necessarily secondary and distinct from the Father as the image and agent of the Father in creation and salvation. The *Theophany*, dated anywhere between 325 and 335, reiterated this Christological model as one of divine revelation through incarnation.

Eusebius was not an intimate of Constantine, but met the emperor on several occasions. His *Life of Constantine*, unfinished when Eusebius died, fused history and \*panegyric to explore the theological meaning of the 'life according to God of the Emperor Constantine'. Appended to the *Life* are a speech given by Constantine himself to the Church of \*Nicomedia one Easter, probably in 325 (*To the Assembly of the Saints*), and two of Eusebius' own speeches, which in some manuscripts are fused together. One of these, uttered by Eusebius at the dedication of the Church of the Holy Sepulchre in \*Jerusalem in September 335, portrays Constantine as the charismatic sole ruler of the newly unified Roman Empire under the grace of the One God. The other, a \*panegyric spoken in Constantinople before the emperor to celebrate Constantine's Tricennalia on 25 July 336, is a Christian transformation of Hellenistic theories of kingship in which the ruler embodies the divine order in the image of the Word of God.

No manuscript is known of the letter (CPG 3503) purportedly written by \*Eusebius to Constantine's half-sister \*Constantia concerning the legitimacy of images.

**Eusebius of Emesa** (c.300–before 359) Theologian and exegete. Eusebius grew up \*bilingual in \*Syriac and \*Greek in \*Edessa. He studied with Patrophilus of \*Scythopolis and \*Eusebius of \*Caesarea, spent time in \*Antioch and \*Alexandria, and became \*Bishop of \*Emesa. His surviving works include excerpts in the original Greek preserved in the \*catena, 29 homilies in \*Latin \*translations, fragments in Syriac, and in an \*Armenian \*translation homilies and a *Commentary on Genesis* and other OT books. Eusebius was an early witness to the \*Peshitta and used Syriac and Hebrew texts in his commentaries, being aware of translation problems. His exegesis influenced \*Diodore of \*Tarsus

and later Syriac authors (e.g. Isho'dad of \*Merv, d. after 852). His Trinitarian doctrine is anti-Sabellian and has been described as homoiousian. His theology linked native Syriac and Antiochene traditions. UP

**Eusebius of Nicomedia** (d. 341/2) \*Bishop successively of Berytus (\*Beirut), \*Nicomedia, and \*Constantinople and a leading ecclesiastical politician and disputant in the \*Arian Controversy. Eusebius came from a prominent family; he was related to the future \*Emperor \*Julian (\*Ammianus, XXII, 9, 4) and had studied under the renowned biblical exegete \*Lucian of \*Antioch. Originally Bishop of Berytus, he moved to Nicomedia after 314 and supported \*Arius before the \*Council of \*Nicaea of 325. He signed the Nicene \*Creed but not its associated anathemas, and shortly afterwards was sent into \*exile alongside his friend Theognis of Nicaea. Restored in 327/8, Eusebius became an influential figure at the \*court of \*Constantine I. In 337 Eusebius baptized Constantine, and under \*Constantius II he was once more translated, to the see of the imperial city of Constantinople.

According to his enemies, particularly \*Athanasius of \*Alexandria, Eusebius was the leader of an 'Arian' party, *hoi peri Eusebion* ('the Eusebians'), who conspired together to promote their \*heresy. It is true that Eusebius believed in the Son's subordination to the Father (*Letter to Paulinus of Tyre*, in \*Theodoret, *HE* I, 6) and disliked the non-scriptural term *homoousios* adopted at Nicaea. Although often described incorrectly as 'Arian', however, Eusebius' theology was upheld by the Second ('Lucianic') Creed of the 'Dedication' Council of \*Antioch (341) and represented orthodox faith for many 4th-century eastern Christians. Fragments of Eusebius' \*letters survive (CPG 2045–8). DMG

**Eusebius of Samosata** Spiritual father of the neo-Nicene theologians who rallied round Meletius of

\*Antioch and \*Basil of \*Caesarea in the 360s. Eusebius was one of the \*bishops who consecrated Basil as bishop in September 370; he was Basil's frequent correspondent (*epp.* 27, 30, 31, 34, 48, 95, 98, 127, 128, 136, 138, 141, 145, 162, 166–7, 198, 237, 239, 241) and his closest confidant thereafter, and probably the translator into \*Syriac of Basil's *Small Asketikon*. He was \*exiled to \*Thrace in 374–8 by the \*Emperor \*Valens, and stoned by an Arian assassin in 379 (\*Theodoret, *HE* IV, 13; V, 6). AMS

F. Halkin, 'Une Vie grecque d'Eusèbe de Samosate', *AnBoll* 85 (1967), 5–15.

**Eusebius of Vercelli** (d. 371) Influential \*Bishop of Vercelli, \*Italy, from at least 353. In 355 he was exiled to the East (where he met \*Epiphanius of \*Salamis and \*Josephus \*Comes), after refusing to condemn \*Athanasius at a \*council in \*Milan. He returned west c.363. According to \*Ambrose, Eusebius was responsible for introducing the new monastic ethos to the West (Ambrose, *ep.* 63). Eusebius is also supposedly the writer of the *Codex Vercellensis*, the earliest-known complete text of the Gospels in \*Latin, and *De Trinitate* (CPL 105). Some \*letters (CPL 106–8) which reveal the workings of the bishopric survive. RJM

CPL 105–8; *HLL* 5, section 584;

ed. V. Bulhart et al. (CCSL 9, 1957).

**Eustathius of Antioch** (d. before 337) \*Patriarch of \*Antioch 323/4–327/8. Leading \*bishop of the anti-\*Arian party before and at the \*Council of \*Nicaea (325) who was exiled by \*Constantine I, for reasons which were and remain disputed. Sexual misconduct, \*heresy, and insulting Constantine's mother \*Helena have all been mooted, as well as an Arian plot. SP  
CPG 3350–69; J. H. Deckerck (CCSG 51, 2002).

**Eustathius of Epiphania** Author of an unfinished chronicle in two books from Aeneas and the fall of Troy to the \*Persian war of \*Anastasius I (502/3). The chronicle survived on Patmos in 1200 but only fragments are extant now. It is known through laudatory references by \*John Malalas (16, 9) and \*Evagrius (I, 19; II, 15; III, 26, 29, 37; V, 24), and through the \*Suda (s.v. Eustathius 3746). Eustathius was probably a source for \*Procopius (describing the siege of \*Amida), \*Theodore Lector, and \*Theophanes. FKH  
PLRE II, Eustathius 10.

**Eustathius of Sebasteia** Born c.300, Eustathius studied in \*Alexandria, and encountered \*Arian and monastic currents. He inspired ascetic enthusiasm across northern \*Anatolia, incurred censures (\*Sozomen, IV, 24–5; canons of the Council of Gangra), adapted himself, befriended \*Basil's \*family in \*Neocaesarea, influenced the young S. \*Macrina towards \*asceticism, and around 356 succeeded his father Eulalius as \*Bishop of \*Sebasteia (mod. Sivas, Turkey). His theology was Homoiousian, affirming that Christ was of a similar substance to the Father, but opposed both to Arian subordinationism, and to the Nicene Homoousian position which affirmed that Christ and the Father were of the same substance. Although he was the mentor of the young Basil of \*Caesarea, he was secretly disaffected by the neo-Nicenes who rallied around Basil in the late 360s. Their alliance

finally collapsed in the early 370s. Eustathius then led the Pneumatomachoi against affirming the divine nature of the Spirit. He died in 379. The principal sources for his biography are the \*letters of Basil and the \*panegyrics of Basil by \*Gregory of \*Nyssa (CPL 3185) and \*Gregory of \*Nazianzus (CPL 3010, *Oration*, 43). \*Socrates (IV, 12) preserves a letter (CPG 2830). **Eutropia** (d. after 325) Wife of \*Maximian (\*emperor 285–305), mother of \*Maxentius and \*Fausta, and so mother-in-law of \*Constantine I. Around 325 she visited \*Mamre and informed Constantine of \*pagan worship polluting the site (\*Eusebius, *VCon* 3, 52).

DMG

PLRE I, Eutropia 1.

NEDC 33, 125.

**Eutropius** Author of the *Breviarium*, a history of Rome from its foundation to the death of \*Jovian (364) in ten short books, written for the \*Emperor \*Valens over the winter of 369–70. Almost nothing certain is known about Eutropius or his career and most modern accounts of his life simply combine dubious Byzantine comments with the careers, correspondents, and works of any number of different 4th-century

individuals with the same name. We know he accompanied \*Julian's Persian expedition in 363.

His *Breviarium* was chiefly based on a now-lost history that combined an epitome of Livy with the \**Kaisergeschichte*, the same text that was used by \*Jerome for his *Chronici Canones* in 381. Its elegant \*Latin and compact nature recommended it to later generations: it survives in a dozen important manuscripts, was translated into \*Greek at least twice, was used as a source by Late Roman, medieval, and Byzantine historians, and served as a textbook of Latin and Roman history down to the modern age.

**Eutropius** (d. 399) \*Praepositus Sacri \*Cubiculi (395–9), \*patricius (399) and the only \*eunuch ever to be \*consul (399). Eutropius had been a slave, but was promoted quickly at the \*Constantinople \*court. He arranged \*Arcadius' marriage to \*Eudoxia, orchestrated the downfall of \*Rufinus (\*Praefectus Praetorio 392–5), and gained \*Africa for Arcadius in 397. In autumn 399, after his unsuccessful campaign against \*Tribigild, \*Gainas forced the \*emperor to dismiss Eutropius. Removed from sanctuary in the Church of the \*Holy Wisdom, Eutropius was executed and his memory damned. Like Rufinus, he was the object of vigorous verse \*invective by \*Claudian, poet at the court of \*Honorius.

**Eutyches and Eutychianism** Eutyches (d. c.456) opposed the doctrine that there were two natures, divine and human, in Christ, as stated in the Formula of Reunion of 433 and again at the \*Council of \*Chalcedon in 451. He favoured the single-nature Christological language that \*Cyril of \*Alexandria had used prior to 433.

Eutyches was the archimandrite of a \*monastery of 300 monks outside the walls of \*Constantinople. He confessed that Christ was from two natures before the union of God and Man, but of one nature after that union. Eusebius, \*Bishop of Dorylaeum, filed a petition against him. A local synod was held in Constantinople in November 448, attended by Flavian, \*Patriarch of Constantinople. This synod excommunicated and deposed Eutyches from his priestly and monastic functions. Undaunted, Eutyches urged his monastery to rebel against the two-nature Christology, which he said could not be defended with scripture. Thirty-five of his monks agreed, accusing Flavian of condemning their archimandrite for refusing to violate the principles of the Council of \*Nicaea of AD 325. Eutyches and his followers were temporarily vindicated at the Second \*Council of \*Ephesus of 449 (also called the Latrocinium or Robber Synod), a provincial gathering of 130 Eastern bishops who were sympathetic to Eutyches. In the presence of Roman legates, the council overturned Eutyches' conviction and deposed Flavian and Eusebius. The Council of \*Chalcedon later judged Flavian and Eusebius to be orthodox and condemned the teaching of Eutyches. Followers of Eutyches were referred to as Eutychians. SW

**Eutychius** \*Patriarch of \*Alexandria and historian. Sa'id b. Batriq, born in 877 in \*Fustat, adopted the name Eutychius when he was appointed \*Melkite Patriarch of Alexandria (933 or 935–40). A trained physician, he became one of the most important Christian \*Arabic authors. A medical and an apologetic work have been ascribed to Eutychius, but he is most famous for his universal history. Published in Arabic as *Nazm al-Jawhar* or *Kitāb al-Ta'rikh al-Majmū' 'alā al-tahqiq*

*wa-l-tasliq* and more generally referred to as the *Annals*, the work describes the history of the world from the Creation (dated 5,500 years before the Incarnation) to Eutychius' own time, and including various information about the early 7th century. There is only one manuscript of the original Alexandrian text (ms. Sinai Arab. 582 [580]). The *Annals* are known especially from the popular extended 'Antiochene' version by Yahyā b. Sa'id al-Antākī (fl. c.1030), preserved in numerous manuscripts.

**Evagrius Ponticus** (c.345–399) Monastic theologian.

Born the son of a \*chorepiscopus and educated at Ibora in Pontus, Evagrius began his career under \*Basil of \*Caesarea, who ordained him \*reader, and from 379 under \*Gregory of \*Nazianzus, who ordained him archdeacon in \*Constantinople, where he stayed through the Council of \*Constantinople of 381. He left the city unexpectedly in 382, to escape, according to \*Palladius (*Lausiac History*, 38), an adulterous entanglement with the wife of the \*Praefectus Urbi. In \*Jerusalem he spent time at the \*monasteries of \*Rufinus and \*Melania the Elder, and at \*Easter 383 he took monastic vows. He soon travelled to \*Egypt, and living in the monasteries of \*Nitria and \*Kellia wrote extensively and cultivated a network of fellow ascetics, most famously \*John Cassian and \*Palladius. Although associated with key participants in the second \*Origenist controversy, he was never a direct participant.

His writings—letters, proverbs, brief sayings (chapters), and short treatises—are among the earliest specimens of monastic literature. Pensive and rich with symbolism, they synthesize worldly erudition, biblical study, ascetic experience, and advanced Christian *paideia*. His moral admonitions are wedded to a complex metaphysical system. The first creation consisted of rational beings meant to know God. A certain movement of their minds brought a fall that resulted in souls

and bodies and their concomitant passions and the differentiation between angelic, demonic, and human realms. The restoration of fallen human minds to divine unity proceeds through a twofold path of \*asceticism: practical (*praktike*), the defeating of \*demons to bring the soul to passionlessness, and intellectual (*gnostike*), itself a twofold contemplation of nature (*physike*) and the divinity (*theologiike*) to restore a rational being to eschatological unity.

Nearly all the writings of Evagrius are addressed to monks or ascetics, to explain and analyse vice and virtue, demons and \*angels, and psychological and psychosomatic phenomena. At the core of the ascetic, return to unity involves combat against the eight demonic thoughts (*logismoi*), namely gluttony, fornication, avarice, sadness, anger, sloth, vainglory, and pride—a list that forms the basis of the Western tradition of the Seven Deadly Sins.

Although well connected in his own time, Evagrius fell into disrepute in the 6th century, when his writings were associated with a strain of Origenism condemned at the Second Council of \*Constantinople (553). The more speculative texts fell out of the Byzantine Greek manuscript tradition, but are preserved in \*Syriac, \*Armenian, \*Georgian, and \*Arabic. His thought, particularly on \*asceticism, exercised wide influence throughout Christendom, both in the West (primarily through John Cassian) and the East (even after his condemnation).

**Evagrius Scholasticus** (536/7–after 594) Author of an *Ecclesiastical History* in six books from the \*Council of \*Ephesus (431) to 594, the last Greek ecclesiastical history to be written until \*Nicephorus Callistus Xanthopolus in the 14th century. As he himself acknowledges (I, preface, cf. V, 24), Evagrius follows in the tradition of \*Eusebius of Caesarea, \*Socrates, \*Sozomen, and \*Theodoret. He also relies, without acknowledgement, on the *Ecclesiastical History* of the \*Miaphysite \*Zacharias of \*Mytilene for information on the later 5th century, the debt being revealed by his response to various challenges. It is possible that Evagrius' motive for writing was in fact the need to counter the influence of Zacharias.

Born in \*Epiphania in \*Syria Coele, Evagrius was an advocate (*scholasticus*) in \*Antioch, where he had access to ecclesiastical archives. He seemingly worked for the \*Patriarch \*Gregory, whose views he champions. For other writings he was made an honorary \*quaestor by \*Tiberius (578/82) and honorary \*praefectus by \*Maurice (VI, 24). A Chalcedonian, he supposedly lost his faith on his daughter's death from the \*plague in 592, but regained it through S. \*Symeon Stylites the Younger (also died 592). Overall his *History* amounts to a justification of the \*Council of \*Chalcedon and its doctrine.

Although basically a compiler, Evagrius did shape material to suit his viewpoint, occasionally also adding relevant personal experiences. He preserves some unique evidence, partly from now lost historians, but most notably from ecclesiastical documents. These he sometimes transcribes within his narrative and sometimes deliberately postpones to the end of a book to avoid clogging the narrative (II, 44). Most important of these documents are \*Basiliscus' *Encyclical* and *Counter-Encyclical*, \*Zeno's \**Henoticon*, and the letter to the Chalcedonian theologian Alcison, \*Bishop of \*Nicopolis of \*Epirus, which is otherwise unknown. Evagrius also shows that he used inter alia the *Acta* of the First and Second Councils of \*Ephesus, of the Council of Chalcedon, and of the Second Council of \*Constantinople. Like other ecclesiastical historians he also deals with secular events, for which he used a succession of non-ecclesiastical sources (\*Eustathius of Epiphania, \*Zosimus, \*Priscus, \*John Malalas, \*Procopius), but treats such matters separately in blocks and as subsidiary to ecclesiastical considerations. Thus, Book 1 opens with ecclesiastical matters and is followed by secular material covering the same period; similar (but not identical) patterns occur in the remaining books. This disjunction also enabled him to avoid the difficulties of combining different sources into a single narrative, which also partly hides his weakness on chronology. Though to some degree his judgement on \*emperors is linked to their position on Chalcedon (notably

\*Marcian), he places greater importance on character, especially piety and morality. So \*Anastasius I is praised because of his piety despite his position on Chalcedon, while \*Zeno, \*Justin I, and \*Justinian I are criticized, despite their support for it.

His *History* is, however, shaped by a Christian need to find a way of overcoming \*heresy which he sees as having been created by the Devil (I, 1) to prevent Christian unity after Christianity had triumphed over \*Julian. He therefore adopts throughout a conciliatory Neo-Chalcedonian approach, as advocated by his patriarch Gregory, as a way of reconciling Chalcedon with Miaphysitism. Thus his opening account of the First Council of Ephesus manages to support both the main combatants, \*Cyril of \*Alexandria and \*John of Antioch. Evagrius aspired to classicizing elegance. \*Photius (cod. 29), judged his \*prose style to be not lacking in grace but somewhat verbose, though thought him more orthodox than other historians. RDS

**Everlasting Peace** Treaty of 532, obliging Rome to pay Persia 11,000 lb of \*gold and withdraw its commander from \*Dara. Persia would defend the \*Caucasus Passes and both sides would restore captured fortresses. \*Khosrow I's invasion of 540 violated the treaty. PNB Dignas and Winter, *Rome and Persia*, 38–9.

Greatrex and Lieu, 89–97.

Sarris, *Empires of Faith*, 134–45.

**evil eye** The projection of malevolence, willed or unwilled, upon another person (esp. children), domestic animals, crops, or even oneself, through the eyes (Gk. *phthónos*, *baskanos ophthalmos*, *baskanía*, *baskainein*; Lat. *invidia*, *fascinus*, (*eff*)*fascinatio*, *invidere*). Although in folk-culture and physiognomic theory envy was linked to physical signs or the 'double pupil', any individual might be the (involuntary) cause of mystical harm. Malevolence could also be transmitted in thought or by (false) compliment (\*Libanius, *ep.* 1403, 1–2). \*Amulets might afford protection, as might apotropaic representations such as the threshold \*mosaic from the House of the Evil Eye at \*Antioch.

Once it had achieved the status of a *topos* in Hellenistic paradoxography, the evil eye presented an intellectual challenge; responses varied between dismissal as peasant folklore, effluences, adaptation of the atomist explanation by the pre-Socratic philosopher Democritus,

and recourse to a theory of \*daemons. Christian positions are ambivalent, wavering between accepting the possibility but attributing the power to \*demons, and reinterpretation, e.g. as a punishment for the sin of pride or as a mistaken response to misfortunes caused by the Devil.

R. S. Cooper, 'Assessment and Collection of Kharāj Tax in Medieval Egypt', *JAOs* 96 (1976), 365–82.

**Exarch (Gk. *exarchos*)** Title, created by \*Maurice in the late 6th century, of the military governors of the Byzantine territories in \*Italy and \*Africa reconquered under \*Justinian I. An Exarch is first attested at \*Ravenna in 584 and at \*Carthage in 591. The Exarch exercised both the military powers of a \*Magister Militum and the civil powers of a \*Praefectus Praetorio. The concentration of civil and military power in one powerful governor reflects the militarization of the \*administration and anticipated the \*Theme System instituted by \*Heraclius.

The title was also used by \*metropolitan \*bishops of the principal \*city of a civil \**dioecesis*, so, for instance, Theodore, Bishop of \*Ephesus, subscribed at the Third \*Council of \*Constantinople of 680–1 as both metropolitan and Exarch of the Dioecesis \*Asiana. The Council of Chalcedon permitted appeals from the metropolitan to the exarch (Canons 9 and 17).

**exceptores** Administrative staff supporting judicial and financial officers in various bureaux of the central (palatine) and provincial \*administration. These positions offered prospects of internal promotion and were attractive to families whose members belonged to \*city councils (\**decurio* meaning 1; *curiales*).

See also CIVIL SERVICE, IMPERIAL; SHORTHAND AND SHORTHAND WRITERS. AGS Teitler, *Notarii*.

**Excerpta** Traditional title given to the 'encyclopedia' of selections from historical texts collected in the 10th century at the court of Constantine VII Porphyrogenitus. From the preface we learn that Constantine ordered all the books of history from across the Empire to be collected and excerpted. The purpose was to lessen ignorance, which led to evil, through amalgamating the lessons of the past into one work. The originally extensive whole was divided into 53 *hypotheseis*, 'themes', of which only a small fraction survives, namely the entirety of *De Legationibus*, and substantial parts of *De Insidiis*, *De Sententiis*, and *De Virtutibus et Vitiis*, alongside several titles of otherwise lost sections. The *Excerpta* contains selections from historians ranging from Herodotus to \*George Monachus Hamartolus in the 9th century, including several authors who would otherwise be unknown. In particular, *De Legationibus*, 'on embassies', contains substantial selections from \*Eunapius, \*John of \*Antioch, \*Menander Protector, \*Peter the Patrician, and \*Priscus. Further, *De Insidiis*, 'concerning plots', contains much important, and often unique, information about Late Antiquity, especially from John of Antioch. *De Sententiis* and *De Virtutibus et Vitiis* are, unsurprisingly given their titles, more closely focused on the *Excerpta*'s moralist mission. **excubitores** A unit of the Roman imperial \*palace guard. While imperial guards bearing this title are attested from the 1st century onwards, \*Leo I is credited with enhancing their prominence by fixing their number at 300 and assigning them the specific role of guarding the entrances of the imperial palace in \*Constantinople (\*John Lydus, *Mag.* I, 12, 16), whose importance was evident during urban \*riots. He probably also created the increasingly influential office of commander (\*Comes Excubitorum), held by \*Justin I and \*Tiberius II at the time they became \*emperor.

ADL

B. Croke, 'Leo I and the Palace Guard', *Byzantion* 75 (2005), 117–51.

**execution** The widely held opinion that executions became more widespread in Late Antiquity needs to be qualified. On the one hand a variety of crimes which had hitherto been punished with socially differentiated \*exile and condemnation to the \*mines now carried the death penalty (*summum supplicium*) regardless of rank, e.g. kidnapping (*CTh* IX, 18, 1). Furthermore, some laws prescribe drastic forms of execution, such as pouring lead down the throat of a maid who did not prevent the abduction of her mistress (*CTh* IX, 24, 1).

On the other hand, spectacular types of execution such as crucifixion and condemnation to the beasts disappeared. Christian authors warned against the excessive use of the death penalty, even though they accepted it in principle if executed by a lawful authority (\*Augustine, *City of God*, I, 21; \*Ambrose, *ep.* 25). Some Christian judges seem to have been reluctant to impose the death penalty (\*Libanius, *oration*, 45, 27). The impact harsh imperial laws had on sentencing practice is hence difficult to reconstruct and there are cases where even \*emperors clearly did not impose the statutory death penalty (e.g. \*John Malalas, XVIII, 168, on \*Justinian I and \*homosexuality). JHi

J. P. Callu, 'Le Jardin des supplices au Bas-Empire', in *Du châtement dans la cité: supplices corporels et peine de mort dans le monde antique* (1984), 313–59.

G. Clark, 'Desires of the Hangman: Augustine on Legitimized Violence', in H. A. Drake, ed., *Violence in Late Antiquity: Perceptions and Practices* (2006), 137–46.

**exedra** Any defined space opening fully onto a larger space. In Late Antiquity, the term was applied, e.g., to a church's \*apse or to subsidiary bays surrounding the nave, or to the *scholae* where rhetoricians taught in the Forum of Trajan at \*Rome and the Capitol at \*Constantinople (*CTh* XIV, 9, 3). Architectural historians often apply the term to semicircular columnar niches opening off a central space (as at the Church of the \*Holy Wisdom in \*Constantinople). JB

**Exilarch (Aramaic *resh galuta*)** Lay leader of the Jewish community in Babylonia (Persian \*Mesopotamia) from the early \*Sasanian period (3rd cent. AD) until at least the 13th century. Medieval Jewish chroniclers claim that the Exilarchs were descended from the royal house of David, with their lineage going back to Jehoiachin, the exiled King of Judaea (597 BC). There is no evidence to substantiate this claim, and references to the office appear for the first time only in \*Talmudic literature, frequently comparing the Exilarch to the Palestinian Jewish \*Patriarch (*nasi*). Most references project a strong and wealthy office, possibly enjoying some degree of recognition and support from the Sasanian authorities. A judicial body seems to have functioned at the Exilarch's \*court, and rabbinic judges recognized by the Jewish leader would be exempt from penalties should they have issued faulty decisions. Talmudic sources attribute to the Exilarch a role appointing overseers of the marketplace (*agoranomoi*), but there is no indication that they functioned on behalf of the government in the collection of taxes. Numerous rabbinic sources project an adversarial relationship between Exilarch and \*rabbis and rebuke the Exilarch's public behaviour, but there is no evidence of interference by the Exilarch in the internal world of the rabbis and their student circles. **exile** (Lat. *ex[s]ilium*) Involuntary exclusion from, or confinement to, a particular place was a common political and criminal penalty in the Roman Empire. The severer form, deportation (*deportatio*, *interdictio aqua et igni*), was assimilated with death as a 'capital' penalty (*\*Digest*, XLVIII, 1, 2), in that it was permanent and involved loss of civil rights and confiscation of property. Relegation (*relegatio*), by contrast, might be temporary and avoid such disabilities. A \**paterfamilias* could relegate his wife or children and a \*patron his freedmen.

Magistrates might decree the expulsion of entire classes of people, as when 'foreigners' (*peregrini*) were expelled from the City of \*Rome due to a food shortage in 383/4 (\*Ammianus, XIV, 6, 19).

High-status offenders were exiled in circumstances in which their inferiors were more usually executed or condemned to the \*mines. \*Constantine I's banishment of \*Arius and two \*bishops deposed by the \*Council of \*Nicaea set a precedent for imperial involvement in ecclesiastical discipline, while \*Magnus Maximus' execution of \*Priscillian of Avila attracted the stigma of \*persecution and was not repeated. \*Athanasius of \*Alexandria was exiled five times, yet died in his see, while \*John Chrysostom's opposition to the \*Empress \*Eudoxia precipitated his death at Comana of \*Cappadocia as he went to his second exile in the Caucasus.

**exorcism** (Gk. *ἐξορκισμός* 'administration of an oath') Rites used to expel \*demons from an individual. The act of exorcizing spirits existed in Near Eastern religious traditions and in post-biblical Judaism, but gained popularity in early Christianity due in part to reports in the Synoptic Gospels and Acts that Jesus performed exorcisms with a single word (cf. Mark 1: 23–8). Both Christian and non-Christian \*exorcists often invoked the name of \*Jesus when performing such rites (Matt. 7:22, Acts 19:13). Justin Martyr (*Apologetica Secunda*, 6.6) legitimized Christian exorcism, as juxtaposed with non-Christian exorcisms, drugs, and complex incantations. By the mid-2nd century, the phrase 'crucified under Pontius Pilate' was often recited during exorcisms. Exorcists became one of the four traditional minor orders in the early Church. Exorcism was not just for the outwardly afflicted, but became a regular ecclesiastical ritual. In the *Apostolic Tradition* attributed to \*Hippolytus, \*baptism of catechumens called for oil of exorcism to be applied with hands as part of the purification ceremony (21,7–10; 20, 3). The authority with which \*holy men cleansed those afflicted by demons was further mobilized in the cult of saints.

**exorcist** Rank of Christian clergy, superior only to \*porter, first recorded at \*Rome in AD 251/3 (\*Eusebius, *HE* VI, 43, 11). Exorcists exercised a ministry of \*prayer over those possessed by \*demons (e.g. Eusebius, *HE* VI, 43, 20). \*Bishops, \*priests, and also, from the earliest times, non-ordained exorcists prayed for healing of the possessed and performed \*exorcism. Exorcists ministered to catechumens for their purification before \*baptism (e.g. \*Egeria, 46). MFC

**Expositio Totius Mundi** Anonymous geographical work compiled 347/362; the extant \*Latin text is probably based on a lost \*Greek original. It surveys the known world from east to west, beginning in the extreme Orient with the mythical Camarini, who live a life of untroubled bliss, without agriculture or government. Other barbarian races are described more briefly. The author depicts the Persians and \*Saracens as untrustworthy, and criticizes the former's supposed practice of incest. The bulk of the work (21–67) is devoted to the Roman Empire. The author lists major \*cities and towns, principal products, and local points of interest (including pagan cult sites). Fulsome praise of eastern \*cities (\*Edessa, \*Nisibis, \*Antioch, \*Tyre, \*Beirut, and \*Caesarea) has suggested that the original compiler hailed from this region, possibly from Tyre. Also noteworthy is the section on \*Alexandria, which includes a digression in \*praise of \*papyrus. After covering the eastern Mediterranean, the work proceeds to a roughly anti-clockwise tour of the western \*provinces. The treatment is cursory and not without errors (e.g. \*Noricum is mistaken for a city). Islands, including \*Britain, are tacked on at the end. Unlike the closely related \**Totius Orbis Descriptio*, the *Expositio* makes no reference to Christianity. Its Latin is inelegant and shows signs of Greek influence. No manuscripts survive; the earliest witness is the *editio princeps* by Jacques Godefroy (1628). GH

**Exultet** (Lat. 'Let it rejoice') Opening of a \*hymn chanted by the \*deacon at the \*Easter vigil in \*praise of the Resurrection and of the Paschal candle representing the Light of Christ (praising also the \*bees who made the candlewax). This Paschal praeconium is traditionally attributed to \*Ambrose of \*Milan, but probably came into use in the 7th century. The earliest liturgical announcement of the Resurrection to survive in full is

Melito of \*Sardis, *On the Pasch* (late 2nd cent.). \*Constantine I provided lights for churches at Easter (\*Eusebius, *VCon* IV, 22); his *Oration to the Saints* was delivered to Christians at \*court during a Paschal celebration. \*Augustine's lines praising candlelight (*City of God*, XV, 22) may derive from such an Easter hymn. A \*letter attributed to \*Jerome declines a request from a deacon to write something suitable (*CPL* 621). Two Paschal Praeconia survive by Ennodius of \*Pavia (*CPL* 1500). OPN; MFC

*New Grove Music* 8 s.v. Exultet, 477–80 (Huglo and Kelly).

**eyes** Greek and Roman scientists had multiple theories about human vision, but they generally agreed in considering the human eye as an active rather than a passive instrument (Plutarch, *Quaestiones convivales*, 5,7). Late Antique thinkers concurred: 'the sight of the eyes comes together', wrote \*Lactantius, 'through the exertion of the mind' (*De Opificio Dei*, 9, 2). A person who was looking had to control his gaze, as the eye was thought to possess the power to harm the object viewed (Lat. *invidere*, Gk. *baskainein*); apotropaic emblems were picked out in \*mosaic on the floors of the \*villas of \*Daphne-by-\*Antioch to avert the \*evil eye.

While sight occurred by way of the bodily eyes, the act of seeing was accomplished by the inner action of the soul. This means that character is apparent from the eyes; the first book of the work on \*physiognomy by Adamantius the Sophist, written in the 3rd/4th century, is much concerned with what eyes can tell an observer about a person's moral predilections. \*Augustine (*Sermon*, 286) speaks of the human body as having a second set of eyes, those of the heart; visual perception was therefore regarded as an act of righteous choice.

Much Late Antique writing about \*art and architecture, therefore, links physical and mental illumination. The Church of the \*Holy Wisdom at \*Constantinople was praised in the anthem sung at its second dedication in 562 because 'it is splendidly illumined throughout by day and by night by the rays of the Word of the Spirit, through which the eyes of the mind are enlightened' (*strophe* 6). **Ezana** King of \*Aksum (initially with his mother as regent) from c. 330 to after 356. Contemporary records of this name are restricted to \*inscriptions on stone and on \*coinage. Stone inscriptions record propaganda relating to expansion of Aksumite rule over areas north and north-west of the capital, to the exaction of \*tribute, and to the resettlement of captives. Numismatic evidence allows no doubt that Ezana was the fifth Aksumite king in whose name coins were struck. It was during his reign that the religious symbol over the royal portrait was changed from the crescent-and-disc to the cross. The stone inscriptions likewise indicate his mid-reign adoption of \*Christianity, perhaps at the instigation of \*Frumentius, and provide details about the territorial expansion and consolidation of the Aksumite hegemony. **Eznik of Kolb** (fl. 429–50) One of the students of \*Mashtots' (Maštoc') and author of a polemical treatise refuting various beliefs about God and free will. After the invention of the \*Armenian alphabet, Eznik was sent to \*Edessa and \*Constantinople to carry on the \*translation of \*Syriac and \*Greek literature into Armenian (\*Koriwn, *Life of Mashtots'*, 19; Movses Khorenats'i, *History*, III, 60). He is probably to be identified with Eznik, \*Bishop of Bagrewand, listed by \*Lazar Parp'ets'i (*History*, §23) and \*Elishe Vardapet (*History*, 27) among the signatories

of the Armenian response to the \*Sasanian vizier \*Mihr-Narseh at the council of Artashat in 449/50 immediately prior to the Armenian War which culminated in 451 in the Battle of \*Avaryr.

His most famous work has been given by Armenian scholars the title *Refutation of the Sects*, but is also known as *De Deo* (*On God*). It is comprised of four parts that address respectively pre-Christian Armenian beliefs, \*Zurvanism, Greek \*philosophy, and \*Marcionite doctrine. In addition to relying on previous Greek and Syriac Christian polemical treatises, Eznik apparently had access to Persian sources. Besides the *Refutation*, fragments of a \*letter from Eznik to Mashtots' have been preserved. A number of spurious works have also been ascribed to Eznik. A set of \*ascetic counsels once attributed to him are now generally held to be by \*Nilus. SVLa

# F

**fables, Graeco-Roman** Aesopic fables continued to be gathered in collections in Late Antiquity. The most important, the anonymous *Collectio Augustana*, seems to have been made c. AD 200, while Babrius' collection, in the choliambic \*metre, was made perhaps shortly before that date. Babrius' collection was the main source of \*Avienus (early 5th cent.) for his 42 fables in elegiac couplets. Individual fables are sometimes treated more virtuosically by rhetoricians such as \*Himerius. Both methods reflect fable's gradual movement away from social criticism to more rhetorical and pedagogical ends. The earlier church fathers tend to disdain fables, along with other pagan \*myth, although such authors as \*Gregory of \*Nazianzus show a greater openness. The \*Bible prefers parable, a related form, but containing spiritual rather than social, political, or ethical, teaching, and shunning fable's vegetable or animal subject matter. JLL

R. Dithmar, *Die Fabel: Geschichte, Struktur, Didaktik* (<sup>8</sup>1997).  
B. E. Perry, *Aesopica* (1980).

**fables, Persian** In AD 750 a Persian convert from \*Zoroastrianism to \*Islam named Abdallah b. al-Moqaffa produced an \*Arabic translation of a Pahlavi translation of the Sanskrit collection of fables, the *Pañcatantra*, entitled *Kalila wa-Dimna*. The preface describes how the King of Persia \*Khosrow I Anoshirvan (531–78) wished to obtain a copy of the famed *Pañcatantra* which was said to be scrupulously guarded by the Indian monarch. Khosrow dispatched a learned physician named Barzoe to \*India to secure, by hook or by crook, a copy of the text. Barzoe accomplished his mission, returning to the \*Persian Empire with the *Pañcatantra*, which he translated into Pahlavi. It is not clear to what extent the introduction of the *Kalila wa-Dimna* is a translation of the Pahlavi as opposed to an embellishment added by al-Moqaffa. There exists an old, incomplete manuscript of a \*Syriac *Kalilag we-Damrag*, translated from the Pahlavi in the year 570 and filled with lacunae—not to be confused with a later 10th- or 11th-century Syriac translation of the

Arabic. A 12th-century Hebrew translation of the Arabic was translated into \*Latin under the title *Liber Kalilae et Dimnae* between 1263 and 1278. WWM  
*Encliran* XV/4 (2010) s.v. Kalila wa Demna, I. Redactions and circulation, 386–95 (Riedel).

**fabricae** The production of \*arms and armour for the Roman \*army in Late Antiquity was organized through a network of arms factories or arsenals, as recorded in the \**Notitia Dignitatum* (or. 11, 18–39, occ. 9, 16–38). Probably developed by \*Diocletian, the *fabricae* were situated in more than 25 locations in the strategically important northern and eastern \*provinces, on good lines of communication, but rarely close to the \*frontiers where they might have been vulnerable to enemy attack. Individual *fabricae* sometimes specialized in certain categories of equipment, such as swords, spears, or \*cavalry armour. Significantly, the *fabricae* were under the oversight of a civilian official, the \*Magister Officiorum, although those who worked in them were regarded as performing military service (*militia*). ADL

S. James, 'The *Fabricae*: State Arms Factories of the Later Roman Empire', in Coulston, *Military Equipment*, 257–331.

**façades** The columns and pediments which dignified the frontages of monumental buildings continued to feature in Late Roman \*city landscapes, whether forming the focal point of a colonnaded \*street or one side of a square. \*Emperors and \*city councillors could agree in wishing to see the preservation of façades, the buildings behind them, and the urban layout of which they were a part. When the Forum at \*Rome was restored under the \*Tetrarchy the \*Basilica Julia and Basilica Aemilia were given monumental façades which accorded better with their external appearance than with the layout of the interior. The space between the columns of such façades might be employed to frame honorific images, like the statues of the \*Tetrarchy set up before the Temple of Hadrian at \*Ephesus.

Fresh façades were also created. The Imperial Basilica at \*Trier was designed as the centrepiece of a flotilla

of buildings which surrounded it; it could be approached closely only from the side of the façade, in front of which it is easy to imagine the figures of imperial personages emerging, much as they are shown in \*silver on the \*Missorium of \*Theodosius I. It is likely that the grand façade on the seaward side of the inner peristyle of \*Diocletian's retirement palace at \*Split was also designed with \*ceremony in mind.

Christian monuments adopted the façade. In the \*mosaics of the \*dome of the Rotunda of S. George at \*Thessalonica saints stand praying before architectural frontages, presumably of a heavenly city. Similarly, the first thing seen by neophytes being baptized at \*Qalat Seman as they emerged from the \*baptistry was the grand frontage of the shrine of S. \*Symeon Stylites the Older.

Just as an image of a \*city gate, its walls, and its roofs might stand for a city, so the façade of a building might represent what was within. On the \*pilgrimage flasks brought back to \*Italy from the \*Holy Land the Empty Tomb of Christ is represented by the frontage of the *aediculum* which covered it. In the \*mosaics of S. Apollinare Nuovo at \*Ravenna the frontage of \*Theodoric the \*Ostrogoth's \*palace, labelled 'Palatium', originally inhabited by royal figures praying between its pillars, brings up the rear of the \*procession of saints making their offering to Christ. That façade is thought to have been modelled on the Chalke Gate, the main entrance to the Great Palace at \*Constantinople. JTPi; OPN S. Ćurčić and E. Hadjistryphonos, eds., *Architecture as Icon: Perception and Representation of Architecture in Byzantine Art* (2010).

I. Jacobs, *Aesthetic Maintenance of Civic Space: The 'Classical' City from the 4th to the 7th Century AD* (OLA 193, 2013).

**factions** The \*circus factions in the Later Roman Empire evolved from stable-based organizations of chariot-owners in the early Principate into organizations run by charioteers and then into broader-based institutions comprising performers and partisans in the hippodrome and theatre (as depicted on the base of the \*Obelisk of \*Theodosius I in the \*Constantinople \*Circus). This latter type of faction became normal by the early 6th century. Factions came to possess their own property, cadre of officers (often themselves performers such as pantomime dancers), organizational rituals, and official records. At \*Rome, the Blue and Greens had \*patrons from the senatorial \*aristocracy. The factions played an important part in imperial \*ceremony, for instance greeting the imperial \*adventus in a city by performing \*acclamations. In 601, the *alba*, or official registers, of the Blues and Greens in \*Constantinople cited a membership of 900 and 1,500 respectively, numbers that Roueché (151–2) argues include not only the professional performers and supporting personnel but

also around 400–600 'young men' (Lat. *iuvenes*, Gk. οἱ νεανίσκοι). These 'youth' not only performed acclamations but were also said to have been responsible for the unruly behaviour and public \*disorder associated with the Late Roman hippodrome and theatre. Whether the colour factions, the Blues and the Greens, the Reds and the Whites, had specific ties to local associations, urban regions, or Christian theological beliefs remain questions of longstanding discussion. That they became primary sources and focuses of loyalty, especially though not only for groups of youth in the \*cities, is generally agreed.

**fairs** Periodic, often annual markets were frequently associated with religious \*festivals (e.g. \*Theodoret, *Religious History*, 16). They should be distinguished from more regular daily, weekly, or fortnightly markets, although the terms *nundinae* (Lat. 'every eight days'), *mercatus*, or *conventus* could refer to either category of gathering.

Smaller, local fairs were characterized by brevity (a few days in length) and direct sale to the consumer, and were usually frequented by local people. At interregional fairs, buyers and sellers of more diverse origins might gather, to trade rarer and more expensive goods, primarily wholesale. Such fairs could last up to six or even eight weeks. Often held on private \*estates, they provided opportunities for rural communities to gather. Suspension of \*taxation and levies was common

## Fall of the Western Empire

during religious festivals and private organizers were not permitted to charge stall-holders. There is evidence for an unbroken tradition of this type of commercial exchange throughout the Late Empire.

International \*trade fairs drew \*merchants from distant foreign parts. The treaty of 298 made \*Nisibis the appointed place for Roman–Persian commerce (\*Peter the Patrician, fr. 14, cf. \**Expositio Totius Mundi*, 22), \*Ammianus describes a thriving fair at \*Batnae (XIV, 3, 3), and a \*law of 408/9 (*CJust* IV, 63, 4, pr. and 1) listed \*Callinicum, \*Nisibis, and Artaxata as the only cities where \*trade with the Persians was permitted.

**Fall of the Western Empire** The years 476–80 saw the coup of the barbarian commander \*Odoacer against the \**patricius* \*Orestes and the deposition of Orestes' young son, the puppet-emperor \*Romulus Augustulus. In hindsight and in traditional accounts these events marked the end of independent imperial authority in the western half of the Roman Empire.

Orestes had revolted in 475, driving the Western \*Emperor \*Julius Nepos to \*Dalmatia and elevating Romulus in his place. The true power behind the throne, Orestes soon encountered difficulties with the soldiers of \*Italy, many of them of barbarian origin, when he refused their request to be given land on which to settle. By August 476, their protests had developed into a full-scale revolt led by Odoacer, whom the soldiers proclaimed king (*rex*). Odoacer defeated and killed Orestes at Piacenza (Placentia) and neutralized all remaining opposition by September. He then took the fateful step of deposing Romulus Augustulus and notified the Eastern Emperor \*Zeno that the West no longer required its own emperor. Placing the West under Zeno's authority, he offered to rule as the emperor's representative in Italy and requested the rank of *patricius*.

Conventionally, these developments ended the Western Empire, but Zeno's response and Odoacer's future actions demonstrate the ambiguity of the situation. Addressing Odoacer as a *patricius*, the emperor nonetheless instructed him to receive his rank from Julius Nepos, whom he still regarded as the legitimate reigning Western emperor. Moreover, and though *de facto* ruler of Italy, Odoacer obeyed Zeno to some extent, minting \*coinage in the name of Nepos. In 480 Nepos was assassinated and Odoacer invaded

\*Dalmatia as Nepos' avenger. With Nepos dead, the West truly did lack its own emperor, but the idea that this constituted the Fall of the Western Empire gained prominence only in the era of \*Justinian I.

**familia** \*Latin legal term denoting both the \*household, including wife, children, other relatives, freedmen, slaves, clients, and sometimes boarders and employees under the authority of a \**paterfamilias*, and also the household property. The term is therefore extended to \*monasteries and the households of \*bishops.

GSN

J. Evans-Grubbs, 'Marriage and Family Relationships in the Late Roman West', in P. Rousseau, ed., *A Companion to Late Antiquity* (2012), ch. 14.

**family life** Although families were the basic units of social organization, family life and experience varied greatly in Late Antiquity, both regionally and by social class. The married couple and their direct offspring constituted the core of a family. Saller and Shaw's epigraphic study of tombstone \*inscriptions (*JRS* 74 (1984), 124–56) concluded that the nuclear family was the form primarily conceptualized during the Principate. Mortality rates and \*marriage patterns, however, often made the nuclear family more an aspiration than a reality. Demographic studies suggest that a majority of children had a deceased parent (usually a father) before reaching adulthood. In certain regions, local custom sometimes dictated that more distant relations might bring up children; \*Ausonius, for example, spent much of his youth in his uncle's house, which was a common

practice in \*Gaul. \*Households might also contain extended kin, slaves, freedmen, clients, and boarders. The experience of even nuclear family life when set within the household could therefore vary widely.

\*Marriage defined the family in practice and as an ideal in the Roman world, and Christianity offered few new notions of conjugal life. The husband as \**paterfamilias* was still master of the household, although Christianity introduced a fresh perspective to the consideration of marital conduct and the sanctity of marriage, including an increased emphasis on conjugal fidelity for husbands (e.g. \*Lactantius, *Inst.* VI, 23, 21–40; \*Constantine I, *CJust* V, 26 of 326). Imperial laws occasionally tried to support Christian marital ideals (e.g. *CJust* V, 17, 10 of 528; *NovJust* XXII, 3–19 of 536 and CXVII, 8–15 of 542). The ability to divorce unilaterally became legally circumscribed (*CTh* III, 16). That said, patterns largely remained unchanged in Late Antiquity: couples were intent on producing heirs, domestic violence remained a matter of concern internal to the family, and patterns of male sexual behaviour before marriage apparently suggest the possibility that promiscuity persisted after marriage.

The outcome and purpose of marriage, both literally and legally, was the production of legitimate heirs, and the avoidance of \*fornication. Formal schooling continued, regardless of religion, for those who could afford it, or in the case of \*Augustine, barely afford it (*Conf.* II, 3, 5); \*Libanius also recounts the lengths to which his widowed mother went to ensure that he received his education (*Oration* I, 4). Children from humbler families learned practical trades, often those of their parents and usually at an early age. Late Roman opinions concerning relationships between parents and children suggest approbation of direct involvement by mothers and fathers. Patristic writers stress that rearing offspring should not be left to servants. Parents were exhorted to correct misconduct, to develop a child's moral sense and devotional practice, and accept partial responsibility should a child fail to live up to the expectations of family and society. Fathers were expected to raise children to be socially and financially responsible; mothers were expected to instil in them the basic precepts of morality. In aristocratic households, there is some evidence that Christianity fostered greater parental involvement.

Slaves and freedmen also played a prominent part in family life, often in quite humble homes. In addition to providing physical labour, many slaves provided personal service, particularly in the bringing up of children. Christian writers voiced opposition to the use of slaves as sexual surrogates. Such relationships might or might not generate bonds of affection; they were not always voluntary. The families of slaves also existed alongside

those of their owners. Sometimes, as in the Classical era, these families would be recognized by their masters, and at other times not.

Thus, while there were some changes to the ideals about family and family life in the Late Roman world, actual changes from Classical habits were relatively small.

**famine and food shortage** In the subsistence agriculture practised by the majority of Late Antique populations local or even regional shortages of staple foodstuffs were very common. On the other hand, famines, that is shortages that led to starvation and increased mortality, were rare. Subsistence crises were quite numerous from the 4th century up to the first outbreaks of the Justinianic \*Plague in the 6th century, while their number decreased significantly up to the early 9th century indicating a demographic decline and decreased pressure on available food. The causes of subsistence crises were manifold, both nature-induced (due to untoward climatic conditions such as drought, excessive rainfall or cold spells, floods, and pests affecting crops) and human-induced (due to sieges and warfare or the manipulation of market operation through the fixing of \*prices). As a rule nature-induced crises lasted longer, but rarely reached catastrophic proportions unless more than one harvest cycle was affected through the combination of more than one of the above factors or the additional outbreak of disease. Human-induced crises, on the other hand, were often short-term events which gave rise to extreme conditions. Siege-induced famines or famines that were caused by applications of a scorched earth policy were quite common and in fact constituted a conscious method of warfare. Shortages and famines that were caused by tampering with markets were obviously not deliberate, but showed that markets resisted outside regulation. The most telling case of such a phenomenon followed the Tetrarchic \*Prices Edict of 301.

Access to food in rural communities was obviously immediate, but \*cities depended on the import of

foodstuffs. Therefore shortages could manifest themselves as a result of transport-related difficulties. Mainland cities were expensive and difficult to provision with food, unlike coastal cities. \*Constantinople, the largest city in this period, depended on shipments of staple foods for its survival, but due to its administrative importance as an imperial capital it was relatively safe from the menace of famine. However, the shift of imperially subsidized food transport to Constantinople meant that the City of \*Rome, suffered a number of famines in the 4th and 5th centuries.

Subsistence crises as a rule began with inflation in the prices of staple foodstuffs accompanied by speculation and the formation of black markets which prompted sale of property or flight from affected areas. Outside aid, through the imperial government or local elites, both secular and especially ecclesiastical, helped terminate less acute crises. If such interventions failed to work and the crisis was allowed to continue social responses became more extreme. Populations often protested and even attacked those deemed responsible for speculation, resulting in food riots. Once conventional foodstuffs were exhausted there was gradual recourse to alternative food which would include (in descending order) inferior or unusual plant-based food (wild oats, chestnuts, acorns, animal fodder), animals not usually destined for human consumption (\*dogs, \*horses, mules, \*camels) and even cannibalism.

Strategies in place for preventing or coping with subsistence crises included mixed farming and crop rotation designed to avoid potentially vulnerable monocultures, and the sowing of such sturdier late-harvest grains as millet when wheat harvests were failing.

**fara** Among the \*Lombards, a collective group based on lineage that may also have had a military function. The term is glossed by \*Paul the Deacon in his *History of the Lombards* as 'families' or 'lineages' in his description of the invasion of \*Italy by \*Alboin (565/8–72): Alboin occupies Italy 'in fara', makes his nephew \*Gisulf \*Dux of \*Friuli and allows him to choose 'farae'. The size, composition, and purpose of the farae remain obscure. The term 'fara' is used only once in Lombard \*law codes (\*Rothari, *Edict*, 177) as a synonym for family. Subsequently it becomes associated with family settlement and survives in a number of place-names, e.g. Farra d'Isonzo.

CTH

N. Everett, *Literary in Lombard Italy c.568–774* (2003), 106–7.

**Faragola** \*Villa of the 4th/6th century in the territory of Ausculum of \*Apulia (mod. Ascoli Satriano, near Foggia in Puglia). Excavation has provided evidence for \*farming on the site, and also an opulent \*dining room. The latter featured a masonry \*stibadium richly ornamented with \*opus sectile made of cut \*marble and \*glass.

**al-Farazdaq (Abu Firas Hammam b. Ghalib)**

(c.641–732) \*Arab \*poet of the tribe Tamim. Al-Farazdaq is one of the most celebrated political poets of the \*Umayyad period. He was a \*court panegyrist in \*Damascus, but as he frequently switched political loyalties, he was obliged to move on occasions to other \*cities of the \*caliphate. Many of his eulogies declare the Umayyad rule to be divinely sanctioned and contain numerous quotations from the \*Qur'ān. His polythematic odes often omit the traditional prelude (*nasīb*), while others continue to conform to earlier conventions. Al-Farazdaq was strongly committed to tribal \*praise poetry, a fact that attests to the continuity of the pre-Islamic poetic tradition and provides a vivid expression of the lasting validity of tribal ties in Arab society of the Umayyad era. Al-Farazdaq's popularity relies to a large extent on the vast corpus of the polemical poems (*naqa'id*) that he composed during his long-lasting rivalry with \*Jarir.

**Faremoutiers-en-Brie** (Eboriacum; dép. Seine-et-Marne, France) Female/double \*monastery founded c.620 by \*Burgundofara in collaboration with \*Eusthasius of \*Luxeuil (*VColumbani* II, 11–22). The nuns probably followed the *Regula Cuiusdam ad Virgines*, one of the earliest monastic rules based on the *Rule of S.\*Benedict*. Among its first abbesses were Æthelburh (d. c.664) and Sæthryth (d. after 664), daughters of King Anna of East Anglia (\*Bede, *HE* III, 8). ADi M. B. de Jong et al., ed., in R. Le Jan, 'Convents, Violence, and Competition for Power in Seventh-Century Francia', in *Topographies of Power in the Early Middle Ages* (2001), 243–69.

**Farghana (Ferghana)** Valley in \*Transoxiana, surrounded by mountains on three sides, through which the \*Jaxartes River flows. Farghana \*horses were traded with \*China in Antiquity; the rich soil, abundant harvests, and livestock breeding are noted by the Buddhist traveller \*Xuanzang (I, 30–1). The densely populated valley was

influenced by both \*Sogdian and Turkic culture; during the 7th–8th centuries, Farghana was alternately ruled by the Western \*Türks, the Chinese, a local Turkic dynasty, and a \*Sogdian ruler, the Ikhshid. After initial Arab raids under \*Qutabya b. Muslim (712–13), Islamization proceeded slowly, due to Sogdian revolts, and was not completed until the early 9th century. Farghana supplied many troops to the armies of the \*Abbasid caliphate (al-\*Baladhuri, *Futūḥ al-Buldān*, II, 205; al-\*Yaqubi, 32, 54–5). Arab and Persian geographers to write about the valley include Ibn Khurdadhbīh (21–2); the *Hudud al-'Alam* (115–17), and al-\*Muqaddasi (238, 243–4).

**Fāris** Ruined village (mod. Khirbat Fāris, Jordan) located in the northern part of the Kerak Plateau, probably abandoned in the 1930s and contiguous with another ancient site known as Khirbat Tadūn. The oldest standing structure at Fāris is a 1st-century AD barrel-vaulted chamber (the 'khan'). Excavations in and around the 'khan' have established a sequence of occupation phases through the Late Antique and Islamic periods. The recovered assemblage is dominated by \*pottery wares and faunal and botanical remains with few coins and luxury items. The presence of a Late Antique church is strongly suggested by abundant \*mosaic tesserae on the site.

**farming** Specialized production on \*estates and even by small-scale peasants was fairly common in the Late Antique Roman and \*Persian Empires, and these depended on intensive methods and the ability to generate consistent, marketable surpluses. Up to 90% of Late Antique people lived by farming. The range of climates and topography from Persia to northern Europe required numerous strategies adapted to local conditions.

MD

**farming, Aksumite** Subsistence farming provided the economic foundation for the \*Aksumite kingdom. Its methods, and the crops and animals involved, all indicate strong continuity from earlier periods. Archaeological evidence supplements that provided by \*inscriptions. \*Cattle, \*sheep, and \*goats were herded, the first being used additionally for drawing \*ploughs. 'Beasts of burden' (presumably donkeys) are attested epigraphically. Evidence for \*camels and \*horses is less certain. Emmer and barley were the staple crops; teff (the modern staple) was cultivated in Aksumite times and perhaps earlier. Free-threshing wheats were adopted, gradually gaining in popularity. These crops were supplemented by varieties originating to the west and south, notably sorghum and finger millet. Grapes may have been cultivated. Cotton was either grown locally or imported from lower altitudes for processing.

 Phillipson, *Foundations of an African Civilisation*, 108–14.

**farming, Germanic** In areas of Germanic settlement, only rural dwellings (\*villages, hamlets, isolated farms) are attested. Here agriculture was the most important economic activity. In the 5th century, fortified hilltop

settlements were established, but only in areas bordering the Romans, such as, for instance, the areas inhabited by the \*Alamans.

Settlements were arranged in smaller or larger groups (*Siedlungskammern*), which were surrounded by woods. On the North Sea coast, there were also artificial settlement mounds, located on the edge of the Wadden Sea. Where Celtic Fields (*Ackerparzellen*) are found, no single picture is apparent; there are rectangular, square, and polygonal enclosures. Long rectangular \*field systems and strip fields are seldom found.

A peculiarity of the north German lowlands and areas with sandy soils was the method of soil management. In these places, grass was grubbed up and used as stable-bedding in the winter. Then in the spring it was enriched with dung and put on the fields, which then grew slowly to full height. Rye is the crop most often cultivated on this land. Apart from that, systematic crop rotation was practised. Soil improvement, for example by the addition of chalk, is occasionally attested.

All of these types of field were equipped with scratch \*ploughs for cultivation; the switchover to the reversible plough came in the 3rd century. Ploughs were drawn by oxen. Archaeological finds indicate a variety of agricultural implements. Attested crops are barley, oats, rye, wheat, and millet. Also attested is the cultivation of beans and some varieties of cabbage, as well as oil seeds (flax and German sesame) and fibrous plants (flax and hemp). \*Fruit and \*vegetable gardens were not cultivated in Germanic areas. This form of agriculture was first taken over from the Romans in the early Middle Ages. The gathering of wild fruits, nuts, beech nuts, wild grasses, and wild spice plants is occasionally attested. The farm animals attested are \*cattle and \*horses (of relatively small sizes), \*sheep, \*goats, pigs, chickens, geese, and ducks. \*Bee-keeping was also important.

**farming, Persian** (MP *warz*) Agriculture of the \*Sasanian period in Iran and \*Mesopotamia, the core lands of the \*Persian Empire, inherited traditions of agriculture pre-dating the Late Antique era by thousands of years, but benefited more immediately from Arsacid investments in \*irrigation. \*Grain (wheat, barley), many \*fruits (including date palms in the lower

latitudes), \*vegetables, and rice were all cultivated for \*food. Sesame was grown to produce oil. Cotton was grown for \*textile manufacture in some regions as well.

Climate and rainfall dictated whether fields were irrigated using canals (Mesopotamia) or \**qanats* (Iranian Plateau). Springs in the Zagros mountains were another important source of water for \*irrigation but where more than 300 mm of rainfall fell annually, dry-farming (unirrigated) could be practised (e.g. in parts of \*Fars, Luristan, Kurdistan, and Azerbaijan; Gilan and Mazandaran received much more rain).

Simple \*ploughs (ards) pulled by draught animals (oxen, donkeys, \*horses, mules) were used to till the land. Herds of \*sheep, \*goats, and, to a lesser extent, bovines, were kept as well. Yields are difficult to estimate but \*Tabari's discussion of the reforms of \*Khosrow I, and many early Islamic sources, contain quantitative information on the \*taxation of agricultural produce. Small farms existed throughout the Empire, as did royal estates, but at various points plantations owned by the \*aristocracy swelled to enormous sizes at the expense of small farmers until broken up by reformer kings like Khosrow I.

**farming, Roman and post-Roman** Farming in the Mediterranean Basin was mostly limited by soil and \*water conditions, rather than by temperature. Most of the Mediterranean endured seasonal shortages of water, and, alongside this, longer-term \*soil erosion and fertility problems that farmers addressed in a number of ways. \*Irrigation was the obvious solution to summer drought and scorching heat that many plants could not survive, and the available evidence indicates a steady investment over the Roman Empire in irrigation works. Most of these were local and small-scale. In Persia, agriculture in the oases and in \*Mesopotamia required perennial irrigation and the \*Persian Empire made heavy investments in irrigation systems, evidenced by their development of plantations along the Diyala River and elsewhere. In \*Aksum and \*Arabia, cultivators built systems to capture rainfall runoff or spring discharge in combination with elaborate hillside terracing that supported intensive farming around administrative centres and their dependent villages. Outside of the \*Nile flood-plain, which was fertilized annually by the overflow of the river, farmers relied mainly on animal manure to maintain and improve the soil. In much of the eastern Mediterranean, pigeon

guano was especially important; its use is attested by thousands of Late Antique dovecotes in \*Egypt, \*Capadocia, the Levant, and Persia. \*Sheep and \*goats of semi-nomadic groups were welcomed into harvested \*grain fields to graze on stubble where they deposited dung. An increase in intensive bovine farming in the Late Roman world increased the local availability of fertilizer. Human waste collected from chamber pots (night soil) was also a common source of fertilizer.

The vast majority of people in Late Antiquity worked on the land and most of them were under the control of large \*estates. Broadly speaking, labourers were either free or unfree (slaves). The \*slave mode of production continued to be important on landed estates, especially in the West. The \*free peasantry was subject to elite power through traditional social and legal means of coercion, namely \*patronage (\**patrocinium*) or laws that bound them to the estate of their birth (\**colonus*). *Coloni* are most commonly referred to as \**adscripticii* peasants (Gr. *enapographoi georgoi*) (CJust XI, 48; XI, 50), as they who were the fiscal responsibility of the landlords to whose estate they were assigned. *Coloni* were prohibited from leaving the land and could not own property. In Late Roman North \*Africa, the *coloni* seem to have been more prosperous than is often supposed, taking part in certain market activities and in social activities beyond their normal roles as cultivators; their mobility and participation in the church and public life in estate \*villages threatened elites and the established order (Dossey, 202–3). In the post-Roman West, the presence of tied tenants on the soil was well established by the 6th century where they are mentioned as *colonus* or *originarius* alongside slaves as the most common farm labourers (\**Lex Romana Burgundionum*, VII). In 566, \*Justin II (Dölger, *Regesten*, no. 4) divided agrarian labourers into legal categories that reflect a complicated and fragmented picture of the legal status of rural workers in the Eastern Empire who are called variously *georgoi* (peasants, often considered synonymous with *colonus*, but this is not always the case), *misthotai* (wage labourers), *emphyteutai* (holders of long-term leases), and *kektemenoi* (free-holders). Sharecropping remained a common means of working the land in the Roman and Persian Empires.

Cereals occupied the bulk of all arable land. Various types of wheat formed the basis of the Roman and post-Roman \*diet in most regions and were the most widely grown crops. Several different barley species were grown, their production largely dependent on access to seed stock and the local environment. Barley was consumed mainly by \*animals and the \*poor. Minor grains, such as any number of millets, rye, rice, and sorghum, were locally important and helped farmers adapt to specific local environmental conditions. The most common \*fruits were the grape and the \*olive, both

characteristic of Roman culture. Since olive and grape could be processed into liquids that kept for considerable periods (olive oil and \*wine) and had a range of uses, these plants rounded out the staple diet in most areas. Common fruit crops that continue to be important today include figs, apples, peaches, cherries, and dates. Others, such as quince and myrtle, have since largely fallen out of favour. Numerous plant species, including peach, cherry, durum wheat, artichoke, and cucumber, were spread by the Romans throughout much of Europe, although their cultivation did not always endure in the post-Roman period. Tropical plants, such as sugar cane and cotton, were regionally important in the Persian Empire and sugar was apparently exported in some quantity. Cotton was known in Late Roman \*Egypt and was locally significant in the desert oases.

Animals were an important element in agriculture in the Roman Mediterranean, as well as in the Persian and Islamic worlds. Oxen usually provided traction for \*ploughs and carts, while asses and \*camels were needed for power on the farm, as well as local and long-distance transport of goods and foods. In most regions, pasture was managed within the cropping regime so that animals could be kept efficiently and provide much-needed fertilizer to the fields. Demand for milk, \*meat, and wool was strong throughout Late Antiquity and these commodities led to increasingly specialized \*cattle rearing methods and improvement of animal types throughout \*Italy and elsewhere.

Late Antique agriculture continued older praxis in nearly every area, but there were modifications to the methods of Mediterranean and Near Eastern agriculture, especially in the continued spread of crops, and intensification as a result of state and market demands. Technologies such as the direct-screw \*press and *saqiya* driven chain-of-pots, as well as the large *noria* irrigating water wheel were not new devices, but they achieved significant diffusion in many regions where intensive agriculture was the norm, not only in the eastern Mediterranean where they are most visible in the sources, but also in regions of the Roman West. The \**qanat* was an ancient foundational technology of Persian agriculture and continued its diffusion to both East and West throughout Late Antiquity. From the end of the 5th century, urban centres in most parts of the Roman West and \*Balkans declined in size and number and a return to more extensive and subsistence-based strategies prevailed. MD

**farrah** See XWARRAH.

**Fars (MP Pārs; Gk. Persis)** South-west Persian province bordering Iraq-i Aḡami (or \*Isfahan) in the north, the Persian Gulf in the south, Kerman in the east, and \*Khuzestan in the west. The ancient province (MP \**shahr*) was much more extensive than the modern province that bears this name. The name is attested from the 3rd century.

Fars appears at the head of the list of lands ruled by \*Shapur I in his \*inscription the \**Res Gestae Divi Saporis* (ŠKZ, §2/2) and was the cradle of the \*Sasanian dynasty. Its founder \*Ardashir I was said to be the son of \*Pābag, custodian of the \*Anahid \*fire temple at Istakhr (MP \*Staxr), near the ancient Achaemenid capital Persepolis, the site of the first Sasanian mint. The Sasanians were intensely interested in the Achaemenid remains, reoccupying parts of Persepolis and carving reliefs below the Achaemenid tombs.

Sasanian Fars consisted of the districts of Ardashir-Xwarrah (NP Gōr, mod. \*Firuzabad), \*Bishapur (near Kazerun), \*Darabgird, Istakhr, New-Darab (location unknown), and Weh-az-Amid-Kawad (Arraḡan, near mod. Behbahan) under the authority of one or more \*governors (MP *āmārgar*). These were largely coterminous with the bishoprics of the Christian \*Church of the East attested from the early 5th century onwards (to which must be added Maškenā dhe-Kurdū and \*Rev-Ardashir, on the Persian Gulf). Sasanian \*rock reliefs are numerous in Fars (at Firuzabad, \*Naqsh-e Rajab, \*Naqsh-e Rostam, Darabgird, Bishapur, Sarab-e Bahram, Sarab-e Qandil, Barm-e Dilak, Guyum, and \*Sar Mashhad), as are \*fire temples. Major excavations have revealed palatial, domestic, and military architecture at \*Qasr-e Abu Nasr, Istakhr, Naqsh-e Rostam, Bishapur, Firuzabad, and \*Hajiabad.

**fasting, Jewish and Christian** The ascetic practice of regulating quantity and kind of both food and drink for philosophical or religious purposes.

Dietary regulation was a central feature of \*Jewish religious practice, with days of fasting appointed each week (Monday and Thursday), fasts associated with holy days, and fasting linked to a personal undertaking (e.g. Nazirite vow). Jewish religious law also regulated kinds of food that were allowable and those that were forbidden. Acceptable animals were those that have a cloven hoof and chew their cud (Leviticus 11:3; Deuteronomy 14:6), thus forbidding e.g. pork, \*camel meat, and rabbit. Acceptable \*fish were those with scales and fins, thus excluding shellfish. Other rules regulated \*birds, insects, and allowable combinations of foods (e.g. \*meat could not be eaten with dairy products). Some schools of Hellenistic \*philosophy practised dietary selection (the vegetarianism of the Pythagoreans) or moderation (Epicureans and Stoics), often under the influence of medical theories of the effects of particular foods on sexual and general health. Foods were classified in various ways (e.g. 'dry' and 'wet') according to their perceived effects on the bodily humours. \*Manichaeans emphasized vegetarianism and abstention from alcohol, and had their own theories about those foods thought to nurture spiritual growth by their higher content of particles of light.

Christians inherited both the religious practice of fasting and the philosophical/medical concerns about the effects of particular kinds of food and drink. A key element of early Christian formation was the abandonment of the Jewish dietary laws (Acts 10: 5–10). The *Didache* reports that Christians fasted on Wednesdays and Fridays to distinguish themselves from the Jews and to observe the day of Jesus' crucifixion. They also

developed a penitential season before the annual celebration of Jesus' resurrection at \*Easter. Ultimately fixed at 40 days (though reckoned in various ways), the 'Great Fast' or Lent typically featured abstention from all animal products as well as restriction of the amount of food and drink. Shorter fasting periods were associated with other \*festivals. Christian \*ascetics practised a generally more severe dietary regimen throughout the year, avoiding both meat and wine. As \*monasticism developed, the one daily meal was typically taken at the ninth hour of the day (3:00 p.m.) or even later on fasting days or in penitential seasons. Ascetic avoidance of meat was linked to the control of sexual appetite, and moderation of food and drink in general was seen as the first defence against lust and other disturbing passions. Some recommended consumption of dried foods alone (xerophagy) and others avoided any cooked or processed food (including \*olive oil). Heroic monastic fasts of several days or longer are recorded in the literature but the general recommendation was to take one simple meal daily and avoid extremes of both fasting and feasting. CAS

**fasting, Islamic** Fasting (Ar. *sawm*) is required every day during the month of \*Ramadan (the ninth month of the Islamic calendar), according to \*Qur'an 2: 183–4. It involves abstention from the ingestion of food, drink, and any other substances, as well as from sexual intercourse, from sunrise until sunset. The end of the fast is commemorated in a festival called Eid al-Fitr, the Feast of the Fast-Breaking. Voluntary fasting at times other than Ramadan also follows the sunrise to sunset formula, and was an important feature of Islamic \*asceticism. NK

*EQ* s.v. fasting (Wagtendonk).

**Fatima** Daughter of \*Muhammad by his first wife \*Khadija, and wife of Muhammad's paternal cousin \*'Ali, who was the fourth \*caliph and the first \*Shi'i imam. Fatima is revered by \*Sunni and Shi'i Muslims alike, though her veneration is much more pronounced in Shi'ism, particularly because she gave birth to Hasan and \*Husayn, the next two Shi'i imams after 'Ali. She is often referred to as Fatima al-Zahra', the 'shining one'.

In traditional literature, Fatima is best known for her abstemiousness and the general poverty of her married life with 'Ali, as well as for her role in the early succession disputes in which her husband was involved. She did not seek political power, but was central to the events of early schism as they unfolded, as well as to

early adjudication regarding \*inheritance and the members of Muhammad's family. NK

W. Madelung, *The Succession to Muhammad: A Study of the Early Caliphate* (1997).

**Fausta** (c.290–326) Flavia Maxima Fausta, daughter of \*Maximian and \*Eutropia. Her marriage to \*Constantine I in September 307 is celebrated in a surviving \*Latin \*panegyric (*PanLat* VII [VI]). She bore Constantine three sons, \*Constantine II, \*Constantius II, and \*Constans, and two daughters. Various theories exist about her death in 326 in mysterious circumstances, by suffocation in an over-heated \*bath. It followed shortly after the trial and execution of her stepson \*Crispus. The credibility of sources (\*Zosimus, II, 29, \*Zonaras, 13, 2, 38–41) which claim that they were involved in a Hippolytus–Phaedra style love affair is diminished by the fact that by 326 Crispus was living in \*Gaul and Fausta in the East. Moreover, \*Julian praised Fausta's moral character in a \*panegyric (*Oration* I, 9BD). She is depicted on the Great Cameo of Constantine and \*Fausta, now in Leiden, formerly in Utrecht. DMG

**Faustus of Buzanda** See *BUZANDARAN PATMUTIWNK*'.

**Faustus of Riez** (400/410–after 484) \*Bishop of \*Riez 452/62–after 484. Faustus was British by origin, but early in life became a monk at \*Lérins in southern \*Gaul, where he was abbot from 433/4 until he became bishop. From c.477 to 484, after Riez came under the rule of the \*Visigoths, he was sent into \*exile by \*Euric. Faustus was the author of numerous literary works, notably *De Gratia* (473/4), a treatise on grace and predestination which put forward ideas differing from those of \*Augustine. After his death it became the object of controversy when it was denounced (c.520) by the latter's admirers, such as the Scythian Monks and \*Fulgentius of Ruspe. His other surviving works include a treatise on the Holy Spirit, a number of \*letters, and probably some of the \*sermons in the extensive \*Eusebius Gallicanus' collection. His ideas about the soul prompted \*Claudianus Mamertus to write his treatise *De Statu Animae* (c.469). DRL

Brown, *Augustine*, 47–8.

**Faventinus, M. Cetius** Author of a handbook on private construction and architecture, compiled from select excerpts of various architectural authors, mainly \*Vitruvius. The book probably dates from the late 3rd or early 4th century. It was known to \*Palladius the writer on \*farming and to \*Sidonius Apollinaris. ER ed. H. Plommer (with ET), *Vitruvius and Later Roman Building Manuals* (1973).

RE 3/2 (1899) s.v. Cetius col. 2013 (Gensel).

**Faxian (Fa-Hsien)** (c.337–c.422) Faxian was one in a succession of hundreds if not thousands of \*Buddhist monks from east Asia whose travels to \*India by land and sea in search of texts and teachings are recorded in an early 6th-century Chinese text, *Memoirs of Eminent Monks*. A handful made personal records, Faxian's being the earliest known. His main purpose was to collect *Vinaya*, texts governing monastic life.

Faxian left Chang'an in 399. He followed the \*Silk Road around the Taklamakan desert and then crossed the mountains of \*Central Asia to Gandhara. From here he went to Buddhist sites in the Ganges Valley, by sea to Sri Lanka, and then back to \*China, arriving c.412. He travelled with other monks, one of whom remained in India. On his return, Faxian translated texts until his death.

His report gives very brief details of the places and peoples he encountered and the perils of travel—especially by sea—but concentrates on Buddhist events, monasteries and shrines, clergy and practices. He gives distances in terms of days or local measures. He also lists some of the works he obtained. SWH

**Fayyum** See ARSINOE AND ARSINOITE NOME.

**Fayyum portrait** In the \*Fayyum (\*Egypt), commemorative portraits of the \*dead were painted on wooden panels in encaustic or tempera technique and affixed over the face of their mummy. These painted wooden portraits—together with painted linen shrouds and, less frequently, stucco masks—depict the individualized features of the dead; they belonged to the tradition of Roman veristic funerary portraiture, but were executed as part of the specifically Egyptian practice of mummification. Many mummies bearing painted panels have been excavated at Fayyum sites; they have also been found elsewhere in Egypt. Comparison with Roman imperial \*hair styles, \*jewellery, and \*dress suggests dates c.30–300 AD. Contemporary representations of deities, also painted on wooden panels and depicted in naturalistic style, had a devotional function akin to later Christian \*icons. ERO

**Fedderson Wierde** A settlement in the German North Sea marshes north of Bremen, of the type known as a *terp* or *wierde*, an artificial dwelling mound designed to provide refuge and protection from flooding, inhabited during the 1st–5th centuries. In a comprehensive excavation campaign 1954–63 the settlement was almost completely excavated. The Feddersen Wierde settlement exemplifies a typical artificial dwelling mound in the sea marshes of the Netherlands and northern Germany, like those described by \*Pliny (*Historia Naturalis*, XVI, 1, 2–4).

The earliest arrangement, of about five farmsteads, was built on a low elevation in the marshes during the early 1st century. In subsequent building phases (during the 2nd to 4th centuries AD), the plateau was artificially

raised with dung and tidal mud layers to create one coherent dwelling mound with fenced farmsteads in a semicircular \*village-like arrangement. Thus the settlement could withstand higher levels of flooding. During the 3rd century the Feddersen Wierde complex comprised at least 26 individual farmsteads with an estimated 300 inhabitants and 450 \*cattle.

The majority of the \*houses in Feddersen Wierde are \*longhouses with space for 12–30 cattle. Livestock farming (mostly cattle but also \*sheep, \*swine, and \*horses) was the dwellers' primary source of livelihood; cultivation with barley, oats, flax, or beans was less important, not least because the marsh fields were often too salty. Conditions in the settlement's layers have preserved both the foundations of the wooden houses, fences, and paths and also artefacts of bone, horn, antler, and wood, which were probably household and \*farming \*tools.

The character of social stratification at Feddersen Wierde is debated. In the village, one farmstead stands out because of the length and capacity of its longhouse and the dimensions of the fenced area around it. Special metal finds suggest workshop activities connected with this farmstead: it is interpreted either as the seat of the village chief or as some sort of communal farm centre. Due to repeated flooding and depopulation of the region, the Feddersen Wierde settlement went into decline in the 4th century and was abandoned during the 5th century.

**festal letters** \*Eutychius, a 10th-century \*Melkite \*Patriarch of \*Alexandria, suggests in his *Annales* (PG CXI, col. 989) that it was a tradition of the Egyptian Church, beginning with the episcopate of Demetrius of \*Alexandria (*sed.* 189–231/2), for the \*Bishop of Alexandria to issue a pastoral \*letter annually before \*Easter, in which he could address issues of topical pastoral concern.

\*Eusebius quotes from several letters of \*Dionysius of Alexandria and mentions others as still extant (*HE* VII, 20–2). Eusebius describes them as festal (*heortastikas*) though some were addressed to individuals rather than to the Church at large. One was concerned with calculating correctly the date of Easter and another hailed the \*accession of the \*Emperor \*Gallienus. The *Canonical Epistle* of \*Peter of Alexandria comforted Christians

during the fourth Eastertide of the Great \*Persecution in 306, and laid out a tariff of \*penances for those who had, in various ways, failed to witness to the faith.

\*Athanasius used his festal letters to warn against association with those he stigmatized as \*Arians. The transmission of the text of the fragments of the *Festal Letters* of Athanasius is complicated. A. Camplani has indicated the need to distinguish between the pastoral letters sent in the spring of each year and the brief notification of the date of the following Easter which Athanasius issued each year probably soon after Easter. Letters XVII and XVIII seem to be examples of these festal notifications. The most substantial fragment of the pastoral letters to survive in \*Greek is from Letter XXXIX, which lists the books of the Old and New Testaments. Some fragments survive in \*Syriac (London, BL Add. 14569) and some in \*Coptic, deriving ultimately from three manuscripts of the \*White Monastery. There is also an index, compiled by editors around AD 400, who also assigned an order to the letters and provided subscriptions.

The Patriarchs \*Theophilus and \*Cyril of Alexandria also employed their festal letters to address in an edifying fashion matters of current concern. The association of the letters with Lent and Easter led to a common emphasis on certain stock themes. Among the most central were: (1) the relation between the Old and the New Testaments and the relation between \*Jews and Christians, with an account of how Old Testament types are fulfilled in the person of Christ; (2) the necessity of ascetical striving during the season of Lent as enabling the reception of the grace of salvation; (3) the death and resurrection of Christ as the source and content of Christian salvation.

The official Alexandria festal letters were sent in advance of Easter. \*Synesius thanked the Patriarch Theophilus for the Letter of 411 (*ep.* 9) and following the 'ancient custom' of the Church of \*Ptolemais sent festal letters to his own clergy (*epp.* 13); in another letter (*ep.* 8), however, he complained that he received no personal Easter greeting from his brother. The Alexandrian custom continued, though actual texts are scarce from later than Cyril of Alexandria. Fragments of festal letters probably for 577 (P. Grenfell II, 112) and for 642 (P. Köln V, 215) survive on \*papyrus.

There was a separate practice of exchanging formal greetings after the festival. Fourteen examples survive from \*Theodoret (especially *ep.* 72) and there survive also responses to such greetings from \*Gregory of \*Nazianzus, and examples from \*Gaul by \*Avitus of \*Vienne (*epp.* 58–73). **festivals and calendars** The multifarious civilizations of Late Antiquity had many different \*eras and contrasting methods of reckoning time, something which the modern world takes largely for granted but which was a matter for copious and learned calculation by chronographers, astronomers, and other scholars from before the time of Julius Caesar to that of the Venerable \*Bede (674–735) and beyond. Different senses of the order in which \*seasons and times elapse had practical consequences, not least for those engaged in \*farming, and so also for the religious festivals through which communities hoped to secure the normal cooperation of the forces of Nature. Calendars and calendar customs are by their nature conservative, but the frequent intensity with which Christians held discussions about the correct way to calculate the date of \*Easter is a sign of the complexity of the various factors which underlie the study of chronology. OPN

L. Holford-Strevens and B. Blackburn, *Oxford Companion to the Year* (1999).

**festivals and calendars, Arabic and Islamic** Muslim festivals and dating follow a lunar calendar, the first year of which (1 AH, that is to say year 1 of the \*Hijra or

Hegira) corresponds to AD 622. There is no intercalation in the Islamic calendar and festivals therefore appear in different seasons since the lunar year is shorter than 365 days. The Muslim months are: Muharram, Safar, Rabi al-awwal, Rabi' al-thani, Jumada al-ula, Jumada al-akhira, Rajab, Sha'ban, Ramadan, Shawwal, Dhu al-Qa'da, and Dhu al-Hijja. In the pre-Islamic period, various systems distinguished between types of months, depending on whether warfare was either permitted or forbidden. Months in which it was forbidden were in the pilgrimage season. The pre-Islamic calendar had an intercalary month to ensure that the sacred months of the pilgrimage were consistent.

There are two main festivals in the Islamic calendar, though important dates like the birthday of \*Muhammad or the last ten days before the beginning of Ramadan are also often commemorated as sacred. The two festivals are called 'Id al-Fitr (the Festival of Breaking Fast, at the end of Ramadan, on 1 Shawwal) and 'Id al-Adha (the Festival of the Sacrifice, on 10 Dhu al-Hijja). NK

EI 2 vol. 10 (2000) s.v. 'Ta'rikh', 257–302 (Teule, de La Véronne, Holt, Farouk, Kably).

**festivals and calendars, Christian** In Late Antiquity, the Christian calendar had two focal points: the Death and Resurrection of Jesus observed in springtime, and his Nativity and \*Epiphany remembered in winter. To these were added, as they occurred, commemorations of the anniversaries (*natalis*) of the deaths of \*martyrs and other saints. Though Christians relied on, and significantly developed, existing scholarly expertise in astronomy, chronography, and \*mathematics in their calculation of seasons, calendars, and \*eras, the timing of Christian festivals owes little or nothing to that of pagan observances.

**festivals associated with Easter**

The most important festival of the Christian year is \*Easter (Gk. Pascha), the annual recollection of Jesus' death and resurrection. The date of \*Easter was fixed by relation to the Jewish Passover, which is itself fixed by relation to the vernal equinox, so that from the 4th century onwards Easter was fixed by complex calculations on the Sunday after the full moon after the spring equinox. From the earliest days of Christianity the Passover lamb was seen as an antetype of the full final sacrifice achieved by the death of Christ (1 Corinthians 5:7–8; cf. Melito of Sardis, *On the Pasch*). The centre of the celebration was a vigil which combined announcement of Christ's Resurrection with the \*baptism of new believers and a festal \*Eucharist.

\*Eusebius (*On Easter*, 11) thought that every Friday throughout the year should be a day of \*fasting and penitence 'for the sake of our previous sins and for the memory of our Saviour's Passion'. But the elaboration of the ceremonies of the Triduum, including

the Veneration of the \*Cross on Good Friday, appears to arise in the latter part of the 4th century from the \*liturgy of \*Jerusalem, as described by \*Egeria, who was on \*pilgrimage in the \*Holy Land and \*Egypt in 381–4.

A more prolonged period of preparation before Easter was observed already in the 2nd century, but its duration varied from place to place. A Lent of 40 days appears to have originated in the West by the 4th century and the custom had spread to \*Alexandria and Egypt by 339. Ascension was celebrated 40 days after Easter and the \*Council of \*Nicaea ordered that during this time provincial \*councils of \*bishops should convene. In 5th-century \*Gaul the three days before Ascension, the \*Rogation Days, became an occasion for \*processions held to ask for God's blessing on the crops. The celebration of Pentecost (Whitsun) comes 50 days after Easter.

#### *festivals associated with Christ's Birth and Baptism*

The appearance of God in Christ on earth was initially celebrated at different times in East and West. The first secure mention of \*Christmas on 25 December is in the \**Codex-Calendar of 354*, which appears to have been relying on a list made some twenty years previously. It therefore coincided with one of the Roman festivals of the Sun, by no means the most important one and quite possibly no older than the 270s; it fell also midway between two significant Roman festivals, Saturnalia and the \*Kalends of January. The date, however, is likely to have arisen from characteristic early Christian concern with chronographical accuracy and mathematical elegance. There was a consensus that either the Crucifixion or the Resurrection had taken place on 25 March in the year when the two Gemini were \*consuls (equivalent to AD 29), so it was held that this day was the anniversary of the conception of Jesus (though actual celebration of the Feast of the Annunciation is not recorded until the 6th cent.). It followed that his birth occurred nine months later (cf. \*Augustine, *On the Trinity*, IV, 5, 9). The celebration of Christmas spread to the East during the course of the 4th century. Advent, a period of preparation for Christmas, is first attested in the 6th century.

In the Greek-speaking Church the winter festival commemorating the Incarnation was the \*Epiphany (Gk. revelation). In its earliest form this was a commemoration not of Christ's birth or of the visit to him of the Three Wise Men, but of his Baptism, though in time it became associated with other manifestations of his divinity.

#### *festivals of saints*

Christians commemorated those of their number who had perfected their witness as \*martyrs on the exact

anniversaries of their deaths. In 251 at the height of the \*persecution under \*Decius, \*Cyprian, \*Bishop of \*Carthage, wrote from his place of concealment to those who were caring for Christians who had been thrown into \*prison, asking that they should note carefully the exact days on which 'our blessed brothers pass by the gate of a glorious death to their immortality' so that they too may be celebrated among the memorials of the martyrs (*ep.* 36, 2). \*Martyrologies are lists of saints arranged by the day and month, but not the year of their death; the earliest to survive is the \*Syriac \**Martyrology of 411*.

These anniversaries were marked with local celebrations. By 384 in \*Milan and a few decades later in Africa celebration of festivals (*refrigerium*) at the tombs of the martyrs had got so out of hand that they had to be moderated in the interests of sobriety and public order. Numerous \*sermons preached by Augustine at festivals of African martyrs survive. In \*Cappadocia the sense of civic loyalty generated by love of local martyrs is apparent from sermons on the saints by \*Basil of Caesarea and \*Gregory of \*Nyssa. The notion that saints' days were originally the festivals of pagan gods became popular only during the Reformation. OPN

**festivals and calendars, Germanic** The principal source for Germanic calendars before the Christian era is the *De Temporum Ratione* of \*Bede, a Christian expert on \*chronography and *computus*, written in AD 725. Chapter 15 (*De Mensibus Anglorum*) lists pre-Christian names of the months and describes the way \*Anglo-Saxons had used \*pagan festivals to divide up the year. Whether or not Bede simplified this sequence of festivals, or set out to align them with Christian counterparts, is debated.

Bede refers to twelve lunar months and a leap year called Thri-lidi. Only ten names of months appear, as the months before and after the two solstices used the same names—Giuli corresponding to Roman December and January, and Lida corresponding to Roman June and July. Each month started with the new moon. The year was organized in two cycles—winter and summer—divided by the equinoxes, one half with an increasing, the other a decreasing altitude of the Sun each day.

The main festivals were, according to Bede, the summer and winter solstices and the equinoxes. The calendar arranged around these festivals had significance for

religion, astronomy, \*farming, and seafaring and in some cases Bede notes the pagan rites appropriate to the month, such as the cakes offered in Solmonath (February) and the cattle immolated in Blodmonath (November). It is possible that during the winter solstice a main festival called Yuletide took place. Not only does Bede mention two months called Giuli, but also, a fragment of a Gothic calendar survives for late October and November in the Codex Ambrosianus A (Milan, Ambrosianus S. 36 parte superiore), recording festivals of interest to 5th-century \*Homoean Christians; this labels November, the 'month before the Julmonth' as *fruma Jiuleis*. **festivals and calendars, Jewish** Jewish festival dates were determined according to the moon calendar: they depended on witnesses' observation of the new moon in Roman \*Palestine and eventually also \*Babylonia. Most of the festivals \*Jews observed in Late Antiquity had biblical roots. The three \*pilgrimage holidays (Passover, Shavuot, and Sukkot) are already mentioned in the Hebrew Bible. How many people actually participated in pilgrimages remains uncertain, though. The rituals and meanings of these holidays changed after the destruction of the Temple. After AD 70 Temple-related rituals became family- and \*synagogue-centred rituals and sacrifices were replaced by meals, \*prayers, and Torah readings. While the biblical festivals were originally related to the agricultural cycle, they eventually gained salvation-historical and theological meanings. The Passover *seder* (ritual meal) commemorated God's redemption of the Israelites from slavery in Egypt, Shavuot the revelation of the Torah to Moses at \*Sinai, and Sukkot the sojourn in the desert and travel towards the promised land. Other festivals with biblical foundations, whose rituals and meanings were further developed by the rabbis, are Rosh Hashanah (the Jewish New Year) and Yom Kippur (Day of Atonement). Details concerning all of these festivals are discussed by rabbis in the Mishnah, \*Tosefta, and \*Talmud tracts devoted to them. In addition, Purim (commemorating the biblical Esther and Mordechai's intervention to save Persian Jews from destruction), and Hanukkah (commemorating the victory of the Maccabees over Antiochus IV Epiphanes) would have been observed by Jews in Late Antiquity. The destruction of the first

and second Temple had become a fast day (Tisha be-Av), together with other commemorative fasts. CH

**festivals and calendars, Manichaean** The death of \*Mani along with the martyrdom of his immediate successor as leader of the Manichaean Church, Mar Sisin under \*Bahram II (c.286), precipitated the development of the holiday calendar in Manichaeism, the central feature of which was the festival of the Bema (Gk. 'throne'). The Bema commemorated Mani's martyrdom, with the presence of a throne symbolizing his oversight of the festival and more broadly his continued presence within the Manichaean Church. Fasts, hymns (many surviving in \*Coptic in the \**Manichaean Psalm Book*), and solemn readings from Manichaean scriptures were the principal features of the festival. A ritual feast for the Elect is also thought to have played some part in the celebrations. The Bema was the culmination of a series of five two-day fasts which began with the full moon and the sun in Sagittarius (i.e. mid-November). These fasts, or Yimkis (from Parthian, 'Twin', i.e. twin fasts), honoured the arch-martyrs of the Manichaean Church, and culminated in the Mani-Yimki, which immediately preceded the Bema during early spring (February–March). In addition, Manichaeans also observed weekly holidays, with \*Sunday and Monday serving as the days of fasting for the Hearers and Elect respectively. NJBB

**festivals and calendars, pagan** The \**Codex-Calendar of 354* lists 177 festival days (*festi*) in \*Rome, and 56 holidays (*feriae*). Typically, public games (*ludi*)—chariot races, theatrical performances (especially mime and pantomime), and \*gladiatorial combat along with wild beast displays—were part of the former. Because these popular celebrations as a rule originated in honour of individual gods (or in recognition of imperial

anniversaries), they originally included \*sacrifice, offering, and \*prayer. This was particularly disturbing to Christians. Even as Christianity came to occupy the commanding heights of Late Roman civilization and the actions of successive \*emperors against pagan practice took effect, some public celebrations survived at Rome.

Local holidays were more likely to persist longer as they drew less negative attention. The *Feriale Campanum*, a calendar inscribed in a amphitheatre at \*Capua in 387, notes seven such celebrations. Pagan \*processions passed through the \*streets of \*Calama in \*Numidia in 408 (\*Augustine, *epp.* 90–1).

The other Late Antique manuscript calendar, that of \*Polemios Silvius of 448–9, suggests a significant decline of such celebrations at Rome. But to characterize the Carmentalia, \*Lupercalia, Quirinalia, Terminalia, and a few others as 'pagan survivals' is problematic. Tenacious cultural remnants, they were now quite thoroughly secularized. Consular games, at the start of January, continued until 541. While gladiators and \*venationes (beast hunts) disappeared in Late Antiquity, chariot racing in the \*circus remained a part of civic life in \*Constantinople until the 12th century. MTG

#### festivals and calendars, Persian and Zoroastrian

The \*Zoroastrian \*calendar had twelve months of 30 days, all named after a deity, and five days were added at the end of the year (\**Frawardigān*, *gāhānbār*). The Achaemenid months had indigenous names, and the days are simply numbered in the inscriptions, but the Zoroastrian calendar was presumably introduced under the Achaemenids, being known from the Cappadocian solar calendar in the late 5th century BC, preserved by Greek astronomers. On the days with the same name as the months, festivals were celebrated in honour of their respective deities, in particular \*Mihragan on the day of \*Mihr in the month of Mihr after the harvest, and Tiragān on the day of Tīr in the month of Tīr (\**Tishtriya*) at midsummer. Others were the festivals in honour of the waters, the \*fire, the deity Wahman (Bahman), and Spandārmad (Esfand), the Earth.

In early winter, the feast of Sada was celebrated, 100 (*sad*) days before New Year (\**Nog Roz*), and that of Rapithvin (Noon) on the first day of the year. The calendar underwent several reforms throughout the centuries, with the result that, at one stage, New Year was celebrated in the autumn rather than the spring. By the early 18th century, the calendar of the Indian Zoroastrians (Parsis) was one month behind that of the Iranians, and, eventually, one group of Parsis decided to adopt the calendar of the Iranians (the *kadmis*,

'oldies'), while another retained the current Parsi calendar (the *rasmis* 'traditionalists' or *shenshais* 'imperials'). Both groups kept the traditional year count starting at the coronation of \*Yazdegerd III, the last Sasanian king, in 631. In Pahlavi manuscripts, the date of the king's death twenty years later is often used. POS

**festivals and calendars, secular and political** Until the time of \*Constantine I festivals and ceremonies in Roman cities which had a secular or political function were naturally and unselfconsciously also imbued with pagan religious significance and observance. If an \*emperor made an \**adventus* to the city of \*Rome he would pass through the crowds to the Capitol, where he would offer \*sacrifice. On one of his three visits to Rome as emperor, Constantine declined to do this. He drew the line between what was proper and what was improper at sacrifice—and it is notable that on the two visits where Constantine had a choice of \**Praefectus Urbi*, he chose a Christian. There was, throughout the 4th and early 5th centuries, an area of doubt and debate about how an event could be conceived of and enacted as purely secular or political, over what constituted its pagan elements and over the extent to which Christians and Christian ideas should be involved. There was not simply disagreement between Christians and pagans, but among Christians themselves, and different resolutions were reached in different cities.

A telling case was the festival of the \*Kalends of January, marking the turn of the year. Celebrations ran from 31 December to 3 January and were enjoyed across the whole Roman Empire. Components catalogued by \*Libanius (*Progymnasmata*, 13, 5) included exchanging gifts, banqueting, singing and dancing, practical jokes and putting up seasonal decorations, rest and relaxation (especially dozing and playing dice), nursing hangovers, going to public games or races, continued overeating, and all-night parties. A fancy-dress \*procession became an increasingly popular ingredient. \*Temple sacrifices, once integral, became illegal in the 4th century. \*John Chrysostom condemned the celebrating of the Kalends of January as demonic (*On the Kalends*, 1). \*Augustine of \*Hippo's attitude was more nuanced; it is possible to see his ideas developing during the course of his ministry as a \*bishop (Markus, 110–23). Of course he rejected sacrifice and \*gladiatorial games, but in his early years at Hippo he was prepared to think of secular festivals as something to be 'tolerated not loved' (\**Sermon* 104, 7). Following a crisis at \*Carthage in 399, attitudes polarized and on New Year's Day 404 he preached at Carthage his longest

surviving \*sermon (around two and a half hours) which not only expressed his disgust but also provided a rhetorical display which was an alternative to taking part in the ambient secular festivity (*Sermon* 198).

Also susceptible to clerical critique were those public celebrations focused on the \*emperor. Paramount among these were the emperor's birthday (*dies natalis*) and the anniversaries of his accession (see ANNIVERSARIES, IMPERIAL). Evidence from \*inscriptions, \*papyri, and elsewhere indicates that these dates were observed across the Roman Empire. But there was evolution under Christian influence. The *dies natalis*, for example, was originally marked by an offering of wine to the emperor's guardian spirit, while public priests offered blood sacrifice and feasted. In the 4th century, sacrifices were removed and public games (*ludi*), also formerly a feature, became more central to the festivities. The games themselves were regulated by law; in the 5th century, there was no chariot racing if the imperial birthday fell on a \*Sunday (*CTh* II, 8, 25).

Legislation in 389 (*CTh* II, 8, 19) substantially altered the calendar of public holidays. These were now listed as Harvest Holidays (occurring between 24 June and 1 August), Vintage Holidays (between 23 August and 15 October); New Year; the foundation days of the cities of \*Rome and \*Constantinople, the \*Easter holy days, \*Sunday (already made a holiday by Constantine: *CTh* II, 8, 1; *CJust.* III, 12, 2), and imperial birthdays and anniversaries. A range of other pagan holidays was thereby removed from the official calendar, while Easter was added. Well into the 5th century at least, ambiguity and plurality would mark the Harvest and Vintage celebrations. These had traditionally involved physical offerings of thanks to pagan deities, but such practices were condemned by Christian clergy.

Local life was shaped by civic calendars, which helped to bring synchronicity to the reckoning of time. Imperial state holidays were embedded within these. Furthermore, a calendrical culture took public and private forms. Inscribing of at least partial calendars on stone continued in Late Antiquity. Calendars were also painted and inscribed on the walls of temples and houses. The rise of the \*codex (i.e. book) by the 4th century fostered the production of ornate private calendars. AGS

**Festus** Author of the shortest surviving *breviarium* of Roman history, written for the \*Emperor \*Valens in 369 and for the most part devoted to enumerating the \*provinces, and then Roman hostilities with the Parthians and Persians. It is therefore quite different in conception and purpose from the other 4th-century *breviaria*, such as those of \*Eutropius and Aurelius \*Victor.

The commonly reported name 'Ruf(i)us' derives from the second class of manuscripts and has no ancient authority. There is nothing apart from the name and chronology to link this Festus (said in the best manuscript, Bambergensis E III 22, to be *uir clarissimus* and \*Magister Memoriae) with the famous Festus of Tridentum, who had a distinguished career as \*governor of \*Syria and \*Proconsul \*Asiae.

The author of the *Breviarium* relied on a number of different sources but most important was the \**Kaiser-geschichte*. There are just under a dozen important manuscripts, including one of the 7th century and four of the 9th, but despite their number the text had little later influence. RWB

**feud** In the pre-Islamic \*Arabian Peninsula and in Germanic lands contrasting forms of feud provided a method of redressing wrongs, by identifying enemies, legitimating hostility towards them and, on occasion, resolving disputes. Feud is particularly associated with kin groups protecting their members from violence by other kin groups through reciprocal violence, \*compensation (e.g. *wergeld*), or the threat of \*warfare. EMB

**feud, Arab** Inter- and intra-tribal feuding is a recurring feature in Arabian history during the two centuries before \*Islam. Feuds could start over trivial insults such as the wrongful killing of a \*camel or cheating in a

\*horse race. With honour at stake, the aggrieved party would murder his adversary, prompting the victim's family to seek blood-revenge. Killings might then multiply, occasionally leading to full-fledged war. In practice, violence was probably limited (Conrad, 681); customs for blood-money payment of camels could prevent further killing, or belligerents could seek refuge with a third-party protector (*jar*) who, if powerful enough, could enforce peace terms. \*Arabic literature describes a code of conduct that prohibited fighting during four holy months (Muharram, Rajab, Dhu al-Qi'da, and Dhu al-Hijja). \*Procopius (*Persian*, II, 16, 18; II, 19, 38) describes a parallel two-month holy season during the vernal equinox during which \*Lakhimids refrained from fighting.

Pre-Islamic feuds are recorded in Islamic-era texts which colour them in epic guise with literary flourishes, focusing on personal adventures, not the wider political context (Webb, 122). Muslim writers were fascinated with the wildness of the \**Jāhiliyya*, with heroes who flouted the rules, and graphic \*poetry ascribed to the warriors celebrated their deeds of arms. Islam abrogated pre-Islamic tribal feuds, though \*Umayyad-era factionalism (*asabiyya*) resurrected memories of pre-Islamic feuds in Islamic-era political rivalries (Hawting, 73–87).

**feud, Germanic** Feud furnished a supplementary legal structure for dealing with violent disputes in Germanic society. Rather than placing all the responsibility for deterring and punishing crimes in the hands of officials, Germanic leaders allowed those wronged, or their kin, to exact revenge for themselves, within certain limits. This revenge could be in the form of violent retaliation, up to and including killing the offender, or the exacting of compensation, which was known as \**wergeld*. The amount of wergeld varied depending on the status of the injured party and the type and degree of injury. Equivalence of blood was expected, meaning that the killing of two persons of low status might be justified as compensation for the murder of one high-status individual. This customary practice coexisted with written \*law inspired by Roman models; Germanic law codes composed in the centuries following the \*Barbarian Migrations contain numerous examples of it. By regulating rather than prohibiting such vengeance, kings maintained the threat of retribution, which served as a deterrent to violence, but were able to regulate such practices to keep them from spiralling out of control. If

an injured party exacted more vengeance than was permitted according to law, he was himself punished.

The term 'feud' as it is used by historians, translating the Germanic words *faehðe*, *faithu*, and *faida*, denotes this Late Antique Germanic practice of legal vengeance rather than broader long-term hostility between warring kin groups which the word 'feud' might be taken to designate, though naturally a hostile relationship might accompany legal vengeance. According to Late Antique sources, feud was not used to resolve all hostilities and violent disputes, and the practices encompassed by the term varied by region and over time. Unless one of the above-mentioned Germanic words appears in a source, it is difficult to determine for certain whether contemporaries would have considered the violence 'feud' or some other form of dispute.

**feudalism** The adjective 'feudal' and its abstraction as a system of 'feudalism' have tended to be used in different ways by different historians and differing historiographical schools.

To the great French medievalist Marc Bloch, 'feudalism' was essentially a means of describing a militarized, lord-focused society such as emerged in the aftermath of the break-up of the Carolingian Empire, in which the vertical ties of dependence between a lord and his followers dominated social relations and the lord came to exercise powers that hitherto had been exercised by the state—that is to say, a world in which the private authority of a military *patronus* filled the vacuum left by the disappearance or absence of central state authority.

To F. L. Ganshof, and to other scholars working from a more narrowly legalistic perspective, feudalism was associated with the concept of a particular unit of real property, typically land, known as the *fief*, and the obligations (above all military) owed by a retainer to his lord in return for his possession of it. As Ganshof stated: 'the fief, if not the corner-stone, was at least the single most important element in the graded system of rights over land which this type of society involved.' This very specific model of feudalism (which Ganshof felt able to trace back to the \*Merovingian sources) has come under concerted criticism in recent years and has fallen out of favour amongst many medievalists, who, when taking about the 'feudal revolution' around the year 1000, for example, now tend to use the term as shorthand for an intensification of aristocratic power after a manner reminiscent of Bloch.

To Marxists, by contrast, the term feudal is used to refer to pre-industrial societies in which peasant

producers were in effective ownership or control of the subsistence-producing plots which they worked, so that, the argument runs, if surplus was to be extracted from them by an elite, it had to be extracted by force.

The extent to which feudal tendencies were discernible in Late Antiquity therefore depends on the definition adopted by the historian. Analyses which emphasize the weakening of the power of the state by aristocratic interests in the Later Roman Empire, the growing prominence in social relations of cultures of military lordship in the early medieval West, the growing association between military service and landholding across the period c.400–700 (in both East and West), or the increased significance of the peasant mode of production in post-Roman conditions, could all fairly be regarded as emphasizing the proto-feudal nature of the period, although those advocating such positions tend to be keen to avoid such teleological categorization. **fibulae** Garment fasteners, used to secure a cloak, dress, or shawl. Though some scholars distinguish fibulae from brooches on the basis of their pin mechanism, the terms are often used interchangeably. Brooches in the Late Roman world could take on a variety of shapes—from discs and other geometric figures to flared trumpet shapes or whimsical \*animals—and were made from materials as wide-ranging as \*bronze, \*silver, \*gold, precious \*stones, and \*enamel. Beyond their obvious decorative and utilitarian functions, a fibula could signal the social group of its wearer. The crossbow fibula, for instance, belonged to the insignia of \*court and government officials. Some of the finest examples—resplendent pieces of gold pierce-work—have been found in barbarian graves, suggesting the increasing integration of barbarians into the structures and hierarchies of the Late Empire. Related in form to the crossbow brooch were the bow brooches found in the graves of barbarian women. Worn in pairs, these were pinned at the shoulders. They too evince enormous variety, some with finger-like projections and others strewn with garnets. Their widespread diffusion and funerary contexts offer rich possibilities for interpreting the complexities of social, ethnic, religious, and gender identity in Late Antiquity. MH

**field army** Modern term commonly used with reference to a distinctive feature of the Late Roman army, whereby significant numbers of military units were withdrawn from the \*frontiers to form one or more mobile \*armies which could respond to military crises in different locations. One hostile ancient commentator who attributed this development to \*Constantine I (\*Zosimus, II, 34) regarded it as weakening the Empire, but it can also be viewed as a sensible response to the problem of serious threats on more than one frontier. Field army units, often referred to collectively as \*comitatenses, were regarded as elite troops. In the 4th century, field armies were commanded either by the \*emperor or by a \*Magister Militum, thereafter (as emperors ceased to campaign actively) by one of the Magistri. ADL

M. J. Nicasic, *Twilight of Empire: The Roman Army from the Reign of Diocletian until the Battle of Adrianople* (1998), 1–82.

**field systems, Germanic barbarian** Long rectangular fields and strip field systems are already attested from the time of the Roman Empire. However, they are seldom found alongside the much commoner four-sided and many-sided field systems known as Celtic fields (*Ackerparzellen*). Only in Late Antiquity and in the early Middle Ages did strip \*farming succeed in replacing the older Celtic field model.

Research suggests that these changes to field systems were associated with the gradual replacement of the simple scratch \*plough by the appreciably more complicated and effective reversible plough during the 3rd century. The design of the reversible plough can be understood as a fusion of the Germanic and Roman-Mediterranean approaches to making machinery.

Strip farming is attested especially early in \*Saxon territory, and also indeed in the \*Lex Salica. Its early appearance in \*Britain is explained by the arrival there of Saxon migrants. In \*Britain, the stratigraphic imposition of strip lynchets over Celtic fields is very frequently attested. Elsewhere in areas of Germanic settlement in continental Europe strip farming came to be introduced at various times during the early Middle Ages.

**finance** The economy of the Later Roman Empire from the 4th to the 7th centuries was highly monetized, meaning that both state finances and those of private individuals and institutions were heavily dependent on and integrated into the workings of the imperial monetary system. Taxes, for example, were generally reckoned and collected in coin, and localized shortages of coin thus gave rise to highly complex and sophisticated \*credit arrangements overseen by both private \*patrons and local bankers (\**trapezitai* or \**argentarii*).

Trans-regional \*banking networks and arrangements are also likely to have been in place, although, at the time of writing, research on such 'financial services' in Late Antiquity is in its infancy. It is a striking fact, however, that although we know the economy to have been highly monetized at both conceptual and practical levels yet, as in the 'High Empire', finds of mercantile \*shipwrecks rarely seem to reveal large quantities of bagged coin. This surely indicates that credit and banking arrangements must have played an important role in inter-regional trade and commerce. Indeed, there are signs that in the Eastern Empire the significance of bankers was becoming increasingly pronounced, so much so that \*Justinian I's alienation of the *argentarii* of \*Constantinople led to a conspiracy against him late in his reign (as alluded to by the court poet \*Corippus).

At the level of landowning institutions and the agrarian economy the situation is somewhat clearer. The \*papyri from \*Egypt in the 6th and 7th centuries, for example, reveal that landowners were keen to maximize their own private reserves of cash, and thus sought to limit the sums of coin disbursed to their workforce. Accordingly, sophisticated arrangements were developed whereby agricultural and other workers on an \*estate were paid in the form of credit notes or 'cheques'—termed *pittakia*—typically reckoned in subdivisions (*keratia*—\*carats) of the \*gold \*coinage. If need be, these credit notes could be exchanged for coin at the office of the estate cashier (known as the *enoikologos*).

Similar use of *pittakia* is attested beyond the great estates, at the level of the \*Senate itself in Constantinople. Imperial officials, private landowners, and ecclesiastical institutions are all recorded as having engaged in money-lending and speculative investment, in spite of imperial \*law and complaints in \*sermons against usury. Amid the monetary and urban contraction we encounter in the West from the 5th century and in the Eastern Empire from the 7th, the sophisticated financial arrangements of earlier Late Antiquity are likely to have become less common, but a market in credit is nevertheless recorded for the Byzantine Empire in

the 10th-century *Book of the Prefect* (*Eparchikon Biblion*, c. 2–3.)—attesting to the ongoing survival into the 10th century in the imperial capital of financial practices that are likely to have been widespread in Late Antiquity. Such patterns of survival are likely to have been even more pronounced in the early Islamic East.

### finance, government, Roman and post-Roman

The financial structure of the Late Roman Empire rested upon three autonomous departments, each with its own sources of revenue and bodies of administrative staff. These three departments were those of the \*Praefecti Praetorio, the Sacrae \*Largitiones, and the \*Res Privata. In historical and functional terms, these three departments existed to handle revenues of different sorts, with the core distinction being that between revenues raised through public \*taxation, and those that were in some sense deemed to be the personal revenues of the \*emperor or of the imperial office.

Public taxes were the preserve of the Praefecti Praetorio (with the post-Constantinian Empire typically being divided into three or four prefectures: those of \*Oriens, \*Illyricum, \*Italy, and \*Gaul) and the Sacrae Largitiones, whilst the Res Privata handled incomes derived from the private property of the emperor (known as his Patrimonium) and crown lands (a distinction which would later be elided). Officials employed by the Praefecti Praetorio had wide-ranging powers over the \*dioceses and \*provinces that were placed under their charge, with the Praefectus Praetorio himself emerging as a figure of immense authority, with his office (of military origin) effectively becoming that of chief finance minister. The main source of fiscal revenue with which the offices of the Praefectus Praetorio was concerned was the land tax which, especially from the mid-4th century onwards, was increasingly collected in coin rather than in kind (see *ADAERATIO*).

The office of the Sacrae Largitiones controlled \*mining and state warehouses, the production, control, and manipulation of the \*coinage, and the levying of customs and other taxes on \*trade, mercantile profits and monetized exchange (such as the \*collatio lustralis) which the economic and commercial expansion of the Late Roman world during the 4th century is likely to have rendered increasingly significant. In general terms, however, compared to the office of the Praefectus Praetorio, the Sacrae Largitiones had rather more of the character of an 'expenditure department' rather than an incoming-generating one.

The main revenues of the Res Privata, by contrast, were derived from rents and income on those lands

or urban properties (such as \*houses, \*shops, and warehouses) that belonged to the state or which came into its possession or ultimately that of the emperor by confiscation or forfeiture. Rural properties owned by the Res Privata were partly administered by agents specifically employed for the task, or alternatively were leased out on long-term or perpetual \*leases (see *EMPHYTEUSIS*), which members of the imperial \*aristocracy of service appear to have been especially eager to acquire, so that by the late 4th century many such \*estates had become the *de facto* property of \*honorati who were also in a strong position to evade the land tax which was meant to be levied on their private estates, a fact which increasingly began to destabilize the finances of the Empire as a whole.

In post-Roman conditions, much of the complicated financial machinery of the Late Roman state was progressively dismantled. Estates belonging to the crown or the imperial government, for example, were prime for confiscation amid the troubled conditions of the 5th century, whilst the land tax increasingly became vestigial even in the most traditionally structured of the Romano-Germanic successor kingdoms, as the rank-and-file of the barbarian \*armies were increasingly rewarded with land in return for their military service rather than with shares of tax revenue (see *TAXATION*, *ROMAN AND POST-ROMAN*). A concept of both the public sphere and public taxation nevertheless persisted in areas such as \*Gaul, \*Italy, and \*Spain, even as the financial structures inherited from the Empire itself gradually faded away. Likewise, in the Eastern Empire, the military crisis of the 7th century would lead to the dismantling of the office of the Praefectus Praetorio of the East and a root-and-branch reform of the fiscal and financial framework of the East Roman state, which would see both the state and those employed to serve it in a military capacity far more dependent upon revenues and remuneration in kind than had come to be the case in the 4th and 5th centuries.

**fire in Zoroastrianism** Venerated by \*Zoroastrians, fire (MP *ātaxš*) was considered the seventh 'creation' that animated the world (\**Bundahishn*, III, 7–8; 6g, 1). Zoroaster thought of truth (*aša*) when making an offering to fire (*ātaš-zōhr*; *Yasna*, 43, 9) and commanded his followers that they should always pray before some form of it. According to the compilation of Zoroastrian \*law, the \**Madayan-i Hazar Dastan* (*Mādigān-i hazār dādestān*), the \*Sasanians recognized three grades of sacred fires: Bahram fires (*Ātaxš Warabrān*), lesser fires (*Ātaxš*), and modest fires (*twrlwk*) established by individuals. - M. Boyce, 'On the Sacred Fires of the Zoroastrians', *BSOAS* 31 (1968), 52–68.

**fires of Iran, great** The most sacred or 'cathedral' fires of pre-Islamic Iran were Adur (MP *Ādur/Ātar*) Farnbag, Adur Gushnasp, and Adur Burzen-mihr, associated with the priesthood, the soldiery, and with farmers respectively. Their origins are unknown, though they were probably older than fires with *Ātaxš* in their name. M. Boyce speculated that they were named after priestly founders and originated in the Achaemenid era, though without evidence. Secure primary-source evidence of the fires (\*seals, archaeological material) appears only in the \*Sasanian period, although it is possible that

some were in existence in the Arsacid period before being moved or reorganized under the Sasanians.

According to the \**Bundahishn*, Adur Farnbag originated in \*Khwarezm and was moved to the 'shining mountain of Karāvand, in the Kār district' (perhaps Kariyan in southern \*Fars). Pahlavi sources place Adur Burzen-mihr in 'Parthia' and its location has been sought near \*Nishapur. Adur Gushnasp is the only fire that has been located and for which archaeological, sigillographical, and textual evidence are all available. It was located at \*Takht-e Solayman in Iranian Azerbaijan and enthroned in a temple complex founded in the Sasanian period. It was an important place of \*pilgrimage. DTP; MPC

## fire temples and sacred places, Zoroastrian

Fire and water were the most common focal points of sacred places in Late Antique \*Zoroastrianism. The \**Bundahishn* attests to the veneration of naturally burning naphtha or natural gas fires. Water was venerated in the \*Sasanian period, as attested by the subterranean temple with water channels at \*Bishapur, numerous \*rock reliefs located next to springs, and archaeological evidence of ritual activity.

While fire temples certainly existed in the Parthian period, only in the Sasanian period were they promoted as Zoroastrianism's primary cult sites. The identification of Zoroastrian temples and their association with \*fire remains controversial for the pre-Sasanian period. The Zoroastrian 'house of fire' (MP *ātaxš-kadag*) is only clearly and widely attested archaeologically in the Sasanian period. A standard ritual configuration seems to appear in the form of a dedicated room (*ātaxš-gāh*) in which the fire burned and received offerings, an adjacent chamber where ashes were swept (erroneously thought in earlier literature to contain the fire in dormancy), rooms for storage of ritual utensils and firewood, and a hall where the priesthood performed liturgical services. Although the main sanctuary most often took the form of a four-arched, domed structure (\**chabar taq*), it is important to note that structurally identical units appear in palatial architecture (e.g. at \*Firuzabad, \*Qasr-e Shirin, Qaleh-ye Yazdgird, Chahar Deh). Surface reconnaissance has shown, moreover, that seemingly free-standing *chabar taqs* originally stood within walled enclosures.

Fire temples have been excavated or surveyed at \*Kuh-e Kwaja (\*Sistan), Tureng Tepe (\*Gorgan), Bandian (\*Khorasan), Mele Hairam (Turkmenistan), and \*Takht-e Solayman (mod. Persian Azerbaijan). Previously thought to be \*palaces, \*Sarvestan and the royal complex at \*Bishapur (both in \*Fars) are now thought to be fire temples. At \*Surkh Kotal (Afghanistan) and \*Dvin (\*Armenia) the Sasanians modified previous sacred sites to accommodate a fire cult. Apart from the baked brick fire temple at Tureng Tepe, which stands virtually isolated on top of the site, all of the excavated examples formed parts of larger architectural ensembles that included adjacent rooms, probably used by priests for living, storage, etc., and corridors or courtyards giving access to priests and worshippers.

The fire temple at Bandian takes the form of a cruciform room, with benches built into the walls, similar to the one at Tureng Tepe. A plastered, mud-brick \*fire altar base at Bandian probably dates from the 5th century. At Mele Hairam in Turkmenistan (1998–2002), excavations revealed a complex whose radiocarbon dating suggested to the excavators that it was one of the oldest, pre-Sasanian fire temples whose use extended into the Sasanian period. It consisted of a small square room, within a larger building complex, which contained the remains of a massive altar base, 1.46 m (4 foot 9 inches) in diameter, of brick and clay, in a sunken pit. The large size of this altar base, surpassing even those at Takht-e Solayman, suggested to the excavator that it was the site of a \*Wahram fire (*Ātaxš Warahrān*).

It is possible, though not confirmed, that a fire cult existed in the Parthian period at Kuh-e Kwaja, although this certainly was its focus in the Sasanian period. E. Herzfeld (1922–5) excavated the stepped base and overturned fire basin of a Sasanian \*fire altar in the complex's main *chahar-taq*. The sanctuaries of many Sasanian fire temples were surrounded by ambulatories. These passages were used by priests (and kings at major fires), and possibly lay people at lesser fires. Some temples, including Takht-e Solayman and Bandian, appear to have incorporated low barriers at the edge of the sanctuary over which lay people viewed the fire. Attested archaeologically at Kuh-e Khwaja, Takht-e Solayman, Bandian, and Bishapur, the exteriors and interiors of important fire temples contained elaborate ornamental and figural decoration in \*stucco, painting, and other media, schemes that were continuous with trends in contemporary palatial architecture.

Most of the extant fire temples from the Sasanian and early Islamic era are located in \*Fars, where Zoroastrians continued to fill important administrative roles in the first few centuries after the \*Arab conquest, followed by the Iraq-e Adjami (the Central Plateau) and \*Kirman (Kerman). Given the importance accorded to Zoroastrianism by the Sasanians, and the

fact that the dynasty originated in Fars, this may not be surprising. On the other hand, it is important to remember that explorations elsewhere in Sasanian territory have often been less systematic. Until the discovery of the fire temple at Tureng Tepe, for example, none was known in Gorgan. In the mid-1970s, L. Vanden Berghe discovered seven *chahar taqs* over a distance of less than 150 km (94 miles) in the Pusht-i Kuh of Luristan, suggesting that in some areas more intensive survey might alter the distribution map of fire temples. A religious function for all of these *chahar taqs* is not always assured, but many were indeed attached to larger complexes.

Ibn-al Faqi indicates that the fire of Adur Gushnasp at Takht-e Solayman was still venerated up to at least the 10th century AD, but sources like Istakhri and Ibn Hauqal suggest that most active fire temples in the later Islamic period were restricted for the most part to Fars. Some former fire temples, like that at Masjid Solayman, were already ruins by this time, and others had been converted into \*mosques. Famous temples like that of Adur Buzen-mihr, near \*Nishapur, and eventually Adur Gushnasp, whose abandoned ruins are mentioned by al-\*Mas'udi, survived only in the memory of Zoroastrian communities and priestly texts. The relatively recent date of the fire temples of Kirman and Yazd, combined with the absence of ancient examples in those regions (if this is not a consequence of the choice of areas for archaeological exploration), might reflect the eastward drift of many Zoroastrians following the \*Arab conquest of the \*Persian Empire. **Firmicus Maternus** (d. after 360) Iulius Firmicus Maternus was a rhetorician and lawyer who became a Christian. He may have been from \*Sicily, and was perhaps a \*senator. During the reign of \*Constantine I, and before his \*conversion, Maternus composed a work on \*astrology in eight books, the *Mathesis*, which is addressed to the senatorial aristocrat Lollianus Mavortius (\*consul 355). In the first book of the *Mathesis*, Maternus defends astrology against its opponents and claims (erroneously) that he is introducing the study of the subject to \*Rome, that is, writing about it in \*Latin. The remaining seven books explain and apply the basic principles of the science. Maternus justifies astrology on philosophical grounds, developing notions such as the important role of Fate in determining human life, and the idea of cosmic sympathy by which all parts of the universe, from stars to humans, are related. He presents astrology in terms reminiscent of mystery cults, as bringing the practitioner closer to the gods. He also prescribes a life of rigorous social and personal virtue for the astrologer. Maternus' learning in this work is eclectic, encompassing \*Neoplatonic and Stoic \*philosophy, Hellenistic science, and a panoply of \*Greek and Latin literature. After his conversion, Maternus produced a brief treatise urging the \*emperors \*Constantius II and \*Constans to destroy \*paganism forcibly (*De Errore Profanarum Religionum*). A dialogue between a Christian and a pagan (*Consultationes Zacchaei et Apollonii*), once attributed to Maternus, is probably not by him, and is now dated to the 5th century AD. SJL-R

**Firmilian** (d. after 268) \*Bishop of \*Caesarea of \*Cappadocia from c.230, contemporary of \*Gregory the Wonderworker, and follower of \*Origen. His only

surviving work is a \*letter in a \*Latin translation (\*Cyprian, *ep.* 75) and reveals him as supporting Cyprian in the controversy over rebaptism.

SJL-R

ODCC, Firmilian.

**Firmus** (d. 375) Chieftain of the \*Moorish Iubaleni tribe in the Kabylie mountains; younger brother of \*Gildo. Fearful of arrest, after Romanus, \*Comes \*Africae, had denounced him to \*Valentinian I, Firmus rebelled in 372. His supporters proclaimed him \*Augustus. The rebellion spread east to \*Calama and west to the plain of the Chelif River. \*Augustine says that he supported the \*Donatists. Early in summer 373, \*Theodosius Comes, then Magister Equitum in Gaul, was ordered to suppress the revolt. Halted at the \*walls of \*Tipasa, Firmus went into hiding, was detained by Igmazen, King of the Isaffenses, and committed \*suicide (\*Ammianus, XXIX, 5).

DAC

PLRE I, Firmus 3.

PCBE I, Firmus 1.

**Firuzabad** Modern city and toponym associated with the \*Sasanian city of Ardashir-Xwarrah in central \*Fars province. It was surveyed by D. Huff in the late 1960s and 1970s.

\*Ardashir I refounded the city of Gūr (Arabic Jūr) as Ardashir-Xwarrah ('Royal Glory of Ardashir') after he had taken south-western Iran, but before defeating the Parthian King Ardawan (Artabanus) IV. Located on a plain of c.10–20 sq. km (4–7 sq. miles) surrounded by mountains, Ardashir I's walled and moated city was designed as a giant circle, c.1.95 km (1.2 miles) in diameter with twenty radial streets. A 30-m (nearly 100-foot) high rough stone \*tower (the 'Terbal') stood at the centre of a walled inner city. Near it stood what was probably a \*fire temple (the Takht-e Nishin) built of rough stone on an ashlar masonry platform incorporating Achaemenid-style columns.

Ardashir I built two architecturally innovative domed and vaulted \*palaces. Built first, the Qal'a-ye Dokhtar was a mountaintop fortress that guarded the northern approach to the valley. The Great Palace was built on the plain outside the \*city walls after Ardashir I's victory. Both incorporated Achaemenid ornament into their \*stuccowork, a visual claim of continuity. The northern gorge preserves two \*rock reliefs. The earliest portrays Ardashir I's victory. The second portrays the god \*Ohrmazd investing the king.

**fish, fishing, and fish farming** Fish were a source of food throughout the ancient world, though it is unclear what portion of the diet they formed. The Tetrarchic *\*Prices Edict* (5, 1) indicates that fish was not cheap—the assigned price for first-quality fish was twice that of pork. Remains recovered from the *\*harbour excavations at Yeni Kapi* (*\*Constantinople*) indicate tuna and swordfish were the most commonly consumed types in 4th–7th century Constantinople (Onar et al.) but many other types were present, including catfish, shark, mackerel, sea bream, sea bass, and bonito. Fresh fish were often consumed grilled or boiled, although the majority of sea fish were probably eaten as fermented fish (as *garan/liquamen* or *\*garum*). Shellfish (crabs, prawns, crayfish), and molluscs (especially octopus, squid, scallops, and oysters) provided an important source of protein and, in the case of cuttlefish, cheap ink (*\*Ausonius, ep.* 14, 76 [Evelyn-White] = 13. 76 [Green]).

Fishing access on the sea, shore, and navigable public waterways was a legal right (*\*Digest*, I, 8, 4–5). Oppian in the 2nd century AD (*Halieutica*, 3, 72ff.) notes the main ways of catching fish: by hook and line, nets, weels, and trident. Hook fishing was done with hand lines, rods, or floating strings with multiple barbs; the latter were especially used in night-fishing for bream. Nets included casting types, draw-, and dredge-nets. The former types were mostly used for catching surface fish like sardines, and the latter for urchins, oysters, and sponges. Weels were wicker basket traps employed especially to capture eels. These methods persisted throughout the post-Roman West, where the trammel line (a three-layered net with floats on top and a weighted bottom) was also common (*Pactus Legis Salicae*, 27, 27–8). Weirs were installed along shorelines or fresh waterways where they captured swimming fish. Tridents were used to spear fish in shallow fresh and saltwater.

Fish farming was an integral part of *\*estate management*. *\*Palladius* does not cover fish farming, but the *\*Geoponica* (20, 1) discuss the stocking of artificial fish ponds with freshwater fish. By the sea, these were also stocked with saltwater fish. Byzantine era breeding pools with *\*amphorae* sunken into the walls have been found throughout the Levant. MD

**fish in art** Images of *\*fish* were quite common in Late Roman art, encountered in a variety of media,

from floor *\*mosaics* with aquatic themes (marine *thiasoi*) to engraved *\*ring bezels*. Frequent references to fish and fishing in the NT (e.g. Mark 1:17, Matt. 14: 14–21) and the interpretation of *ΙΧΘΥΣ*, *\*Greek* for 'fish', as an *\*acrostic* for Christ (e.g. Tertullian, *De Baptismo*, 1, 3) ensured the continuous popularity of the fish in Christian art, where it was employed as a symbol of Christ, an *\*apotropaic design*, or as an *\*allegorical image* with *\*Eucharistic*, *\*Baptismal*, or even *\*cosmological connotations* according to context. J. Spier, *Late Antique and Early Christian Gems* (2007), 41–9.

**fitna** ('Trial' or 'Test') The word appears in the *\*Qur'ān* with the sense of 'temptation' or 'punishment' (*Qur'ān* 8:28; 51:14). It came to be especially associated with the *\*Arab Civil Wars* of the 1st century of Islam, the conflict over the *\*caliphate* in 656–61, and also with two later major conflicts over the same issue (683–92 and 744–7). AM

*EI* 2 vol. 2 (1960) s.v. Fitna, 930–1 (Gardet).

**flamen** See IMPERIAL CULT.

**Flaminia et Picenum** *\*Province* in the *\*Dioecesis \*Italiae* mentioned in the *\*Verona List* (256 recto, 10). It originally included much of the area between *\*Rome*, the Aternus River, and *\*Ravenna*, but it was reduced to the area between Ravenna and the Esino River in the later 4th century when its southern part was made a separate province as *\*Picenum Suburbicarium* and transferred to *\*Italia Suburbicaria* and the jurisdiction of the *\*Vicarius Urbis Romae*. Flaminia et Picenum was governed from Ravenna by a *\*Corrector* (first attested in 325) till the mid-4th century. Thereafter the *\*governor of Flaminia et Picenum Annonarium* was a *\*Consularis* (*\*Notitia Dignitatum*, occ. I, 56; II, 14). MMA

F. Ausbüttel, *Die Verwaltung der Städte und Provinzen in spätantike Italien* (1988).

R. Thomsen, *The Italic Regions from Augustus to the Lombard Invasions* (1947).

**Flavia Caesariensis** *\*Province* created in the early 4th century as part of the *\*Dioecesis of \*Britannia* and included in the *\*Verona List* and *\*Notitia Dignitatum*. The *\*governor* was a *\*Praeses*. Its exact boundaries are unclear but its heartland was probably the east Midlands. It is generally assumed that *\*Lincoln* was its capital but there remains no definite evidence. ACR D. Mattingly, *An Imperial Possession: Britain in the Roman Empire* (2006).

**Flaviani** Senatorial family of noble origin (\*Ammianus, XXIII, 1, 4). Several of its members held important offices, including Volusius Venustus, \*Vicarius Hispaniarum (362–3), \*Nicomachus Flavianus the Elder and the Younger, and Nicomachus Dexter, \*Praefectus Urbi before 432. The Flaviani were known for their literary interests and their pagan loyalty. Nicomachus Flavianus wrote a lost *Annals* and Dexter edited Livy (*CIL* VI, 1783, *subscription*). The family's marriage alliance to the \*Symmachi was commemorated by the \*Nicomachorum–Symmachorum \*diptych. DN

Matthews, *Western Aristocracies*, esp. 241–5.

Cameron, *Pagans*.

**Flaviopolis of Cilicia (Flavias)** \*City founded by the \*Emperor Vespasian in the north-eastern part of the coastal plain of \*Cilicia, which became the see of a \*bishop under \*Anazarbus, the metropolis of Cilicia Secunda. It should probably be identified with modern Kadirli, a town with few surviving Roman remains, and the site of the Alacamii. This late 5th-/early 6th-century Christian \*basilica, situated in the city's eastern necropolis, was built largely from Roman imperial period \*spolia in a distinctively Cilician form of church architecture. It became a mosque in 1489. PTa

R. Bayliss, 'The Alacami in Kadirli: Transformations of a Sacred Monument', *AnatSt* 47 (1997), 57–87.

**flavius and aurelius** Designations used, especially in \*Egypt, to differentiate those who worked for the imperial civil and military \*administrations (Flavii), and those who did not (Aurelii). In the year 212, by the Constitutio Antoniniana (P.Giss. 40), the \*Emperor M. Aurelius Antoninus (known as Caracalla) had made all free inhabitants of the Roman Empire Roman citizens. It was the custom for those enfranchised as citizens to take the *praenomen* and *nomen* of the official or master who accorded them the citizenship, while they retained their Greek, barbarian, or slave name as a *cognomen*. Aurelius thus became at a stroke the most common *nomen* in the Empire, borne, for instance, by both \*Ambrose and \*Augustine.

Flavius, the *nomen* of the imperial dynasty inaugurated by Vespasian in AD 69, was revived as the dynastic *nomen* of \*Constantine I. Subsequent \*emperors retained it in their titulature and it was widely adopted in the 4th and 5th centuries by those holding office, by soldiers, and by the upwardly mobile. Eventually it came to be used as a title of nobility or royal power by \*Ostrogoths such as \*Theoderic, by \*Visigothic kings such as \*Reccared (e.g. *ILCV* 1814), and particularly by \*Lombard kings from \*Authari onwards (\*Paul the Deacon, *HL* III, 16). **fleets, Roman** The Roman government continued to maintain fleets in the Mediterranean into the 5th century, when naval bases at Misenum in \*Campania, at \*Ravenna and \*Aquileia at the head of the Adriatic, and on the Rhône and its tributaries, were listed in the \**Notitia Dignitatum* (occ. XLII). Large-scale \*naval warfare in the Mediterranean before the 5th century was uncommon. No naval response is recorded to the barbarian threats mounted by barbarians coming along the Black Sea coast in the mid-3rd century (\*Zosimus, I, 31–6), but in the civil war of 324 Licinius could gather a fleet of 350 \*triremes against Constantine I's 200 triaconters and 2,000 transports (Zosimus, II, 22). The untrustworthiness of such numbers is illustrated by the claim of \*Priscus that the force deployed by \*Basiliscus against the \*Vandals in 468 comprised either 1,100 or 100,000 ships (fr. 42 FGH = 53, 1 Blockley). However, \*Procopius personally witnessed the loading of the 500 transports (each holding 3,000 to 50,000 *medimni*) and 92 warships (rowed by 2,000 men) which carried \*Belisarius' expedition against the Vandals in 533 (*Vandalic*, III, 11, 15–16). One of the ships wrecked off \*Yassi Ada was providing supplies for forces resisting the \*Persian invasions of the early 7th century. The \*Theme System which evolved in response to the \*Arab invasions had a naval element in the form of the \*Carabisian Theme, later replaced by the \*Cibyrrhaeotic Theme.

In northern waters fleets were active up to the 5th century maintaining Roman \*frontiers. The former *Classis Britannica* progressively disappeared during the 3rd century, incorporated into the \*Saxon Shore system, whose dispositions are listed in the *Notitia Dignitatum* (occ. XXVIII) together with various other fleets operating on the edge of Ocean (occ. XXXVIII, 8; XL, 51; XLII, 23). The *Notitia* also records naval dispositions defending the Danube \*frontier (\*Pannonia Secunda: occ. XXXII, 50–2 and 55–6 and Pannonia Prima: \*Valeria: XXXIII, 58; XXXIV, 28 and 42–3; \*Scythia: or. XXXIX, 35; \*Moesia Secunda: XL, 22, 28, and 36; Moesia Prima: XLI, 38–9; \*Dacia Ripensis: XLII, 42–3). A law of 412 (*CTh* VII, 17) orders the building of 200 new craft for the Danube patrols within seven years; it may have been too little, it was certainly too late. JC; OPN

**Florence** (Roman Florentia) The gridded *colonia* of Florence was founded c.30 BC, and saw monumental growth in the 2nd century AD. It became the seat of the \*Corrector \*Tusciae et Umbriae in the \*Tetrarchy's provincial reorganization. Theatre, \*baths, and \*aqueducts continued in use, and a \*bishop is attested in 313. The \*city's Late Antique life focused on the north and south gates and the churches of S. Reparata and S. Cecilia respectively. Excavations at the former revealed a 52 × 25 m (170 × 82 ft) first church with fine floor \*mosaics, datable to the early 5th or 6th century. The \*city \*walls were rebuilt in this same period. Florence was damaged in the Byzantine invasion of Italy (\*Procopius, *Gothic*, VII, 5, 7), and declined in comparison to \*Lucca which later became the seat of a \*Lombard \*Dux. Much recent archaeology clarifies Late Antique to medieval sequences at Florence. NJC

**foederati** \*Latin term used to refer to non-Roman troops in the service of the Roman Empire, especially during the 4th and 5th centuries. This was not a technical term, and the literal meaning 'those with whom a treaty has been made' suggests the wide range of potential relationships covered, including mercenaries, allies, and equal partners. By the late 4th century this term could also refer to an elite corps of \*cavalry regiments composed of both Roman and non-Roman recruits. By the 6th century it had further extended to refer to an elite cavalry regiment attached to the Eastern imperial ('praesental') \*army. HE

Jones, *LRE* 611–13 (general); 159–60, 182–9 (4th and early 5th cents.); 194, 199–203, 218–19, 244 (5th cent.); 663–8 (6th cent.).

- T. Stickler, 'The *Foederati*', in P. Erdkamp, ed., *A Companion to the Roman Army* (2011), 495–514.

**foie gras** (Fr. fatty liver) A food made from goose liver (duck is sometimes also used). In the 4th/5th century the Roman agricultural writer \*Palladius (1, 30, 4) notes that, in the Greek fashion, geese were given diced figs in water for at least twenty days in order to produce large livers. Foie gras production was thus apparently common throughout the Mediterranean basin. MD

**foliage in art, Islamic** Whilst the use of vine scrolls, laurel wreaths, and other foliate motifs have familiar iconographic meanings in classical and late antique art, there have been many debates as to whether these same motifs are merely decorative or have any significance in Islamic \*art. In fact, imagery of kingship, \*paradise (both earthly and heavenly), and many other themes can be discerned in early Islamic paintings and

## foliage in art, Roman and post-Roman

\*sculpture of foliage in both stone and \*stucco. Such imagery is found in \*Umayyad \*palace buildings, such as \*Qusayr 'Amra and \*Qasr al-Hayr al-Gharbi, and in the Dome of the Rock and the Great \*Mosque of \*Damascus. EL

O. Grabar, *The Formation of Islamic Art* (2 1987).

**foliage in art, Roman and post-Roman** Various types of foliage were popular artistic motifs depicted in many media. Plants, flowers, and vegetal decorations allowed artists to incorporate both the intricate details and the lush connotations of abundance into the decorations of objects and interiors.

Derived from the classical Greek artistic tradition, the grapevine was a motif that in Roman times was associated with \*Dionysus, the god of \*wine. In Christian art, the vine was both a visually pleasing decoration and a symbol of Christ as the 'true vine' (John 15:1). \*Mosaics of \*inhabited scrolls, vine scrolls populated with \*birds, \*animals, and figural scenes, adorn the floors of many churches in the eastern Mediterranean, and appear in wall mosaics in both west and east, including the vault over the sanctuary in the Church of S. Vitale in \*Ravenna and the \*apse of the Church of Mar \*Gabriel \*Monastery on the \*Tur 'Abdin, dated to 512. Vines also decorate architectural \*sculpture, including the \*capitals of the Church of S. Polyeuctus in \*Constantinople.

Acanthus plants, another popular motif, adorn artworks as varied as composite column \*capitals, \*silver vessels such as those in the \*Water Newton Treasure, and mosaics. Trees and plants feature in images of the \*Earthly Paradise both in churches and in \*Umayyad art, including the wall mosaics of the Great Mosque in \*Damascus, which also featured a vine frieze of gilt \*marble.

\*Choricus describes a now-lost 6th-century Church of S. Stephen at \*Gaza which featured images of \*Nilotic plants and animals (*Laudatio Marciani*, II, 50–1). In different artistic traditions and media, foliage is variously depicted as naturalistic, as simplified (for instance in the plant scrolls and *rincaux* on Egyptian \*textiles and architectural friezes), or as stylized (including on the \*carpet pages of \*Insular manuscripts). **folles** (literally Lat. for 'bag') Late Roman \*bronze coin denomination worth 40 \*nummi. The *folles* was introduced in 498 under \*Anastasius I and became the most significant bronze denomination of the Empire, except in Alexandria which retained its own denomination system. Prominently marked M (the \*Greek number for 40) for its value, it could weigh up to 26 g (0.9 ounces), though size and weight could vary considerably. RRD  
Grierson, *Byzantine Coinage*.

**fonds de cabane** See SFB OR SUNKEN-FEATURED BUILDING.

**font** See BAPTISTERY.

**food supply** Cereals were the staple food almost everywhere in the Late Antique world. Prominent among the \*grains consumed and traded were various varieties of wheat. Barley and oats, usually cheaper than wheat, were also commonly eaten and traded. \*Olive oil, \*wine, and \*meat were also among the basic foods of the Late Antique period. Products such as meat and \*vegetables tended to be supplied by the hinterland of \*cities, though networks even for fresh produce could be quite extensive. In \*Italy, for instance, \*swine from \*Sardinia and \*Lucania et Bruttium furnished most pork destined for consumption in the city of \*Rome (CTh XIV,4,4; XIV,4,10; *NovVal* 36).

Long-distance, high-volume supply networks for grain, oil, and wine underpinned food supply in Late Antiquity. Grain was chiefly exported from north \*Egypt, oil from \*Baetica and North \*Africa, and wine from Italy, and also from \*Greece, \*Syria, and \*Palestine. These were the core products in an exchange network supplying various Mediterranean markets and populations. They were collected through \*taxation or provided by traders and distributed in the larger urban centres, such as Rome, \*Alexandria, \*Antioch, and \*Constantinople, in part as free allowances (*panis gradilis*) and in part by sale under regulated prices and conditions (i.e. *panis Ostiensis* or *fiscalis*; CTh XIV, 15). The most imposing system for supplying an urban centre with foodstuffs was that developed in Rome and adapted in Constantinople from 330 onwards, though food distribution was not restricted to these cities; in the early 7th century grain from \*Sicily contributed to the relief of \*famine in Alexandria.

Rome retained a privileged position as the main recipient of tax-grain from Africa and Sicily, while Egyptian grain fed Constantinople. Numerous sources refer to the supply from Egypt and Africa, but Sicily and also Sardinia, and more generally \*Italia Suburbica, assumed a significant role in the supply of Rome in the Late Roman period. From the 5th century

onwards the control of Egyptian grain by the imperial \*administration in Constantinople and the loss of Africa to the \*Vandals (AD 439), presented the city of Rome with increasing difficulty in feeding its population. Food shortage is reflected both in a drop in free distribution levels and in demographic decline, though food supplies continued in a limited capacity under the rule of the \*Visigoths, AD 493–554 (\*Cassiodorus, *Variae*, XI, 39). At the end of the 6th century \*Gregory the Great (pope AD 590–604) distributed free Sicilian grain to the Roman population in order to prevent famine in the city (*ep.* I, 70).

In the post-Roman West, however, demographic decline and dispersed settlements affected both production and exchange. The collapse (in the West) or reduction (in the East) of Roman systems of food redistribution appear to have diminished the capacity of communities to cope with food crises in Late Antiquity.

**formae** See RANKS IN CIVIL SERVICE.

**formulae (formularies)** Templates used by scribes for composing documents. They principally survive from \*Francia in collections called formularies, over twenty of which are datable from the 6th to the 10th century. Such compilations were informal and drew on original texts, often but not always replacing specifics with indefinite pronouns. Designed to be reused, formularies were reshaped by copyists as needed, something concealed by modern editions which standardize their texts. Formulae exist for diverse acts, including donations, sales, \*dowries, \*contracts, \*immunities, \*manumissions, disputes, and \*letters, providing norms of practice for recording these transactions in written form.

The best-known formularies are that of \*Angers, which contains 60 formulae, probably from the 6th century for everyday local business, and that of \*Marculf, which contains 92 formulae in two books, including models for royal \*charters, commissioned from an elderly monastic \*notary for use by other scribes, perhaps in \*S. Denis, during the later 7th century. One Iberian formulary from the earlier 7th century also survives, echoed in the text of the contemporary \*Visigothic slates. GDB

**fornication** The criminality of extramarital sex in Roman society depended on the status of the woman. Intercourse with married women was punished as adultery, with severe penalties for both culprits (see MARRIAGE, ADULTERY, DIVORCE, AND REMARRIAGE), while intercourse with unmarried women was permissible if the woman was a slave, engaged in \*prostitution, or with a tainted reputation. \*Concubines formed a half-reputable category. Fornication (Lat. *stuprum*) was a criminal offence if it took place with a free woman who might be married into a family of good standing. Intercourse with a free boy was also penalized as fornication (\**Digest*, 48, 5, 35). The Romans did not consider incest a form of extramarital

sex but defined it as a marriage impediment, setting limits to diverse provincial marital customs.

The punishment for fornication was usually less severe than that for adultery, and was death only in exceptional circumstances. Specific penalties are rarely stated in the sources, but in \*Justinian I's time upper-class offenders were fined half of their property, while lower-class people were corporally chastised and exiled (*InstJust* IV, 18, 4). \*Rape was a capital offence. A guardian who violated his \*ward was sent into \*exile and lost his property. In 368 imperial officials terrorized \*senatorial families at \*Rome, executing men and women for sexual affairs, including *stuprum* (\*Ammianus, XXVIII, 1). From the 4th century, sex between men was punished by death, in the \*Visigothic kingdom by castration.

Premarital sex was uncommon in the Mediterranean area, as women married early. Elopement was severely punished as *raptus*; a law of 320 stated that both parties were deemed guilty even if the girl consented (*CTh* IX, 24). In practice, most cases of fornication concerned \*widows. Their affairs with slaves were especially condemned. Many Christian authors attacked the double standard and demanded the same limits on male sexuality (e.g. \*Lactantius, *Inst.* VI, 23, 23–4; \*Jerome, *ep.* 77, 3). This was never realized in law, and the post-Roman kingdoms continued to penalize only adultery and female extramarital affairs. Some Germanic \*law codes laid down elaborate lists of fines for the sexual harassment of women. From the 4th century, the chastity of consecrated \*virgins and widows gave rise to fresh concerns.

**fortifications** The most numerous 'public buildings' constructed across the Late Antique world between the mid-3rd and the end of the 6th centuries. The adoption of the new Christian faith by the \*emperors ensured a boom in \*church architecture from the 5th century, but the new fortified \*cities, fortresses, and a range of fortified places far exceeded the scope of church construction in the scale of manpower and resources demanded to shift and construct the literally billions of tons of stone and earth for the new fortified Empire of Late Antiquity.

Imperial projects may have begun under \*Gallienus, but \*Aurelian's decision to construct an 18 km (12 mile) circuit around the \*city of \*Rome marked the clearest sign of a radical change in the security of the Roman state (see FRONTIERS). The new fortifications were provided with high curtain walls, normally at least 9 m (c.30 feet) in height, and with closely spaced bold projecting \*towers to facilitate flanking missile fire against attackers. These new fortifications are found on almost

all the Empire's frontiers (an exception is \*Hadrian's Wall) and there are distinct patterns of construction and design associated with military and urban projects. On the European frontiers from the \*Saxon Shore in south and east \*Britain to the Danube estuary, major construction is attested from the later 3rd into the 4th centuries, with epigraphically attested programmes under the \*Tetrarchy, \*Constantine I, and \*Valentinian I. In many instances the new fortifications replaced existing principate-style forts often with reduced or reconfigured circuits, and invariably with massive new curtain walls reinforced by great projecting towers of designs varying from the rectangular, to the drum-shaped, and polygonal. The new defences often dwarf the internal structures of the garrisons, but presented an imposing symbol of military resistance.

A significant innovation from c.275 was the defence of many urban centres across the western \*provinces of \*Gaul and \*Spain. Many previously undefended cities now acquired new well-built *enceintes* often making use of \*spolia from earlier buildings and cemeteries. Over 100 have been identified across Gaul alone, many with reduced circuits defining the core urban settlements which survived into the medieval period. An outstanding question is how far these urban defences constitute imperial initiatives coordinated by the \*Vicarii, as seems to be indicated by the near-contemporary frontier works. New urban fortifications are also apparent across the Roman East. \*Athens has two separate circuits dating from the 3rd century, but in Asia Minor the majority of the newly walled cities such as \*Aphrodisias were not constructed before the later 4th century and these rarely match the building competence of Gallic cities such as Le Mans. Exceptions were those cities selected as imperial residences during the late 3rd century including \*Nicaea and \*Nicomedia and the later defences of \*Antioch where the construction reflects centralized planning and resources.

The greatest fortification of the age was \*Constantinople, which acquired defences which were to ensure the city's security for over a millennium. But in the eastern provinces where Rome confronted the aggressive and technically competent power of the \*Sasanians a distinctive pattern of fortress cities emerged, acting as strategic 'hard points' in the frontier zone, but also constituting new urban foundations. Foremost amongst these were the great fortified circuits of \*Amida in the 4th and \*Dara in the early 6th century. New forts typify the system of \*Diocletianic frontier \*roads in Syria and \*Arabia, comparable with those of the European frontiers, though these are less frequently encountered in \*Mesopotamia and Roman \*Armenia. Major programmes of fortification continued in the \*Balkan and eastern frontier zones into the 6th century, together with a number of new barrier \*walls. However with

the exception of new fortress cities such as \*Justiniana Prima it is often difficult to reconcile the limited extent of the material remains with the claims made by such written sources as \*Procopius. Confronted by major incursions throughout the 7th century, especially the \*Arab conquests, new patterns of urban defences emerge in \*Anatolia, known from \*Ephesus, \*Miletus, \*Ankara, and elsewhere, often with a clear military character. New threats required different responses.

**fortified farms, African (gsur)** Dated mainly to the late 3rd and 4th centuries; best known from southern \*Tripolitania, but attested across most of the African \*frontier zone, from the cultivated lands of \*Cyrenaica to the highlands of \*Mauretania. A response, perhaps, to raids from the desert, or maybe just to unsettled conditions, they are often associated with \*villages, forts, and smaller military outposts. Replete with indications of wealth, they were, for the most part, private \*estates, like the *centenarium* built in Tripolitania by a civilian landowner to 'guard and protect the zone' (*IRT* 889). Others seem to have functioned as (semi-)official forts, overseen by the commanders (*principes*) of the frontier \*army. There were numerous fortified estates also in the Kabylie mountains south-east of Algiers, including the *castellum* Tulei (*CIL* VIII, 9005–6), and the *castellum* of Flavius Nubel, the father of \*Firmus and \*Gildo, near Rusguniae (Tametfoust; *CIL* VIII, 9255). DAC  
D. J. Mattingly, *Tripolitania* (1995).

**Fortuna of cities** See PERSONIFICATIONS OF CITIES.

**Forty Martyrs of Sebasteia** Forty Roman soldiers allegedly martyred at \*Sebasteia of \*Armenia under \*Licinius by standing all night on a frozen lake. An influential homily (19) of \*Basil of \*Caesarea and three \*sermons of \*Gregory of \*Nyssa describe their witness. Gregory buried his sister \*Macrina at a shrine containing \*relics of the Forty. Later, the Forty healed \*Justinian I's knee. An 'epic' Greek \*martyr passion, the martyrs' purported *Testament*, passions in \*Armenian, \*Syriac, and \*Coptic, and two \*kontakia by \*Romanos attest to widespread devotion. Feast day 9 March. BHG 1203–8, BHL 7537–42, BHO 1203.

M. Mullett, O. Nicholson, and A. Wilson, eds., *The Forty Martyrs of Sebasteia* (BBTT, forthcoming).

**forum (plur. fora; Gk. agora)** Open public space in a \*city used for multiple civic purposes, religious, political, and commercial. A *forum* was generally surrounded by colonnades and flanked by public buildings (e.g. \*temples, \*basilicas) and \*shops. *Fora* were typically rectangular in plan, although some were round or oval, as for instance at \*Gerasa. \*Rome had several significant *fora*, including the Forum Romanum, decorated with statues of \*emperors and \*senators and triumphal \*arches. \*Constantinople had seven imperial *fora*. The *fora* of many cities continued in use through the 6th or early 7th centuries, and sometimes formed part of new urban foundations (e.g. at \*Justiniana Prima, founded in the 530s). Legislation of 383 (*CTh* XV, 1, 22) prohibiting private buildings within *fora* indicates a concern with encroachment on public space already by the 4th century. As \*streets became important sites of commercial activity, *fora* were turned increasingly to other uses, both residential, as at \*Luna, or as places of artistic production, as at \*Hierapolis. **Frankish coinage** See MEROVINGIAN COINAGE.

**Franks** The kingdom of the Franks (*regnum Francorum*) came to be the most successful and enduring successor state in the post-Roman West. After the political dissolution of the Western Roman Empire in the course of the 5th century, \*Clovis I (d. 511), one of several Frankish kings who ruled over relatively limited territories in the north and north-east of \*Gaul, managed to extend his rule with remarkable speed over most of the former \*provinces of Gaul. His descendants, the \*Merovingian kings, established themselves as one of the longest-ruling royal families of the medieval period, controlling roughly the territory of modern France, including some regions along the Rhine that are part of modern Germany. Merovingian rule ended only when members of the Carolingian family (so called from their descent from \*Charles Martel, son of the \*Mayor of the Palace \*Pippin II) replaced them as Frankish kings in the mid-8th century. Among other strategies, the new Carolingian rulers legitimized their usurpation with intensified military expansion. Under the second Carolingian king, Charlemagne (768–814), the Frankish kingdoms comprised most of Western and Central Europe, with modern France and Germany as the core regions of what was soon to become the first medieval Christian Empire in the West.

The division of the Carolingian Empire led to the development of France, Germany, and other medieval and modern European countries and also fostered repeated reconceptualizations of the Roman and Frankish past to legitimize contemporary claims to power. The establishment of modern European nation states only intensified these efforts, as they increasingly sought to justify their independent existence and claim to rule by the construction of continuous histories that traced their origins back to late antique and early medieval peoples (Geary, *Myth*). As a result, the early history of the Franks became a battleground for French and German scholars and politicians in particular, as they rivalled each other in claiming their country to be the true successor of the Frankish kingdom; one revealing example is *Karl der Große oder Charlemagne?*, a collection of essays by eminent scholars of the 1930s which debated whether Charlemagne was German or French (Wood, *Modern Origins*). Since the Second World War, however, early Frankish history has increasingly been seen as offering a common past and foundation for (Western and Central) European states, as emphasized in an exhibition organized at Aachen by the Council of Europe in 1965 on *Karl der Große* and the joint Franco-German project *Die Franken* of 1996, the 1,500th anniversary of the supposed date of the baptism of Clovis.

### The name of the Franks

In recent decades, the efforts of earlier historians in national myth-making have been deconstructed. Recent scholarship on Frankish and French history has carefully explored the many discontinuities and breaks in the long history of contradictory and competing appropriations and definitions of the name of the Franks. Already in Late Antiquity and the early Middle Ages the term 'Franks' applied to several different groupings and this may have contributed to uncertainties about the meaning and etymology of the name of the Franks in Roman sources. The word 'Frank' most likely derives from the Indo-Germanic root *preg*, Germanic *frek* meaning 'fierce', 'bold', rather than 'free', a meaning for 'frank' that developed only in the course of the Middle Ages (Beck in von Welck et al. *Die Franken*, 373). Indeed, some of the earliest Roman sources for the Franks emphasize their fierce nature, although they provide different etymologies and explanations of the name. Others believed that the Franks took their name from one of their mythical leaders, Francio, a \*Dux (see the discussion in Nonn, *Die Franken*, 11–15). In the mid-4th century the *rhetor* \*Libanius (*Oration*, 59, 27) thought the name had resulted from a misunderstanding—that because of their strong armour, the Franks had originally been called *Phraktoi* (the armour-clad), a term then misrepresented as *Frankoi*. The *\*Historia Augusta* (XIX, *Vita Firmi et al.*, 13, 5) makes a characteristic pun on the name, stating that the Franks are accustomed to break (*frangere*) their \*oaths with a laugh.

### The Roman Empire and the Franks

Although these debates are little help in uncovering the original meaning of the Frankish name, they do reflect a process in which it acquired considerable prestige in the Late Roman world. While the earliest references to Frankish groups in the 3rd century mention them in different regions and acting in various capacities, whether as military *\*foederati*, as raiders along the northern periphery of the Roman Empire, or as \*pirates in \*Britain and \*Spain, they came to be seen as the principal successors of the *Germani* in the course of the 4th century (Pohl, *Germanen*, 35). It seems that the name did indeed fill the same function in Roman politics, historiography, and ethnography as that of the *Germani* had during the Principate, as an umbrella term to describe various *gentes* on the northern \*frontiers beyond the Rhine and Danube.

The reorganization of Germania into the territories of the Franks and \*Alamans involves more than a change of names, however. It also reflects a social transformation of barbarian societies in these regions, which went hand in hand with the reorganization of the Roman Empire after the 'Third Century \*Crisis'. The

intensified interaction of Roman politics with the barbarian peripheries brought about the establishment of new \*aristocracies in these regions, who knew how to exploit the Roman system by fighting for or against the Empire—something that also enabled them to acquire prestige and power within their own communities. For their part, the Romans reflected this increasing social mobilization and militarization in the frontier regions in the 3rd and 4th centuries by reorganizing the political geography of the barbarian periphery along the Rhine and upper Danube frontiers as *Francia* (and *Alemannia*) (see Pohl, 'Alemannen und Franken'; Halsall, *Migrations*, 74–9; 118–31, with *RGA* 2 s.v. Franken § 2 Archäologisches, [H. Ament] 387–414 for further discussion of the archaeological dimensions of this process).

In employing the name Franks, the Romans picked up a Germanic term that may well have been in use as a means of self-identification among an increasingly confident warrior class. But there is no evidence that the name as yet corresponded to a larger \*confederation of different groups who identified themselves collectively as Franks. Alliances were based on the common interests of various individual groups rather than on a sense of belonging to a larger Frankish community (Pohl, *Völkerwanderung*, 165–71, Pohl, *Germanen*, 34, Halsall, *Barbarian Migrations*, 118–31; although for a recent revival of the idea of a Frankish confederation see Nonn, *Die Franken*, 15–19).

Frankish solidarities were more important within the boundaries of the Roman world than they were beyond the frontiers, as becomes clear in the second half of the 4th century when several Franks ascended to the highest offices in the Roman army. When the \*Magister Militum \*Silvanus, the son of a Frankish officer, fell victim to a conspiracy at the \*court of \*Constantius II, some Frankish officers at the \*court tried to support him. Yet when Silvanus discussed his plans to flee to the Franks, the Frankish officers under him advised strongly against it: he would either be killed or sold back to the Romans (\*Ammianus, XV, 5). Thus, it seems that Frankish solidarities did not extend beyond the frontiers of the Roman Empire. Silvanus was one of the first in a series of Frankish officers who made a splendid career in the Roman army in the later 4th century; others included Charietto, Mallobaudes, \*Merobaudes, \*Ricomer, \*Bauto, and \*Arbogast. Unlike Silvanus, most of these men continuously expanded their political networks on both sides of the frontier. Mallobaudes, for instance, was both a Roman officer and a Frankish King. They could draw on their position and connections in the barbarian world to recruit soldiers or to build up alliances for the Roman Empire, while at the same time their position as rulers or commanders of their 'Frankish' group was legitimized by

their rank in the Roman army, so providing them with an additional power and resource base. The especially successful Frankish Magister Militum Arbogast responded to the attempt to depose him by the \*Emperor \*Valentinian II with a confident rebuke: it was not the emperor but his troops who had elected him as their commander (\*Zosimus, IV, 53). Two processes of integration were therefore occurring in parallel: on the one hand, a group of 'Franks' was forming from elements which might have quite heterogeneous ethnic and social origins, and on the other hand, this group was being drawn into the social and political texture of the Late Roman world. When the Roman Empire progressively lost control of the Rhineland and northern Gaul in the course of the 5th century, communities there built on these experiences to reorganize the remaining structures of the Roman world into smaller political units based around cooperation between local or regional \*aristocracies and barbarian rulers, which have been termed 'local Romanesses' (Heather, *Fall of the Roman Empire*, 432–43, developed further by Brown, *Through the Eye of a Needle*, 392–4).

#### *Franks in post-Roman Gaul: from Frankish kingdoms to the Merovingian regnum*

Most of these units developed within the framework of the former Roman provinces and *civitates*. In cities such as \*Soissons (the base of \*Aegidius and his son \*Syagrius, remembered about a century later as 'King of the Romans') or \*Trier (the base of the \*Comes \*Arbogast) these armies supported Roman commanders. Elsewhere, barbarian commanders took power for themselves, legitimized by their alliance with the local aristocracy. Frankish kings and groups are well-documented participants in this process along the Rhine and in northern Gaul. Older research has emphasized the importance in the 4th and 5th centuries of two Frankish groups in particular, the Salian and the Ripuarian Franks. But the distinctively high profile retrospectively assigned to these groups has more to do with efforts to trace continuous histories from Salians and Ripuarians to Western and Eastern Franks and eventually to France and Germany (as is shown in *RGA 2 s.n.* Salier, § 2 Historisches [H. Reimitz], and Ripuarier [M. Springer]). The evidence instead hints at a much more diverse and discontinuous history, in which a variety of Frankish groups established their rule in *civitates* along the Rhine (such as \*Cologne) or in northern Gaul, the most important of which were \*Cambrai and \*Tournai (Wood, *Merovingian Kingdoms*, 38–41; MacGeorge, *Late Roman Warlords*, 69–164; Halsall, *Migrations*, 257–84).

Tournai was the centre of one of the most successful Frankish rulers of the second half of the 5th century, namely \*Childeric I (d. 481/2) (Lebecq, 'The Two

Faces'; Halsall, 'Childeric's Grave'). After his death, the Roman regional aristocracy acknowledged his son \*Clovis I as his successor (Wood, *Merovingian kingdoms*, 41–50) and he proceeded to expand his kingdom through a succession of campaigns against Syagrius of Soissons, the Alamans, the \*Visigoths in southern Gaul, and other Frankish kings along the northern and eastern periphery of his kingdom. By the end of his life, Clovis ruled over the majority of the former provinces of Gaul. Given that the conquest of all this territory took less than a generation, the social and political coherence of the kingdom that Clovis bequeathed to his successors was remarkable. He laid the foundation for a Merovingian *regnum* that was seen as a common polity for many generations to come, to the extent that it proved capable of surviving its repeated division among several rulers and recurrent civil wars between them and their elites (Wood, *Merovingian kingdoms*, 55–119). One of the most important factors in this coherence was the decision of Clovis to embrace Nicene Christianity and thereby ally himself with the Gallo-Roman Church. Clovis' successors continued this policy, presenting themselves as royal patrons of the Christian Church and making the realization of a Christian kingdom a collective focus for political and social integration (Reimitz, 'Contradictory Stereotypes').

What is less well documented is the role of Frankish identity in this process. It seems Clovis and his successors deliberately left the ethnic and political identity of the *regnum* ill defined, in a way that can be interpreted as a response to the difficulties of integration faced by the new rulers of Gaul. After such rapid conquests, Clovis ruled over a territory inhabited by an ethnically and socially diverse population, among whom Frankish groups were in the minority. Moreover, these Frankish groups themselves lacked political coherence, being diverse entities with varying and possibly competing claims to Frankish identity and history. In this situation, all the evidence indicates that the early Merovingian kings did not build their legitimation around a strong notion of Frankish identity, but instead sought to situate themselves in a position equidistant from the different social and ethnic components of their newly established kingdom. Groups and individuals who identified themselves as Franks formed just one of these components, and had to establish their positions and claims in competition with other social groups and identities as well as in relation to each other.

The situation changed, however, in the last decades of the 6th century in the course of the civil wars between the grandsons of Clovis, where we can observe the increasing salience of the name of the Franks as a common focus for the political and social integration of the whole *regnum*. This in turn intensified conflicts

among different political and social groups over the meaning and conception of Frankish identity, a development that marks the beginning of the medieval history of the Frankish name and the social realities with which it was associated (Reimitz, *History*). HR

**frawahr (fravashi, ferouahar)** In \*Zoroastrianism, the *frawahr* are the heavenly pre-existing souls of all living beings, fashioned by God. They come down to

help make new life and at \*death, return to heaven. In early texts *frawahrs*, depicted as female warriors, assist the Wise Lord in the (re)creation of the world at dawn and at the new year. By the \*Sasanian period their cult had been associated with that of the souls of the faithful departed, and during the festival of \*Frawardīgān they were thought to come to earth for ten days to be venerated. They are invoked before all rituals. The notion that they were guardian spirits or \*angels has no support in the texts. The interpretation of the Achaemenid winged-disc symbol as the king's *fravashi* is also baseless. POS

**Fredegar Chronicle** The name Fredegar is conventionally assigned (though first attested only in 1579) to the author of a Frankish world \*chronicle in four books, running from the Creation down to 642, when it abruptly concludes, although its continuation down to at least c.659 had been envisaged (IV, 81). Notwithstanding various attempts to identify multiple authors and perspectives within it, the chronicle as it stands is now usually regarded as the work of a single compiler or author, writing early in the 660s. This hypothetical Fredegar (sometimes known as pseudo-Fredegar) explains in the preface to his fourth book how he had hitherto followed the 'five chronicles' of \*Jerome, \*Hydatius, 'a certain wise man', \*Isidore, and \*Gregory (of \*Tours); the *Liber Generationis* of \*Hippolytus, the chronicles of Jerome, Hydatius, and Gregory's *Histories* certainly provide the spine of the first three books, but the author weaves into these extensive excerpts an intriguing assortment of material of uncertain origin, including two versions of the Trojan origins of the \*Franks, the possibility that the \*Merovingians were descended from a sea-beast, and tales of the likes of \*Clovis I, \*Theoderic the \*Ostrogoth, and the \*Emperor \*Justinian I.

In Book IV, Fredegar declares his intention to continue where Gregory of Tours left off late in 584 (he had access only to the six-book version of the *Historia Francorum*); his independent account overlaps with Gregory's until 591, and thereafter provides our main outline of Frankish history down to 642. It describes in particular the last phase of \*Brunhild's dominance, the reigns of \*Lothar II and \*Dagobert I, and the emerging importance of the \*Mayors of the Palace, including \*Pippin I, interspersing its Frankish material with more incidental insights into \*Visigothic \*Spain, \*Lombard \*Italy, the reign of the Emperor \*Heraclius, and the rise of the \*Arabs. The author's emphases and political sympathies suggest a location in \*Burgundy, but his identity otherwise remains elusive.

Although it was long assumed that this original chronicle was in turn extended down to 768 by one or more continuators, as enshrined in the MGH edition, it has been demonstrated by R. Collins that the manuscript tradition offers no support for the existence of any such composite text. Instead, an author working c.751 under the \*patronage of the \*Dux Childebrand, uncle of \*Pippin III, extensively reworked the 'Merovingian Fredegar' to his own ends, bridged the gap to his own days with material derived from the \**Liber Historiae Francorum*, and then extended the chronicle down to \*Pippin's coronation as king. This *Historia vel Gesta Francorum*, as it is described in one colophon, was subsequently extended down to 768 on the authority of Childebrand's son. As such, this 'Carolingian Fredegar' should be regarded not as a simple continuation, but rather as a rewriting of the part played in history by the Franks, a text that substantively revised as well as expanded its Merovingian antecedent. It remains to be edited. STL

**free peasantry** Peasants were legally free within the Roman Empire, but their actions were circumscribed by \*law and by the power of landlords. In the East, the majority of peasants seem to have been 'free' in the sense that, though they worked someone else's land, they were not bound to the landlord legally or by indebtedness, and they often had their own small plots under which they were registered in the \*tax registers.

In \*Egypt, hired labourers (*misthatoi*) with considerable mobility and autonomy do not seem prominent but neither do unfree (*enapographoi*) labourers feature conspicuously, the latter being attested only in the Oxyrhynchite (Hickey, 83). Instead, most peasants appear to have been rent-paying or sharecropping tenants of varying means. By contrast \*Libanius (*On Patronage*, 4) attests to \*villages of free peasants in \*Syria who apparently owned the lands they worked. The archaeological remains of the \*Limestone Massif of northern \*Syria, where small farming \*villages exhibit high-quality architecture, numerous churches, and \*baths seem to represent such free peasant villages.

Free peasants who owed service obligations and rents or shares but who were largely economically autonomous survived in Frankish \*Gaul and in \*Anglo-Saxon England. In the \*Persian Empire and the Early Islamic East free peasants (not bound to the land or strictly controlled by the landlord) were extremely rare. MD

**friendship** (Lat. *amicitia*) Friendship continued to define a wide range of male relationships in Late Antiquity, including \*patronage relationships, enabling the participants to be represented as equals. Educated men maintained networks of friends and protégés in their own regions and often Empire-wide. The most extensive of these are highly visible in exchanges of \*letters. Friends might provide influence in civic or imperial politics, as for \*Symmachus or \*Libanius, or promote a common doctrinal or ideological stance, as in the networks of such \*bishops as \*Theodoret of Cyrhus or \*Ruricius of Limoges.

The letters of \*Julian show that \*emperors also participated in these networks of friendship, but to be called a 'friend of the emperor' was more commonly an acknowledgement of rank and privilege at \*court. \*Gregory of \*Nazianzus (*Oration*, 7, 10) records this status as having been achieved by his brother \*Caesarius; conversely, \*Augustine of Hippo (*Confessions*, VIII, 6, 15) records the rejection by two imperial officials of the prospect of friendship with the emperor in favour of friendship with God, understood as the founding principle of Christian community.

While some Christians such as \*Basil of Caesarea derived Christian friendship from classical models, others emphasized the contrast between mundane friendship and an ideal spiritual friendship shared among believers. This may be found strongly if unsystematically expressed in \*Ambrose of \*Milan (*De Officiis*, III, 22, 128–38) and \*Paulinus of Nola (*ep.* 13, 2). Its chief theorist, however, is Augustine, who explicitly approved Cicero's conception of friendship as agreement on matters human and divine (Augustine, *ep.* 258, 1; Cicero, *Laelius: De Amicitia*, VI, 20), but regarded *amicitia* as having been transformed by Christian *caritas*. It therefore permitted frank criticism as well as a deeper intimacy and affection. MSW

**Frigeridus** Renatus Profuturus Frigeridus wrote a history in at least twelve books. It covered the early 5th century, was used by \*Gregory of \*Tours (*HF* II, 8 and 9), and is now lost. OPN

PLRE II, Frigeridus.

RE VII (1912) s.v. Frigeridus (2), col. 102 (Seeck).

**Frigidus, Battle of River** Victory won on 5 or 5–6 September 394 by \*Theodosius I (379–95) over the \*usurper \*Eugenius (392–4) and his \*Magister Militum \*Arbogast in the Julian Alps. Theodosius' \*foederati and desertions from Eugenius' army played a part, as did the Bora wind mentioned in \*Claudian's \*panegyric on the third consulate of \*Honorius (93–5), and also by Christian authors such as \*Ambrose (*In Pss.* 36, 25), \*Rufinus (*HE* XI, 30), and \*Orosius (VII, 35, 11–21), who

present the battle as a victory over \*pagans for the Christian \*God of battles. \*Zosimus (IV, 55, 1–IV, 58, 6) provides a contrasting account. Modern historians disagree about these and other details including the length of the battle. IAPS

**Frisia and Frisians** The Frisians appear at the very beginning of the Christian era as a Germanic people settled along the coasts of the North Sea, especially, according to Tacitus, on the banks of Lake Flevo (mod. IJsselmeer). During the period of \*Barbarian Migrations, they moved westward through the Zeeland Islands toward the Scheldt estuary. It is likely that many of them participated in the movement of Angles and \*Saxons to Great \*Britain. From the 6th to 8th centuries, they moved eastward towards the Weser estuary and the so-called Eastern and Northern Frisian Islands off the coasts of Germany and Denmark.

The continental Frisians, who lived in coastal marshlands on artificial mounds, were led by a series of kings, of whom the most famous was \*Radbod (c.680–719). They were responsible for waging wars, celebrating religious cults, and applying the law. From the 7th to the beginning of the 9th century, the power of the Frisian kings was challenged by the \*Franks, especially the Pipinid (then Carolingian) family, who conquered the territory of the Frisians and converted them to Christianity. Most of the missionaries who converted the Frisians (including \*Wilfrid, \*Willbrord, \*Boniface, Liawine) came from \*Anglo-Saxon England, which was closely related to Frisia both culturally and linguistically.

In spite of, or thanks to, the Frankish conquest, Frisians became the most significant seamen and \*merchants of north-western Europe, and their port (or *emporium*, or *wic*) \*Dorestad, on the Rhine delta, became its principal entrepôt. Connections radiated from it into the European hinterland, where the Frisians had colonies in \*Trier, \*Mainz, or Worms, to eastern England where they settled in \*London or \*York, and northwards to Scandinavia, where they created trading posts in Ribe, Haithabu, or Birka. With their Anglo-Saxon trade partners, the Frisians contributed to the spread of \*silver currency (the so-called \**sceatta*) in northern Europe, helping precipitate the conversion of all Western Europe to silver \*coinage. However the wealth of the Frisians attracted Viking piracy, and during the 9th century, Frisia became the main target of Scandinavian raids in continental Europe, which caused the end of the great 'Frisian trade of the Dark Ages'. **Fritigern** Co-leader with Alavivus of the majority of the \*Tervingi \*Visigoths who broke with \*Athanaric in 376, preferring to negotiate asylum in the Roman Empire than to continue resisting the \*Huns. Fritigern led the subsequent Gothic revolt (377) which resulted directly in the Battle of \*Adrianople (378). He was still leading the Tervingi c.380, but was not involved in the eventual peace negotiations of 382. He was a \*Homo-ean Christian. PHe  
PLRE I, Fritigern.

**Fritigil** Queen of the \*Marcomanni who wrote to \*Ambrose, asking what she should believe. His \*letter advocated (successfully) alliance with Rome. On coming to \*Milan, she found Ambrose had died (*VAmbrosii* 56). OPN

**Fritzlar** (Hesse, Germany) A church and 'little \*monastery' founded by S.\*Boniface in the 720s, close to the site of the 'Oak of Jupiter', which Boniface famously felled, at Geismar. Its first abbot was Wigbert (d. 737/8). JTP

J.-H. Clay, *In the Shadow of Death: Saint Boniface and the Conversion of Hessia, 721–54* (2010).

**Friuli, Duchy of** The regional name Friuli in the modern Italian province of Venezia-Giulia derives from the Roman *colonia* and later Lombard ducal base of Forum Iulii (mod. \*Cividale del Friuli). Part of the \*Verona List \*province of \*Venetia et Histria, the territory was bounded to the north by the Carnic Alps—the main pass at Mount Croce Carnico, is 1,362 m (4,469 feet) high—and in the east by the lower, Julian Alps; to the south lay \*Aquileia at the head of the Adriatic.

In Late Roman times the territory gained heightened military significance. In the 4th century traffic in the Julian Alps was overseen by defended \*road stations (e.g. Ad Pirum), cross \*walls, and towers. The Claustra system here saw conflict (mostly civil) in the 380s–390s, but was probably abandoned in the early 5th century. Subsequent defensive reconfiguration included the (re)fortification of key \*cities and of new, elevated places such as Cormons, Udine, and Duino.

The \*Lombards probably developed many existing sites following the \*Lombard invasion of \*Italy in 568, and the creation of the Friuli duchy c. AD 570. \*Paul the \*Deacon refers to various *castra* for c. AD 610 as both garrison and refuge sites (*HL* IV, 37). Noble groups may have been allocated control of these and associated

lands. Lombard \*tombs occur at or near *castra* and major roads (e.g. S. Stefano in Maiano) and privileged \*burials in castral chapels (e.g. Ragogna, Osoppo). \*Duces of Friuli occasionally played prominent roles in the Lombard kingdom, whether in dynastic struggles (e.g. Lupo, \*Aistulf) or in military ventures against Byzantine territories (e.g. \*Ratchis; *HL* VI, 52 and 56); the region also faced threats from external forces, notably \*Slavs and \*Avars (*HL* IV, 37 on 610). The Duces Taso and Caco undertook counter-campaigns in the 620s/30s (*HL* IV, 38) and the Dux Wechtari (r. 666–78) allegedly slew thousands of Slavs who had mistaken him and his 25 companions for the Patriarch and his clergy (*HL* V, 23).

**frontality** Representation of a person *en face*. Frontality isolates a figure from the surrounding scenery and addresses the beholder; it creates a timeless, solemn appearance. Frontality established itself in Roman imperial art under the Severan \*emperors (as on the Arch of the Argentarii, \*Rome). Under the \*Tetrarchy and later, it became a regular means of representing the \*emperor in ceremonial scenes in relief, but not in sculpture in the round (Arch of \*Constantine, Rome; \*Missorium of Theodosius; Theodosian \*Obelisk base, \*Constantinople). Frontality was also used for solemn representations of high-ranking office-holders (as on consular \*diptychs). In the mid-4th century this motif from imperial imagery influenced the representation of Christ (*Maiestas Domini*; Christ teaching; Ascension) and occasionally also of \*saints (as in the \*mosaics at the Rotunda of S. George, \*Thessalonica, 5th cent.). On early \*icons (6th/7th cent.) frontally placed representations address the beholder and emphasize the sacred attributes of Christ, the Virgin \*Mary, or saint. UG  
L. Budde, *Die Entstehung des antiken Repräsentationsbildes* (1954).

**frontier, Arab–Byzantine** Following the \*Arab conquest of \*Palestine and \*Syria by 640, the \*Taurus mountain range became the barrier between the Christian Eastern Roman Empire and the Muslim \*caliphate. The Romans withdrew from \*Cilicia and transformed their

side of the range into a thinly populated defensive zone, monitored by local forces, to check the Arab threat to Central \*Anatolia. A system of small military districts and fortresses took shape along the Byzantine frontier, where incessant raiding and unstable conditions produced a society dominated by warlords, peopled by various religious and ethnic groups, and only nominally under imperial control. On the more fertile Arab side of the \*Taurus Mountains, towns such as \*Tarsus, \*Mopsuestia, and \*Melitene eventually revived under the caliphate and became flourishing commercial centres as well as bases for annual attacks on Byzantine territory. As the Arab dream of capturing \*Constantinople faded in the 8th century, these incursions kept alive the martial spirit of the early Islamic conquests and enhanced the prestige of the caliphs who led or sponsored them. In this uneasy coexistence \*trade contacts and exchanges were minimal, but evidence of intermarriage and reciprocal cultural influences survives in the tales of the borderlands that have come down in both traditions. EM

**frontier, Roman, impact on free Germany** The Roman \*frontiers on the Rhine and Danube had an enormous impact on the peoples of Germany and led to the formation of \*confederations described in written sources for the 3rd and 4th centuries. Some 110,000 soldiers were stationed at the Roman bases on the Rhine and upper Danube around AD 100, and they created a great demand for food and supplies, such as \*leather for military gear and tents and \*iron for \*tools and weapons, much of which was satisfied by \*trade across the frontier. At \*Feddersen Wierde in north-western Germany, between the 1st and 4th centuries the community expanded its capacity for raising \*cattle for export to Roman bases on the Rhine, and status differentiation increased as Roman imports arrived at the site.

Auxiliary troops were recruited from peoples who lived across the frontier. When they returned home after serving with Roman \*armies, they brought their earnings in the form of \*coinage and other goods, as well as their experience of the world beyond their homelands.

The abundance of Roman luxury goods in richly outfitted graves beyond the frontier attests to the cultural and political impact of the frontier on the barbarian \*aristocracies. Graves such as those at Mušov and \*Gommern demonstrate familiarity with and desire to emulate Roman cultural practices, especially those involved with \*dining. PSW

**frontier, Roman military** A panegyrist of \*Constantius I, praising imperial campaigns beyond \*Hadrian's Wall in 306, claimed that the \*emperor in his final campaign was 'called by the gods to come to the uttermost edge of the earth' (*PanLat* VI, (VII) 7, 1–2). The panegyrist sees the emperor traversing the frontiers of the Roman Empire and reaching towards Ocean and the edges of the world itself.

Late Antiquity witnessed radical changes to the boundaries of the Roman state, and the concepts of frontiers and defences also changed over time. The term *limes* was applied to frontiers in Roman times, but the current usage of the term is largely a modern construction. Studies have shown that *limes* had various meanings which did not always imply military structures, but by the 4th century *limes* referred to administrative borders and frontier districts, especially on the desert borders with the \*Persian Empire (\*John Malalas, *Chron.* XII, 40; XVIII, 32).

Territorial losses in \*Germania, \*Raetia, and \*Dacia, meant that by the late 3rd century land frontiers were defined by the rivers Rhine and Danube manned by \**limitanei* and *ripenses*. The eastern frontier, however, which formerly followed the Euphrates actually advanced after the Persian victory of \*Galerius in 298 into parts of \*Armenia and far beyond the Tigris to \*Singara and the \*Transtigritanae regiones. Areas further south had relied during the 260s on the forces of the briefly separate Empire of \*Palmyra. Under the \*Tetrarchy, the Roman authorities implemented a system of patrol roads (the \*Strata Diocletiana) linking new legionary bases along the edges of the desert as far south as the Gulf of Aqaba. There was also change in the spatial organization of garrisons, as an increasing number of military fortifications have been identified located within the frontier signifying a greater concern for 'defence in depth'. How this network was garrisoned remains less clear, as the main document for military dispositions across the Empire, the \**Notitia Dignitatum* of the early 5th century, differentiates *limitanei* along the existing frontiers from the imperial \*field armies (\**comitatenses*) within the Empire.

By the end of the 5th century, archaeological evidence along the lower Danube indicates poorly maintained garrisons, although writers such as \*Procopius (*Aed.* IV, I, 33) continue to visualize a river frontier. In the East stable relations with the \*Persian Empire allowed the frontier garrisons and fortifications to be neglected and it was only with the renewal of recurrent \*Persian–Roman wars from 502 that new fortifications and garrisons were required. Throughout the 6th century the eastern frontier depended on a series of fortress cities such as \*Amida and \*Dara supplemented by a network of fortified settlements. On the desert fringe the Empire relied on \*Bedouin allies (the \*Ghassanids) with few major defences apart from the oasis strongpoints of \*Palmyra and \*Sergiopolis-Rusafa; in the 6th century the *strata* survived merely to designate disputed areas of desert grazing (Procopius, *Persian*, II, 1). In \*Africa Justinian I's new territories required newly constructed forts and fortresses representing an army of occupation rather than a line of frontier defence. JCr

- The series of conferences, held biennially since 1995 mostly in the United States of America, on *Shifting Frontiers in Late Antiquity* is concerned only partially with military and geographical frontiers. The series of International Congresses on Roman Frontier Studies, held triennially since 1949, have a more military focus. The proceedings of both are published.

**frontier, Roman military, African** Roman military deployment in \*Latin-speaking \*Africa during the High Empire had expanded southwards to encompass the productive Tell. From the late 3rd century it contracted, as the \*army withdrew from advanced positions in the pre-desert.

In \*Tripolitania, the frontier east of \*Leptis Magna was reduced to the coastal road; legionary forts like Bu Ngem (Bu Njem) and Gheria were abandoned, replaced eventually by a large number of \*fortified farms (*centenaria*), some of them manned by local troops. \*Inscriptions from \*Sabratha and \*Lepcis Magna record a series of raids by the Austuriani c.355–60; another raid in 363 reached the \*cities of the coast. Further west, in \*Numidia and \*Mauretania Caesariensis, some desert posts were abandoned, but other forts were rebuilt (e.g. Ad Maiores, under \*Diocletian, *CIL* VIII, 2480) and

new bases were constructed, as at Aqua Viva near Tobna (*AE* 1942/43, 81) under \*Constantine I, and at Cellae on the route leading north from Hodna to \*Sitifis under \*Valentinian I (*CIL* VIII, 10937).

The real threat to security came, not from the desert, but from the mountain ranges of the interior, the Grand Kabylie, the Babors, the Bibans, and the Ouarsenis. Military action against the \*Moors is recorded at Tobna in 420 (\*Augustine, *ep.* 220, 3 and 12), and again, more broadly, under the \*Vandals (*CIL* VIII, 9286). In the mid-6th century, after the \*Byzantine invasion and occupation of Africa, the \*Magister Militum \*Solomon and \*John Troglita campaigned against the \*Laguatan (Leuethae).

Further West still, in \*Mauretania Tingitana, much of the southern part of the province around Volubilis appears to have been evacuated in the period after 280, the army having pulled back to a line of camps along the coastal road from Lixus to \*Tingi and the Rif Mountains.

**frontier, Roman military, Danube** The Danube flows roughly from west to east, from its confluence with the Inn at Passau to its delta on the Black Sea. In the 4th century it formed the northern boundary of the Empire in the \*Balkans, from Castra Regina (mod. Regensburg) in the \*province of \*Raetia Secunda through the \*Dioeceses \*Pannoniae, \*Moesiae, and \*Thraciae to the delta in the province of \*Scythia Minor, the modern Dobruja, through which the river flows into the Black Sea. The \**Notitia Dignitatum* lists over 400 military units along the Danube frontier in what were by then the Dioeceses of \*Illyricum, \*Daciae, and Thraciae. The terrain varies greatly along the course of the river, from flat farmland west of Vindobona and \*Carnuntum to the impassable Iron Gates and on to the low wetlands of the delta.

#### *The Danube frontier in the 1st and 2nd centuries*

Rome came to occupy the Danube slowly from the 1st century BC onwards. The security of the \*Amber Road,

running from the Baltic to \*Aquileia, was improved under the \*Emperor Claudius I by the stationing of a legion at Carnuntum. Following pressure from barbarians beyond the frontier during the 1st century, Trajan at the beginning of the 2nd century established a province of \*Dacia north of the middle Danube which reached far into modern Romania.

After Trajan the dispositions along the frontier were consistent until the reign of \*Aurelian (270–5). There were legions based in the four Pannonian and Moesian provinces: those at Vindobona, Carnuntum, and \*Bri-getio in upper \*Pannonia faced the \*Suebi, \*Quadi, and \*Marcomanni, while the three at \*Aquincum (Buda-pest), Singidinum (\*Belgrade), and \*Viminacium faced the \*Sarmatians. In Lower \*Moesia, two legions supported the Roman army in Dacia, north of the Danube. For the most part, the Romans systematically dispersed their forts based on travel time and economy of force but there are noticeable points of concentration. In some stretches of flat terrain such as the region west of Vindobona, the Romans placed forts 10 km (6 miles) apart. A tighter concentration was at the Danube bend, north and south of Aquincum, where there was only 8 km (5 miles) between forts. Two further legions were brought to the Danube during the wars against the Marcomanni under Marcus Aurelius (161–80).

#### *3rd-century defence and withdrawal*

The recession of the Danubian frontier started in the mid-3rd century. \*Decius' attempts to resist invasions on the lower and middle Danube by \*Goths and \*Carpi in 250–1 ended in his death on the battlefield. Early in the sole reign of \*Gallienus (260–8) an invasion of barbarians, described in a fragment of \*Dexippus, reached \*Thessalonica and caused the pass at \*Thermopylae to be fortified. In 267/8 the irruptions of the \*Heruli reached \*Athens. \*Claudius II Gothicus was able to defeat Gothic invaders at \*Niš (Naissus) in 269, but died of disease the following year. His successor \*Aurelian made the difficult decision in 271 to abandon the province of Dacia north of the Danube (\*Eutropius, IX, 15). The legions in Dacia were transferred to Oescus (near mod. Plevna, Bulgaria) and \*Ratiaria, and refugees, who included the mother of the future Emperor \*Galerius (\*Lactantius, *Mort.* 9, 2), were accommodated in two new provinces south of the river, which were given the name of the Dacias.

#### *The Tetrarchy, Constantine and his sons*

After the instability of the mid-3rd century, it fell to \*Diocletian to reorganize and stabilize the frontier. He reinforced the Lower Danube at \*Durostorum, Transmarisca, and Sexaginta Prista in 298–9 and

Halmyris in 301–2, and was passing regularly up and down the frontier between 290 and 296. He also built a significant number of \*bridges, and forts north of the river. Galerius campaigned almost annually against Marcomanni, Carpi, and Sarmatians between 299 and 309. \*Licinius was permanently in the Balkans from the time of his accession at Carnuntum in November 308 and seems to have restored the monument to a victory of Trajan at \*Tropaeum Traiani in the Dobruja.

When \*Constantine I took over all the Balkan territories of Licinius except Thrace in 317 after the \*Cibalensean War, he was constantly in the cities favoured as imperial residences in the north Balkans, including Niš (his birthplace) and \*Serdica, which at one point he described as 'my Rome'. Even after he took control of the East in 324 he passed regularly along the \*Via Militaris and the \*Via Egnatia, the \*roads leading from \*Constantinople to the Adriatic, and campaigned against the \*Sarmatians, settling over 300,000 of their subject peoples in the Balkans and \*Italy (\**Origo Constantini*, 31–2). In 328, he built a very long stone \*bridge across the Danube from Oescus to Sucidava where the river is 1.3 km (1,422 yards) wide.

The frontier and its troops played a part in the civil wars of Constantine's sons; \*Constans I marched along the Danube to repel the invasion of his brother \*Constantine II at \*Aquileia in 340, \*Constantius II marched the same way against the \*usurper \*Magnentius in 350–1, and \*Julian advanced against Constantius by the Via Militaris, until he came to Niš where he heard that his adversary was dead. Forts were repaired and strengthened throughout the 3rd and 4th centuries and river forts were reinforced and supplied by a system of defence in depth, comprising inland forts and civilian sites well within the Balkan territories.

#### *The mid- and late 4th century*

Thanks to such dispositions and the constant vigilance which maintained them, the Danube frontier was stable throughout much of the 4th century. Alternative fort designs were developed in the late 3rd–early 4th centuries as the Romans transitioned from the earlier standard 'playing card' shape to designs more prevalent in the medieval period. \*Valentinian I ordered the construction of watchtowers to improve surveillance of crossing points on the frontier. A new waterfront was constructed for the fleet located at Brecantia on Lake Konstanz and there is evidence that \*Honorius and \*Theodosius II continued to maintain a fleet of patrol boats on the Lower Danube.

During the 4th century, the \*Goths (already active on the frontier in the 3rd cent.) became the principal presence on the Danube. In the 340s \*Ulphilas 'Apostle of the Goths' spent seven years in his native land north

of the frontier spreading Christianity, a linking of \*diplomacy and mission which had a long future in Roman politics. The character of his political dealings with the confederation of the \*Tervingi is not clear, but from this time onwards, Christianity was an element in Roman–Gothic relations. In 376 the Tervingi under \*Fritigern sought permission from the Emperor \*Valens to settle on the Roman side of the frontier (\*Ammianus, XXXI, 4, 1), and \*Sozomen states, perhaps correctly, that Ulphilas led the embassy making the request. The request was made, says Ammianus, because the \*Huns and \*Alani were pressing the Goths from behind (XXXI, 2–3); he also takes a low view of the competence of the Roman commanders who not only failed to make proper provision for the immigrants but by suspending the normal boat patrols on the river permitted the \*Greuthungi to cross over as well. The Goths proceeded to terrorize cities south of the frontier. The Emperor Valens, dismissed an embassy led by a Gothic Christian \*priest and, without waiting for reinforcements led by his colleague the Emperor \*Gratian, confronted a united Gothic force near \*Adrianople on 9 August 378. He was disastrously defeated and killed, and his body was never found (Ammianus, XXXI, 12–13). His successor \*Theodosius I settled the Goths in Thrace, but under \*Alaric they eventually broke free and moved beyond the Danube sphere.

#### *The 5th century*

The history of the Danube frontier area in the 5th century is dominated by the threat presented by the Huns. In 422, according to \*Marcellinus Comes, they devastated Thrace; five years later, and no less cryptically, he records that the provinces of Pannonia were retaken by the Romans, having been held by the Huns for 50 years—a statement which cannot be literally true. At some point in the first half of the 5th century the residence of the \*Praefectus Praetorio was withdrawn from \*Sirmium to the greater security of \*Thessalonica (*NovJust* 11).

With the accession of \*Attila to leadership of the Huns in 435/40 the threat to the lands formerly enclosed by the Balkan frontier worsened. \*Priscus of Panium, who accompanied an embassy to Attila in 449, described the devastation surrounding formerly prosperous cities. Viminacium and Serdica had been sacked and the Huns had besieged and captured Niš which was now the border point between Hun and Roman territory, but the city was empty and the banks of the River Margus were strewn with the unburied bones of those killed in the fighting (fr. 6, 1–2 and 11, 1–2 Blockley). The defeat of Attila at the \*Catalaunian Plains in 451, followed by his death two years later, removed the immediate threat, but the construction in c.505 of the

Anastasian \*Wall as an outer defence for Constantinople itself by that cautious monarch \*Anastasius I indicates an awareness that even the imperial city was vulnerable to barbarian threats.

### The 6th century

\*Justin I (518–27) and his nephew and successor \*Justinian I (518–65) were natives of the Balkans and Justinian undertook elaborate refortification of the area. In 535 he embellished his birthplace and renamed it Justiniana Prima (\*Caričin Grad) and then created a new administrative entity called the \*Quaestura Exercitus which was intended to provide for the security of the lower Danube, and provision the troops guarding it (*NovJust* 11 and 41). The arrangement certainly lasted into the 570s. In addition he constructed numerous fortifications, though the description of these dispositions in \*Procopius' *Buildings* (*Aed.* IV) is by no means as exhaustive as the account of the Persian frontier, and indeed frequently degenerates into mere lists of names. In 540 he restored the Anastasian Wall.

Despite all this activity, the military situation was marked by insecurity. The late 6th and early 7th centuries saw the incursions of \*Slavs and Avars as well as the final disintegration of the Danubian frontier. The Slavs, specifically the Sclavini and the \*Antes, were settled on the northern bank of the Danube by 518 and began to raid Roman territory in conjunction with various \*Bulgar groups. In 549, the Sclavini began to capture fortresses south of the Danube for the first time. The Avars first appear during the reign of Justinian in 558 and the \*Gepids were only removed, in 567, by the east Romans forming an alliance with \*Lombards and Avars. The Lombards then invaded Italy and the Avars quickly occupied the area north of the Black Sea and Danube so that by 570 they controlled Pannonia and had established a federation under \*Bayan. The Slavs and Avars together conquered most of the inland cities in the Balkans during the reign of the Emperor \*Maurice, and in 626 laid siege to Constantinople itself. Thereafter the Romans never occupied the Danube again. DSW; OPN

**frontier, Roman military, eastern** The history of the Later Roman Empire's eastern frontier, from the time of the rise of the \*Sasanian dynasty in the \*Persian Empire in the early 3rd century up to the \*Arab invasions of the mid-7th century, went through several successive phases, as it responded to the variations in Roman diplomatic and military relations with the Persian Empire on the other side of the frontier, and to Roman relations with the peoples who inhabited the frontier area. Each phase required the Empire to adopt distinctive diplomatic and military policies and dispositions and organize its frontiers accordingly.

These were tempered by the contrasting topographical conditions in the frontier regions. In the north, the Black Sea coast and Caucasus area were an area of active contention principally in the mid-6th century. The mountains and fertile valleys of what is now eastern Turkey (the Late Roman \*province of \*Armenia Major and the area of the Satrapies, later \*Armenia Quarta, to the south of it) was frequently the scene of local tensions; Armenia also provided an east–west route along which emperors could take the fight into the heart of Persian territory as \*Galerius did in 298 and \*Heraclius in the campaign which culminated in the death of Shahanshah \*Khosrow II in 628. But it was south of the \*Taurus Mountains, in northern Mesopotamia (the Late Roman provinces of \*Mesopotamia and \*Osroene), that the most serious confrontations between the superpowers occurred, especially along the east–west road running through \*Nisibis and \*Edessa or \*Harran westwards to the Euphrates crossing at \*Zeugma, or on the route running from the south-east up the Euphrates Valley, a route which could also form a line of advance for Roman armies counter-attacking into Persian \*Mesopotamia, as \*Carus probably did in 283 and as \*Julian did in 363. Roman defences to the south of this cockpit of empires ran along the \*Strata Diocletiana, stretching from \*Sura on the Euphrates via \*Palmyra to \*Bosra, the capital of the province of \*Arabia, with further fortifications southwards as far as \*Aila on the Gulf of Aqaba; these were supplemented at various times by alliances with the nomad peoples who inhabited the Syrian Desert.

Scholarly understanding of the frontier is hampered by its relative inaccessibility, though the remoteness of some sites has ensured their preservation, and the detailed accounts of intrepid travellers of an earlier generation (e.g. J. G. Taylor, H. F. B. Lynch, C. F. Lehmann-Haupt, and Gertrude Bell) often

record remains which have since disappeared. The dating of many sites along the frontier remains arbitrary and often contradictory, but it is often from the location of sites and the routes of \*roads that scholarly deductions are made concerning imperial strategy.

### *The 3rd century*

Up to the early 3rd century, Roman–Persian relations had been characterized by occasional conflict, but direct contact was cushioned by client kingdoms lying to the east of Roman territory. These had been brought slowly under Roman direct rule, Armenia Minor and Commagene in the 1st century and the \*province of \*Arabia in the former kingdom of Nabataea in 106. By 200 a large province of Mesopotamia had been created. This included the \*cities of Harran, Nisibis, and \*Singara, and also most of the client kingdom of Osrhoene, ruled from Edessa, the centre of \*Syriac-speaking civilization, by the Abgar dynasty, although the dynasty did not finally end until 241/2 (Millar, *RNE* 124–6, 150–2).

The rise of the \*Sasanian dynasty in the Persian Empire brought a permanent end to this symbiosis. In 240 \*Ardashir I, the first Sasanian Shah, captured Hatra, an independent city-kingdom which had a Roman garrison (*Cologne Mani Codex*, 18, 1–16). \*Shapur I, Ardashir's son and successor, adopted a regularly hostile policy towards the Roman Empire in campaigns which he celebrated at length in the *\*Res Gestae Divi Saporis*, an \*inscription in three languages carved at the ceremonial site of \*Naqsh-e Rostam in \*Fars. Shapur enumerates three campaigns which eventually took him far into Roman territory in \*Anatolia. The first resulted in the death of the \*Emperor Gordian III (238–44), the burial of that emperor at \*Zaitha on the Euphrates, and a humiliating peace treaty for the Emperor Philip the Arab (244–9). In the second, in c.253, occasioned by tensions in the kingdom of Armenia, Shapur advanced up the Euphrates to Barbalissus, from where one army struck west capturing \*Aleppo and \*Apamea while another marched upriver to Zeugma before heading west to sack \*Antioch. A concurrent invasion crossed the frontier further north, captured \*Satala, and ravaged \*Cappadocia. In 256/7 the Persians captured the Roman Euphrates fortress of \*Dura Europus. Then, in his third campaign, Shapur captured the Emperor \*Valerian in a battle beyond Harran and sacked Roman cities along the south coast of \*Cilicia and in the interior of \*Anatolia as far north as \*Sebasteia. The catastrophe of the capture of a Roman emperor set the pattern of superpower relations for an entire generation. Valerian's son \*Gallienus did nothing to rescue his father (*\*Lactantius, Mort.* 5); for over a decade the defence of the East was in the hands of an independent regime run from the desert city of Palmyra until it was suppressed by the Emperor \*Aurelian in

272. The Emperor Carus sacked the Persian royal residence at \*Ctesiphon in 283, but his army retreated to Roman territory after his sudden death.

### *Diocletian, the Tetrarchy and Constantine I*

The early years of Diocletian (284–305), Carus' successor, saw peaceful diplomatic relations between the empires. \*Circesium, at the confluence of the Euphrates and the Khabur, was fortified in c.287 (*\*Ammianus, XXIII, 5, 2*).

In 290 Diocletian campaigned against the \*Arabs of the Syrian desert (*PanLat XI [III], 5, 4–7*) and resettled captives in \*Thrace (*PanLat IV [VIII], 21, 1*). Palmyra was refortified and incorporated into the system of defences and roads along what is known as the Strata Diocletiana, a line of defence which has been interpreted as an attempt to create a 'frontier-in-depth' based on a network of sites situated along the approximate line of the 200 mm isohyet (the point where sedentary agriculture becomes unviable through lack of rainfall).

The accession of \*Narseh in 293 saw fresh Persian aggression. In 297 the Shah defeated \*Galerius between \*Callinicum and Harran (P. Argent 480, \*Jerome, 227c Helm). The following year Narseh attacked by way of Armenia and was crushingly defeated (according to Armenian sources, in the Pasinler plain east of mod. Erzerum), losing \*horses, \*elephants, and the women of his \*court. The harsh peace terms imposed by Diocletian in 298 again set the diplomatic tone for a generation; in particular the Persians were obliged to cede five strategic areas north and east of the Tigris, the \*Transtigritanae Regiones, Nisibis was to be the place where business was transacted, and, apart from a minor Armenian war under \*Maximinus Daza, all was quiet on the eastern front until the final year of the reign of \*Constantine I (306–37).

### *Constantius II, Shapur II, and Julian*

Throughout the reign of \*Constantius II (337–61), \*Shapur II (309–79) adopted an aggressive attitude towards the Roman Empire. International relations had become more complicated due to the adoption of Christianity by the rulers of both Armenia and the Roman Empire; Christian subjects of the Persian Shah might well feel that God was on the side of the Christian emperor—indeed \*Aphrahat, the Persian sage, said as much, in \*apocalyptic tones (*Demonstration, 5*). North of the Taurus, conflict was enmeshed in the complexities of Armenian dynastic politics, and there is evidence of refortification, for instance at \*Paḡnik Öreni. The Mesopotamian sector of the frontier bore the brunt of the Persian attacks and the strategy of Constantius II was resolutely defensive. \*Constantia-Tella (mod. Viranşehir), west of the Khabur between Nisibis and

Edessa, was fortified (\*Ammianus, XVIII, 9, 1 calling it Antoninopolis). Amida on the Tigris was built up as a base, and \*Cephas (mod. Hasankeyf) and \*Bezabde (mod. Eski Hendek), both downstream to the east of Amida, were fortified. About 100 km (c.62 miles) south of Cephas across the \*Tur 'Abdin plateau, the stronghold of Rhabdion (mod. Hatem Tai Kalesi) on the edge of the escarpment overlooking the Mesopotamian plain was fortified. Shapur besieged Nisibis three times, but did not take it, and at least three battles were fought at Singara, which the Persians captured in 360.

Ammianus Marcellinus' account of his own involvement as a staff officer in the Persian invasion of 359 reveals much about the working of the frontier. Particularly noteworthy is his record that in official quarters the Persian objective was assumed to be Edessa. This expectation turned out to be incorrect when Shapur swung northwards and besieged Amida instead, using detailed information about Roman dispositions gained from the traitor Antoninus, owner of a farm at Iaspis (mod. Büyükdere, formerly Hespist) on the Tur 'Abdin.

On the death of Constantius II in 361, Julian reversed many of his predecessor's policies. His invasion of Persian Mesopotamia took the Euphrates route, with his commissariat floating down the river alongside the army; after his death the Romans retreated up the Tigris and \*Jovian made a peace for 30 years of which Ammianus (who was there) was ashamed (XXV, 7, 13). Jovian gave up the *Transtigritanae Regiones*, and promised not to help the Roman ally \*Arshak the Great of Armenia against the Persians, a promise which led eventually to the murder of Arshak and the annexation by the Persians of Armenian territory. Most significant of all, Nisibis and Singara were given to the Persians stripped of their inhabitants. \*Joshua the Stylite (7) believed that Nisibis was ceded for only 120 years, but the loss had immediate repercussions for the defence of the frontier. The headquarters of the \*Dux Mesopotamiae and of Legio Prima Parthica were withdrawn westwards from Nisibis to Constantia-Tella and those of Legio Secunda Parthica, formerly at Singara, to Cephas (\**Notitia Dignitatum* or. XXXVI), leaving without major fortification the route the Persian army took to Amida in 359. Local Christians who left Nisibis rather than live under Persian rule included the poet \*Ephrem, who settled in Edessa. When, twenty years later, the pilgrim \*Egeria wanted to visit Ur of the Chaldees she was told it was not possible for Romans to go into Persian Mesopotamia (20, 12).

#### After Julian

The conditions created by Jovian's peace held for the most part until the beginning of the 6th century. Amida was enlarged and in 380/1 \*Theodosius I fortified the

small *colonia* of \*Resaina (mod. Ras al 'Ain), south of Constantia, and renamed it Theodosiopolis. In the early 5th century \*Marutha of Martyropolis was permitted by Shah \*Yazdegerd I to collect the \*relics of Christians martyred by earlier Sasanian monarchs and install them at \*Martyropolis (mod. Silvan), in Roman territory c.88 km (c.55 miles) north of the Tigris crossing at Cephas and adjacent to the Persian region of \*Arzanene. A short war in 421–2, fought in Arzanene and outside Nisibis, did no permanent damage to relations.

Changes along the Armenian frontier had few repercussions on other aspects of international affairs. At the partition of \*Armenia between the Emperor \*Theodosius I and Shah \*Shapur III in 387, a line was drawn east of modern Erzerum (Armenian Karen), which was subsequently fortified and renamed Theodosiopolis after \*Theodosius II. From 428 onwards the Persian portion of Armenia was ruled by a \*marzban, though the Armenian nobility (\**naxarars*) strongly resisted attempts to impose \*Zoroastrianism on them.

#### Qobad I, Khosrow I, and Justinian I

The international peace of the 5th century came to an end in 502 when \*Qobad I invaded the Roman Empire. His pretext was that the Emperor \*Anastasius I had not paid money the Persians claimed as a subvention for their garrisons in the Caucasus passes which protected both empires against irruptions of tribes from \*Central Asia, such as had occurred in 395 (\*Procopius, *Persian*, I, 7, 1, cf. I, 10; \*John Lydus, *Mag.* III, 52–3). An author based in Edessa and conventionally known as \*Joshua the Stylite gives a detailed account of the ensuing war which lasted until 506. Qobad advanced through Armenia, captured Theodosiopolis (Erzerum) without difficulty, and moved south by way of Martyropolis to Amida which he besieged and captured, whilst his Hun and \*Arab allies ravaged the countryside. The Romans eventually took Amida back from the Persians in exchange for 1,000 lb of \*gold (\*Zacharias Rhetor, *HE* VII, 3–4; Procopius, *Persian*, I, 7–9).

The immediate consequence of this invasion was that \*Anastasius I refortified Theodosiopolis (Erzerum) (*Persian*, I, 10, 18–19; *Aed.* III, 5, 4–9) and founded \*Dara, a massive fortress-city set as a defence 'in front of the entire Roman Empire' (Procopius, *Aed.* II, 1, 13). The site of Dara is strategically sited, at the foot of the escarpment, about 26 km (c.16 miles) west of Nisibis and only 10.4 km (6.5 miles) inside the Roman frontier. A river runs through it. The fullest account of its building, by Zacharias Rhetor (*HE* VII, 6) makes it clear that Thomas, Bishop of Amida, as an agent for the emperor, was given substantial funds to ensure rapid building, despite Persian attempts at obstruction (Joshua the Stylite, 90). Dara was intended to block any future invasion originating from Nisibis; it was

reinforced by a chain of subsidiary fortresses along the frontier, including the Monastery of Mar Gabriel on Tur 'Abdin (Procopius' Banasymeon: *Aed.* II, 4, 14) where Anastasius paid for an \*apse \*mosaic as well as fortifications. Furthermore, between 514 and 518, \*Sergiopolis-Rusafa, already a place of \*pilgrimage and of gathering for Arab tribes, particularly the \*Ghassanids, ruled by the \*Jafnid dynasty, was given the standing of a metropolis, a sign of the increasing involvement of Arab partisans in the Roman frontier system, balancing the \*Nasrids (Lakhimids), the Arab allies of the Persians. In the first quarter of the 6th century tensions between the empires began to be felt also in the Caucasus, with the defection of \*Iberia to Roman suzerainty in 524, and in southern \*Arabia, in the proxy war between the \*Himyarites and the Christians of \*Najran in 523/4.

Procopius, who had served at Dara with \*Belisarius, gives a detailed description of the city, ascribing most of the credit for Dara's formidable strength to \*Justinian I, though Croke and Crowe have shown that much of his description does not accord with what can still be seen at the site. The city was first tested in 530. Roman construction of a small fortress at Mindouos 'against the very boundary of Persia' was interrupted by Persian attacks; these were followed by a full-scale invasion and a battle under the walls of Dara which the Romans won (Procopius, *Persian*, I, 13–14). A parallel Persian invasion of Roman Armenia was defeated at \*Satala. The following year the Persians invaded up the Euphrates route, bypassing Dara, and won a battle at \*Callinicum. They also attacked north of the Tigris against Martyropolis. However the death of King Qobad suggested withdrawal and the new Shah, \*Khosrow I Anushirvan, agreed in 532 on an \*Everlasting Peace, one of whose conditions was the withdrawal of the headquarters of the \*Dux Mesopotamiae from Dara to Constantia-Tella.

Khosrow broke the Eternal Peace in 540. Significantly it was preceded by conflict between the Arab allies of the two empires. Again the Persians took the Euphrates route, so bypassing both Dara and, by staying on the right bank, Circesium, and proceeded to sack Antioch. The Roman counter-attack in 541 barely got beyond Nisibis. In 542 the Persians again advanced up the Euphrates and captured Callinicum. Fighting continued in Mesopotamia till a five-year truce was declared in 545 though fighting between the Ghassanids and the Lakhimids (e.g. in 554) did not stop.

In 540 Khosrow also opened a second front in the Black Sea region, by invading the kingdom of \*Lazica, ruled by King \*Gubaz (Gobazes) II, a Roman ally who shifted his loyalty to the Persian side. Fighting centred around the Roman fortress of \*Petra until it was demolished in 551. Persian policy in the region was hampered by Laz adherence to Christianity. The war in these

regions, as described by Procopius and \*Agathias, persisted for twenty years, until the laboriously negotiated \*Fifty Years Peace of 561. This treaty, whose terms are recorded by \*Menander Protector (fr. 11), directed the Persians to protect the Caspian Gates, bound the Arab allies of the two empires to keep the peace, and explicitly permitted the existence of Dara. It was at about this time that Mar \*Ahudemme, the \*Miaphysite Bishop of \*Beth-Arabaye, was permitted to build a shrine to S. Sergius, to whom Arab Christians had a considerable devotion, at \*Qasr Serij in Persian territory, so providing an alternative place of \*pilgrimage to Sergiopolis-Rusafa. The Arab allies of both empires had been increasingly involved in their conflicts.

#### After Justinian

In 571 Vardan Mamikonean led a revolt against the Persians, fleeing to the court of the Roman Emperor \*Justin II (565–78) for protection when the rebellion failed. In 573, Justin II unilaterally broke the Fifty Years Peace, 'and hence came the evil procession of Roman misfortunes' (\*Theophylact Simocatta, III, 8, 5). The Romans attacked Nisibis. The Persian counter-attack reached Antioch and sacked \*Apamea; then the Persian King came to Dara 'like a hurricane' and after a siege of six months captured it with great slaughter (\*John of Ephesus, *HE* VI, 5). Justin II lost his mind and \*Tiberius was appointed Caesar. War then continued intermittently on both the Armenian and Mesopotamian fronts until 591, particularly after 578 under the command of \*Maurice and then, after Maurice became emperor in 582, under his brother-in-law \*Philippicus. Denied Dara, Maurice and Philippicus made inventive use of the frontier topography, invading down the Euphrates (581), swooping on the Persian territory east of Nisibis in \*Beth Arabaye from the heights of the Tur 'Abdin, now a Roman salient (584), and making attacks on Persian territory from Arzanene eastwards (582, 585, 586) from bases north of the Tigris such as Martyropolis, a stronghold and residence of a Dux since Justinian I (Procopius, *Aed.* III, 2).

In 589 the Persians actually captured Martyropolis. Events however took a significant turn when in 590–1 Roman forces were able to aid the new Shah \*Khosrow II Aparwez to take possession of his throne (as prophesied by S. \*Golinduch). In gratitude, Khosrow returned to the Romans not only Martyropolis (as recorded in a lost Greek inscription seen on its walls by C. F. Lehmann-Haupt) and significant territory in Armenia, but also Dara. Maurice reorganized Roman Armenia, and Khosrow sent gifts to the shrine at Sergiopolis-Rusafa.

It was the overthrow of Maurice by \*Phocas in 602 which broke the peace. Maurice had adopted Khosrow as his son, so Khosrow set out to avenge his adoptive father in what has been called the Last Great War of Antiquity lasting from 603 to 630. Dara was taken after

a prolonged siege and Edessa was captured for the first time in the long history of Roman–Sasanian warfare. What followed was a systematic war of movement in which entrenched frontiers were irrelevant. Persian armies captured \*Jerusalem (614), took control of \*Egypt (618–19), and besieged \*Constantinople. When the Roman Empire finally struck back, it was with help from Central Asia and by way of Lazica, \*Tbilisi of \*Iberia (627–8), and \*Dvin, striking at Ganzak (Shiz, mod. \*Takht-e Soleyman) east of the Zagros Mountains and fighting in Armenia and north-west Persia before striking southwards to Ctesiphon.

Muslim forces were first seen in Roman territory in 630 at \*Aila, at the head of the Gulf of Aqaba. In the next generation, as the \*Arab invasions swept across the Levant, their attack took the former Roman frontier in the flank, beginning in that sector which had been the least contested in the long superpower struggle. Roman forces checked the Muslims at the Battle of Mu'ta (629) south of the Wadi al-Mujib, but when Heraclius decided to stop paying subsidies to some allied tribes in southern Palestine, the tribes helped the Muslims to enter \*Gaza. Finding a region effectively devoid of Roman forces, progress was relatively unhindered. Roman armies suffered defeats at Pella (634), at the capture of \*Damascus (635), and at a decisive Arab victory at the \*Yarmuk in 636, when the region passed from Byzantine to Arab control. The \*frontier in the \*Arab–Byzantine wars of the next two centuries was to be considerably further north and west; to Syria, a long farewell. OPN; PWMF

**frontier, Roman military, Rhine** The Rhine frontier (*limes*) extended from Lake Constance to the North Sea, across three \*provinces, \*Germania Secunda, \*Germania Prima, and \*Maxima Sequanorum, the last of which was formed into a separate province from territory of the former Germania Prima under the \*Tetrarchy. While the lower Rhine remained unchanged as the frontier throughout the Roman Empire, that was not the case on the middle and upper Rhine, the strategic importance of which increased after the abandonment of the advanced frontier in the forests of south-west Germany in the 260s. This was followed by a shift back towards the river as a natural boundary, even if the Rhine itself never formed an economic or cultural barrier. Late Roman sources such as \*Ammianus Marcellinus and the anonymous author of \**De Rebus Bellicis* show a more definite perception of the frontier than those of the Principate; they were more conscious of geographical space, and consider that the frontier, apart from its fiscal and military role, defined a distinct political limit. The discussions between \*Valentinian I and an \*Alaman king which took place on a raft in the middle of the river make its liminal status very clear.

#### Conflict and response

The tempo of conflicts between Romans and barbarians along the *limes* increased during the 4th and 5th centuries. For the barbarians, conflict consisted of pillaging raids, attempts at conquest, and defensive warfare. Most of the battles fought against the \*Alamans during

the 4th century occurred in the Rhine Valley, for example at Brumath, \*Strasbourg, or Argentaria. The Alaman breakthrough of 352–3, took advantage of the movements of Roman troops under \*Magentius: it began as a raid, then shifted into an attempt to occupy Roman territory. Though more peaceful, the Frankish infiltration of the early 5th century also aimed at permanent settlement. However, the barbarians were obliged to defend themselves against Roman punitive expeditions launched against their home territories, such as those of \*Julian and of Valentinian I; these attacks were meant to demonstrate Roman military superiority rather than to take and hold territory.

The pressure put on Roman territory by the \*Franks and the Alamans resulted in a series of measures which defined these frontier regions more sharply than before. There were efforts to create along the river a security corridor from which native peoples were to be excluded. But for the most part the opposite policy was adopted, one of encouraging settlement within defined frontier regions of the Empire of authorized barbarian groups (\**laeti*, \**limitanei*, and other \**foederati*) with a recognized treaty status and obligations to serve Roman power. The movement of peoples on one side or other of the Rhine increased notably during the Late Empire. It became increasingly common to reinforce military garrisons by recruiting indigenous warriors from either side of the frontier, organized into ethnic units. The military policies adopted are all the more visible because during the later 3rd and throughout the 4th century the \*emperor was often present in person in the frontier regions in order to respond quickly to emergencies arising from new barbarian threats coming from without.

#### Frontier defence, north to south

From the end of the 3rd century onwards, the \*army underwent an unprecedented series of reforms intended to reinforce mobile units. The effectiveness of the garrison troops along the Rhine (*limitanei*) was maintained, and they were now supported by \**comitatenses*, significant reserve forces for rapid intervention which were based back in \*Gaul until, during the later 4th century, territorial armies emerged, each under the command of a \*Dux. Three command headquarters at \*Cologne, \*Mainz, and Besançon, one for each province, divided responsibility for the defence of the Rhine sector. Even if the notion of a 'Grand Strategy of the Roman Empire' seems more hypothetical than real, the reforms of the army and its adaptation to the changing Late Antique context represent a clear rupture with the policies and practices of the Principate. A defensive strategy reliant on reserve forces and fortifications based far from the frontier, though questioned by some scholars, did in fact exist. It is reflected, for

example, in the networks of small *castra* along the main axes of communication linking frontier to interior, as found from \*Cologne to \*Amiens and \*Trier, or from Trier to \*Reims, and also in the construction of ramparts around \*cities throughout the Gallic provinces during this period. Unlike the frontier fortifications, however, the roadside *castra*, which mostly derive from the period of the \*Gallic Empire in the mid-3rd century, were manned only intermittently later in Late Antiquity.

All along the Rhine can be observed contrasting systems of military organization, with construction programmes varying from one region to another and from one period to another. The far north-west was affected by rising sea levels which altered the physical geography of the coast and river deltas, rendering the region inhospitable to settlement and not worth defending in any systematic manner. Here in Germania Secunda the Rhine defences also linked with those of the \*Saxon Shore (*litus Saxonicum*). Two upriver sites, Qualburg and Xanten, have provided important information. Qualburg (possibly the Quadriburgium refortified by \*Julian in 359: Ammianus, XVIII, 2, 3–6) was the base of the Numerus Ursariensium, attested by \*brick-stamps, a detachment for which evidence is also found elsewhere on the northern *limes*. The Legio XXX Ulpia Victrix (Tricesimae) was still present at Xanten, albeit reduced in numbers, during the first half of the 4th century. The other legion of Germania Secunda, Legio I Minervia, was stationed at Bonn (Bonna). Recent excavations have provided much new data on other fortified sites including \*Krefeld-Gellep, Neuss, Haus Bürgel, and Remagen, as well as for the Constantinian *castellum* of Deutz, opposite Cologne. It is unfortunate that the page of the \**Notitia Dignitatum* listing the units of this \*province has been lost.

Mainz (Moguntiacum) and Strasbourg (Argentorate) were the military centres of Germania Prima, and the bases at the beginning of Late Antiquity of Legio XXII Primigenia and Legio VIII Augusta, but some of the other major fortresses are better known, including Altrip and, a little back from the Rhine, Alzei. Altrip has a pentagonal plan and was occupied under Valentinian I, whereas Alzei continued in use through the first half of the 5th century. The *Notitia Dignitatum* distinguishes, for this period, between two sectors of the province. The first, under the command of the Dux Moguntiacensis (*occ.* XLI), followed the frontier from Andernach to the north-eastern limit of Germania Secunda, as far as Seltz. Eleven fortresses were occupied by *milites*, except at Worms, where a legion was still stationed. The second sector, the Tractus Argentoratensis, was under the authority of the Comes Argentoratensis (*occ.* XXVII) Both reported directly to the \*Magister Peditum.

Maxima Sequanorum (sometimes Sequania or Sequanicum), south of Germania Prima and with an eastern

frontier extending as far as Lake Constance, was defended principally by a network of forts, such as Oedenburg, \*Kaiseraugst, Zurzach, and Stein-am-Rhein. The earliest references to this defensive system date from the Tetrarchy (*CIL* XIII 5249 of AD 294 and 5256 of AD 285/305). Although the command centre of Sequanicum was Castrum Rauracense (Kaiseraugst), garrisoned by Legio I Martia, the province was also protected by an impressive series of watchtowers built during two phases of intensive construction, the first under \*Diocletian and \*Constantine I, the second under Julian and Valentinian I. Ammianus Marcellinus (XXVIII, 2) wrote that the latter had fortified the whole frontier from \*Raetia as far as the North Sea with a network of towers (*turres*). Around 400, the Comes Argentoratensis was responsible for defending the southern part of *Maxima Sequanorum*.

### Military architecture

Each provincial sector of the Rhine frontier has its own history within the common framework of successive phases of construction and reorganization during the Gallic Empire, and the reigns of Diocletian, Constantine, and Valentinian I. The older, more spacious camps sometimes continued to be partially occupied in the northern sector, for example at Bonn. But a new military architecture very quickly appeared, notably under Constantine, characterized, as at Deutz, by square layouts defending a perimeter reduced to 2 ha on average (c.5 acres), designed for new military units made up of 1,000 men. This architecture was further developed under Valentinian I, with barracks backed up against the enclosing ramparts and facing onto a central square, as in the case of Alzei. The Krefeld-Gellep fortress was further modified at the beginning of the 5th century. The Rhine frontier was further reinforced by a network of smaller *castra* averaging 10 ha (25 acres) in extent, and by watchtowers. Relatively few of these have been noted in the lower Rhine, but along the upper Rhine 52 of them are well integrated into the overall defensive scheme. We should also note the small bridgehead forts (*burgus*) often built to defend the approaches to \*bridges on the right bank of the Rhine. Excavations at several of these various fortifications have yielded 5th-century material, proving that the frontier continued to be defended after the great barbarian breakthrough of 406/7. According to \*Zosimus, the usurper \*Constantine III (407–11) restored the frontier. Nonetheless, it is difficult to identify and date evidence of reconstruction or reorganization after these dates. It would seem that Roman forces continued to hold the *limes* along the Rhine south of Xanten until about the middle of the 5th century, during the period when the \*Patricius \*Aëtius kept the upper hand over the barbarians. After his fall, the latter

were able to carve out small autonomous territories for themselves.

**frontiers, Persian** Like the Parthian Empire before it, \*Sasanian Iran faced a 'strategic dilemma' (Howard-Johnston) of confronting powerful and often aggressive opponents on all sides of their Empire. This included the Romans to the west, the \*Hephthalites (or White Huns) to the east, and steppe powers to the north such as the \*Alans and \*Turks.

In the West, the frontier with the Romans in \*Mesopotamia was secured from 363 onwards by garrisons commanded by a \*marzban at the formerly Roman \*cities at \*Singara and \*Nisibis and a network of dependent fortresses such as \*Sisauranon, and increasingly in the 5th to 7th centuries through alliances with the \*Persian Empire's \*Arab clients the \*Lakhimids (\*Nasrids). Maintaining the security of the Armenian frontier was perennially bedevilled by internecine competition between the \*naxarars (*nakharars*), the families of the Armenian aristocracy, who were culturally more akin to Iran even though they were Christian from the early 4th century onwards. The defence of the \*Caucasus Passes between the Black Sea and the Caspian, particularly those at \*Debent and Dariel in Caucasian Albania, was of

paramount importance for preventing intruders from the northern steppes forcing their way into the settled lands of Azerbaijan and Armenia. Financial provision for the maintenance of these defences was a frequent focus of dispute between the Sasanians and the Romans. Remains of the elaborate Sasanian fortifications at Derbent are still visible. Further west, the kingdom of \*Lazica was able to prevent incursions from the north along the coastal plain to the east of the Black Sea and diplomatic competition for control of this region turned into war between the Romans and Persians in the mid-6th century, described by \*Procopius (*Gothic*, VIII) and \*Agathias. The defence of the north-eastern regions from \*Khwarezm (Choresmia) on the lower \*Oxus to \*Bactria in the south was achieved with a combination of massive fortification \*walls like those in \*Gorgan, intended to halt incursions of horsemen, and garrisons dispersed in a series of fortresses.

The Sasanians' fear of a war on two fronts or even of a strategic alliance of their enemies is evident in the view of the world portrayed in what can be reconstructed of the late Empire's official history, the \**Xwāday-nāmag*, and it decisively shaped Persian foreign policy and \*diplomacy. \*Khosrow II's audacious attempt to absorb the East Roman Empire and completely remake the world order ended in disaster for the Türks, the Romans, and the Persians alike, and was one of the reasons for the early success of the \*Arab conquest. **Fructuosus of Braga, S.** (c.610–15–c.665) Spanish monastic reformer, known from his monastic rule (CPL 1869), an anonymous *Vita sancti Fructuosi* of c.670–80 (BHL 3194), and the acts of the Tenth \*Council of \*Toledo of 656. He successfully promoted a rigorous ascetic agenda to reform what he considered a tepid church in \*Gallaecia. With the removal of two abbot-bishops of Dume/\*Braga in 656 at the Tenth Council of Toledo, Fructuosus was given that position and continued successfully the pastoral work started by the founder of the Dume \*monastery, \*Martin of Braga. **fruit** Various sorts of fruit provided staple food. In the Mediterranean, the \*olive was the most important fruit. Although grapes were commonly pressed into \*wine, some were eaten fresh and others pickled whole to preserve them. In the Roman world common tree fruits included apples, pears, pomegranates, mulberries, cherries, figs, jujubes, apricots, and plums (\*Palladius, XIV; \*Isidore, *Etymologiae*, XVII, 5–7); prices are given in the Tetrarchic \*Prices Edict (vi). Apples and pears were the most common fruits of the \*Merovingian era (\**Lex Salica*, 7, 11). In Persia, the \**Bundahišn* (tr. Anklesaria, 150–1) attests a comparable mix of fruits in Iran. Dates were grown in the warmer parts of the Roman Empire and were a staple in the desert fringes of North \*Africa, the Levant, and \*Egypt; the date palm provided food, fibre, and fruit that was easy to preserve and could be rendered into an alcoholic beverage. Muskmelons (*Cucumis melo*, cantaloupe and related cultivars) were grown in gardens and cultivated widely, as was watermelon which had been introduced into Egyptian agriculture in the Pharaonic period. The citron (*Citrus medica*), known as early as Theophrastus (IV, 4, 2–3) and \*Pliny (XII, 15–16), was important in Jewish ritual, and seems to have been the only form of citrus cultivated in the Roman world—other citrus fruits apparently arrived in the Islamic era. Fruit trees were typically grown in gardens where they could be irrigated and often propagated through grafting (\**Geoponica*, 10). MD

**Frumentius** First \*Bishop of \*Aksum. Of Syrian extraction, Frumentius came to Aksum as a youth, probably c.320–30. \*Rufinus of \*Aquilaia (HE X, 9–11) recorded that Frumentius entered the service of the Aksumite king and continued to serve his successor \*Ezana (whose mother served as a regent for him during his minority). Frumentius associated with a group of \*Christians at Aksum and, when the young King Ezana assumed full authority, went to \*Alexandria to seek the \*patriarch's appointment of a bishop for the Aksumite Christians. The Patriarch \*Athanasius appointed Frumentius himself. It is likely (although Rufinus does not specifically confirm this) that it was on Frumentius' return that Ezana adopted the new religion. The date at which these events took place has been the subject of much debate, covering the period from 328 (when Athanasius first became patriarch) to 356 when a letter from \*Constantius II to Ezana indicates that Frumentius was then serving as bishop. In Ethiopian tradition and writings, other than those of late date that are probably derived from Rufinus, the name Frumentius

is not known, and Aksum's first bishop is called Abba \*Salama.

Wu Yugui, 'Turks in the Gaochang Provisioning Texts', in Luo Xin and R. Covey, eds., *Chinese Scholars on Inner Asia* (Indiana University Uralic and Altaic Series 174, 2012).

**fugitives** People avoiding capture by state authorities as a result of criminal charges or dereliction of hereditary duties. In addition to criminals (or those accused of crimes) fleeing the law, the continuation of \*slavery into Late Antiquity meant that slaves fleeing their masters formed a distinct fugitive category (*CJust* VI, 1, 2). The flight of slaves, for instance as a result of cruel treatment or because their masters were not providing for them, was common in the Late Roman Empire and was not restricted to agricultural slavery (*CTb* II, 1, 8; \*Salvian, *De Gubernatione*, 4, 14f.). Even where peasants were legally free they could still become fugitives as a result of abandoning land which they were hereditarily required to farm.

**Fulgentius of Ruspe** (462–527 or 467–532) African \*bishop and theologian. Of aristocratic birth, he entered

a \*monastery in early adulthood and was subsequently ordained bishop. Exiled to \*Sardinia c.508 with other Homoousian (pro-Nicene) leaders, he was recalled briefly c.516 to debate against the \*Vandal King \*Thrasamund. He returned permanently only after Thrasamund died in 523. His surviving works consider Christology, grace, and predestination. *De Fide ad Petrum*, a short catechetical treatise later misattributed to \*Augustine, enjoyed wide medieval circulation. A small corpus of \*letters testifies to links with Roman aristocrats and African churchmen like \*Ferrandus. An anonymous *Vita*, composed shortly after his death, and often attributed to Ferrandus, is the main source for his biography. Attempts to identify him with \*Fulgentius the Mythographer are no longer widely accepted. GH

**Fulgentius the Mythographer** (late 5th or 6th cent.)

Fabius Planciades Fulgentius was an allegorist and antiquarian from \*Vandal \*Africa. He has sometimes, but implausibly, been identified with \*Fulgentius, \*Bishop of Ruspe. His *Mitologiae*, in three books, offer rationalizing and moralizing explanations of Greek myths, with an elaborate preface in prose and verse. The *Expositio Virgilianae Continentiae* is a \*dialogue between the author and the shade of \*Vergil, who explicates the *Aeneid* as a moral \*allegory. The *Expositio Sermonum Antiquorum* illustrates archaic and otherwise obscure words with quotations from earlier authors (some possibly fictional). The *De Aetatibus Mundi et Hominis* is a series of short meditations on biblical and pagan history, based on \*Orosius and other sources. Each chapter avoids words containing the corresponding letter of the \*Latin alphabet; the extant work breaks off with Book 14 (O). An allegorical explication of Statius' *Thebaid* ascribed to Fulgentius, Bishop of Ruspe, is almost certainly medieval. GH

**Fulrad of S. Denis** (d. 784) Abbot of \*S. Denis (750–84) and palace chaplain to \*Childeric III, \*Pippin III, and Charlemagne. In 749 Pippin entrusted him with obtaining papal support for a palace coup against the \*Merovingians, and in 756 with overseeing the so-called 'Donation of Pippin'. JTP  
*LexMA* 'Fulrad', 4, 1024–5 (J. Fleckenstein).  
 A. Stoclet, *Autour de Fulrad de Saint-Denis* (1993).

**fundus** The primary meaning of *fundus* in \*Latin is 'bottom', thus it denotes the root of one's possessions. In antiquity this always meant land, the fundamental element of wealth. \*Justinian I's \**Digest* (L, 16, 60) repeated Ulpian's (d. 228) judgement that a *fundus* included land and also the buildings and improvements upon it. See also ESTATE MANAGEMENT. MD  
 D. Kehoe, *Investment, Profit, and Tenancy: The Jurists and the Roman Agrarian Economy* (1997).

**funeral orations, Greek** Laudatory speeches about the deceased composed and delivered at (or near) the point and place of the funeral were produced by and for both Christians and pagans in Late Antiquity. The contents and shape of such an oration were prescribed by rhetorical theorists like \*Menander Rhetor. Pagan funeral orations adhered fairly closely to the classical archetype; \*Themistius' *Oration* 20 \*praises his late father's literary and especially philosophical talents. They could also be vehicles for polemic; \*Libanius' *Oration* 18 on the \*Emperor \*Julian is both an extremely lengthy panegyric biography of the emperor and a fervent argument for preserving traditional religious practices. Christian preachers like \*Gregory of \*Nyssa and \*Gregory of \*Nazianzus adapted the format, style, and message of classical funeral orations, writing works which offered not merely laudatory biographical portraits of the dead, but also biblicizing portraits and comparisons, and theological arguments about salvation and resurrection. **funeral orations, Latin** Speeches of \*praise composed and delivered at (or near) funerals were a long-standing and important social and political phenomenon in the Roman world. Their literary and philosophical contours were also shaped by \*Greek rhetorical theory and exemplars. In Late Antiquity, the format and contents of traditional funeral orations were reshaped to new Christian ends. The main extant Latin funeral orations were composed and delivered by \*Ambrose: two on his brother Satyrus, and one each for the \*emperors \*Valentinian II and \*Theodosius I. Although they show awareness of classical \*Greek and \*Latin models, they are replete with scriptural allusions and imagery. Ambrose laments and praises the dead, but also argues that Christians need not mourn their dead as pagans do, given the repose of the souls of the dead with God and the certainty of bodily resurrection. **furniture, church** The \*sermon by \*Eusebius of \*Caesarea (*HE* X, 4, 2–72) celebrating the dedication of the cathedral in \*Tyre in c.317 contains the earliest surviving description of church furniture. A wooden trellis separated the \*altar, 'the Holy of Holies' (X, 4, 44), from the congregation; it was surrounded by high seats for the clergy and by benches. These are fundamental elements of church furniture. Open-worked wood was also used for the regulation of daylight; Eusebius stresses the importance of \*light for the building. The Tyre cathedral had \*bronze \*doors, \*marble pavements, and marble columns. It possessed an atrium with a fountain, used for washing, refreshment, and decoration.

A fountain is mentioned also in the description of the church erected in the Constantinian period at \*Laodicea Combusta (\*Lycaonia) by M. Julius Eugenius,

described in the \*sarcophagus \*inscription of its founder (*MAMA* I, no. 170). Eugenius stresses that his church is furnished with different types of stonework, with an entrance door and paintings and \*mosaics. The themes of the decoration in Eugenius' church are not indicated.

The inner walls were used for figural decoration since the beginning of monumental church architecture (\*Gregory of Nyssa, PG 46, 572C), but not as a general rule (\*Paulinus of Nola, *Carmen*, 27, 544). In other churches panel paintings are mentioned (\*Asterius of \*Amaseia, *Homily*, XI, 2). Hangings and \*curtains along the walls contributed to the decoration of churches, as did altar cloths. \*Ambos for \*chant and the reading of scripture survive from as early as the late 5th century. Tables were used in the church and in annexes for various purposes, both with decoration, as at the Episcopal Basilica in Novae (on the Danube), or without it. \*Lamps of different types and shapes lightened the church during morning and night services. \*Silver was used for revetments, lighting equipment, and liturgical vessels. Ex-votos, offerings 'in fulfilment of a vow', were made in a variety of materials. Individual areas had particular local forms of church decoration, e.g. the small terracotta tiles with figural representations which decorated ceilings in \*Africa Proconsularis. JDW

**furniture, secular** In general, furniture can easily be moved from one place to another, so that when buildings are abandoned what is left is often only broken pieces of low value. In antiquity, few types of

furniture—beds, seats, tables, and chests—were in use and they did not change much over the centuries. The wardrobe had existed since Roman time. The *cathedra*, a seat with a higher back, was considered a woman's seat and the folding stool was particularly popular in Late Antiquity. There are more images of furnishing than physical survivals; they frequently depict diners in the Roman fashion reclining while they ate on a \**stibadium*, a semicircular couch or cushion. The \*villa of Faragola (south Italy) has a well-conserved *stibadium*.

The new palaces of the elite, with vast rooms and innovative architecture, needed particular furnishing, so that mythological \*sculpture depicting gods and heroes, small and life-size, was again produced in the later 4th century. Sets of *tondi*, circular relief sculptures of Hellenistic origin showing heads of gods and heroes, often provided symbolic decoration for entrance halls in the late 4th and early 5th century. Free-standing decorative sculpture also furnished \**triclinia*, \*baths, and nymphaea. Decorated \*marble table tops with figural representations—pagan, conventional, and Christian—were produced in the late 4th and early 5th century to decorate houses, and were probably also used in the context of dining. From the late 3rd century, in contrast to earlier times, \*mosaics and wall painting developed a suggestive power and invited the spectator to step into the world of imagery. Wall hangings, curtains, and \*silver plates contributed to sumptuous interior decoration. JDW

I. Moreira, *Heaven's Purge: Purgatory in Late Antiquity* (2009).

**Fussala** *Castellum* (semi-independent town) in the *territorium* of \*Hippo Regius, on a site, now unknown, 40 Roman miles (nearly 60 km) from Hippo to which it was attached ecclesiastically. The area had been strongly \*Donatist and \*Augustine was keen to provide a Catholic \*bishop. After a suitable candidate who could speak \*Punic (a useful skill in this rural setting) had dropped out, Augustine put forward the young Antoninus for consecration as Bishop of Fussala. Antoninus, who attended the council of \*Milevis in 416, mistreated his congregation and enriched himself illegally, causing a serious international scandal, which is recorded in Augustine, *ep.* 209 and at considerable length in *ep.* 20\* Divjak. RB

**Fustat** The first \*Arab capital of \*Egypt, founded in 642 on the site of the Roman fortress of \*Babylon. This had long been recognized as an advantageous position where the Delta and \*Nile Valley join, but the founding of Fustat by the \*Arabs as one capital for all of \*Egypt

represents a definite administrative, organizational, and economic break with the Roman period.

Founded as a garrison city (Ar. \**misr*) where the Arab soldiers lived separately from the locals, the town grew quickly, incorporating new Arab immigrants and Egyptians wanting to profit from the new political and economic centre. Although the Coptic patriarchate moved to Cairo only in the mid-11th century, with the building of a palace in Hulwan near Fustat by Patriarch Isaac (r. 689–92), the Church's dependency on Fustat increased.

Archaeological finds and papyrological evidence confirm literary accounts of the founding of churches, the building of \*palaces and shipyards (on Rawda island), the replacement of Trajan's Canal, the constant extension of allotments for tribal units settling in the area, and general building activity. The Great \*Mosque of 'Amr, founded by the Islamic conqueror of Egypt, 'Amr b. al.-As, and named after him, had to be extended multiple times.

Fustat and Egypt were important partners for, and sometimes competitors with, the Caliphs ruling from \*Medina and, after 660, from \*Damascus. Egypt's \*grain was gathered in Fustat before it was shipped by way of Trajan's Canal to the Red Sea harbour of \*Clysma, and from there to \*Arabia, a commercial route also used for other products. \*Amphorae found at Fustat (Istabl Antar) indicate the continued production and consumption of wine in the new political centre. # G

**Gabala (Kabala)** Twenty km (12 miles) south-west of modern Qabala, Azerbaijan; ancient capital of Caucasian \*Albania, located at the foot of the Caucasus. In the mid-5th century, persistent invasions of northern nomadic tribes obliged the Albanians to transfer their capital from Gabala to \*Partav. NA Bais, *Albania caucasica*.

**Gabala** (mod. Jebele, Jebleh, Lebanon) Port in \*Syria Prima, and, after \*Justinian I's boundary reforms, in \*Theodorias, 24 km (15 miles) south of \*Laodicea. The first known \*bishop attended the \*Council of \*Nicaea. Bishop \*Severian died after 408. \*Theodoret describes (*Religious History*, 28; *BHG* 1709) an early 5th-century \*holy man called Thalelaïos taking over a \*temple of \*demons' near Gadara, winning their worshippers over to Christianity, and installing \*relics of \*martyrs. The city was rebuilt after an \*earthquake in 457 (\*John Malalas, XV, 4). The \*Arab conquest reached Gabala in 637/8. PWF; OPN

**Gabra Masqal** Mid-6th-century Aksumite king. Although no \*coinage, \*inscriptions, or literary sources note a king of this name, several traditions recall him as successor to his father \*Kaleb, and instrumental in the foundation of several churches and \*monasteries, including \*Debra Damo. A pair of \*tombs at \*Aksum are traditionally attributed to Kaleb and Gabra Masqal, and there is archaeological support for the 6th-century date thus implied. The absence of written evidence for a King Gabra Masqal may be due to the Ethiopian practice of a king taking a new 'throne-name' on assuming authority; several Ethiopian kings in later times are known to have taken the throne-name Gabra Masqal

(lit. = Servant of the Cross), and it is not always easy to differentiate between them. DWP

Sergew Hable Selassie, *Ancient and Medieval Ethiopian History to 1270* (1972), 89–113.

Belaynesh Mikael et al., eds., *Dictionary of Ethiopian Biography*, vol. 1 (1975).

**Gabriel, Mar** (573/4–648) \*Syriac Orthodox \*bishop and saint originally from Bet Qustān (Turkish Alagöz, Mardin vilayet). He was especially associated with the Monastery of Qart(a)min/Kartmen (Turkish Deyrülür) in the \*Tur 'Abdin, often known by his name. The \*monastery was founded in 397 by the monks Samuel and his disciple Simeon, and received imperial benefactions from \*Arcadius and \*Honorius, from \*Theodosius II and \*Anastasius I. Gabriel's *Life* is known in a few \*Syriac manuscripts, which refer to something like the 'Covenant of Umar' made directly between the Muslim conquerors and Gabriel when he was bishop to establish certain freedoms for Christians in Tur 'Abdin under Islamic rule. \*Miracles, including raising the dead, were attributed to him, and after his death, to his \*relics, including the supposed cessation of a local \*plague in 774. **Gabriel of Singara** (d. 610) Doctor of the \*Sasanian King \*Khosrow II. Gabriel Derustbadh came from the \*frontier town of \*Singara, became a \*Nestorian of the \*Church of the East, but reverted to the \*Miaphysite (Jacobite) \*Syriac Orthodox Church, to the disgust of the author of the \**Chronicle of Khuzestan*. His influence

## Gadara

with Queen \*Shirin enabled him to promote the spread of the Syriac Orthodox into the \*Persian Empire. CJ

J. Labourt, *Le Christianisme dans l'empire perse sous la dynastie Sassanide* (224–632) (1904).

**Gadara** (also Antiocheia or Seleucia; mod. Umm Qais) \*City in the \*province of \*Arabia from AD 106, and subsequently of \*Palaestina Secunda now in north-east Jordan, c.110 km (70 miles) north of \*Amman, overlooking Lake Tiberias and the Golan Heights.

Gadara was occupied from the 7th century BC, was an important Hellenistic cultural centre, and became Roman as one of the Decapolis cities. It was an episcopal see from at least the time of the \*Council of \*Nicaea. The \*philosopher \*Iamblichus impressed his disciples with a \*miracle at the nearby hot springs (\*Eunapius, *Lives of the Philosophers*, 459), and \*Epiphanius mentions pagan healings (and mixed bathing) there (*Panarion*, 30, 7, 5). The springs were also visited by the \*Piacenza Pilgrim, who found them dedicated to Elijah and used for incubation by leprosy patients (7). S. \*Sabas shared a cave near the Water of Gadara (the Yarmuk) with a \*lion during his first exile from his \*monastery in 503 (*VSab* 33, 119).

The extensive remains date mostly from the 1st century. An \*earthquake of c.400 initiated the beginning of the city's end, although archaeological research suggests continuity of occupation up to its capture during the \*Arab conquest in the 7th century. After it was largely destroyed in c.747, the site fell into obscurity and was effectively abandoned by the 11th century.

**Gāhānbār** (MP) Six \*Zoroastrian festivals celebrated throughout the year. In the \*Avesta, they were associated with divine entities: midspring (Best Order), midwinter (\*Tishtar), harvesting time (autumn equinox; Khshathra-vairiya, protector of metals), the time of the return of the flocks (\*Mihr), midsummer (\*Wahram), and the end of the year at the spring equinox Nowruz (MP \*Nōg Rōz) and \*Frawardīgān; dedicated to the fifth Gāthā. In the Pahlavi texts, they were associated with the six creations: sky, water, earth, plants, animals, and man. The term was also applied to the five epagomena at the end of the year, celebrated during Frawardīgān. POS

*EncIran* X/3 s.v. Gāhānbār, 254–6 (Boyce).

**Gainas** Gothic soldier and \*Comes Rei Militaris (395–9), having commanded troops for \*Theodosius I in the war against the \*usurper \*Eugenius in 394. He forced the downfall of the \*Praefectus Praetorio \*Rufinus in 395 and purportedly instigated the rebellion of \*Tribigild in 399, an occasion he used to force \*Arcadius to appoint him \*Magister Utriusque Militiae (399–400) and to dismiss the Praefectus Praetorio \*Eutropius. However, in \*Constantinople Gainas clashed with the \*Patriarch \*John Chrysostom and his troops were massacred by a popular revolt. Although Gainas got away, in early 401 he was captured and executed. DN

*PLRE* 1, Gainas.

Cameron and Long, *Barbarians*, 161–75, 199–232.

**Galatia and Galatia Salutaris** \*Provinces of \*Dioecesis \*Pontica in central western \*Anatolia. The \*Verona List records only one province of Galatia, which was smaller than the former province because it had lost territory to \*Pisidia and \*Paphlagonia. Galatia was divided into Galatia and Galatia Salutaris under \*Arcadius, who liked to spend his summer holidays in \*Ankara (Ancyra), and the two provinces appear in the \**Notitia Dignitatum* (or. II, 42 and 51; XXV, 16 and 19), governed by a \*Consularis and a \*Praeses respectively (or. I, 69 and 111). Ancyra was the principal \*city of Galatia and \*Pessinus was the principal \*city of Galatia Salutaris, an arrangement reflected in the ecclesiastical jurisdiction. In the 7th century both provinces were merged into the larger \*Opsikion \*Theme and soon thereafter became part of the Bukellarian Theme.

The geography is characterized by rolling plains and sporadic mountains. A major \*thoroughfare, the \*Pilgrims' Road, connected \*Constantinople to \*Antioch, to the \*Holy Land, and to the eastern \*frontier. The economy was mainly rural and best known for the cultivation of \*grain. Christianization was well advanced by the 4th century, as appears from disputes concerning the Montanist movement. The foundations of numerous cities and bishoprics, among them a walled city at \*Amorium and a pilgrimage site at \*Germia, indicate affluence in Late Antiquity. Ss. \*Nilus of Ancyra and \*Theodore of \*Sykeon attest to prosperity in rural Galatia, where independent and well-to-do farmers lived in \*villages, built churches, and founded \*monasteries. The few extant monuments include churches at Ancyra, Amorium, and Germia, some of which reflect Constantinopolitan designs and techniques, whilst others were built in a regional style that is also encountered in Lycaonia. PhN

**Galeata** \*Villa complex 48 km (30 miles) south-west of \*Ravenna in the Bidente Valley of the north-east Apennines. Excavations began in 1942 and have continued more recently under the supervision of the University of Bologna (1998–2006). They have revealed an extensive residential complex, built in the late 5th or early 6th century. This incorporates several independent structures linked by arcaded passageways and open spaces. The most prominent structure was a \*bath complex arranged around a large enclosed courtyard paved in sandstone and furnished with a central pool. The courtyard granted access to a series of covered chambers, including possible \*tridinia, and so-called 'summer' and 'winter' bathing complexes. Rooms such as the octagonal *caldarium* show evidence of a \*water supply and hypocaust system. Neighbouring independent structures include kilns and a group of chambers of a residential character. The *Vita of Hilary of Galatea* (BHL 3913) describes how the \*Ostrogothic King \*Theoderic built a rural palace near a \*monastery founded by Hilary (c.496). Based on this text, the excavations have been associated with Theoderic's villa. The excavations have not produced positive evidence of this association, although the complex shares elements in common with other 'Gothic' residences such as \*Monte Barro and Palazzolo, and fortified villas of the Danube provinces. **Galen in Late Antiquity** After Galen's death (c. AD 216), we have clear evidence of his influence not just in the great medical texts of the period (\*Oribasius, \*Aëtius of \*Amida, \*Alexander of \*Tralles, \*Paul of Aegina), but also in Christian literature, \*Greek and \*Latin, from the early 4th century onwards. The simplified, abbreviated, systematized form of his doctrines taught by 'iatrosophists' in Late Antique \*Alexandria in the 4th to 6th/7th centuries is called 'Galenism' (Temkin). Alternative forms of medical practice remained available alongside Galenism, ranging from late Methodism, as illustrated by Caelius Aurelianus (5th cent.), to various healing cults, magical practices, and demonology. **Galerius** (c.250–311) \*Caesar 293–305, \*Augustus 305–11. G. Galerius Valerius Maximianus, often called Maximianus in the ancient sources and also named Armentarius (herdsman) by Aurelius \*Victor (39, 24) and the \**Epitome de Caesaribus*, was born c.250 at \*Romulianum (mod. \*Gamzigrad, Serbia) in \*Dacia Ripensis (*Epitome de Caesaribus* 39, 2; 40, 1 and 15). His mother \*Romula, an enthusiastic pagan, had been a refugee when \*Aurelian abandoned the old \*province of Dacia north of the Danube (\*Lactantius, *Mort.* 9 and 11). He had a sister, the mother of \*Maximinus Daza. His daughter Valeria Maximilla married \*Maxentius, son of \*Maximian, the fellow Augustus of Diocletian. Galerius' son \*Candidianus was born c.296.

Galerius was a big man, comparable in size and ferocity to his pet \*bears, says Lactantius (*Mort.* 21, 5; cf. 9, 1–4), who blamed Galerius for being the moving force behind the Great \*Persecution of the Christians. He had a reputation as an outstanding and fortunate soldier (*Epitome de Caesaribus*, 40, 15; \*Eutropius, 10, 2) and had served under the \*emperors Aurelian and \*Probus before the \*accession of Diocletian in 284.

Galerius was appointed Caesar on 1 March 293 to serve under the Augustus Diocletian in the East, at the same time that \*Constantius I was appointed Caesar to serve under Maximian in the West; the resulting rule of four emperors, dominated by Diocletian, is called the \*Tetrarchy. Initially Galerius resided in the \*Diocese of \*Oriens and campaigned in \*Egypt in 293/5. In 296/7 he was sent to repel a Persian invasion in \*Mesopotamia and was defeated between \*Harran and \*Callinicum; Diocletian ceremoniously humiliated him by making him walk for a mile in front of his chariot (\*Ammianus, XIV, 11, 10; \*Jerome, *Chron.* 227c Helm). Galerius collected fresh troops from the Danube \*frontier and in 298 inflicted a crushing defeat on the Persian King \*Narseh, who had invaded Roman \*Armenia (*Mort.* 9, 5–7; \*Jerome, *Chron.* 227f Helm; cf. \*Buzandaran *Patmut'wkn'*, III, 21). He captured the shah's womenfolk, 13 \*elephants, and 250 \*horses, marched south through Media into southern \*Mesopotamia, with the future Emperor \*Constantine in his army, and then back north into Roman territory up the Euphrates Valley. When a Persian envoy sought the return of the royal harem Galerius angrily reminded him of Persian mistreatment of the captured Emperor \*Valerian, and it was the more emollient \*Magister Memoriae \*Sicorius Probus who secured valuable

strategic advantages in the peace negotiations (\*Peter the Patrician, frs. 13 and 14).

Between 299 and 303 Galerius moved to the \*Balkans where he campaigned against \*Marcomanni, \*Carpi, and \*Sarmatians. According to Lactantius, however, the Persian victory had made him arrogant (*Mort.* 9, 8). In accordance with his mother's wishes, Galerius persuaded Diocletian to try and bring the Christians into line; he himself gives his motive as being to 'set everything right in accordance with the ancient laws and public way of life (*disciplinam*) of Romans' (*Mort.* 34, 1). The result was the Great \*Persecution, which began on 23 February 303 by depriving all Christians of their civil rights and Christians working for the emperor of their jobs (*Mort.* 11–16), and continued in the East in fits and starts until 313.

On 1 May 305, in a ceremony on a parade ground outside \*Nicomedia, Diocletian abdicated and Galerius became the new Augustus in the eastern half of the Empire; in a similar ceremony in the West \*Constantius I became the new Augustus in the West (*Mort.* 19). The following July, Constantius I died far off at \*York and Galerius recognized Constantius' son Constantine I as his successor. Then, in October, Maxentius, son of the former Augustus Maximian, usurped power at \*Rome and obliged the Caesar \*Severus the Tetrarch to abdicate. Galerius invaded \*Italy, but failed to remove Maxentius: 'formerly Roman emperor, now the devastator of Italy' is Lactantius' acerbic comment (*Mort.* 27, 7). Eventually, in late 308 \*Licinius, an old comrade-in-arms, was appointed to maintain pressure on Maxentius, and Galerius settled in \*Thessalonica.

Here Galerius built a \*circus and \*palace west of the main \*city, between the seashore to the south and the main street (\*Via Egnatia). It boasted a \*basilica of a similar size to that which survives at \*Trier, with the \*apse to the south and the main entrance at the north end. This was approached from the west by a ceremonial colonnaded \*street flanked by two rotundas, each standing in its own *temenos*, the more southerly of which had a diameter of 100 Roman feet and later had the so-called 'Palace Octagon' built over it. \*Baths were built south of the basilica. These buildings were on the same axis as the street joining the tetrapylon known as the \*Arch of Galerius, whose surviving piers are richly decorated with scenes showing Galerius engaged in warfare, \*ceremony, and \*sacrifice, and the so-called Rotunda of S. George, built as a potential mausoleum.

As it turned out, Galerius died in \*Dardania (\**Codex-Calender of 354*, XVI = *Chron. Min.* I, 148, 30) and his remains were interred at Romulianum. His last illness, an infection of the nether regions, was protracted and painful and is described by Lactantius and Eusebius with what Gibbon calls 'singular accuracy and apparent pleasure'. On his deathbed Galerius issued an \*edict

permitting Christians to gather once more for worship, a document reproduced in full by Lactantius (*Mort.* 34) and Eusebius (*HE* VIII, 16) and remarkable for containing a clear statement by a persecutor of his motives for instigating persecution. The edict was published at Nicomedia on 30 April 311, but persecution resumed later that year under Maximinus Daza. Galerius entrusted his \*widow, \*Valeria, daughter of Diocletian, and his son Candidianus to the care of Licinius (*Mort.* 35, 3); after he took control of the East in 313, Licinius executed them both (*Mort.* 50, 2). **Galilee (Hebrew Gālīl)** Divided by the valley of Ramah into Upper and Lower Galilee, this region encompasses the northern part of \*Palestine limited by the southern slopes of Lebanon, the plain of Esdrelon to the south, and the Jordan River and Lake of Tiberias to the east. Galilee is a mountainous region, overlooked by Mount Tabor. The region was prosperous, as surveys and excavations starting in the 19th century have shown.

Galilee's significance stems from its role in the formation of Christianity and Rabbinic Judaism. In the Roman period, Galilee was a rural region with only three cities, Acco, \*Sepphoris, and \*Tiberias. Christian presence in Galilee was centred to the north and north-west in the Bet Ha-Karem Valley. In eastern Galilee, Jewish \*villages dominated, while Lower Galilee had a

small Christian population primarily located at key holy sites. In Late Antiquity, Galilee flourished, as appears from the construction of churches and \*monasteries, and the establishment of shrines in the environs of the Sea of Galilee. The main centre was Hippos-Susita, which acquired a \*bishop in the 4th century. After the \*Arab conquest it became part of \*Jund al-Urdunn (\*Jordan). BH

**Gallaecia** \*Province in north-west \*Spain, within the \*Dioecesis \*Hispaniae, divided from \*Tarraconensis in 211/17. Its other neighbours were \*Lusitania and Carthaginiensis; its capital was Bracara Augusta (\*Braga). It is included in the \*Verona List. In the \**Notitia Dignitatum* the \*governor was a \*Praeses. Gallaecia was conquered successively by the \*Suebes in 409, the \*Visigoths in 585, and the \*Arabs, briefly, after 711. GDB  
*Barrington Atlas*, 101E3.  
*TIR* K-29 (1991).

**Galla Placidia, Aelia** (c.388–450) \*Empress, daughter, wife, and mother of \*emperors. Born at an uncertain date to \*Theodosius I and Galla. Her mother died in 394. Her cousin \*Serena, wife of Flavius \*Stilicho, brought her up from an early age. She was styled *nobilissima* early in life and given her own household and \*palace in \*Constantinople in Theodosius I's lifetime.

Having moved to the West, Galla Placidia resided primarily in \*Italy thereafter. The erudition apparent in her \*letters suggests an advanced secular and religious \*education. Prior to the Sack of \*Rome in 410, the \*Visigoths captured Placidia, and she accompanied them through Italy and into southern \*Gaul. In the

negotiations that followed, \*Honorius agreed to a marriage between Placidia and \*Athaulf I in January 414. Their only child, Theodosius, died shortly thereafter, followed by Athaulf himself.

Placidia was returned and wed to the \**patricius* Constantius (later \*Constantius III) in 417, bearing \*Honorius and \*Valentinian III. During this time, she involved herself in the disputed election to the see of \*Rome and aided in her candidate's appointment. Honorius lacked an heir, so in 421 Constantius was declared emperor and Placidia \*Augusta; these titles were not recognized in the East nor esteemed by Honorius. Upon Constantius' death in the same year, she temporarily fled to Constantinople.

Only with the death of Honorius in 423 and the usurpation by \*John did the Eastern court move to install Placidia's son Valentinian III as emperor. In 425, he was crowned and Placidia's status as Augusta was recognized. For twelve years she served as regent, although she vied for power with the \**patricius* Flavius \*Aëtius, who became increasingly dominant in the late 430s as Placidia's influence diminished as a result of her failures with the \*Vandals and the growth to adulthood of her son Valentinian. However, she remained a political force until her death in 450.

Like other imperial women, Placidia was active in religious \*patronage, building churches in \*Rome, \*Ravenna, and \*Jerusalem. \*Agnellus (41–2) relates her building of the (lost) Church of the Holy Cross, records the dedication \*inscription in the \*apse of the Church of S. John the Evangelist which she endowed as a thank-offering for deliverance from danger at sea, and states that she was buried in the *monasterium* of S. Nazarius at Ravenna. The surviving cross-in-square building now known as the Mausoleum of Galla Placidia in Ravenna was originally attached to the south end of the Church of the Holy Cross. GSN

**Gallehus horns** Two unique \*gold signal or drinking horns of c.6.8 kg (15 lb) found in a field in the village of Gallehus in southern Denmark in 1639 and 1734. Both horns were stolen and melted in 1802. They were richly ornamented with figurative motifs; one horn carried a \*runic inscription naming its maker. The functions and

owners of the horns are debated. Although Late Antique, specifically East Roman templates can be identified, the choice of motifs, composition, and style as well as the inscription indicate a south Scandinavian manufacture in the early 5th century. AR

*RGAA* s.v. Gallehus, X (1998), 330–44 (Axboe, Nielsen, Heizmann).

**Galliae** \**Dioecesis* formed under the \*Tetrarchy to control the north and east of \*Gaul (with \*Septem Provinciae ruling southern Gaul). In the \*Verona List, the Dioecesis of Galliae comprises the \*provinces of \*Lugdunensis Prima and Secunda, \*Belgica Prima and Secunda (correcting the word 'betica'), \*Germania Prima and Secunda, Sequania (i.e. \*Maxima Sequanorum), and \*Alpes Poeninae et Graiae. The \**Notitia Dignitatum* lists these provinces (and Lugdunensis Tertia and Senonia, which arose from subdivisions under \*Constantine I) as governed by the \*Vicarius of Septem Provinciae (*occ.* XXII, 4–8, 10–11, and 17–19; cf. I, 68–74 and 106–17). Its territory came gradually under local control during the \*Barbarian Migrations of the 5th century, and the final area fell to the \*Franks in the 480s. ACR

Jones, *LRE* 373–4.

**Gallican Liturgy** The Christian \*liturgy in use in \*Gaul prior to the efforts by \*Rome to encourage liturgical uniformity in the 8th century is not well recorded. The fragments of two 8th-century sacramentaries known as the *Missale Gallicanum vetus* (ms. Vat. Pal. lat. 493) contain masses for the feast of S. \*Germanus for Advent, Lent, \*Easter, and \*Rogation, as well as other rites, but other Gallican missals are mostly from after Late Antiquity.

Other evidence of uniquely Gallican liturgical customs appears in the proceedings of local church \*councils toward the end of Late Antiquity, mostly on matters of the duties of particular liturgical ministers and matters of the church year as Gallican timekeeping traditions were established. These include the Councils of Agde of AD 506 (Mansi 8, 725–8), Vaison of 529 (Mansi 8, 319–38), \*Tours of 567 (Mansi 9, 947–64), Auxerre of 578 (Mansi 9, 911–19), and Mâcon of 581 and 627 (Mansi 9, 931–40 and 10, 587–90). **Gallicanus, Vulcatius** Alleged author of the \**Historia Augusta* life of Avidius Cassius, \*usurper under Marcus Aurelius. OPN

**Gallic Empire** Term conventionally used by scholars for the pattern of political power which emerged in the \*provinces of the Roman Empire north of the Alps at the height of the Third Century \*Crisis, beginning in the sole reign of the \*Emperor \*Gallienus (260–8). The sources for the Gallic Empire are poor, being composed largely of brief notices by late 4th-century \*Latin authors who depended for much of their information on the lost \**Kaisergeschichte*, of scattered allusions in the first book of \*Zosimus, and of information gleaned from the rather copious \*coinage minted by the Gallic emperors. The imperial biographies of the \**Historia Augusta* interweave fact, invention, and an idiosyncratic sense of humour.

In AD 260 the Emperor \*Valerian was carried into captivity by \*Shapur I, the Persian King of Kings. Valerian's son and successor Gallienus faced considerable insecurity, with several \*usurpers challenging his authority, with the formation of a separate polity centred on \*Palmyra in \*Syria, and with barbarian threats in the \*Balkans and on the Rhine \*frontier, the latter including an attack by \*Franks which penetrated as far as \*Tarragona in \*Spain (Aurelius \*Victor, 33; \*Eutropius, IX, 8). In 259/60 \*Postumus, a military commander on the Rhine frontier, attacked and killed Gallienus' son Saloninus at \*Cologne (\*Zosimus, I, 38, 2) and set himself up as ruler of Gaul, Spain, and \*Britain, where, according to Eutropius, he 'restored the almost exhausted provinces through his enormous vigour and moderation' (IX, 9). Despite making two attempts to dislodge Postumus, Gallienus was obliged in general to acquiesce in the usurpation, while posting \*Aureolus in northern \*Italy to ensure that Postumus did not cross the Alps (Zosimus, I, 40, 1–2). In 268 Postumus was killed by his own \*army, because he refused to allow them to sack \*Mainz, which had supported a general called \*Laelianus who had revolted against him.

Postumus was replaced briefly by a former blacksmith called \*Marius, who was in turn eliminated by the general \*Victorinus, who faced further opposition at \*Autun, a \*city he damaged severely in a lengthy siege. Victorinus ruled for two years before succumbing to a military mutiny at Cologne. His mother then persuaded the troops to acclaim as their new emperor \*Tetricus, a

Gallo-Roman \*senator and \*governor of \*Aquitaine. Tetricus ruled for two years and had some success against threats to the Rhine frontier. By this time \*Aurelian (270–5) was the legitimate Roman emperor and, having secured the eastern frontier by recovering the empire of Palmyra, he turned to Gaul, and in 274 defeated the armies of Tetricus at Châlons-sur-Marne, capturing Tetricus, who survived many years as a private citizen. It is alleged that Tetricus gave up to Aurelian willingly, as he was tired of the frequent mutinies of his army (Aurelius Victor, 35; Eutropius, IX, 13).

Roman imperial administrative forms appear to have been followed in the Gallic Empire. All Gallic emperors followed imperial practice by appointing themselves to \*consulships. That the adoption of these titles was accompanied by the normal \*ceremonies and public \*entertainment may be supposed, but the coinage gives no evidence of games or spectacles. One would expect the consulships to be marked by \*donatives to the soldiers. A number of issues with the emperor's head facing left, rather than the normal right, may be part of such donatives. OPN; PJC

CAH XII (2005), 45–6, 52–3 (J. F. Drinkwater).

Drinkwater, *Gallic Empire*.

**Gallienus** Augustus 253–68. P. Licinius Egnatius Gallienus was the longest ruling \*emperor of the Third Century \*Crisis and the object of enduring controversy. Born the son of \*Valerian in c.218, Gallienus was proclaimed \*Caesar and then \*Augustus almost immediately upon his father's accession as emperor in 253. He commanded in the West during his father's reign, and campaigned on the Rhine and Upper Danube \*frontiers against the \*Franks and \*Alamans. After Valerian was captured by \*Shapur I of Persia in 260, Gallienus faced internal and external crisis. His reign was plagued by \*usurpers, exaggerated in the *Historia Augusta* as the so-called \*Thirty Tyrants'. The \*frontiers remained weak, and Gallienus was unable to suppress either the breakaway Empire of \*Palmyra under Septimius \*Odaenathus and his Queen \*Zenobia or the \*Gallic Empire of \*Postumus.

Gallienus focused his energy on consolidating the central territories of \*Italy, \*Africa, \*Egypt, and the \*Balkans. Condemned in the sources for indolence and inactivity, he husbanded his remaining resources carefully. Gallienus' \*coinage reflects the difficulties of his reign. The heavily debased \*antoninianus, of variable weight and \*silver content (often only lightly silver-coated \*bronze) became the dominant circulating coin. \*Gold issues of varied weights suggest repeated attempts at reform. The military was reorganized, creating a mobile central army with far greater emphasis on \*cavalry. Valerian's persecution of \*Christians was abandoned (\*Eusebius *HE* VII, 13). Gallienus patronized

the \*Neoplatonist \*philosopher \*Plotinus (\*Porphyry, *VPlot* 12), although how much weight should be placed on this is debated. Sculptors represented him as a figure of classical elegance blended with personal intensity.

In 267 renewed \*Gothic attacks over the Black Sea and the Danube ravaged \*Greece and sacked \*Athens. Gallienus defeated one Gothic force at the Battle of the River Nestus in 268, but in Italy his general \*Aureolus had mutinied and Gallienus was murdered by his officers while besieging Aureolus in \*Milan. In the Latin tradition of \*Lactantius (*Mort.* 5, 5) and the \*Tetrarchic \*panegyrics (e.g. VIII (V), 10), and later of Aurelius \*Victor, \*Eutropius, and the *Historia Augusta*, Gallienus is uniformly denounced for sloth, exclusion of \*senators from military commands, and failure to rescue or avenge his father. Yet he preserved the Empire in the darkest days of the 3rd century, and laid the basis for the recovery under his successors. DMG

**Galswintha** (d. 569/70) \*Visigothic Princess, daughter of \*Athanagild and sister of \*Brunhild, married to the \*Frankish King \*Chilperic I, who subsequently, according to \*Gregory of \*Tours, had her murdered. In a poem of lament for Galswintha (*Carmen*, 6, 5), \*Venantius Fortunatus studiously avoids assigning culpability for her death MJR  
PLRE IIIA, Galswintha.

**Gamzigrad** (Serbia) Settlement in \*Dacia Ripensis, centred on the fortified \*villa Romuliana built by the \*Emperor \*Galerius. A rampart with 20 round towers

(enclosing about 6 ha or 15 acres) enclosed two residential complexes, two \*temples, a \*bathhouse, a *horreum* (\*barn), and associated buildings. A sumptuous complex of three corridor-halls, a peristyle court, an apsidal hall, and a *triclinium* in the north-west part of the fortification was probably the ceremonial part of the \*palace. Two mausolea and consecration mounds in the vicinity (Magura) were probably intended for Galerius and his mother \*Romula. An extensive settlement including barracks and a *horreum* stretched outside the fortification. The palace probably remained unfinished after the death of Galerius (311). A rural settlement with dwellings and workshops soon took over the site, with a Christian \*basilica built over the corridor-halls of the palace. The settlement and church were destroyed in the mid-5th century, but were restored. The walls were repaired under \*Justinian I. The site was abandoned in the 7th to 9th century, but reinhabited in the late 9th to 11th centuries. ER

**gardens and orchards, Persian** (MP *bāg* 'garden', 'orchard'; *bōyestān* 'flower garden') Although scant archaeological evidence survives, textual sources attest to the importance of gardens in Persia. Their quadripartite design and water channels influenced Islamic gardens. Late Sasanian \*palaces contained elaborate formal gardens often with cosmological symbolism. \*Khosrow II was captured in a palace garden known as the 'Garden of India' (\*Tabari, V, 1043). There were probably gardens at the \*Taq-e Kesra at \*Ctesiphon, Bisotun, \*Qasr-e Shirin, and \*Taq-e Bostan.

\*Zoroastrianism considered cultivating the land to be a holy act and harming it a sin (\**Menog-e Xrad*, 5, 1–13). \*Ammianus Marcellinus (XXIII, 6, 78) records that the Persians even refrained from destroying enemy gardens and vineyards. A good king ensured the earth was cultivated and the \*Persian Empire itself could be described as a garden (\*Dinawari, *Kitab al-akhbar at-tiwal*, 114–15; Tha'alibi, *Ghurar*, 722–32). Plantations (\**dastgird*) with walled gardens containing plant and animal specimens from all over the world were part of \*Sasanian estates, of which Khosrow II's

Dastgird and Qasr-e Shirin stand as the prime literary and archaeological examples. MPC

### **gardens and orchards, Roman and post-Roman**

Gardens (Gk. *kepos*; Lat. *hortus*) often lay close to dwellings and were limited in size so as to be walled and worked by a few hands. Orchards were often extensive in scale, planted primarily with \*fruit trees whose produce was intended for the table or market, with spaces between the trees sometimes cultivated with crops or grazed by animals. Herbs and vegetables were commonly grown in kitchen gardens. Cash crops, like artichokes, were frequently grown in Roman gardens—the Tetrarchic \*Prices Edict (vi, 1) set the price of five large artichokes at 10 *denarii* (10 per cent of a baker's daily wage: vii, 12). Garden and orchards also provided space for experiment and selective breeding. \*Palladius gives detailed monthly advice about intensive cultivation in gardens, including sowing, the planting out of seedlings, watering, and measures to be used against such pests as moles.

Gardens were common in Late Antique \*cities; tree roots were liable to damage houses (\*Julian of Ascalon, 49, 1) and urban dwellings were sometimes demolished to make way for gardens (*CJ* Just VIII, 16, 2). Planned, elaborate gardens and parks for pleasure were common throughout the Late Roman and post-Roman world, as at the Villa Bancroft in \*Britain (c. AD 340).

In Persia, the garden (*bagh*) was developed as an intensively worked and irrigated food-bearing enclosure under permanent cultivation: gardens were especially features of oasis agriculture. In the pleasure garden ornamental flowers and plants were carefully arranged alongside water features. The \*Umayyads drew upon and expanded both Persian and Roman gardening traditions. MD

P. D. King, *Law and Society in the Visigothic Kingdom* (1972), 56–62.

**Gargilius Martialis** (3rd cent.) Q. Gargilius Martialis probably came from Auzia in \*Mauretania (*CIL* VII, 9047 of AD 260). He wrote a \*Latin work on horticulture \*praised by \*Cassiodorus (*Inst.* I, 28, 6). A fragment of *De Hortis* survives in a 6th-century palimpsest (Naples, A.IV.8). Overlapping with this

text is the anonymously transmitted *Medicinae ex Heribris et Pomis* (= Book 4 of *Medicina Plinii*). It is improbable that he is the 'Martial' or 'Marsial' frequently named by Ibn al-Awwam. RR

*De Hortis*: ed. I. Mazzini (1978, 21988).

*Medicinae*: ed. B. Maire (annotated with FT, 2002).

**Garima Gospels** Abba Garima, one of the \*Nine Saints of Ethiopia, founded near Adwa a \*monastery, which still operates under his name and preserves what is probably the oldest Ethiopian manuscript material still extant. Traditionally believed to have belonged to or to have been written by the saint himself, but not brought to outsiders' attention until the 1960s, the material originally comprised three separate codices. Two, each containing fine portraits of the evangelists, canon tables, architectural images and \*Ge'ez gospel-texts, almost certainly date from the 6th century, as is indicated by comparative studies of the canon tables and portraits, linguistic features of the Ge'ez texts and radiocarbon dates for the vellum. The third codex, which incorporates no portraits, is thought to be somewhat later in date, although all the Garima Gospels material is clearly more ancient than any other extant Ethiopian manuscript. It has been suggested that the portraits, canon table, and texts might be of different ages, but recent study effectively disproves this possibility, and the view that the two oldest Garima manuscripts are of 6th-century age is increasingly accepted, this being the time that the \*Bible first became available in Ge'ez (see CHRISTIANITY, AKSUMITE). Ongoing studies now focus not only on their significance to Ethiopian history but on their relevance over a much wider field; here, the portraits of the four evangelists plus in one case an individual who has been identified as \*Eusebius of Caesarea, originator of the canon tables, are of exceptional interest. **garum and salsamenta** A basis for many Roman cooking sauces, condiments, and main dishes. Scholars use 'garum' to refer to \*fish sauces generally. There were in fact various different types: Greek *garon* is equated with *liquamen* in the Tetrarchic \*Prices Edict (3, 6–7) and consisted of small fishes dissolved in \*salt; the best was *himation* (\**Geoponica*, 13, 4, 8) made from the intestines, blood, and gills of tuna. *Garum* was made from salted blood and viscera. *Salsamenta* comprised any kind of fish layered with salt and thus pickled. \*Spain, \*Mauretania Tingitana, and the Black Sea region were important exporters of various fish sauces and salted fish. MD

**Gaul** The largest region in the Roman Empire, comprising during the 4th century about one-quarter of the Latin West, and an area about two-thirds that of the

entire Greek East. It connected three important economic and ecological zones in the European sector of the Empire: the Mediterranean heartland, the Atlantic coast, and the Rhine \*frontier. From the mid-4th century this vast region became the core of the prefecture of the Gauls, which also included \*Spain and \*Britain. The administration of the region was divided between two \*dioeceses, \*Galliae ('Gauls') in the north and Viennensis or \*Septem Provinciae ('Seven Provinces') in the south, each of which included several provinces.

Mediterranean and Alpine Gaul was divided among the provinces of \*Narbonensis Prima and Secunda, \*Viennensis, \*Alpes Maritimae, and \*Alpes Graiae et Poeninae. Although many of its important \*cities were on or near the coast, including \*Narbonne, \*Arles, and \*Marseilles, the Rhône River, between the Alps and the Massif Central, also linked more northern \*cities directly to the Mediterranean. Small seagoing vessels could navigate up the Rhône as far as \*Vienne and \*Lyons, from where the Saône River was navigable still further north, so that Arles could be said to supply \*Trier (\**Expositio Totius Mundi*, 58; \*Ausonius, *Ordo Urbium*, 73–80).

Western and central Gaul was divided among the provinces of \*Novempopulana, \*Aquitania Prima and Secunda, and \*Lugdunensis I, II, III, and IV (also known as Senonia). Its major rivers, including the Garonne, the Loire, and the Seine, oriented these provinces towards the Atlantic and the English Channel. Important cities on or near the coasts included \*Bordeaux, Nantes, and \*Rouen, but inland cities further upriver, such as \*Toulouse, \*Tours, \*Orléans, and \*Paris, were also linked to the ocean.

Northern and eastern Gaul was divided among the provinces of \*Belgica I and II and the frontier provinces of \*Germania Prima and Secunda and \*Maxima Sequanorum. The Moselle River flows into the Rhine, and the Meuse River empties near the Rhine delta. Here, the proximity of the frontier and the presence of military encampments dominated the economy, and the provinces that bordered the English Channel and the North Sea were oriented toward the supply of the soldiers stationed along the Rhine.

These three geographical zones intersected about midway between Trier and Lyons, at the watersheds of the Moselle, Meuse, Marne, and Saône rivers. Within Roman Gaul an extensive system of \*roads both connected and complemented these rivers. This communications network had aided the development of cities and an urban way of life, as well as the extensive exploitation of the countryside.

### Late Roman Gaul

In the later 3rd century much of Gaul became, briefly, a separate Roman Empire, termed for convenience by

scholars the \*Gallic Empire. In 260 the \*army in the Rhineland supported \*usurpers who represented themselves as Roman \*emperors and were recognized throughout Gaul, as well as in Britain and Spain. This 'Empire of the Gauls', as it was labelled by the historian \*Eutropius, was an early precursor of the centrifugal tendency of northern Europe to separate itself from the Mediterranean core of the Roman Empire.

After the Emperor \*Aurelian restored central control in 274, emperors often established their \*courts in Gaul. Three generations of emperors from the Constantinian dynasty led military campaigns against barbarian invaders in northern Gaul, typically residing at Trier. In 359 \*Julian as \*Caesar even campaigned across the Rhine. \*Valentinian I established his court at Trier in 367; in 383 his son \*Gratian was killed at Lyons by the troops of the \*usurper \*Magnus Maximus. Two centuries later the historian \*Gregory \*Bishop of \*Tours still recalled Maximus as 'the emperor at Trier'.

As an imperial residence, Trier flourished with the construction of new buildings and an expanding population. Other cities with imperial connections likewise prospered. Members of the local civic \*aristocracy could now aspire to hold offices in the imperial \*administration, as \*Praefectus Praetorio, \*Vicarius, and provincial \*governors or as bureaucrats on their staffs, and at the imperial courts. Many of these positions conferred senatorial \*rank. During the 4th century thousands of Gauls probably held posts in the imperial administration, including some notables who reached its very top. \*Ausonius, a teacher from Bordeaux, was \*Praefectus Praetorio of the Gauls and \*consul in 379; his pupil, \*Paulinus of Nola, became a governor in \*Italy. With the expansion of Christianity into central and northern Gaul, local notables could become bishops and clerics. S. \*Martin was a former soldier who became Bishop of Tours. His career anticipated the later prominence of bishops, and after his death in 397 he was honoured as a saint.

Gaul had never seemed as 'Roman' as it did during the 4th century. The residence of an imperial court, the promotion of Gallic notables, the teaching of \*Latin classical culture, and the increasing prominence of Christianity were characteristics of the Mediterranean heartland. In reality, however, Gaul was already becoming 'post-Roman'.

Living beyond the Rhine \*frontier were distinct groups and confederations of Germanic-speaking barbarians. During the 4th century many barbarians moved into Gaul, often with the acquiescence of the imperial administration. \*Franks settled in northern Gaul, and by the mid-4th century some had become military officers and in the case of \*Magnentius and \*Silvanus had even attempted to usurp the imperial office. Other barbarians gradually infiltrated across the

Rhine; in the mid-4th century Julian claimed that 'Germans', probably \*Alamans, occupied a strip over 190 km (120 miles) long and almost 65 km (40 miles) wide on the Roman bank of the Rhine. Still other barbarians were recruited directly into the army, and many \*veterans received allotments of land in Gaul. By the end of the 4th century barbarians and their descendants made up a significant percentage of the population of Gaul. Rather than sealing the frontiers, the Roman army had become the primary mechanism facilitating the steady \*Barbarian Migrations into Gaul.

### *Barbarians and warlords*

The Emperor \*Valentinian II published the last known imperial edict issued from Trier, in June 390. The \*usurper \*Eugenius was the last emperor to campaign in northern Gaul, and the general \*Arbogast led the last Roman army to cross the Rhine. In 396 the \*Magister Militum \*Stilicho removed troops from the Rhine frontier to defend \*Italy. At about the same time the residence of the Praefectus Praetorio of the Gauls was transferred from Trier to Arles. During the 5th century the names of very few \*governors are known for provinces in Gaul, both north and south, and the army was considerably diminished.

During the winter of 406–7 bands of \*Vandals, \*Suebes, and \*Alans crossed the Rhine and slowly drifted to Spain. A band of \*Burgundians settled along the middle Rhine. An army of \*Visigoths arrived from Italy in 412, soon moved to Spain, but they were settled in Aquitania Secunda in 418 with a view to their staying there. Roman generals continued to conduct campaigns against barbarians, although often with the assistance of other barbarian groups. \*Aëtius resettled the Burgundians in eastern Gaul. In 451 he led a coalition of Romans, Visigoths, and Franks to victory over \*Attila and the \*Huns at the Battle of the \*Catalaunian Plains in central Gaul.

Political authority in Gaul fragmented. The last emperor to visit Gaul was \*Majorian (457–61), who resided usually in Arles. During the 460s the Roman general \*Aegidius was selected as an interim king for a group of \*Franks in northern Gaul. His son \*Syagrius was remembered by Gregory of Tours a century later as holding the hybrid title of 'King of the Romans'. The Frankish King \*Childeric I was apparently operating in a Roman orbit, and his tomb near \*Tournai contained both Frankish weapons and the ornaments of a Roman magistrate. During the 470s the Visigothic King \*Euric seized cities on the Mediterranean coast. The historian \*Jordanes claimed that Euric wanted to rule Gaul independently of the emperors. As a Roman general \*Gundobad had intrigued against emperors in Italy; back in Gaul in the later 5th century he became a

King of the Burgundians and controlled the Rhône Valley. In the guise of kings, Roman, Frankish, Visigothic, and Burgundian warlords now dominated most of Gaul.

During the 5th century most of those holding office as Praefectus Praetorio of the Gauls were Gallic \*aristocrats, in particular from southern and central Gaul. With the shrinking of the Roman administration, however, aristocrats found other strategies to preserve their standing. Some represented their cities as ambassadors in front of barbarian kings, and others served at the courts of barbarian kings. Other aristocrats, including \*senators, became clergymen. After serving as a military officer and a provincial governor, S \*Germanus became Bishop of \*Auxerre in 415. S. \*Honoratus founded a \*monastery at \*Lérins before becoming Bishop of Arles in the later 420s. \*Sidonius Apollinaris, the son-in-law of the Emperor \*Avitus, served as \*Praefectus Urbi at \*Rome before becoming Bishop of \*Clermont during the 470s and 480s. At Tours in the later 5th century three men from the same senatorial family held the episcopacy in turn. As Sidonius commented in adapting to the *zeitgeist*, 'the humblest ecclesiastic ranks above the most exalted secular dignity'.

Sidonius also promoted the importance of \*Latin literary culture. Aristocrats who became clergymen applied their learning in the arts of \*rhetoric to theological treatises and \*sermons. They exchanged \*letters and composed poems; \*Agroecius, Bishop of Sens, wrote a treatise about the correct \*grammar, spelling, and vocabulary of \*Latin. At the same time the availability of an \*education in classical culture was increasingly restricted. Instead, churchmen were often trained in the biblical and ascetic culture of monasteries. \*Caesarius was a Gallic aristocrat who joined the monastery at \*Lérins before becoming Bishop of Arles in the early 6th century. In contrast to Sidonius, who had warned against the use of 'barbarisms' in spoken and written Latin, Caesarius preferred a 'lowly speech' (\**sermo humilis*) in his sermons that matched the simplified vernacular Latin spoken by members of his audience.

Bishops dominated post-Roman cities. They negotiated with barbarian kings, funded the construction of new churches, and established registers for the care of the \*poor and destitute. They also patronized the foundation and enhancement of \*shrines in honour of saints. During the 460s Bishop Perpetuus of Tours expanded the cult of S. Martin in his city. He dedicated a new church to the saint and collected stories about his recent \*miracles. Devotion to saints' cults provided everyone, including aristocrats, ordinary people, and barbarian settlers, with a shared idiom for creating new communities.

### Merovingian and Carolingian Francia

In 507 the Frankish King \*Clovis I defeated the Visigoths in \*Aquitaine. After his \*victory he presented gifts to the Church of S. Martin at Tours and received honours from the Emperor \*Anastasius I. During the 6th century Clovis' sons and grandsons established the \*Merovingian dynasty and ruled as joint kings. After the conquest of the Burgundian kingdom in 534 and the annexation of \*Provence in 537, the Franks controlled the whole of Gaul except for western \*Brittany, and Visigothic \*Septimania. Under the Merovingian kings, Gallia became Francia. After much dynastic infighting, three major sub-kingdoms had emerged by the 7th century: \*Neustria was centred in north-western Gaul, \*Austrasia in the Rhineland, and \*Burgundy in eastern Gaul, while the cities of \*Aquitaine still tended to be partitioned among the various kings.

Bishops remained important local leaders, and some, such as \*Arnulf of \*Metz, \*Eligius of Noyon, and \*Audoenus of Rouen, were also influential at royal courts during the 7th century. Bishops and aristocrats founded monasteries, sometimes in honour of saints from their own families. The monk S.\*Columbanus imported traditions from \*Ireland when he established a monastery at \*Luxeuil in Burgundy. Clerics influenced by Luxeuil spread Christianity north and east of the Rhine, and \*Anglo-Saxon and \*Irish missionaries evangelized the region of the lower Rhine.

Boys were educated at home and, sometimes, at the royal courts. Churchmen and monks provided an education based on the \*Bible and ecclesiastical writings but also on classical culture and Roman \*law. Monasteries such as Luxeuil and \*Corbie collected and copied manuscripts. The royal courts issued \*charters and edicts in Latin, and well into the Merovingian period Latin remained the common spoken language. Clerics preached in Latin, albeit typically in a rustic style. But as spoken Latin increasingly diverged from the forms of classical Latin, vernacular Latin slowly developed into various Romance languages during the Carolingian period.

The royal administration included men with the title \*Comes who governed cities and the title \*Dux ('duke') to oversee larger regions (sometimes referred to in English as duchies). These magistrates collected taxes and administered justice on behalf of the kings. \*Chlothar II, who unified the Frankish kingdom as sole ruler in 613, and his son \*Dagobert I, who resided primarily in Neustria, were still effective kings. Most of their successors were comparatively weak, however, and their aristocrats, whether members of old Roman families or new Frankish ones, were often more powerful than the royal family. Some of the great notables became bishops and others held royal offices. Often they fought with the kings. During the later 670s \*Lupus, the Dux

of Aquitaine, may even have claimed to be an independent king of Aquitaine.

In Austrasia the family of \*Pippin I, who served as \*Mayor of the Palace under Dagobert I and \*Sigibert III, became especially prominent. In 687 \*Pippin II defeated Neustrian aristocrats in battle and from 717 onwards his son \*Charles Martel consolidated his authority as \*Mayor over all of Francia. In 751 the last Merovingian king was deposed, and bishops anointed \*Pippin III as king. Pippin re-established direct royal rule over the dukedom of Aquitaine and seized the Mediterranean region of Septimania from the \*Arabs. The campaigns of his son Charlemagne expanded Frankish rule east into Germany. Charlemagne also became King of the \*Lombards in Italy, and in 800 Pope Leo III crowned him emperor at Rome. His Carolingian dynasty would rule in France until the later 10th century.

**Gaulanitis** The modern Golan or Jawlan Heights, flanking the Jordan Valley on the east, and stretching from Mount Hermon to the River \*Yarmuk and the southern end of the Sea of \*Galilee. The basalt plateau of Gaulanitis was densely settled in the Roman and Byzantine periods. \*Jews clustered in southern and central Gaulanitis in the 3rd–4th centuries and around the Decapolis city of Hippos, coexisting with Jewish Christians in Eastern Gaulanitis.

In the 4th century, the \*Ghassanids established their capital at Jabiyah and a \*pilgrimage shrine for S. John the Baptist at al-Ramthaniya (Er-Ramthaniyye). They controlled Gaulanitis until the \*Persian invasion of AD 614, losing it during the \*Arab invasion after the Battle of the Yarmuk in 636.

**Gayane and Rhipsime, Ss. (Gaiane and Hripsime, Ss.)** Roman \*virgins said to have been martyred in \*Armenia with 35 companions at the turn of the 4th century. Fleeing the Great \*Persecution in Roman territory, the group numbering 'over seventy'

at the outset and being led by Gayane took refuge in \*Armenia, eventually hiding in a vat-store near \*Valarshapat (present \*Edjmiatsin/Etchmiadzin), capital city of \*Trdat the Great. According to legend, preserved in the *History* attributed to \*Agat'angelos, Rhipsime's beauty and her royal lineage had made \*Diocletian want to marry her—another reason for her flight. When the virgins were discovered at the \*emperor's behest, Trdat became equally infatuated with Rhipsime, who courageously resisted his advances. This led to her \*martyrdom and that of her companions, thus bringing divine punishment upon the king in the form of insanity. In search of a cure, the king's sister Khosrovidukht (Xosrovidux) was instructed in a \*dream that the prisoner \*Gregory (later Illuminator of Armenia) could heal Trdat. Released after thirteen to fifteen years of imprisonment, Gregory healed Trdat, a \*miracle which led to the king's conversion to Christianity in c.301, followed by that of the Armenian people. Gregory, directed by a divine vision, interred the remains of the martyred virgins in three chapels (\*martyria), named after Gayane, Rhipsime, and the 'anonymous' virgin martyred at the vat-store. The chapels were replaced with grand churches early in the 7th century. Those named for Rhipsime and Gayane, where their traditional tombs are marked, stand as foremost examples of early Armenian church \*architecture.

**Gaza** \*City of \*Palaestina Prima with a large agricultural hinterland, famous in Late Antiquity for its fine wine (e.g. \*Gregory of \*Tours, *Glory of the Confessors*, 64), whose distinctive \*amphorae have been found as far away as 7th-century England. It exported its produce through the \*harbour at \*Maiuma, some 6 km (3.7 miles) from the city. Constantine made the port of Maiuma a separate city on account of its fervent Christianity (\*Eusebius, *VCon* IV, 37), but \*Julian the Apostate returned it to the jurisdiction of Gaza (\*Sozomen, V, 3).

Gaza itself, however, had a reputation for \*paganism. \*Eusebius records the torture and execution of half a dozen \*martyrs in the Great \*Persecution, including Silvanus the \*Bishop (*MartPal* 3; 8; 13). The \*conversion of the city to Christianity was a protracted process. There are serious problems with the historicity of Mark the Deacon's *Life of \*Porphyry of Gaza*, which gives a vivid but anachronistic account of \*Bishop Porphyry's destruction of its \*Temple of Zeus Marnas in the early 5th century. There is, however, solid evidence from other sources, especially from the church historian \*Sozomen (c.400–after 445), who came from Bethlelea

in the Gaza area and whose grandparents' family was one of the first two in their community to be converted to Christianity having been influenced by the local monk S. \*Hilarion (d. 371), who freed one of them from possession by a \*demon. All of them were obliged to flee during the reign of the \*Emperor \*Julian rather than face further persecution by their pagan fellow citizens, who had already dragged three Christians from \*prison and lynched them (V, 9). Sozomen praises his grandfather's skill as an exegete of the \*Bible and acclaims the 'other family', some of whom he knew when they were very old, for founding the first churches and \*monasteries in the area (*HE* V, 15, 14–17; cf. V, 10, 1). The pagans of Gaza were still keen to maintain their temples in the 390s (VII, 11), but \*Jerome predicted in a \*letter of 403 that the Temple of Zeus would soon fall (*ep.* 107, 2) and in his *Commentary on Isaiah* written in 410 expressed satisfaction that the temple was now a church (Book VII, 17, on Isaiah 17:1–3 = PL 24, 241D).

It was, in fact, by the example of monks, says Sozomen (III, 14, 28), that many in Gaza and the villages of its territory were led to embrace Christianity, as early as the time of \*Constantius II. S. Hilarion, a local man from the \*village of Thabatha, was inspired by S. \*Antony of \*Egypt while a student in \*Alexandria and returned to become one of the first recorded monks of the Gaza area. Sozomen gives details of his \*asceticism. Though he was initially buried on \*Cyprus, his \*relics were later brought back to Palestine and an annual \*festival established in his honour by his pupil Hesychius (III, 14, 21–7), two (Roman) miles from the city; his tomb was still being venerated in the late 6th century, when the \*Piacenza Pilgrim found Gaza a splendid city inhabited by decent people who were fond of pilgrims (33).

Hilarion's contemporaries and disciples were followed by many monks who lived in the desert around Gaza (VI, 32), and in the 6th century some of them acquired considerable renown. Foremost among them were the two 'spiritual old men', \*Barsanuphius and John who lived as hermits under the aegis of the Monastery of Abba Seridus at Thabatha in the early 6th century and gave level-headed written responses (which survive) to written questions put to them by troubled folk. Their pupil \*Dorotheus of Gaza had been trained in \*medicine at \*Antioch and cared for the sick as well as writing on matters of spirituality. The historical sources mention at least ten monasteries in the area, but so far only two of these are known from archaeological evidence; that of Seridus (Deir e-Nusseirat) south-west of the city, and another near Khirbet Jemameh to the east. This dearth of evidence is due to the fact that the region has remained densely populated down to the present day and many older buildings have therefore been plundered for building materials, thereby

destroying much of the archaeological evidence for the ancient surroundings of the city.

At the same time that monasteries were forming in its territory, the city of Gaza itself acquired a renowned concentration of \*rhetoricians whose orations and writings combined Christian faith and classical elegance. The \**grammaticus* \*Timotheus wrote on exotic animals, the \**grammaticus* \*John wrote a poetic \*ecphrasis on a cosmological wall painting in a \*bathhouse, the rhetorician \*Aeneas wrote on philosophical topics in a manner compatible with Christianity, \*Procopius of Gaza (d. 535/6) composed ecphrasis, \*panegyric, and numerous \*letters, including some which indicate how he maintained his \*friendship with former students. \*Choricus, a pupil of Procopius, composed an ecphrasis on the Church of S. Stephen and another on the Church of S. Sergius, which were both built in the city during this period. His description of the \*mosaics of the Church of S. Sergius includes detail about images of the childhood of Christ which makes them sound like narrative paintings. Though the purpose of ecphrasis is more evocation than accurate and detailed description (A. Grabar), Choricus' account does indeed resemble surviving images. The high-flown description of a wooden vault in the Church of S. Stephen has also attracted scholarly attention (Maguire).

Alongside its prominent Christian community, Gaza also maintained a significant Jewish population, whose prosperous condition is illustrated by the presence of a \*synagogue discovered on the shore at Gaza-Maiumas. The building is dated by an \*inscription in \*Greek to 508/9 and was extensively decorated with mosaic pavements. One of these represents King David, identified by a Hebrew inscription, in the robes of a Late Roman emperor and in the iconography commonly employed for the figure of Orpheus, but with a \*nimbus, an unusual fusion of artistic associations.

Gaza was brought under Muslim rule very early in the \*Arab conquest of Palestine, in the time of the first \*Caliph \*Abu Bakr (632–4), by the general \*Amr b. al-'As (al-\*Baladhuri, *Futūḥ al-Buldān*, I, 167–8 and 213).

**Gaza, schools and rhetoric at** The 4th-century *Expositio Totius Mundi* (32) mentions the quality of listeners (i.e. students) in \*Gaza, but it was in the late 5th and early 6th centuries that what is now known as the 'School of Gaza' flourished. The 'School' was a loose grouping of Christian orators and intellectuals some of whom had a teacher–pupil relationship, as in the case of \*Aeneas, \*Procopius, and \*Choricus who taught \*rhetoric and served as public orators. Their \*letters and speeches reveal their contacts with prominent citizens and dignitaries and the continued role of schools in producing a classically educated Christian elite. Their rhetorical output is characterized by its application of traditional Hellenic forms such as epithalamia and \*funeral orations to fit Christian subjects as well as experiments with new forms of poetry and prose composition. Procopius and Aeneas also composed works of \*Bible interpretation and \*philosophy respectively. RW

**Gaza amphorae and Gaza wine** Long, bullet-shaped transport jars with rough loop handles (known as 'LRA 4'), produced in the hinterland of \*Gaza and Ashkelon between the late 4th and 6th/early 7th century, widely distributed around the Mediterranean and far beyond, and probably used in the Gaza \*wine trade.

Though not mentioned in the Tetrarchic \*Prices Edict, Gaza wines were esteemed by \*Sidonius Apollinaris (*Carmen*, 17, 15) and \*Cassiodorus (*Variae*, XII, 12, 3) and mentioned by \*Isidore of Seville (*Etymologiae*, XX, 3, 7). \*Corippus (*In laudem Justiniani*, III, 88) claims that they (with many others) adorned the imperial table, and \*Gregory of Tours categorizes Gaza wines, along with those of Latium, as among the 'more potent' (*HF* VII, 29). Gregory also tells a story (*Glory of the Confessors*, 64) about a dishonest \*subdeacon at \*Lyons

who substituted vinegar for the Gaza wine offered at the \*Eucharist by a \*widow for the repose of her husband's soul and was discovered when the irate deceased appeared to his widow in a \*dream. JV; OPN

**Ge'ez** See ETHIOPIAN LANGUAGES.

**Geiseric** \*King of the \*Vandals (c.428–77). Geiseric's origins are obscure. \*Sidonius implies that he was illegitimate (*Carmen*, II, 358–60), and succeeded his half-brother Gunderic, at an uncertain date (\*Hydatius s.a. 428). Geiseric orchestrated the Vandal crossing from \*Spain into \*Africa, and then a series of campaigns in Africa against \*Boniface and later \*Aspar, culminating in the agreement made at \*Hippo Regius in 435. In 439, Geiseric occupied \*Carthage, and began raids into \*Sicily and southern \*Italy which halted only with formal imperial recognition of the Vandal kingdom of Carthage in 442. The details of this treaty are preserved imperfectly by \*Victor of Vita (I, 13) and \*Procopius (*Vandalic*, III, 4, 12–15; III, 5, 12–17). Geiseric further consolidated his position by betrothing his eldest son \*Huneric to the imperial princess \*Eudocia, by completely reorganizing the Vandal army (Procopius, *Vandalic*, III, 5, 18–21), and by redefining the Vandal law of succession to privilege his own family (\*Jordanes, *Getica*, 169).

Geiseric remained active in Mediterranean politics throughout his life. Following the death of \*Valentinian III, a period of sustained conflict with both halves of the Empire began. In 455, the Vandals and their allies sacked \*Rome and returned to Carthage with considerable plunder, including the imperial princesses \*Eudoxia, Eudocia, and \*Placidia (Procopius, *Vandalic*, III, 5, 1–7). Shortly thereafter, the Vandals occupied Sicily, \*Corsica, \*Sardinia, the \*Balearics, and parts of the North African coast and initiated maritime raids which were to continue for more than a decade (Victor of Vita, I, 51). Geiseric successfully repelled imperial expeditions in AD 441, 460, and 468/70, and earned a reputation for military genius (Procopius, *Vandalic*, III, 3, 24).

Geiseric was a \*Homoean ('Arian') and persecuted the Homoeousian (Nicene, 'Trinitarian') Church in Africa, although persecution was most intense under his successor Huneric, as Victor of Vita records. Geiseric's reign was a time of political and economic stability in Africa; he passed on a strong kingdom at his death in 477. Said by \*Jordanes (*Getica*, 168) to have been of medium height, lame from a riding accident, and somewhat taciturn, he was a brilliant politician

and power broker during a period of considerable upheaval.

**Gelasian Decree** A Latin catalogue of acceptable and objectionable texts, including lists of the books of the Old and New Testaments. The catalogue was traditionally attributed to Pope \*Gelasius I (\*Bishop of \*Rome, 492–6). The current scholarly consensus is that several parts of the text may stem from Roman traditions in the era of \*Damasus (Bishop of Rome, 366–84), but the current form of the text probably originates from south \*Gaul in the first half of the 6th century. The objectionable texts include a large number of pseudonymous books attributed to apostolic authors as well as some popular apostolic acts, including the *Acts of Paul and \*Thecla*.

GED

**Gelasius, Pope** \*Bishop of \*Rome 492–6. One of only a handful of post-Constantinian Roman bishops in Late Antiquity who was neither a native of \*Rome nor a member of the provincial \*aristocracy, Gelasius probably owed his election to his close association with his predecessor, Felix III. Gelasius' tenure coincided with the so-called \*Acacian Schism, which severed communion between Rome and the Eastern Churches from 484 to 518. Gelasius famously criticized the Roman \*emperor, \*Anastasius I (491–518), for his failure to yield to his authority in ecclesiastical matters. His *Ad Anastasium* offers a rhetorically sophisticated, if wishful, assertion of international pre-eminence on the basis of the \*see of Rome's connection to S. Peter. Gelasius is also widely known for his condemnation of the \*Lupercalia \*festival, a \*pagan ritual that was still patronized by influential Roman aristocrats. A substantial corpus of \*letters and theological treatises survives in overlapping but distinct critical editions and his life is summarized in *\*Liber Pontificalis*, 51.

**Gelasius of Caesarea** (r. 367–before 400) A nephew of \*Cyril of \*Jerusalem, Gelasius belonged to the Homoeousian tendency within \*Arianism and was deposed as Bishop of \*Caesarea in \*Palestine in 373 when the \*Homoeans reasserted power. Like his uncle, Gelasius realigned himself after 379 with the supporters of the doctrines of the \*Council of Nicaea and returned to his see. As early as the late 5th century, Gelasius is said to have written a *Church History* (in particular by \*Photius, *Bibliotheca*, 89). Supposedly running from \*Diocletian to 387 or 395, this *History* has been seen as the first continuation of the *Church History* of \*Eusebius of Caesarea and as the main source for that of \*Rufinus. In fact, the extant fragments rely on \*Socrates and Rufinus, and are closely related to those of a \*Greek translation of Rufinus. The work read by Photius must therefore have been pseudepigraphical. Either the original work had been heavily interpolated or an unknown author composed a compilation about 4th-century church history in the second half of the 5th century.

Gelasius of Caesarea must not be confused with the anonymous author of the so-called *Syntagma*, a 5th-century history of the Council of Nicaea, which used to be attributed to \*Gelasius of \*Cyzicus.

**Gelasius of Cyzicus** (5th cent.) Name given to the anonymous author of an ecclesiastical history written in \*Greek around 480, which survives in part. \*Photius (15, 88, 89) attributed this history to one Gelasius of \*Cyzicus, to distinguish him from \*Gelasius of \*Caesarea, continuator of the *Ecclesiastical History* of \*Eusebius. The error was compounded by an early editor who mistook a manuscript's marginal 'Gelasius of Cyzicus' for the author's name. The anonymous author was certainly a \*priest's son from Cyzicus. His main source was a historical compilation on the \*Council of \*Nicaea prepared by Dalmatius, \*Bishop of Cyzicus. The anonymous history was inspired by an encounter in \*Bithynia with opponents of \*Chalcedon who were supported by the \*usurper \*Basiliscus (476). It comprises

three books: the first covers \*Constantine I, the second the Council of Nicaea, and the third subsequent events to AD 335.

**Gelimer** \*King of the \*Vandals and \*Alans AD 530–4. Gelimer became king after deposing his distant cousin \*Hilderic in a coup, and ruled until the \*Byzantine invasion of \*Africa in 533–4. His short reign was beset by military crises. There was persistent conflict with the \*Moorish polities south of the kingdom; \*Lepcis Magna seceded from Vandal control as a direct result of these difficulties, and the garrison in \*Sardinia rebelled. A substantial military campaign brought Sardinia back under Vandal control, but this commitment of troops, combined with continuing frontier conflict in the south, fatally compromised Gelimer's military response to the \*Byzantine invasion of Africa, led by \*Belisarius.

Following his defeat by Belisarius at \*Tricamerum in late 533, Gelimer retreated to a Moorish \*fortification on Mons Pappua, probably on the \*Numidian frontier (\*Procopius, *Vandalic*, IV, 3, 1–22; IV, 4, 28–30). After a prolonged siege, Gelimer surrendered and was brought to \*Constantinople in triumph. Procopius' comments on Gelimer's eccentric behaviour following his defeat, including bitter laughter at the vicissitudes of Fate and his rejection of the title \*patricius, are best read as a reflection of the historian's own philosophy, rather than of Gelimer's stoicism (Procopius, *Vandalic*, IV, 7, 1–17). Following his public submission to \*Justinian I in the \*Circus at Constantinople, Gelimer lived, unrepentantly \*Homoean in faith, on large \*estates granted him in \*Galatia (*Vandalic*, IV, 9, 1–15).

**Genesis Rabba (Bere'shit Rabba)** An anonymous rabbinic commentary on Genesis in Hebrew and Aramaic from 4th–5th-century AD Palestine. It provides at least one quotation-comment unit for most verses in their sequence, and often more than one. The comment statements are mostly paraphrases of the biblical meaning as seen by the interpreter (see MIDRASH, 1). Most statements are presented as a \*rabbi's utterance, introduced by formulae such as, 'R. X said:...', or 'R. X and R. Y [disagreed about this]'. Adjacent quotation-comment units (see MIDRASH, 2) are not integrated with each other, but merely juxtaposed. The sequential quotation-comment units are found alongside

information in a variety of other formats, such as additional quotation-comment units for verses from elsewhere in Scripture, hermeneutic parables, and short narrative vignettes about rabbis (usually in Galilean Aramaic). About 100 so-called *parashiot* ('chapters') divide the large work, and their number varies somewhat in the manuscripts. Each chapter begins with one or more Petiḥah-like units (see LEVITICUS RABBA), which leads the reader from an apparently unconnected biblical verse to the next Genesis verse in line for treatment. The sequential commentary then continues to the next 'chapter' beginning. These divisions are irregular and do not conform to a known principle.

**genius** Generic term for a minor spirit, 'the natural god of each place or thing or person' (\*Servius, *Commentary on Vergil Georgics*, I, 302), allotted by Nature when the child is born (\*Ammianus, XXI, 14, 3) or the \*city is founded (\*Symmachus, *Relatio*, III, 5 and 8; cf. \*Prudentius, *Contra Symmachum*, II, 70–4). \*Lactantius (*Inst.* II, 14, 12–14) says that \*Latin *genius* is the equivalent of \*Greek *daemon*, but takes a Christian view of such spirits as \*demons who attach themselves to all men and houses, appear in \*dreams, and cause illness. \*Theodosius I in 392 prohibited all offerings to household gods, in particular of unmixed \*wine to the genius of the house (CTh XVI, 10, 2).

Before \*Constantine, Romans swore \*oaths on the Genius of the \*Emperor (Tertullian, *Apology*, 32; Minucius Felix, 29, 5). The Genius of the Roman People was shown on the reverse of the \*bronze \*coinage of the \*Tetrarchy and the Genius Publicus allegedly appeared to \*Julian in a dream to assure him that he should consent to his \*acclamation as \*Augustus by his \*army (Ammianus, XX, 5, 10). Some Christians in the 4th century were prepared to take a secularized view of the genius of their \*city: 'I know as well as you do, that it is only a stone,' said \*Augustine in a \*sermon at \*Carthage (62). Elements of the \*imperial cult survived, emptied of pagan religious significance, into the 6th century, and similarly \*personifications of cities continued to be represented in official \*art even longer.

The iconography of Christian \*angels, with wings suggesting speed and power, is based on those of depictions of \*Victory and of personifications of genius, as well as on descriptions in the \*Bible, such as that of Isaiah 6:1–8.

**Gennadius** \*Magister Militum (c.578–85) and first known \*Exarch (c.591–8) in \*Africa, where he had defeated the \*Moors in c.578. He was a correspondent of \*Gregory I, whose evangelizing initiatives in \*Sardinia and \*Corsica he supported. AHM  
PLRE III, Gennadius 1.

**Gennadius of Marseilles** (fl. late 5th cent.) Presbyter and theologian. His most important surviving work is his continuation of \*Jerome's *De Viris Illustribus* cataloguing Eastern and Western Christian writers of the 5th century. Our sparse knowledge of Gennadius' life derives from that work, where he identifies himself as a presbyter of Massilia (\*Marseilles) and contemporary of \*Gelasius I of \*Rome (492–6). Gennadius also wrote numerous works now lost, including polemics against \*Nestorius, \*Eutyches, and \*Pelagius. He is the probable author of the Pseudo-\*Augustine treatise *Liber Ecclesiasticorum Dogmatum* which circulated widely in the Middle Ages. Gennadius criticized Augustine in *Vir. Ill.* and his theology is often described as 'Semi-\*Pelagian'.

**genre, literary, Greek** Late Antiquity saw the continuation of many existing literary and rhetorical genres as well as innovative developments. In the domain of oratory, many subtypes of epideictic speech for different functions and occasions were defined in treatises by \*Menander Rhetor and others. Despite its increased importance, epideictic did not eclipse other rhetorical genres: deliberative oratory, for example, took the form of speeches of advice addressed to civic and imperial authorities by speakers such as \*Libanius and \*Themistius. The specific needs of Christian communities gave rise to the \*sermon, combining exegetical and rhetorical traditions. Still in prose, forms originating in the \**progymnasmata*, such as \*ecphrasis and *ethopoiia*, came to be independent forms, particularly in 6th-century \*Gaza. The increasingly popular genre of \*biography (e.g. \*saints' lives and lives of \*philosophers) reflects the influence of encomium and, occasionally, of the novel (e.g. in the case of the *Life and Miracles of S. \*Thecla*). Polemic and apologetics required innovative forms, as in the writings of \*Eusebius of \*Caesarea incorporating extensive quotations of sources.

Poetry, which had been eclipsed by prose forms during the \*Second Sophistic, revived from the 3rd century onwards, particularly in \*Egypt. In addition to narrative and didactic poems, \*hymns, and \*epigrams, the increasing convergence between poetry and \*rhetoric is evident in verse encomia by \*Pamphilius and others, continuing Hellenistic practice, and encomiastic ecphrases celebrating buildings (by \*Paul the \*Silentiary and \*John of Gaza). The theological and autobiographical poems of \*Gregory of \*Nazianzus represent a new development that was highly influential in later centuries. In the 6th century, the verse homilies of \*Romanus the Melodist represent a new departure, later known as the \**kontakion*.

RW

**genre, literary, Latin** Of the major genres of \*Latin literature in the classical period, only \*epic continues to flourish in Late Antiquity, developing new subgenres (panegyric, biblical, \*hagiographic epic). With the exception of the \**Querolus* there is no \*drama, and though there are satirical elements in largely non-satirical works, no independent verse satire. Menippean satire is represented by \*Martianus Capella, \*Fulgentius (*Mythologiae*), and \*Boethius (*Consolation of Philosophy*). Although topics from love elegy occur in Late Antique writers, love elegy itself is not written (with the possible exception of \*Maximianus). In lyric poetry the most important innovation is the Christian \*hymn, as practised pre-eminently by \*Ambrose. Generic

indeterminacy is characteristic of much of the poetry of the period. Works like \*Ausonius' *Mosella* and \*Prudentius' *Peristephanon* combine a wide range of elements that defy a single generic affiliation. Epideictic literary forms are especially productive, not only in the writing of prose and verse \*panegyric, but also in \*Paulinus of Nola's *Natalicia*, written to celebrate Felix of Nola's annual festival, and in the thriving tradition of verse epithalamia. Christian poetry often combines traditional verse forms with the emerging prose genres of, for instance, apologetic, anti-heretical, and dogmatic treatises, or commentaries on the \*Bible. MJR

**gentiles** Category of \*barbarian settlements managed by the western part of the Roman state, similar to \**laeti*. The early 5th-century \**Notitia Dignitatum*, in an incomplete section (occ. XLII), records a number of *praefecti Sarmatarum gentilium* in \*Gaul and \*Italy. These prefects held administrative positions and were not commanders of military units. Similar settlements of *gentiles* were found in \*Africa along the \*frontier in the early 5th century. Some guard regiments of \**scholares* were also named *gentiles*. (*Not. Dig.*, or. XI, 6 and 10). HE

**geographical texts, Persian** Two Middle \*Persian geographical texts survive. The *Šābrestānīhā ī Ērānšahr* (*The Provincial Capitals of Iran*), gives details of the provinces and \*cities of the \*Persian Empire and beyond, and their historical importance for \*Zoroastrianism. It divides \*Eranshahr (the land of the Iranians) into four regions (*kusts*), namely \*Khorasan (north-east), Khwarwaran (south-west), Nemroz (south-east), and Adurbadagan (i.e. Azerbaijan). The usual term for the north is avoided, perhaps because of the general association of the north with the forces of evil.

There is also a short text entitled *Abdihud Šābagih ī Sīstān* (*Wonders and Magnificence of Sīstān*) which reports the important history of the province of \*Sagastan in the south-east of the Persian Empire. TD

**geography** No geographical genius like \*Ptolemy appeared in Late Antiquity. Geographers of the age were mostly concerned to comment upon past achievements, but they also strove to add information about regions unknown to the past, and to imbue descriptions

of the world with a Christian consciousness. Geographical theory—the sphericity of the Earth, the Earth as centre of planetary and stellar orbits, and the division of the Earth into \*climes and zones—was bequeathed to the Middle Ages by such works as the *De Natura Rerum* of \*Isidore of \*Seville (c.615) and of \*Bede (c.703). These handbooks included a description of the Heavens as well as the Earth, and linked their movements to the all-important calendrical calculations necessary for finding the date of Easter. A more sophisticated treatment, which attracted numerous glosses, was \*Martianus Capella's *De Nuptiis Philologiae et Mercurii* (5th cent.), where a theoretical exposition of geography came from the mouth of the \*personification of \*Geometry.

Geographical descriptions appeared as part of histories, such as \*Orosius' description of the world in his *Seven Books Against the Pagans* (417). \*Jordanes' *De Origine Actibusque Getarum* (551) began with a description of 'Scandza' and Scythia, while Bede's *Historia Ecclesiastica* (731) started out with information on the British Isles, whose matter owed much to Orosius and whose manner something to Isidore's *Laus Spaniae*.

In his *Etymologiae* Isidore (622/33) provided a lengthy list of \*provinces, \*cities, rivers, mountains, and islands, sorted out by continents. Brief treatises, such as \*Julius Honorius' *Cosmographia* (c.400), and longer ones, such as the work of the \**Anonymi Cosmographia* (Ravenna Cosmographer; c.700), covered the Earth with place names largely fossilized at the time of the \*Tetrarchy. \*Marcian of Heraclea made an effort to bring the work of Ptolemy up to date, substituting distances for coordinates.

Late Roman itineraries and *periploi* (sailing routes) include the \*Antonine Itinerary of the late 3rd century. These itineraries may or may not have been based on \*maps, or may have been originally accompanied by maps. The Peutinger Map is the only one to have survived in cartographic format, albeit in a medieval copy. \*Pilgrimage was a new motive for travel, and the itinerary of the \*Bordeaux Pilgrim (333) recounts the measured stages of travel from \*Gaul to \*Jerusalem and back to \*Milan.

\*Augustine and \*Cassiodorus had been eager to employ the secular knowledge of antiquity for Christian purposes, and geographical theory became involved with interpretation and commentary on the \*Bible. The holy places of the eastern Mediterranean were catalogued in the *Onomasticon* of \*Eusebius of \*Caesarea (c.300), translated by \*Jerome as *De Situ et Nomini-bus Locorum Hebraicorum Liber*. Bede, in *De Locis Sanctis* contributed to this genre. Eventually sites of \*martyrdom, noteworthy \*monasteries and hermitages, and preaching sites of the Apostles were incorporated in lists of sacred places.

One peculiarly Roman document was the *\*Notitia Dignitatum*, an illustrated vision of the Roman world divided up in accordance with administrative responsibilities. Although geography had no formal place in the scholarly curriculum, treatises of the type printed in *Geographi Graeci Minores* and *Geographic Latini Minores* were copied and recopied, and used for the study of secular and biblical history. **geometry** Late antique geometry was characterized by meta-mathematical reflection upon canonical works. Its character is best exemplified in the lemmata which *\*Pappus* gathered in his *Collectio* in order to fill in gaps in arguments for specific propositions in treatises of the 'analytical corpus'.

Most of these lemmata are of the kind whose representative specimen is constituted by *\*Euclid*, *Elements*, II, 1–10: these propositions assume as given a straight line cut into equal and/or unequal segments and it is required to show that suitable combinations of squares and rectangles constructed by means of these segments are equal. *Pappus*' approach displays a feeling for the 'structure' of a mathematical proposition: the linear lemmata are the core of a proof and the fact that the same lemma can be applied in disparate configurations testifies to its belonging to an order of mathematical reflection that extracts from a particular configuration its 'essential geometrical content', namely sequences of points on a straight line.

This feeling for structure may derive from such cultural factors as the canonization of certain literary products and the dominance of *\*rhetoric* in the school curriculum, entailing attention to the building blocks of an argument. The lemmata could become a central research tool for those obsessed, as late mathematicians were and *Pappus* for one was, by the ideology of the 'discovery', and by reconstructing the heuristic (analytical) methods of the 'ancients'.

While not resorting to such 'lemmatic fragmentation', *\*Serenus* carried to an extreme the scholarly approach typical of *Apollonius*. As well as commenting on *Apollonius*' *Conics*, *Serenus*' *Section of a Cone* studies the triangular sections passing through the vertex, a subject that was paid only passing attention in the very first propositions of *Apollonius*' treatise. *Serenus*' *Section of a Cylinder* shows that the generic plane section of a cylinder is an ellipse, of course defined as a conic section. *Serenus* sets out the definitions and the first

twenty propositions of this tract in strict parallelism with the corresponding portion of *Conics* I; in this way, he recovers in succession all properties of the ellipse.

*\*Cassiodorus* claims that *\*Boethius* made *Euclid* known in *\*Latin* (*Inst.* II, 6, 13). For *\*Isidore of Seville* *geometria* was in origin a technology for geographical measurement (III, 10); for *\*Martianus Capella* (*De Nuptiis*, VI) that remained its principal interest. FA

R. Netz, *The Transformation of Mathematics in the Early Mediterranean World: From Problems to Equations* (2004).

**Geoponica** (c.950) Byzantine agricultural compendium compiled under *Constantine VII Porphyrogenitus* (913–59). With a series of additions and modifications not yet perfectly understood, it largely recasts the 4th-century work of *Vindonius \*Anatolius* and its 6th-century adaptation by *\*Cassianus Bassus*. Ancient authorities named in the context are reliable, while those attached to chapter headings are problematical and apparently reflect a late stage of editorial intervention. In only rare cases do contents post-date Late Antiquity (e.g. 12, 1, discussing growing seasons for *\*vegetables* near *\*Constantinople*). RR

ed. H. Beckh (1895).

On the Syriac version, *GEDSH*, 173 s.v. *Geoponica* (Brock).

**George, Bishop of the Arab Tribes** (d. 724) Noted polymath and *\*bishop* for the *\*Arab* tribes in the area of *\*Aleppo*. George represents the last of the great *\*Syriac Orthodox* (or *\*Miaphysite*) philhellènes of the 7th and 8th centuries.

Born probably around AD 660, George was ordained Bishop of the Arab Nations (*'amme*), or tribes, at the order of *Athanasios II* of Balad, *Syriac Orthodox \*Patriarch* of *\*Antioch*, in November 687. George's three tribes, called in *\*Syriac* the 'Aqulaye, the Tu'aye, and the Tanukaye, were *\*bilingual* in *Syriac* and *\*Arabic*. George himself knew both *\*Greek* and *Syriac*, and he translated *Aristotle's Categories*, *On Interpretation*, and Books I–II of the *Prior Analytics* from *Greek* into *Syriac* and wrote introductions to these texts. George composed other works also, including a verse homily on the life of *\*Severus of Antioch*, scholia to the orations of *\*Gregory of \*Nazianzus*, and a commentary on the *\*liturgy*. He also completed the *\*Hexaemeron* of *\*Jacob of \*Edessa* after *Jacob's* death in 708.

Eleven of George's *\*letters* are extant; covering a number of different topics, they are important for

George, S.

understanding the development of early \*Islamic theology, or *kalām*. George seems to have been a student of Athanasius of Balad and an associate of Jacob of Edessa and \*John of Litharb; to judge from his letters, George seems to have lived in an unnamed \*monastery. A strong circumstantial case can be made that he spent time at \*Qenneshre, the most important intellectual centre of the Syriac Orthodox Church in the 7th and 8th centuries.

Barnes, *Hagiography*, 318–21.

**George Cedrenus** (late 11th/early 12th cent.) A Byzantine scholar who wrote a chronicle (*Synopsis Historiarum*) from Creation to 1057. For Late Antiquity he organizes his content by imperial reign and derives it mainly from the (unpublished) 10th-century *Chronicle* of Ps.-Symeon with other material from \*Sozomen, \*Procopius of \*Caesarea, \*Theophylact Simocatta, \*John of \*Antioch, \*Chronicon Paschale, \*Theophanes, and \*Georgius Monachus. BC

ed. (with LT) Immanuel Bekker (CSHB, 1838–9). References to Cedrenus' *Chronicle* are cited in *ODLA* by page and line number of this edition.

R. Maisano, 'Note su Giorgio Cedreno e la tradizione storiografica bizantina', *RISBS* 3 (1983), 237–54.

**George Monachus Hamartolus** (9th cent.) George the Monk and 'sinner', author of a Byzantine \*chronicle extending from Creation to 842 and written in the 860s/870s. His compilation drew mainly on the chronicle of \*George the Syncellus, as well as utilizing for Late Antiquity \*Eusebius of \*Caesarea, \*Theodoret, \*John Malalas, and \*Theophanes. The *Chronicle* divides into four books: the first covers the period from Adam to Alexander the Great, the second the historical period covered by the Old Testament, the third Roman history from Julius Caesar to \*Constantine I; and the fourth from the 330s to 842 (death of the \*Emperor Theophilus). ed. C. De Boor, 2 vols. (1904; repr. 1978).

**George of Cappadocia** \*Homoean \*Patriarch of \*Alexandria (February 357–December 361). George began his career as a contractor for military supplies and settled on an estate in \*Cappadocia, where he lent books to the future \*Emperor \*Julian (Julian, *ep.* 23 Wright). He was appointed by \*Constantius II to replace the exiled \*Athanasius as Patriarch of Alexandria (Athanasius, *Apology for his Flight*, 6–7; *History of the Arians*, 75; *Festal Index*, 29 and 30). Ousted by the populace in October 358 (\*Athanasius, *Historia Acephala*, 2, 3–4), he attended the \*Council of \*Ariminum in 359. After his return in November 361, George persecuted \*pagans and Nicene Christians (\*Sozomen, *HE* IV, 10, 30). Following the accession of Julian in 361, the Alexandrian populace lynched George (Julian, *ep.* 21, cf. *ep.* 24 Wright; \*Ammianus, XXII. 11, 8–11; *Historia Acephala*, 2, 8–10). Julian reacted by sequestrating George's substantial library for his own use (*epp.* 23 and 38 Wright). CJH

**George of Choziba** See CHOZIBA.

**George of Cyprus** (fl. late 6th/early 7th cent.) Author of the *Descriptio Orbis Romani* written in \*Greek in the early 7th century. The *Descriptio* is contained within a 9th-century list of Byzantine bishoprics compiled by Basil the Armenian. The first part of Basil's work is organized by bishoprics of the see of \*Constantinople with each headed by its metropolis, while the second consists of a list of civic entities, not bishoprics: \*cities, towns, and fortresses organized by \*province. It starts with \*Italy followed by \*Africa, \*Egypt, and \*Oriens. The south-east European provinces are omitted, probably because the 9th-century manuscript is incomplete. Lapithos is in the list of towns in \*Cyprus and Basil notes this as the birthplace

of George, the writer of the latter list (*Descriptio*, 1106–7). Nothing more is known of George. Analysis of the locations and their status suggests the *Descriptio* was written in the early 7th century. BC

ed. H. Gelzer, *Georgii Cyprii Descriptio Orbis Romani* (1890), with detailed annotation.

ed. E. Honigsmann (with introd. and comm.), *Le Synekdemus de Hierokles el l'Opuscul geographique de Georges de Chypre* (1939).

**George of Pisidia** (c.580–c.632) A \*deacon of the Great Church of the \*Holy Wisdom at \*Constantinople and close to the \*Patriarch Sergius. At different points he was responsible for relations with the imperial court (as a \*referendarius) and for patriarchal \*archives (as *chartophylax*).

He was recognized by both contemporaries and later Byzantine scholars as an outstanding and skilled poet on both imperial and religious themes. Most of his extant poems were commissioned by Sergius or the \*Emperor \*Heraclius. His earliest poem (610/11) celebrated the \*accession of Heraclius, followed in 613 by the *In Sanctam Resurrectionem* honouring the first birthday of the emperor's son Constantine (later \*Constantine III).

His first major work was an encomium in three cantos on Heraclius' 622 expedition against the Persians (*Expeditio Persica*) commissioned by the emperor shortly afterwards and recited at the imperial \*court. Now with an established reputation, in 626 George produced a \*panegyric for the general \*Bonus (*In Bonum Patricium*) entrusted with defending the capital against the besieging \*Avars, followed by his eyewitness account of the \*siege (*Bellum Avaricum*) commissioned by Patriarch Sergius and attributing victory to the Virgin \*Mary. In June 628 George recited his *Heraclias* honouring the victory of Heraclius over the Persians and utilizing bulletins reaching the imperial capital from the military front.

Heraclius next commissioned the *Contra Severum*, a Christological exposition in opposition to the theology of the leading \*Miaphysite \*Severus, Patriarch of \*Antioch in the early 6th century. The *In Restitutionem Sancti Crucis* was a spontaneous composition when the news reached Constantinople of the restoration of the Holy \*Cross to \*Jerusalem in 630. His longest poem, the *Hexaemeron* (629/30), was an elaborate disquisition concerned with the Six Days of Creation and stimulated by Sergius. George's many other works include \*epigrams (including several on local Constantinopolitan buildings) and a prose \*panegyric on the Persian military \*martyr S. Anastasius.

All his poems are sophisticated in terms of literary devices, especially figurative language, as well as classical and biblical learning, with his panegyrics

distinctively constructed in iambic trimeter. They were used by chroniclers such as \*Theophanes and remain valuable historical sources for religious and political culture and events in the reign of Heraclius. BC

**George of Resaina** Very little is known about George (or maybe Gregory) of \*Resaina, other than his authorship of an early \*Syriac *Life* of \*Maximus the Confessor. He claims to have been a contemporary of Maximus in \*Palestine in the 630s, and his account was most likely written before 680. Opinion is divided on the value of the life, of \*Maronite provenance. Although openly hostile to Maximus, it may contain some accurate historical details. AL

ed. S. Brock, *AnBoll* 91 (1973), 299–346.

**George the Syncellus** (fl. late 8th/early 9th cent.) Chronicler; assistant (*syncellus*) to Tarasius, \*Patriarch of \*Constantinople (784–806) and later (810) a monk. He wrote a chronicle (*Ecloga Chronographica*), from the Creation to \*Diocletian, in which extracts from previous writers (especially Sextus Julius Africanus, \*Eusebius of \*Caesarea, and his 5th-century \*Alexandrian redactors Panodorus and Annianus) were harmonized and integrated. The chronicle was continued by his friend \*Theophanes using materials already collected by George. BC

**Georgia** A country in the south-western and central foothills of the Caucasus Mountains. Georgians in Late Antiquity and the early Middle Ages called themselves *Kartli*. After the final unification of Georgia, *Sakartvelo*, a more general term, meaning 'place where Georgians live', was and is still used to designate Georgia. The term 'Georgia' is nowadays usually used to translate *Sakartvelo*, and refers to both eastern and western Georgia. The etymology of the word 'Georgia' is not agreed, but the word is not attested in European languages until the Crusades. It is probably related to the *Grg*, *Jrj*, *Grj* root used in various Semitic languages such

as \*Syriac and later \*Arabic to refer to \*Iberia, and probably in particular to the Armeno-Georgian march-land Gogarene (Arm. Gugark', Geo. Gugareti).

In Antiquity and Late Antiquity, Greeks and Romans used Iberia to refer to the kingdom occupying the territory that roughly coincides with the south central Caucasus. The Georgian word for the same region was *Kartli*, now the central province of Georgia. In Late Antiquity, western Georgia (west of the Likhi range and along the eastern coast of the Black Sea) was known as \*Lazica, in Georgian \*Egrisi. The root *Egr* is still preserved in the name of the western Georgian province of *Sa-m-egr-el-o*. The two entities, Lazica and Iberia, were formed and developed more or less independently, although medieval Georgian narratives prefer to speak of a pan-Georgian union from the very beginning of Iberian statehood; they attribute the unification of all Georgian lands to the legendary first King of Iberia Parnavaz (4th–3rd cent. BC) and to his legendary Laz ally Kuji. The same role of the unifier of all Georgia was assumed by the late 5th-century King \*Vakhtang I Gorgasali, although it is unlikely that either king achieved a unification in reality.

In the 4th century, Lazica became especially prominent and subdued several neighbouring tribes including the \*Abasgians, Apsilae, and Sanigs. Lazica also managed temporarily to take over the Iberian lands in western Georgia, such as the dukedom of Argveti. The centre of Lazica was \*Archaeopolis (Tsikhe-Goji). The highlight of the second half of the 5th century was the reign of King Vakhtang I Gorgasali, the semi-legendary Georgian king, who, according to the Georgian tradition, was successful in uniting most of the Georgian lands and gained ecclesiastical independence for Iberia, although Lazica remained a metropolis under the \*Patriarch of \*Constantinople until the 8th century. The unification of the two Georgian churches of Lazica and Iberia took place only after the 9th century, although events surrounding the unification are still a matter of speculation. Despite this, both \*Iberia and \*Lazica shared similar geopolitical aspirations in their opposition to the \*Persian Empire; both kingdoms remained allied to the Roman Empire and both accepted and defended the Christology defined at the \*Council of \*Chalcedon.

The first half of the 6th century was a period of Persian dominance in Georgia. The monarchy was abolished in Iberia c.523, and would be restored only in the late 9th century. In 542, during the so-called Lazic wars, the Persian Shah \*Khosrow I invaded Iberia and entered Lazica through the Likhi mountain range, where he met King \*Gubaz II, at that point his ally. The war in Lazica ended in 562 with the land remaining under Roman control. The failure to annexe western Georgia also undermined Persian positions in eastern

Georgia, as a result of which, in c.570, the Iberians were able to reassert their autonomy. The Iberian \*Erismtavaris enjoyed Roman sympathy and were honoured with various Roman titles, the most common of which was \*Curopalates.

The process of true political and ecclesiastical unification of the Georgian lands and principalities began in the 8th century, when Lazica was integrated into the newly formed kingdom of \*Abasgia. During the same period, several other semi-independent state entities were formed in the south Caucasus which gave impetus to the political unification of Georgia: these included the kingdom of Kakheti, which by the end of the 8th century was able to throw off Arab domination and establish local rule. The rulers of Kakheti bore the title, curious for a layman, of \*Chorepiscopus, the reason for their use of this title is unknown. East of Kakheti, in the 9th century, the kingdom of Hereti emerged, formed partially on the \*Albanian lands and often even referred to as the \*kingdom of Albania. This kingdom existed only until the 11th century, when it was annexed by the neighbouring kingdom of Kakheti.

At the beginning of the 8th century, in north-western Georgia, the kingdom of Apkhazeti began to form. In the second half of the 8th century, the ruler of Apkhazeti Leon II declared independence from the Byzantines and received the title of King of Apkhazeti. The capital of Apkhazeti became Kutaisi, later capital of all Georgia. The last Georgian kingdom to be created was that of \*Tao-Klarjeti, when the \*Erismtavari of Iberia, Ašot \*Bagrationi, left central Georgia and escaped south-west. There he restored the fortress of \*Artanuji as his capital. The kingdoms of Apkhazeti and of \*Tao-Klarjeti became the initiators of Georgian unification. In the mid-9th century, the Church of Apkhazeti gained independence from the Byzantines and united with the catholicosate of \*Mtskheta, although the head of the Church of Apkhazeti for a while also retained the title of catholicus. In 978, Apkhazeti seized separate existence when Bagrat III (975–1014), heir of the Bagrationis of both Tao and Apkhazeti, united the Georgian lands and became the first king of united Georgia. NA

**Georgia, Christianity in** The Georgian Church (Georgian Apostolic Autocephalous Orthodox Church) attributes its foundation to S. Andrew the Apostle and Simon of Cannah, who, according to the local tradition, first preached Christianity in western

\*Georgia. Although the existence of various Christian communities in \*Georgia in the first several centuries AD is attested, Christianity was not declared the official religion until c. AD 326 when S.\*Nino converted King \*Mirian and Queen Nana. The \**Conversion of Georgia* and \*Juansher's *Life of Vakhtang* attribute the introduction of the office of \*catholicus and the acquisition of independence for the Georgian Church to King \*Vakhtang I Gorgasali. From the mid-6th century, \*bishops appointed to head the Georgian Church as Catholicus were no longer sent from \*Constantinople or \*Antioch but were chosen from native Georgians. The Church of \*Lazica with its \*metropolitan at \*Phasis remained under Constantinople until the 8th century, before being incorporated into the catholicosate of Apkhazeti (Kutaisi). The 6th century was a period of doctrinal formation in the churches of the Caucasus. By the end of the 5th century, \*Georgians, together with \*Armenians and \*Albanians, accepted the \**Henotikon* of \*Zeno and remained in communion with the East Romans. By the mid-6th century, the Armenians began to fall away from the \*Chalcedonian confession of faith which the Georgians favoured, but Georgian ecclesiastical loyalty to the Chalcedonian formula was probably related to politics, since Constantinople had secured both political and ecclesiastical autonomy for \*Iberia by c.560. By the end of the 6th century, an ecclesiastical schism occurred between the Armenian and Georgian hierarchs. As a result, the two Churches fell out of communion and, after years of oscillation, the Georgians affirmed the Chalcedonian confession of faith, while the Armenians preferred a more \*Miaphysite Christology. In the 8th century, the centre of Georgian Christianity and monasticism temporarily shifted from \*Mtskheta to \*Tao-Klarjeti, where it rapidly developed under the leadership of S. Gregory of Khandzta. NA

**Georgia, churches of** \*Georgia adopted Christianity in the early 4th century and churches began to be built on the sites of earlier pagan shrines, both for patriarchal seats and for \*monasteries. Other churches were associated with the activities of monks, notably the \*Thirteen Syrian Fathers, who came to Georgia in the 6th century.

Single-nave churches with horseshoe-shaped \*apses are datable to the 4th century. According to the chronicles, the first wooden church at \*Mtskheta was built by King Mihran in the 4th century, and \*Vakhtang I built

a stone church on the same spot, later incorporated into the 11th-century Church of Svetitskhoveli (the Life-Giving Pillar).

The \*basilica of Bolnisi Sion, firmly dated to 478/93, was constructed of good-quality masonry and its interiors were adorned with reliefs. All of its three naves are under a single roof; the interior is wide rather than elongated. Further basilicas were built in the 6th century in \*Tbilisi (Anchiskhati), Urnisi, and elsewhere. Basilicas whose naves were subdivided by walls rather than by columns were peculiar to early Christian \*Iberia.

The main innovation in the 6th century was the development of the domed church plan. This took about a century to develop; the plans included tetraconches, 'free cross' ('croix libre'), and 'inscribed cross' types. What they had in common was a cross-shaped layout and a centralized interior, crowned with a \*dome supported by wall projections and surrounded with four \*apses and, in the case of the tetraconch structures, with additional chambers.

The Church of Jvari (Holy Cross) in Mtskheta (586–604) is the most accomplished example of the tetraconch type; its side chambers and semicircular apses were distinguished on the \*façades by niches. The churches of the early 7th century in Martvili (west Georgia), Old Shuamta, and Ateni (Kartli) closely repeat the Jvari plan. They are built of well-hewn local stone and have distinctive relief decoration. The double-shelled tetraconch type is represented by the mid-7th-century episcopal church of Bana in \*Tao-Klarjeti (mod. Artvin province, Turkey). The earliest example of the 'inscribed cross' plan can be still seen in the church of Tsromi from the 630s; it is rectangular in plan and a broad dome rests on four free-standing columns, an arrangement that led to the development of the central-domed architecture of later periods. **Georgia, languages in** \*Georgia, like the Caucasian region in general, is a linguistically diverse country. As in north-eastern Turkey, the Kartvelian language family is dominant. Soviet scholarship developed a notion of Ibero-Caucasian languages, and proposed a genetic relation between the south and north Caucasian languages. This is less accepted by modern scholars, who prefer instead to speak of either typological or geographic closeness of these two language families.

It is generally accepted that the Proto-Kartvelian language, spoken in the south Caucasus and eastern Anatolia, was further divided, on the one hand, into Svan (c.19th cent. BC according to Klimov's dating) and, on the other, into the proto-Georgian and Zan

languages (c.8th cent. BC). The Zan language was further divided into the Laz and Megrelian languages, and spread into western Georgia, otherwise known as \*Lazica, or \*Egrisi, along the east and south-east coast of the Black Sea. Georgian was mostly spoken in eastern Georgia but already in Late Antiquity it had penetrated the west and south-west of the Caucasian region. As for the Svan language, it was confined to the north-western Georgian highlands, roughly coinciding with, but in Antiquity exceeding, the territory of modern \*Svaneti. Of the three Kartvelian languages, an alphabet was created only for the Georgian language. The date of the creation of the Georgian alphabet is widely contested and ranges from the 3rd century BC to the 5th century AD, although the latter date is currently more acceptable. With the creation of writing, the Old Georgian language was recorded, and became Georgia's primary literary language until the 11th century, when so-called Middle Georgian was formed. Later, in the 18th century, this in turn was replaced by modern Georgian.

Meanwhile, the Georgian writing system passed through three distinct stages of development. The *Asomtavruli* (Capitals), most widely used in the 5th–9th century, the *Nuskhuri* (Minuscule), 9th–14th centuries, and the *Mkhedruli* (Military) script, which is attested from the 9th century and is still used today. The *Mkhedruli* was apparently used for lay purposes as opposed to *Asomtavruli* and *Nuskhuri* scripts, which were used for ecclesiastical purposes. Apart from the Kartvelian languages, other Caucasian languages, such as Abkhaz and other north Caucasian languages, also spread through the territory of Georgia. After the incorporation of part of Caucasian \*Albania into the Georgian kingdom, \*Albanian, a north-eastern Caucasian language, spread in eastern \*Georgia and was probably still spoken in the Kingdom of Hereti in the 9th–11th centuries. As for the Indo-European languages, \*Armenian, \*Greek, and some \*Persian languages were also spread and spoken in Georgia, as attested by a number of loanwords and toponyms. These languages were popular among aristocratic elites and strongly influenced the Georgian literary language. Armenian enjoyed particularly high popularity in Late Antique \*Iberia, especially in the bilingual Armeno-Georgian marchlands of \*Tao-Klarjeti and Gogarene. Various Zan loanwords in Armenian also indicate close ties between the Armenian and Kartvelian languages.

Before the creation of the original Georgian writing system, Greek and Aramaic were apparently the official written languages in Iberia, as is attested by archaeological finds from central Georgia. One particular variant of North Mesopotamian Aramaic script (Armazian Aramaic), discovered in the capital of Iberia, \*Mtskheta, was also apparently an officially recognized form of writing (along with Greek). There was also a strong

community of \*Jews in Late Antique Iberia, which is attested by numerous Judaeo-Aramaic epitaphs in Mtskheta and Georgian narrative sources. NA

**Georgia, pre-Christian religion of** Our knowledge of the pre-Christian Georgian cult derives mostly from two medieval Georgian narratives: the *\*Moktsevai Kartlisai* (*Conversion of Iberia*) and the *Life of the Kings* (preserved in *\*Kartlis Cxovreba, Life of Georgia*). Another source of knowledge is the exceptionally rich oral tradition still persistent in Georgia, especially in the mountainous regions such as \*Svaneti, Khevsureti, and Tusheti, which narrates the early stages of Christian–pagan encounters in Georgia. According to the medieval Georgian narratives, the supreme deity of pre-Christian \*Iberia was Armazi, introduced by King Parnavaz (3rd cent. BC). The same deity is known in \*Armenian tradition as Aramazd. Armazi's statue or shrine was apparently erected in \*Mtskheta on a hill still known as Mount Armazi. Another deity was Zadeni, whose cult was, according to the same tradition, adopted by King Parnajom (c.109–90 BC) and apparently erected opposite Armazi, on Mount Zadeni, or Zeda-Zadeni. The same sources speak of unidentified deities Gats and Gai, whose idols also existed in pre-Christian Mtskheta. The *Conversion of Georgia* and the *Life of Georgia* both mention Ainina, introduced by King Saurmag (c.234–159 BC) according to the *Life of Georgia*, and Danina (introduced by King Mirvan, according to the same tradition), which are probably corrupted forms of the names of deities already known. They are often identified with the goddesses Anahit and Nane, the cults of which were widespread in pre-Christian Armenia. We know that already in Late Antiquity, Christianity was closely intertwined with the pagan pantheon. For example, S. \*George, or simply Giorgi, was related to a pagan deity. *Jvari* (\*Cross) and *Ieso Kriste* (Jesus Christ) are yet other members of the Late Antique mountainous pagan pantheon. NA

**georgos** See COLONUS.

**geouchos** See POSSESSOR.

**Gepids** An east Germanic people of Gothic descent, attested in the 2nd–6th centuries, and formerly settled in the Vistula delta. By the mid-3rd century they migrated southwards under King Fastida, who, according to \*Jordanes (97–100), defeated the \*Burgundians but was later beaten by the \*Goths. After being subdued by the \*Huns, a large force of Gepids took part in \*Attila's campaign against \*Gaul (451) under King Ardaric, portrayed as a loyal counsellor of the Hun ruler. However, after Attila's death, Ardaric revolted against Attila's sons, conquered them at the Nedao River (454), and freed the Gepids from the Hun yoke, seizing \*Dacia—often called Gepidia—and concluding a *foedus* (treaty) with the \*Emperor \*Marcian. Gepid territory (where characteristic \*pottery and \*fibulae have been found) extended to the right bank of the Danube, including at times \*Sirmium and \*Singidunum. As a response to Gepid plundering, \*Justinian I formed an alliance with the \*Lombards, whom he allowed to settle in \*Pannonia and Noricum. After much warring between both peoples, recorded mostly by \*Procopius and \*Paul the Deacon, the Gepid kingdom fell to a joint attack by Lombards and \*Avars in 567. \*Alboin, King of the Lombards, made the head of Cunimund, King of the Gepids, into a drinking cup (Paul the Deacon, *HF* I, 27, 4). **Gerasa** (mod. Jerash/Jarash, Jordan) Site of the well-preserved remains of an ancient \*city 55 km (34 miles) north of \*Amman, Jordan. As Antioch on the

Chrysorhoas it was a Seleucid (re-)foundation of a previously fortified site. Its convenient location on trade routes running south–north and east–west meant that the community flourished under Roman suzerainty from the 1st century BC, changing its name to Gerasa when it was a member of the federation of Hellenized *poleis*, known as the Decapolis. With the Roman annexation of Nabataea in 106, the community became part of the province of \*Arabia.

The city, important as a caravan city, continued to prosper under the *pax Romana* as judged by the range and lavishness of its public buildings. In the later Roman period Gerasa remained part of the province of Arabia. Earlier Western scholarship regarded the \*Persian invasion of 614 followed by the \*Arab conquest of 635 as disasters which occasioned a rapid decline in the community's fortunes. Judging by its public buildings, however, the decline of Gerasa started as early as the 3rd century, when the absence of \*inscriptions and construction work in general suggests a reversal in fortunes. This is in spite of Caracalla granting Gerasa the status of a colony (as Colonia Aurelia Antoniniana). As one of four episcopal sees under the \*metropolitan of \*Bosra, the appearance of a number of well-dated ecclesiastical buildings in the 5th and 6th centuries and other rebuilding work suggest a revival from the late 4th century down to the reign of \*Justinian I and thereafter. The transfer to Islamic control, again contrary to earlier opinions, seems not to have occasioned disruption. Recent archaeological work complemented by a less prejudiced reappraisal of the literary evidence shows a functioning urban community into the 8th century. Early Islamic histories describe Gerasa as a major administrative centre with its own mint. Excavation hints at contemporary housing and that the city continued to possess thriving regional-scale industries. While no churches appear to have been dedicated after 635, none of the existing churches shows signs of conversion. Instead, the arrival of the Arabs indicates a non-destructive transition, as shown not least by the erection of a large congregational \*mosque in the city centre in the early to mid-7th century. The town's eventual disappearance followed a gradual decline intensified by the consequences of a series of \*earthquakes in the 6th, 7th, and 8th centuries. The town was also progressively marginalized as the axis of power in the Muslim world (and so its commercial routes) shifted from the \*Arabian peninsula, under the \*Umayyads, to \*Damascus in the mid-7th century and to Baghdad with the \*Abbasids in the 8th. **Gerizim, Mount (Ar. Jebel et-Tūr)** The sacred mountain of the \*Samaritans near \*Nablus in \*Palestine, 881 m (2,890 ft) above sea level, and the focus of their devotion from pre-Christian times until today. Although currently the Samaritans deny they ever had a temple on the mountain, Josephus describes the building and destruction of a temple in the Hellenistic period (*Antiquities*, 11, 321–4 and *Jewish War*, 1, 62–3, cf. *Antiquities*, 13, 254–6). Archaeological excavations confirm its existence. On the northern, lower peak of the mountain stood a \*temple to Zeus, erected probably by Emperor Antoninus Pius and in use until the 4th century. After the revolt by the Samaritans in c. AD 484, the \*Emperor \*Zeno built on the main summit a fortified church, dedicated to \*Mary the Mother of God (\*Theotokos), the ruins of which, together with the defences added by the Emperor \*Justinian after renewed Samaritan rebellion, are still visible. **Germania Prima and Secunda** Late Roman \*provinces established under the \*Tetrarchy out of Germania Superior (to the south) and Germania Inferior (to the north). Germania Prima was carved out of the northern part of Germania Superior (the southern part became \*Maxima Sequanorum), covering the middle and upper Rhine with its key city at \*Mainz. Germania Secunda, the renamed Germania Inferior, covered the lower Rhine and was governed from \*Cologne. Both appear in the \*Verona List and the \*Notitia Dignitatum within the \*Dioecesis of \*Galliae. Each \*governor was a \*Consularis. They ceased to function as administrative units during the reign of \*Clovis I, King of the \*Franks. EMB

NEDC 218.

*Topographie chrétienne, Gaule*, vol. 11, *Mayence, Germania Prima*, ed. N. Gauthier et al. (2000); vol. 12, *Cologne, Germania Secunda*, ed. N. Gauthier et al. (2002).

**Germanic cultures** The earliest surviving description of the peoples who became known as Germans is by Julius Caesar in his *Commentarii* on the Gallic Wars (58–51 BC). All subsequent references to early Germans depend upon his use of the name. The key geographical aspect of Caesar's assertions is that Germans lived (for the most part) east of the Rhine River, Gauls lived to the west. In studies of the peoples east of the Rhine, archaeologists have used geographical designations, such as Elbe Germans, North Sea Germans, Rhine-Weser Germans, and Oder-Vistula Germans, to distinguish regional variations in material culture and practice. The tribes or peoples named in the writings of Caesar, Tacitus, and later authors are not easily matched with the archaeological cultures.

By the time of Caesar, the peoples east of the Rhine practised agriculture, growing such \*grains as wheat, barley, and rye. They raised domestic animals, especially \*cattle, as well as \*swine, \*sheep, \*goats, \*horses, and \*dogs. On the North European Plain, \*longhouses, where humans occupied one end and livestock the other, were the characteristic \*houses. An especially well-documented settlement is \*Feddersen Wierde, occupied from the end of the 1st century BC into the 5th century AD. In the hilly uplands of central Europe, smaller rectangular houses were characteristic.

The \*dead were disposed of by both inhumation and cremation. From the latter half of the 1st century BC on, it was common practice to place weapons in some men's graves. These \*arms included lances and spears, swords, shields, and occasionally helmets. From the 1st century AD on, a few graves were outfitted much more lavishly than most, with \*gold and \*silver \*jewellery, ornate \*bronze and sometimes silver vessels from the Roman world, drinking horns, and ornate weapons. Status differences are also reflected in the \*weapon deposit sites of northern Europe, such as Hjortspring in southern Denmark, where variations in the types and numbers of weapons indicate difference in the armament of top-rank leaders, lower-level officers, and foot soldiers.

Ritual practices included the deposit of offerings to supernatural powers, especially at the sites of springs, such as that at \*Bad Pyrmont, in ponds and lakes, as at \*Oberdorla, and in the numerous bog deposits in Denmark and northern Germany, including \*Illerup, Thorsberg, and Vimose.

During the 3rd and 4th centuries, major political, economic, and religious centres developed, as at \*Gudme in Denmark, \*Uppåkra in Sweden, and \*Jakuszowice in Poland. During these and subsequent centuries, a new style of ornament emerged, known as Germanic art, characterized by highly stylized representations of

- \*animals in complex intertwined patterns on brooches, \*belt buckles, and other ornaments. PSW

**Germanicea** See MARAŞ.

**Germanic languages** Group of Indo-European (IE) languages believed to have originated around the Baltic and currently spoken in a large area of north-west Europe. They are divided into:

1. North Germanic, comprising the Scandinavian languages;
2. West Germanic, which includes English, Dutch, German, and Frisian; and
3. East Germanic, now extinct, which included Gothic and Vandalic.

As IE languages, the Germanic languages have features in common with \*Latin and \*Greek, including related noun classes (*a, o, i, u* stems), and they share its core vocabulary. However, the Germanic languages also share certain features among themselves that distinguish them from other IE languages, among which are:

1. Development of two verb classes which form preterite and perfect tenses in different ways. Weak verbs use a suffix with a dental consonant throughout, while strong verbs build upon a regularized system of vowel alternation in the verb stem (known as ablaut or vowel gradation) to distinguish present, preterite, and perfect tenses.
2. A collapse of IE tense and aspect into a simple verb tense system including only forms for present and preterite, though there is disagreement about the status and development of the perfect tense. Other tenses are circumscribed with auxiliary verbs and/or time expressions.
3. The First Consonant Shift (also known as Grimm's Law), a phonological sound shift of the

IE voiceless plosives *p, t, k* to fricatives *f, s, h*, voiced plosives *b, d, g* to voiceless plosives *p, t, k*, and aspirated plosives *bh, dh, gh* to voiced fricatives *β, ð, γ*. These shifts explain etymological correspondences, e.g. Lat. *pisces* with Eng. *fish*, Lat. *centum* with Eng. *hundred*, Lat. *dens* with Eng. *tooth*.

4. The ultimate fixing of word stress on word stems (often the first syllable), probably completed before the literary period of the West Germanic languages (but not yet visible in Gothic).

The earliest Germanic language to be recorded in substantial texts is Gothic, spoken by the \*Visigoths and \*Ostrogoths. Extended parts of a translation of the \*Bible survive, mainly in the 6th-century \*Codex Argenteus, and attributed to the 4th-century \*Bishop \*Ulphilas (Wulfila). Gothic declined after the \*conversion of the Visigoths in \*Spain from \*Homoean to Nicene (Catholic) Christianity in AD 589 and became extinct in the late 8th century. The long-term survival of a Gothic dialect in the \*Crimea is a matter of dispute; a Flemish diplomat in the 16th century published a description of 86 words in a Germanic language, but his report contains numerous misprints and is based on the testimony of unreliable witnesses.

Some \*runic inscriptions from Scandinavia are in an early form of Germanic closely resembling Gothic, probably Proto-Old Norse. They may be older than the surviving records of Gothic, but are very short, formulaic, and sometimes hard to interpret. After the decline of Gothic, it was Franconian, the West Germanic dialect of the \*Frankish invaders of \*Gaul and southern Germany, that came to dominate the northern borders of the declining Roman Empire. MVDH

C. J. Hutterer. *Die germanischen Sprachen. Ihre Geschichte in Grundzügen* (2002).

**Germanus** (before 505–50) Nephew of \*Justin I, cousin of \*Justinian I, praised by \*Procopius (*Gothic*, VII, 40, 9). He made his reputation by defeating the \*Antes when \*Magister Militum Praesentalis (518–27). Later, as Magister Militum Praesentalis and \*patricius in 536–9, he crushed the mutiny of \*Stotzas in \*Africa, before being posted to \*Antioch in 540 when \*Khosrow I broke the \*Everlasting Peace. He abandoned Antioch to the Persians. His reputation recovered following the death in 548 of \*Theodora, who had feared his political ambitions. Germanus refused to join the conspiracy of \*Artabanes and \*Arsaces, which may have sought to

## Germanus

make him \*emperor (*Gothic*, VII, 32, 7–19). He was restored to imperial favour, and in 550 to a command fighting the Goths. His sudden death at \*Serdica ended his plan to retake \*Italy. PNB  
*PLRE* II, Germanus 4.

**Germanus** Native of \*Iustiniana Prima and protégé of \*Justinian I. He commanded forces defending the Thracian \*Chersonnese and defeated the \*Huns under \*Zabergan (559). PNB  
*PLRE* III, Germanus 4.

**Germanus** \*Magister Militum and \*patricius and possibly a kinsman of \*Justinian I. He married Charito, daughter of \*Tiberius II, in August 582 and was made \*Caesar, along with \*Maurice, but then disappears from the sources. PNB; OPN  
*PLRE* III, Germanus 5.  
Whitby, *Maurice*, 7, 15.

**Germanus** \*Dux Libani at \*Damascus in 588 when the army in \*Syria mutinied against the \*Emperor \*Maurice and threw down his imperial \*icons because their new \*Magister Militum had insulted them and reduced their pay. Germanus led them successfully against the Persians at \*Martyropolis and he and the army were reconciled with the emperor. He may be the same Germanus who commanded at \*Dara in 602, and died in 604 after being defeated by the Persians at \*Constantina-Tella. PNB  
*PLRE* III, Germanus 6 possibly = *PLRE* III, Germanus 13.  
Whitby, *Maurice*, 17, 287–89.

**Germanus** Senator and \*patricius, whose daughter married \*Theodosius, son of \*Maurice. In 602, while hunting west of \*Constantinople, he was asked by the army of Thrace to make Theodosius \*emperor. Confronted by Maurice, he found sanctuary in \*Cyrus' Church of the Theotokos and then at the \*Holy Wisdom. He subsequently backed \*Phocas, was ordained, and then, having plotted with Maurice's widow Constantina, was killed by Phocas. OPN  
*PLRE* III, Germanus 11.  
Whitby, *Maurice*, 25–6, 168.

**Germanus of Auxerre, S.** (d. 445–8) \*Bishop of Auxerre from 418. A native of Auxerre, Germanus studied \*law in \*Rome, and began a career in public office. The author of his *Life*, \*Constantius of \*Lyons, says that his final post was as a *ducatus*: he was perhaps \*Dux Tractus Armorici et Nervicani in military charge of north-west \*Gaul. While visiting his home town of Auxerre, he was elected its bishop, and adopted an ascetic life. In 429, alongside \*Lupus, Bishop of Troyes, he undertook a mission to deal with the problem of the

Pelagian \*heresy in \*Britain, visited S. \*Alban's tomb, and allegedly led the Britons to a bloodless victory over an army of \*Picts and \*Saxons by inspiring them to use 'Alleluia' as a war cry. The historicity of a second visit is uncertain. He died in 448, on a journey to \*Ravenna to persuade \*Valentinian III's regime to reduce taxes. His lifetime renown was perpetuated by his cult. EJ

**Germanus of Paris** (c.496–576) \*Bishop of \*Paris (before 556–76). Born into a family of civic \*aristocrats at \*Autun, he was abbot of St.-Symphorien there before becoming bishop under \*Childebert I, while persisting in his monastic habits. He interceded with \*Chlothar I on \*Radegund's behalf in 559, and retained links with her Nunnery of the Holy Cross at \*Poitiers, visiting to give his blessing to Agnes, its first abbess. Shortly before \*Charibert I's death in 567, he excommunicated the king for marrying Marcovefa, a nun and sister of one of his former wives. In 575 Germanus wrote a surviving \*letter to \*Brunhild asking for her help in ending the civil war between her husband \*Sigibert I and \*Chilperic I (*Ep. Aust.* 9), and warned Sigibert on pain of death not to seek to kill his brother; Sigibert disregarded the admonition, and was soon assassinated. He was buried in the portico of S. Vincent's church in Paris, and commemorated by a metrical \*epitaph (Le Blant, *Inscriptions*, 205). His cult developed at once, and \*Venantius Fortunatus, who at Germanus' behest had previously written poems and a *Life* of his predecessor Bishop Marcellus, composed his *Vita*, a richly detailed account of Germanus' travels in \*Gaul and his \*miracles. By 690, his name was associated with the dedication of the church in which he was buried, and from the 11th century, it came to be known as St.-Germain-des-Prés. PPé; STL

VII (1920), 337–418.

**Germia** (mod. Gümüşkonak, formerly Turkish Yürme) \*City of \*Galatia Salutaris, later an arch-bishopric. By at least the 5th century, healing waters inspired the foundation of a place of Christian \*pilgrimage near two ancient \*cities. The most important of several surviving churches and \*monasteries was dedicated to the Archangel Michael; it included \*hospitals

and homes for the elderly and was donated by the same Studios who built the churches of S. Michael at \*Nacolea and \*S. John Baptist of Studius at \*Constantinople. It was visited by \*Justinian I and S. \*Theodore of \*Sykeon. \*Gregory of \*Tours had heard that Christ's tunic was there (*Glory of the Martyrs*, 7). PhN

**Gerontius** (d. 411) \*Magister Militum and \*Comes of the \*usurper \*Constantine III. Originally from \*Britain, Gerontius and the Frankish Magister Militum Edobichus freed Constantine III from the siege of Valence by Sarus in 408 (\*Zosimus, VI, 2, 4–5). After subjugating \*Spain for the \*Caesar \*Constans in 408, Gerontius guarded the passes to \*Gaul. In 409 Constantine proposed to replace him (Zosimus, VI, 4, 2; VI, 5, 1–2). Gerontius rallied the armies of Spain and the barbarians in Gaul, and arranged for his own \*Domesticus Maximus to be proclaimed \*emperor at Tarraco. Expelling the usurpers from Spain, he pursued Constans to \*Vienne and executed him there in 411. He besieged Constantine at \*Arles, but his troops deserted him when an army approached which was loyal to the Emperor \*Honorius. Gerontius fled to Spain, was defeated there by deserters, and committed \*suicide (\*Orosius, VII, 42, 4; \*Olympiodorus, fr. 16; \*Prosper, *Chron.* 411; \*Sozomen, IX, 12, 6–13, 1–7; \*Gregory of Tours, *HF* II, 9). \*Sidonius recalled Gerontius as characterized by perfidy (*ep.* V, 9, 1). **Gertrude, S.** (626–59) First Abbess of \*Nivelles, daughter of the \*Austrasian \*Mayor of the Palace \*Pippin I and \*Itta, and sister of Begga and of \*Grimoald, later mayor. She was associated with a group of Irish monks (S. \*Furse, Foilan, Ultan), and, with her mother, was responsible for founding the \*Monastery

of the \*Scotti at Fosses. She was buried in the Church of S. Peter (S. Gertrude) at Nivelles. Her cult developed rapidly and was one of those particularly favoured by the Carolingians. A *Vita*, written at Fosses after 693, survives in two recensions.

**Gerunda** (mod. Girona or Gerona, Catalonia) \*City in \*Tarraconensis, with Late Roman \*walls (c.284–300). \*Prudentius (*Peristephanon*, IV, 29–30) mentions a \*martyr called Felix, who had a significant cult (BHL 2864–8), about which \*Gregory of Tours tells stories (*Gloria Martyrum*, 91). Six Christian \*sarcophagi (c.305–25) are preserved in the Church of S. Feliu. Gerunda was the site of a \*Visigothic mint and of a church \*council in 517. The chronicler \*John of Biclar, \*Bishop of Gerunda (c.589–614), was a Visigothic convert to Catholicism. GDB *New Pauly: Antiquity*, vol. 5 (2004) s.v. 'Gerunda' 820–1 (P. Barceló).

**Gervasius and Protasius, Ss.** \*Martyrs, the whereabouts of whose \*relics was revealed to \*Ambrose at \*Milan in 386. The historicity of Ss. Gervasius and Protasius remains uncertain, but subsequent tradition placed their deaths in the later 2nd century. In 386 Ambrose needed support against the imperial \*court of \*Valentinian II which he regarded as \*Arian'. The miraculous discovery of the martyrs strengthened Ambrose's position, and their relics were translated in triumphal procession to the newly completed Basilica Ambrosiana. Ambrose told the story in a letter (22), as did his biographer \*Paulinus of Milan (*VAmbrosii*, 14), and \*Augustine (*Conf.* IX, 7, 16; *Civ. Dei*, 22, 8).

McLynn, *Ambrose of Milan*.

Delehaye, *Origines*, 75–8.

**Gesta Martyrum** (Lat.: 'Deeds of the Martyrs') A group of 5th- and 6th-century \*martyr narratives describing the trials and deaths of (largely) pre-Constantinian Christian martyrs at \*Rome. The phrase *Gesta Martyrum* is attested from the 6th century, and functioned as a loose literary label for some five or six dozen \*martyr passions, each celebrating one or more male and/or female martyrs. Although many show signs

of interdependence, the *Gesta* were penned anonymously and independently. The authors all seem to have lived in (or had significant knowledge of) the \*city of \*Rome, since many include topographical references (some more accurate than others) to \*pagan and Christian monuments in Rome. The influence of earlier hagiographic forms (e.g. Apocryphal Acts of the Apostles and the Passions of Martyrs) on the form and content of the *Gesta Martyrum* is also apparent. The *Gesta* were probably read in churches, monastic settings, and perhaps in private homes. KMS

*Gesta* of individual martyrs are ed. separately in *AASS* and by B. Mombritius, *Sanctuarium seu Vitae Sanctorum* (new edn., 1910).

**Gewilib of Mainz** (d. after 745) Bishop of \*Mainz, who according to legend avenged the death of his father Gerold, the previous \*bishop, who had died fighting \*Saxons. S. \*Boniface denounced him to the pope as a 'false teacher' and unlawful bishop. JTP

F. Staab, 'Rudi populi rudis adhuc presul. Zu den wehrhaften Bischöfen der Zeit Karl Martells', in *Jarnut et al., Karl Martell*, 249–75.

**Ghassanids** See JAFNIDS.

**ghazi** Participant in a 'raid against the infidels' carried out by Muslims on the frontiers of the *Dar al-Islam* territory of \*Islam. In the early days of Islam, during the initial \*Arab conquests, *ghazis* gained status and booty by participation in these religiously and economically motivated raids. Due to their location close to the pagan \*Türks, \*Khorasan and \*Transoxiana were particularly popular with *ghazis*, who often functioned almost like mercenaries, posing a potential threat not only to

those they deemed infidels but also to the local Muslim administrative and military establishment. MLD

*EI* 2 s.v. Ghāzī vol. 2 (1965) (I. Mélikoff).

**Ghurak** \*Sogdian ruler (r. 710–37/8) of \*Samarkand during the \*Arab conquest of \*Transoxiana, who alternately cooperated with the \*Arabs and sought help against them from \*China or the \*Türks. When \*Qutayba b. Muslim captured Samarkand (712), Ghurak withdrew to Ishtikhan, from whence he later appealed to \*Caliph \*Umar II to restore Samarkand to him. Ghurak did not participate in the Sogdian revolt of 722 which caused \*Dewashtich's downfall and maintained loyalty to the Arabs during the initial Türgesh invasions under \*Suluk. However, he openly allied himself with the latter in the joint Türk–Sogdian capture of Samarkand in 731. Ghurak died in 737/8, shortly before the Arabs recaptured Sogdiana from the Türgesh. MLD

#### gift giving and treasure, Germanic barbarian

Texts from Tacitus to \**Beowulf* relate the giving of gifts among Germanic peoples as means of securing loyalty and of gaining status and prestige. While archaeology does not often enable us to identify objects as gifts, a great many objects of special material or manufacture probably functioned as gifts in the contexts where we find them.

Treasures placed in well-outfitted burials and in special deposits are likely to have served as gifts at some stage before they went out of use. Common among the rich \*burials of the 4th and 5th centuries are \*gold neck rings, gold or gilded \*silver \*fibulae, and ornaments of gold inset with carved \*garnet pieces, including those decorating special weapons. For example, among the objects in the second grave at Apahida in Romania were a purse with an ornate gold and garnet lid, gold shoe buckles with inset garnets, gold beads, and gold strap-ends. The scabbard that held the sword in this man's burial was decorated with gold and garnet, as was his \*belt buckle. Another richly equipped grave at Apahida included a solid gold bracelet with widening terminals, one of a group of at least seven nearly identical bracelets found in other

graves of this period, including that of the \*Frank \*Childeric I at \*Tournai in Belgium.

Besides graves, treasures are also recovered from \*hoards. A 5th-century hoard found at \*Hoxne in England included gold jewellery, silver vessels and tableware, and over 15,000 gold and silver coins. Some treasure hoards contain \*bronze tableware and \*iron tools.

**gift giving and treasure, Persian Empire** The presentation of gifts by monarchs of the \*Sasanian dynasty was not only integral to the \*Persian Empire's system of collecting and redistributing wealth, it was also the material and symbolic way the Persian Empire's aristocratic and courtly hierarchies were ordered. Given in the course of \*diplomacy, gifts amplified the grandeur of the Empire among client kings and foreign aristocracies and served as a channel of cross-cultural communication.

Gifts given by the king, such as clothing made of \*silk (MP *abrēšom*), and accoutrements that marked an individual as belonging to the nobility or as the holder of an office had a significance beyond their material value. The archmagus \*Kerdīr's \*inscriptions state that \*Bahram II gave him a hat (*kolāf*) and belt (*kamar*) when the king ennobled him. Roman accounts of the rise and fall of Persian nobles also stress the importance of such objects and numerous divine investitures on \*rock reliefs reflect this political reality. In the medieval remembrance of authors such as the epic poet Ferdowsi (Firdausi) and Ps.-Jahiz, gift giving and displays of generosity were as expected a part of royal display as \*hunting. The \*Sasanian King of Kings presided over ritual gift giving on the two most important holidays of the year: the New Year (MP \*Nōg Rōz) in spring, and the festival of \*Mihr in autumn (\*Mihragan). During the New Year celebrations, provinces would bring their taxes to the \*court and the King of Kings would give public audiences where he gave gifts and invested officials.

MPC

Canepa, *Two Eyes*, 182–3; 190–2.

**gifts, diplomatic** Gifts were integral to Late Antique \*diplomacy, for both their monetary value and

symbolism. The exchange of gifts was integrated into the ritual of diplomatic receptions. \*Peter the Patrician's detailed description of the protocol for receiving a Persian embassy is preserved in \*Constantine VII Porphyrogenitus' *De Caerimoniis*. The \*Magister Officiorum would inspect the gifts that the Persian embassy intended to give and relay a description of them to the emperor before the audience. During the audience, the envoy and his men would leave the hall and make a second entrance with the gifts. The \*emperor's \**silentarii* would receive all the gifts, and after the audience they would be taken to the sacred wardrobe (*vestosacra*), where *vestiarii* would appraise them and create a record, which would be consulted when it was time to prepare gifts for the return embassy (*De Cer.* 1.89.404). No such records survive, and Peter the Patrician's protocol mentions only \*textiles and 'decorated objects'.

From the quantity of \*Sasanian \*silver found on the northern peripheries of the Empire, especially in the \*Caucasus, it is likely that the Persians favoured silver plate decorated with bas-relief figural scenes of the sovereign as gifts for \*client kings. Roman *missoria*, such as the \*Kerch Plate portraying a mounted emperor (possibly \*Constantius II), come from these regions and probably served this purpose as well. Various Sasanian \*textiles and \*luxury objects which were preserved in European church treasuries, such as the \*Cup of \*Khosrow (Solomon), were possibly Persian gifts kept in the treasury of the Great Palace of \*Constantinople redistributed to clients in the West in Late Antiquity or acquired in the Fourth Crusade. The constant flow of objects and images from one court to the other generated a taste for the other's luxury objects and ornament and influenced indigenous traditions of ruler representation. Scattered mentions in references to Persian embassies indicate that \*horses or exotic animals such as tigers or \*elephants were also given as gifts. Accordingly, the Arch of \*Galerius portrays Persians offering exotic animals and silver vessels. These traditions of diplomatic gift giving survived in the diplomatic traditions of medieval Byzantium, Islam, and Western Europe.

**Gildas** (d. 570?) Writer and church father. Gildas was a Briton whose principal surviving work, *De Excidio Britanniae* (or *Brittonum*), is a sermon expounding a providential reading of British history and urging the clergy and laity of his own time to live better Christian lives in order to avoid national catastrophe. In this work he leans heavily on the Old Testament prophetic

tradition and particularly on the example of Jeremiah. *De Excidio* seems to have owed its survival principally to transmission through the Church of \*Canterbury. The earliest witness to its existence, \*Bede, read its message as legitimizing English conquest as the consequences of British sin. In \*Ireland Gildas was famed as a monastic teacher and described as *Sapiens*. After the universal fathers of the Church such as \*Augustine and \*Jerome he is the authority most cited in the collection of Irish \*law known as the *Collectio Canonum Hibernensis*, though from works that do not otherwise survive rather than from *De Excidio*.

At the time of writing *De Excidio*, Gildas seems not yet to have become a monk. Dating the man and his works has become controversial. \*Columbanus cites a letter by Gildas to Uinniau, probably either Finnian of Clonard (d. 549) or Finnian of Moville (d. 579), which suggests that he lived into the middle of the 6th century. Examinations of his Latinity and reading, however, show little evidence of any influences written after the middle of the 5th century. The Irish chronicles contain an obit under AD 570, which may not be contemporary. It is tempting to imagine that he had a long multi-phase career analogous to that of \*Cassiodorus. AW

**Gildo** (d. 398) Chieftain of the Jubaleni tribe in the Kabylie mountains south-east of Algiers, \*Comes Africae and \*Magister Utriusque Militiae per Africam, 396–8. Owner of numerous \*estates in the region (*CTh* VII, 8, 7 [400]; IX, 42, 19 [405]), he sided with the Romans during the rebellion of his brother \*Firmus in 372–3. Late in 397, he announced his intention to transfer \*Africa from Western to Eastern imperial control, and began holding up the supply of \*grain to \*Rome. His supporters included Optatus, the \*Donatist \*Bishop of \*Thamugadi, possibly also a number of \*Circumcelliones. The rebellion spread to the Chelif Valley, so a small force was sent against Gildo from \*Italy early in 398, under the command of his brother Mascezel, whose two sons Gildo had previously murdered. Routed near \*Theveste, Gildo died a fugitive. DAC

PLRE I, Gildo.

PCBE I, Gildo 1.

**Gilling** (North Yorkshire, England) Gilling West has been identified as the 7th-century \*monastery at Ingetlingum (\*Bede, *HE* III, 14 and 24), founded by

Eanflæd, wife of \*Oswy, King of Northumbria, apparently where Oswy had killed Oswine, King of Deira. No archaeological evidence has been found for this monastery; Gilling East has been proposed as an alternative location. HFF

T. Pickles, 'Locating Ingetlingum and Suthgedling: Gilling West and Gilling East', *Northern History* 46/2 (2009), 313–25.

**Gisulf** Lombard \*Dux, previously \*strator (Lombard \*marpabis) to King \*Alboin (his uncle), appointed in 569 to create and hold the Duchy of \*Friuli, centred on \*Cividale (Forum Iulii). He is recorded as requesting select clan groups (\**faræ*) to control the territory. Many invasion-period and first-generation Lombard tombs are known around Cividale. Gisulf's brother Grasulf succeeded him by 581. NJC

PLRE III, Gisulfus 1.

\*Paul the Deacon, *History of the Lombards*, II, 9, 32.

M. Brozzi, *Il ducato longobardo del Friuli* (1981), 31–2.

**gladiators** Professional fighters matched against each other in single combat in amphitheatres. Originally gladiators were slaves trained in gladiatorial schools (*ludi*) under the supervision of *lanistae*, though free men also joined to fight during the Principate; the latter were deemed *infames personae* on account of their mercenary public self-display. Successful gladiators were highly popular and were thought to exhibit the *virtus* of the Roman people. Stoic \*philosophers and Christians, however, criticized gladiatorial games as bloody and morally corrupting. The costs of presenting gladiatorial games were borne by \*emperors, magistrates, imperial \*priests, and other benefactors (*munerarii*) as part of their civic obligations, while a small bureaucracy developed in \*Rome to handle the associated logistics.

In 325, \*Constantine I prohibited the traditional practice of condemning criminals to fight as gladiators (*CTh* XV, 12, 1; \*Eusebius, *VCon* IV, 25). In 337 \*Hispellum in Umbria petitioned \*Constans I for a \*temple honouring the imperial family and games including gladiators; the emperor granted temple and games but is silent about gladiators (*CIL* XI, 5265). Gladiators continued to fight in the inaugural games of magistrates and high officials, including those of the Syriachs in Antioch c.330 (\*Libanius, *Oration*, 1, 5). The \*Codex-Calendar of 354 lists ten days of games (Lat. *munera*—singular *munus*) in Rome around the time of the \*Saturnalia in December. \*Valentinian I threatened to punish a judge for condemning a Christian to the *ludus*, which was forbidden regardless of any crime (*CTh* IX, 40, 8: *ludo non adiudicetur*). \*Symmachus the Orator bemoaned the mass suicide of 29 Saxon war captives the day before their gladiatorial bout in the quaestorian games of his son in 393 (*ep.* 2, 46). Already in decline, *munera* finally

disappeared around the 440s. In Christian tradition, \*Honorius banned the games after the Christian monk Telemachus was killed by angry spectators when he tried to stop the gladiatorial games in Rome's Flavian Amphitheatre (\*Theodoret, *HE* V, 26). Some Christian writers claimed that Christianity's triumph ended the murderous games. More likely, their disappearance was due to multiple causes, including changed external circumstances, as well as a shift in popular taste to favour \**venationes* and other mass spectacles.

**glass, Persian** Glass of the \*Sasanian period from archaeological excavations is mainly known from graves in \*Mesopotamia (\*Kokhe, \*Nineveh, Tell Baruda, \*Kish, \*Babylon, Uruk, Tell Mahuz, Tell Abu Skhair) and to a lesser extent from the Iranian plateau (Tureng Tepe, Shahr-i Qumis). Blown, moulded-blown, and blown and cut flasks, bottles, goblets, and bowls are attested. Popular throughout Eurasia, exported examples have been discovered in Japan and \*China (3rd–8th cent.), where some thought that clear glass (*po-li*) was petrified ice, like rock crystal. DTP

**glass, glass production, and trade** The Tetrarchic \*Prices Edict shows that by 301 six types of glass material were traded and sold by the pound: \*Alexandrian raw glass (colourless) and Judaeian raw glass (greenish), Alexandrian and Judaeian glass vessels, and glass \*windows of first and second quality. To these may be added \*mosaic glass cakes of different colours.

As in the Early Roman period, raw glass and objects were manufactured in different workshops. The primary workshops situated in \*Syria, \*Palestine, and \*Egypt produced raw glass in reverberatory tank furnaces, of which a few examples are known (Apollonia, Bet Eliezer).

Very standardized when compared to their antecedents known from the excavations in \*Wadi an-Natrun, these furnaces produced in one firing an amount of roughly 8 tonnes of glass. This raw glass was traded to the secondary glass workshops which were disseminated across the whole Empire where, up to the 8th century, fresh raw glass was combined with cullet to produce objects.

Three main compositions of raw glass have been identified through chemical analyses: Levantine 1 and 2 and HIMT glass coming from northern \*Sinai. The HIMT glass made its appearance on foreign markets by the mid-4th century and until the beginning of the 7th century was in competition with the raw glass from the Levant which earlier dominated the market.

From the mid-3rd to the early 5th century, glass vessels can be divided into two groups: common tableware produced in various places and luxury glass manufactured in a few centres and traded over long distances. The use of glass for containers of perfumed oils, liquid, and solid food was limited. Engraved glass was made principally in the Rhine Valley, \*Rome, and Egypt, painted and mosaic glass was manufactured in Egypt, complex applied decoration is known in the Rhine Valley and in Syria-Palestine, mould-blown glass is produced with new techniques such as optic blowing and dip mould-blowing in the Levant and in the Rhine Valley. For common wares, the diversity of individual forms reached its peak in Syria-Palestine at this period, whereas in the West there is a marked decline in diversity after the end of the 2nd century. In the early 5th century, in both the western and eastern Mediterranean, the repertoire of tableware forms and decoration is limited and continues to be so until the 8th century—glass becoming a highly prized and uncommon material in the former Roman north-western provinces. The true innovation of this period is the use of glass \*lamps.

Late Antiquity sees the introduction of two new techniques for manufacturing glass windows. The muff technique appears in the West during the 4th century and is followed very soon afterwards by the development in religious buildings of an early form of *vitrail* (flat glass grozed into pieces and reassembled with lead); this early form of stained glass is known from 5th-century Sion (Switzerland). Actual painting of glass appears only in the 8th century. In the East, the muff technique is also attested, but the crown technique prevails, with the use of bluish-green glass, but also of vivid colours, especially in *claustra*.

The use of glass tesserae is known in pavements from the Hellenistic period onwards. Examples of mural glass \*opus sectile panels are also present from the mid-3rd century onwards (\*Corinth, \*Ariminum, \*Kenchreai), but the development of mural mosaics between the 4th and 6th century in religious contexts (\*Rome, \*Ravenna) implies a change of scale, as the entire surface of the

## Glastonbury

walls was covered with glass tesserae of vivid colours, employing also \*gold and \*silver foil. MDN

**Glastonbury** \*Anglo-Saxon \*monastery on the edge of the Somerset Levels, once a large expanse of wetlands in south-west England. From an early date the monastery held extensive estates in the nearby hills and marshes, and the main monastic centre had satellite sites at Glastonbury Tor and nearby islands. Extensive archaeological evidence for craftworking includes 7th-century \*glass manufacture. Perhaps refounded by \*Ine of Wessex (*ASC s.a.* 688), both the Tor and Abbey have yielded 5th-/6th-century Mediterranean \*pottery suggesting earlier origins. SCT

L. Brubaker, in J. R. Strayer, ed., *Dictionary of the Middle Ages*, 13 vols. (1982–9), vol. 5, 564.

**globes and spheres** The term *sphaera* was used by both \*Latin and \*Greek authors to denote astronomical models. Celestial globes outnumbered terrestrial into the 15th century. The small, bronze celestial globe now in the Römisch-Germanisches Zentralmuseum at Mainz, dated by Künzl on the basis of engraving to AD 150–220, is one of the few extant complete ancient globes. Possibly found in \*Anatolia, it was probably intended to be descriptive and decorative rather than accurate in its depiction of constellations. \*Claudian (*Carmina Minora*, 51 (68) *In Sphaeram Archimedis*) refers to an astronomical model made by 'an old Syracusan'; Archimedes' sphere was described by earlier writers (Cicero, *Republic*, I, 21–2, also mentioning Aratus). While Claudian may not have seen an Archimedean sphere, his poem suggests contemporaries would have had some familiarity with such models.

In *On the Construction of an Aratean Globe*, addressed to Theodore, \*Leontius (7th cent.) stated he made a globe for Elpidius, depicting constellations described in Aratus' *Phaenomena*. He notes that Aratus' poem did not place constellations precisely, but was nonetheless useful. Leontius did not base his globe solely on Aratus; in the text he refers to \*Ptolemy's *Mathematical*

*Syntaxis*, and similarly used a deep colour for the surface (cf. *Mathematical Syntaxis*, 8, 3). Leontius' globe could serve as an aid to readers of Aratus' *Phaenomena* (one of the few \*Greek poems translated into \*Arabic, as well as \*Latin), and also for more practical purposes, including \*navigation. Ibn al-Salāh (12th cent.) described a Greek celestial globe he had seen; several features of Leontius' globe are found on Islamicate examples. LCT

**gnomons and shadow length tables** The *gnomon* is an indicator of the passing of time—specifically one which casts a shadow. It is a free-standing instrument, a stick, a pole, an \*obelisk, even a person. Once it had been noted that the direction and length of the shadow change during the course of the day and the year in a repeating pattern, gnomons could be used to mark specific points in these periods. Measuring and tabulating the lengths of the shadows cast throughout the day allowed daytime to be known in whatever hour-system was used. Such tables, deriving from the early classical period (5th–4th century BC), were used throughout the Mediterranean world. In the mid-5th century they became enshrined in the *De Re Rustica* of \*Palladius and this ensured their survival and use up to at least the 13th century. Shadow lengths were measured literally in

feet on the assumption that a person is approximately six times as tall as his or her foot is long. AJT

O. Neugebauer, *A History of Ancient Mathematical Astronomy*, 3 vols. (1975), 740–6.

**gnosticism** Generic term in modern scholarship for a diverse set of religious teachings and sects within and on the margins of Christianity in the 2nd to 5th centuries AD. It includes those opposed by heresiologists from Irenaeus onwards as being 'Gnostics' (from Gk. *gnosis*, a higher knowledge, theoretical or mystical). It encompasses also Valentinians, associates and followers of the Christian teacher Valentinus (c. AD 140–60 in \*Rome), who adapted earlier gnostic mythology to exegesis of the NT and developed an elaborate sacramental system, and Basilides, an Alexandrian teacher with a similar metaphysical system and interest in exegesis together with his followers. Some scholars also treat as gnostics followers of religious movements that shared comparable elements with these groups, such as Hermetists, \*Manichaeans, and \*Mandaeans.

Discoveries of codices from the 4th century AD containing \*Coptic translations of writings composed by these groups (P.Berol. 8502, the \*Nag Hammadi Codices, and the Codex Tchacos) have enabled scholars to compare the reports and fragments preserved in the works patristic opponents of gnosticism with versions used in these groups themselves. For example, Irenaeus' summary of a gnostic myth of origins (*Adversus Haereses*, I, 29) belongs to a widely circulated work, the *Apocryphon of John*, for which we have long and short versions. Irenaeus also mentions a *Gospel of Judas* (*Adversus Haereses*, I, 31), which corresponds to the third tractate in *Codex Tchacos*. The Nag Hammadi Codices contain treatises such as *Allogenes* (Nag Hammadi, XI, 3), *Steles Seth* (Nag Hammadi, VII, 5), and *Zostrianus* (Nag Hammadi, VIII, 1), which \*Porphyry (*VPlot* 16) mentions being read in the circle of \*Plotinus in the mid-3rd century. These writings and others associated with them which identified the enlightened as belonging to the 'immovable race of Seth' suggest that Irenaeus' gnostics are properly referred to as 'Sethians'. **goats** Goats provided \*meat and milk, as well as hair fibre and hides. The peoples of Late Antiquity kept numerous varieties of domestic goat (*Capra aegagrus hircus*); large, long-haired animals are depicted on the \*mosaics of the Great \*Palace of \*Constantinople, and \*Timotheus of \*Gaza (*De Animalibus*, 16) indicates that Angora goats, which produce extremely fine fibres, were raised in \*Cappadocia. Goats were ideally suited to marginal land, where they could browse brushy plants and rough herbage. The \*Bedouin goat allowed pastoralists to exploit extreme desert environments. MD

Toynbee, *Animals*.

**God-fearers** (Gk. *phoboumenoi*, *sebomenoi*, *theosobeis*, *metuentes*; Heb. *yirei shamayim*, 'fearers of heaven') Non-Jews, pagan and (eventually) Christian, who dropped in on Jewish community activities, participating in fasts or feasts, co-celebrating the high holidays, and listening to scripture, read aloud in the vernacular. Their arrangements with local \*synagogues were voluntary and *ad hoc*, and could run the gamut from occasional presence to substantial \*patronage. God-fearers were not 'converts': they continued in their native cults while showing respect, as well, to the god of Israel. Hostile pagan observers fretted that such voluntary Judaizing could lead to conversion (Juvenal, Tacitus), while Christian observers criticized \*Jews for not pressuring such pagans to convert (\*Commodian, \*Cyril of \*Alexandria), and \*bishops thundered against their own synagogue-going congregants (\*John Chrysostom). As attested by the interdictions of church canons, and by the 4th–5th-century \*Aphrodisias donor \*inscriptions (which list the names of god-fearers separately from those of converts), Gentile god-fearing, both pagan and Christian, continued well into the late Empire. **Godigisel** King of the \*Burgundians, c.474–500. Godigisel was son of King Gundioc, and brother to \*Gundobad, \*Chilperic II, and Godomar. He shared rule with one or more of his brothers, with his centre at Geneva. In 500 he helped the \*Franks overthrow Gundobad, and became sole ruler, but Gundobad soon defeated and killed him (\*Gregory of \*Tours, *HF* II, 32–3). EJ

PLRE II, Godigisel 2.
